ECM selected gear	1st	
Vehicle speed	2 to 40 km/h (1.2 to 24.9 mph)	
Throttle valve opening angle	7.0% or more at 2,000 rpm (Conditions vary with engine speed)	–
ON malfunction (B)		
ECM selected gear	3rd	
Vehicle speed	2 km/h (1.2 mph) or more	–
Throttle valve opening angle	7.0% or more at 2,000 rpm (Conditions vary with engine speed)	–
ON malfunction (C)		
ECM selected gear	4th	
Vehicle speed	2 km/h (1.2 mph) or more	–
Throttle valve opening angle	7.0% or more at 2,000 rpm (Conditions vary with engine speed)	–
ON malfunction (D)		
Current ECM selected gear	5th	
Last ECM selected gear	4th	

Vehicle speed (During transition from 4th to 5th gear)	–	Less than 100 km/h (62.2 mph)
ON malfunction (E)		
ECM selected gear		5th
Engine speed – Turbine speed (NE – NT) (After transition from 4th to 5th gear)	–	Less than 150 rpm
Vehicle speed (After transition from 4th to 5th gear)	–	Less than 100 km/h (62 mph)

TYPICAL MALFUNCTION THRESHOLDS

Detection criteria	Threshold
Both of the following conditions are met:	
<ul style="list-style-type: none"> • ON malfunctions (A) and (B), or ON malfunction (C) • ON malfunction (D) or (E) 	
ON malfunction (A)	
Turbine speed/Output speed	3.30 to 7.50
ON malfunction (B)	
Turbine speed/Output speed	1.28 to 1.53
ON malfunction (C)	
Turbine speed/Output speed	0.93 to 1.07
ON malfunction (D)	
Turbine speed – Output speed x 4th gear ratio (NT – NO x 4th gear ratio)	1,000 rpm or more
ON malfunction (E)	
Turbine speed – Output speed x 5th gear ratio (NT – NO x 5th gear ratio)	1,000 rpm or more

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the hand-held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the hand-held tester to the DLC3.
- (d) Turn the ignition switch to the ON position.
- (e) Turn on the tester.
- (f) Select the item "DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST".
- (g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:

While driving, the shift position can be forcibly changed with the hand-held tester.

Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page [DI-1150](#)).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The 4th to 5th up-shiftings must be performed with the accelerator pedal released.
- The 5th to 4th down-shiftings must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position commanded by the ECM is shown in the DATA LIST (SHIFT) display on the hand-held tester.
- The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

ECM command gearshift	1st	2nd	3rd	4th	5th
Shift solenoid valve SL2	ON	ON	ON	ON	OFF

1	Check other DTCs output (in addition to DTC P0776).
----------	--

PREPARATION:

- (a) Turn the ignition switch off.
- (b) Connect the OBD II scan tool or hand-held tester to the DLC3.
- (c) Turn the ignition switch to the ON position.
- (d) Turn on the tester.
- (e) Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".

CHECK:

Read the DTCs using the OBD II scan tool or the hand-held tester.

RESULT:

Display (DTC output)	Proceed to
Only "P0776" is output	A
"P0776" and other DTCs	B

HINT:

If any other codes besides "P0776" are output, perform troubleshooting for those DTCs first.

2 Inspect shift solenoid valve SL2.

Shift Solenoid Valve SL2:

D12795

PREPARATION:

Remove the shift solenoid valve SL2 (See page [AT-12](#)).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

CHECK:

Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG Replace the shift solenoid valve SL2 (See page [AT-12](#)).

OK

3 Inspect valve body (See page [AT-12](#)).

OK:

There are no foreign objects on each valve.

NG Repair or replace valve body.

OK

Repair or replace transmission (See page [AT-34](#)).

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)
------------	--------------	--

CIRCUIT DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, S1, S2 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (See page [DI-1150](#)).

DTC No.	DTC Detection Condition	Trouble Area
P0778	The ECM checks for an open or short in the shift solenoid valve SL2 circuit while driving and shifting gears. (1-trip detection logic) • Output signal duty equals to 100%. (NOTE: SL2 output signal duty is less than 100% under normal condition.)	<ul style="list-style-type: none"> • Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The ECM commands gear shift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF". (In case of an open or short circuit, the ECM stops sending current to the circuit.)

While driving and shifting gears, if the ECM detects an open or short in the shift solenoid valve SL2 circuit, the ECM determines there is a malfunction (See page [DI-1150](#)).

MONITOR STRATEGY

Related DTCs	P0778	Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2	
Frequency of operation	Continuous	
Duration	1 sec.

COMPONENT OPERATING RANGE

Parameter	Standard value
Output signal duty	Less than 100%

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

ECM command gearshift	1st	2nd	3rd	4th	5th
Shift solenoid valve SL2	ON	ON	ON	ON	OFF

1 Inspect transmission wire.

PREPARATION:

Disconnect the transmission wire connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
11 (SL2+) - 3 (SL2-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
11 (SL2+) - Body ground	10 kΩ or higher
3 (SL2-) - Body ground	↑

NG Go to step 3.

OK

2 Check harness and connector (Transmission wire – ECM)

PREPARATION:

- (a) Connect the transmission wire connector.
- (b) Disconnect the ECM connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
E6 – 17 (SL2+) – E6 – 16 (SL2-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E6 – 17 (SL2+) – Body ground	10 kΩ or higher
E6 – 16 (SL2-) – Body ground	↑

NG → **Repair or replace harness or connector (See page IN-30).**

OK

Replace the ECM (See page SF-82).

3 Check shift solenoid valve SL2.

Shift Solenoid Valve SL2:

D12795

PREPARATION:

Remove the shift solenoid valve SL2 (See page [AT-12](#)).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

CHECK:

Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

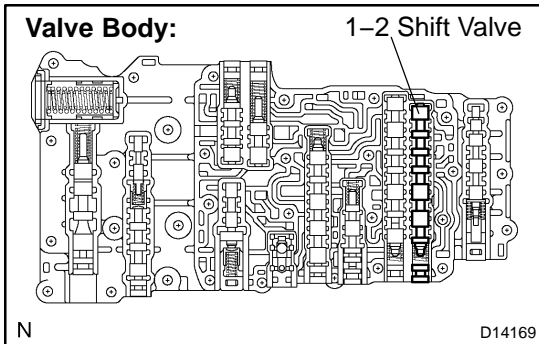

NG

**Replace the shift solenoid valve SL2
(See page [AT-12](#)).**

OK

**Repair or replace the transmission wire
(See page [AT-9](#)).**

DTC	P0781	1-2 Shift (1-2 Shift Valve)
------------	--------------	------------------------------------

SYSTEM DESCRIPTION

The 1-2 shift valve performs shifting to 1st gear and other gears.

DTC No.	DTC Detection Condition	Trouble Area
P0781	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	<ul style="list-style-type: none"> • Valve body is blocked up or stuck (1-2 shift valve) • Automatic transmission (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

This DTC indicates that the 1-2 shift valve in the valve body is locked in the direction the spring compresses. The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF" and switching oil pressure to the valves in the valve body.

The ECM calculates the "actual" transmission gear by comparing the signals from the input speed sensor (NCO) and the output speed sensor (SP2). The ECM can detect many mechanical problems in the shift solenoids, valve body, and the transmission clutches, brakes, and gears. If the ECM detects that the actual gear position and the commanded gear position are different, it will illuminate the MIL and store the DTC .

MONITOR STRATEGY

Related DTCs	P0781	Valve body/Rationality check

Condition (D)	
Turbine speed – Output speed x 5th gear ratio (NT – NO x 5th gear ratio)	1,000 rpm or more

INSPECTION PROCEDURE

1	Check other DTCs output (in addition to DTC P0781).
----------	--

PREPARATION:

- (a) Turn the ignition switch off.
- (b) Connect the OBD II scan tool or hand-held tester to the DLC3.
- (c) Turn the ignition switch to the ON position.
- (d) Turn on the tester.
- (e) Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".

CHECK:

Read the DTCs using the OBD II scan tool or the hand-held tester.

RESULT:

Display (DTC output)	Proceed to
Only "P0781" is output	A
"P0781" and other DTCs	B

HINT:

If any other codes besides "P0781" are output, perform troubleshooting for those DTCs first.

2	Perform active test
----------	----------------------------

HINT:

Performing the ACTIVE TEST using the hand-held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the hand-held tester to the DLC3.
- (d) Turn the ignition switch to the ON position.
- (e) Turn on the tester.
- (f) Select the item "DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST".
- (g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:

While driving, the shift position can be forcibly changed with the hand-held tester.

Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page [DI-1150](#)).

Standard:

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The 4th to 5th up-shiftings must be performed with the accelerator pedal released.
- The 5th to 4th down-shiftings must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position commanded by the ECM is shown in the DATA LIST (SHIFT) display on the hand-held tester.

OK:

Gear position changes in accordance with the tester command.

NG

Repair or replace valve body (See page [AT-12](#)).

OK

3	Clear the DTC and running test.
----------	--

CHECK:

Clear the DTC, and check DTC again after conducting the "MONITOR DRIVE PATTERN FOR ECT TEST" (See page [DI-1134](#)).

OK:

No DTC code

NG	Repair or replace valve body (See page AT-12).
-----------	---

OK

END

DTC	P0973	Shift Solenoid "A" Control Circuit Low (Shift Solenoid Valve S1)
------------	--------------	---

DTC	P0974	Shift Solenoid "A" Control Circuit High (Shift Solenoid Valve S1)
------------	--------------	--

CIRCUIT DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, S1, S2 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (See page [DI-1150](#)).

DTC No.	DTC Detection Condition	Trouble Area
P0973	ECM detects short in solenoid valve S1 circuit 2 times when solenoid valve S1 is operated (1-trip detection logic)	<ul style="list-style-type: none"> • Short in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM
P0974	ECM detects open in solenoid valve S1 circuit 2 times when solenoid valve S1 is not operated (1-trip detection logic)	<ul style="list-style-type: none"> • Open in shift solenoid valve S1 circuit • Shift solenoid valve S1 • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the shift solenoid valve S1 circuit. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. When the shift solenoid valve S1 is on, if resistance is 8 Ω or less, the ECM determines there is a short in the shift solenoid valve S1 circuit.

When the shift solenoid valve S1 is off, if resistance is 100 kΩ or more, the ECM determines there is an open in the shift solenoid valve S1 circuit (See page [DI-1150](#)).

Disconnect the transmission wire connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
7 – Body ground	11 to 15 Ω

NG**Go to step 3.****OK**

2 Check harness and connector (Transmission wire – ECM)

PREPARATION:

- (a) Connect the transmission wire connector.
- (b) Disconnect the connector of the ECM.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
E6 – 9 (SR) – Body ground	11 to 15 Ω

NG Repair or replace the harness or connector (See page [IN-30](#)).

OK

Replace the ECM (See page [SF-82](#)).

3 Check shift solenoid valve SR.

Shift Solenoid Valve SR:

PREPARATION:

Remove the shift solenoid valve SR (See page [AT-12](#)).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SR) – Solenoid Body (SR)	11 to 15 Ω

CHECK:

Connect the battery positive lead to the solenoid connector terminal and the battery negative lead to the solenoid body ground.

OK:

Solenoid sounds an operation noise.

NG

Replace the shift solenoid valve SR (See page [AT-12](#)).

OK

Repair or replace the transmission wire (See page [AT-9](#)).

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)
------------	--------------	---

SYSTEM DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty cycle of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

$$\text{Duty Ratio} = \frac{A}{A + B} \times 100 (\%)$$

DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects a malfunction on SLT (ON side) according to the revolution difference of the turbine and the output shaft, and also by the oil pressure. (2-trip detection logic)	<ul style="list-style-type: none"> • Shift solenoid valve SLT remains open or closed • Valve body is blocked • Automatic transmission (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

The ECM calculates the amount of heat absorbed by the friction material based on the difference in revolution (clutch slippage) between the turbine and output shaft. The ECM turns on the MIL and outputs this DTC when the amount of heat absorption exceeds the specified value.

When the shift solenoid valve SLT remains on, oil pressure goes down and clutch engagement force decreases.

NOTE: If you continue driving under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the hand-held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the hand-held tester to the DLC3.
- (d) Turn the ignition switch to the ON position.
- (e) Turn on the tester.
- (f) Select the item "DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST".
- (g) According to the display on tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON [HINT] OFF: Line pressure up (When the active test of "Control the Line Pressure Up" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-

*: "LINE PRESS UP" in the ACTIVE TEST is performed to check the line pressure changes by connecting the SST to the automatic transaxle, which is used in the HYDRAULIC TEST (See page [DI-1123](#)) as well.

HINT:

- The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.
- Normally, the line pressure detected in the ACTIVE TEST is approximately half of the value detected in the HYDRAULIC TEST's stall test.

1	Check other DTCs output (in addition to DTC P2714).
----------	--

PREPARATION:

- (a) Turn the ignition switch off.
- (b) Connect the OBD II scan tool or hand-held tester to the DLC3.
- (c) Turn the ignition switch to the ON position.
- (d) Turn on the tester.
- (e) Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".

CHECK:

Read the DTCs using the OBD II scan tool or the hand-held tester.

RESULT:

WIRING DIAGRAM

INSPECTION PROCEDURE

- 1 Check transmission wire.

PREPARATION:

Disconnect the transmission wire connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
14 (SLT+) - 6 (SLT-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
14 (SLT+) - Body ground	10 kΩ or higher
6 (SLT-) - Body ground	↑

NG Go to step 3.

2 Check harness and connector (Transmission wire – ECM)

PREPARATION:

- (a) Connect the transmission wire connector.
- (b) Disconnect the ECM connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
E6 – 13 (SLT+) – E6 – 12 (SLT-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E6 – 13 (SLT+) – Body ground	10 kΩ or higher
E6 – 12 (SLT-) – Body ground	↑

NG → **Repair or replace the harness or connector (See page IN-30).**

OK

Replace the ECM (See page SF-82).

3 Inspect shift solenoid valve SLT.

Shift Solenoid Valve SLT:

P

D11987

PREPARATION:

Remove the shift solenoid valve SLT (See page [AT-12](#)).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

CHECK:

Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG

Replace the shift solenoid valve SLT
(See page [AT-12](#)).

OK

Repair or replace the transmission wire
(See page [AT-9](#)).

DTC	P2740	Transmission Fluid Temperature Sensor "B" Circuit
------------	--------------	--

DTC	P2742	Transmission Fluid Temperature Sensor "B" Circuit Low Input
------------	--------------	--

DTC	P2743	Transmission Fluid Temperature Sensor "B" Circuit High Input
------------	--------------	---

CIRCUIT DESCRIPTION

ATF (Automatic Transmission Fluid) temperature sensor No.2 is on the transmission and just in front of the oil cooler inlet pipeline.

If ECM detects the abnormally high temperature of ATF by this sensor, it draws driver's attention by illuminating the warning lamp.

HINT:

- The temperature of ATF easily rises when towing, climbing hills and in traffic, etc.
- If the ATF temperature sensor No.2 becomes short-circuited, the signal that indicates the ATF temperature is 150°C (302°F) or higher is input in ECM.

Vehicle conditions when the sensor is normal and when the sensor is short-circuited are indicated in the table below.

ATF temperature Sensor No.2 State	Detection Condition	Symptom	Recovery Condition
Sensor is normal	• AT fluid temp. more than 150°C (302°F).	• AT Oil Temp. warning light remains on	• AT fluid temp. less than 135°C (275°F). *2
	• AT fluid temp. more than 130°C (266°F).	• Shift point too high.	• AT fluid temp. less than 110°C (230°F).
	When the conditions (a) and (b) are satisfied. (a) AT fluid temp. more than 130°C (266°F). (b) Engine coolant temp. more than 95°C (203°F).	• Lock-up at 3rd gear. *1	• AT fluid temp. less than 110°C (230°F) *2 and engine coolant temp. less than 95°C (203°F).
Sensor is short-circuited	• Any conditions.	• AT Oil Temp. warning light remains on • Shift point too high.	• Symptoms still occur
	• Engine coolant temp. more than 95°C (203°F).	• Lock-up at 3rd gear. *1	• Symptoms still occur

HINT:

*1: When AT fluid temperature is normal, transmission locks up at 5th gear with the shift lever in D position and at 4th gear with the shift lever in 4 position.

*2: When AT fluid temperature is in normal range, it decreases to less than 135°C (275°F) within 5 minutes with the shift lever in P or N position in an idling state.

DTC No.	DTC Detecting Condition	Trouble Area
P2740	(a) and (b) are detected momentarily within 0.5 sec. when neither P2742 nor P2743 is detected (1-trip detection logic) (a) ATF temperature sensor No.2 resistance is less than 25 Ω (0.046 V) (b) ATF temperature sensor No.2 resistance is more than 156 k Ω (4.915 V) HINT: Within 0.5 sec. the malfunction switches from (a) to (b) or from (b) to (a)	<ul style="list-style-type: none"> • Open or short in ATF temperature sensor No.2 circuit • Transmission wire (ATF temperature sensor No.2) • ECM
P2742	ATF temperature sensor No.2 resistance is less than 25 Ω (0.046 V) for 0.5 sec. or more (1-trip detection logic)	<ul style="list-style-type: none"> • Short in ATF temperature sensor No.2 circuit • Transmission wire (ATF temperature sensor No.2) • ECM
P2743	ATF temperature No.2 sensor resistance is more than 156 k Ω (4.915 V) when 15 minutes or more after the engine start DTC is detected for 0.5 sec. or more (1-trip detection logic)	<ul style="list-style-type: none"> • Open in ATF temperature sensor No.2 circuit • Transmission wire (ATF temperature sensor No.2) • ECM

MONITOR DESCRIPTION

The Automatic Transmission Fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an open or short in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 25 Ω (0.046 V) or more than 156 k Ω (4.915 V), the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Range check (Low voltage)	
TFT (transmission fluid temperature) sensor voltage	Less than 0.046 V
Range check (High voltage)	
TFT (transmission fluid temperature) sensor voltage	More than 4.915 V

COMPONENT OPERATING RANGE

Parameter	Standard value
TFT (transmission fluid temperature) sensor	Atmospheric temperature to approx. 130°C (266°F)

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the OBD II scan tool or hand-held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the OBD II scan tool or hand-held tester to the DLC3.
- (d) Turn the ignition switch to the ON position.
- (e) Push the "ON" button of the OBD II scan tool or the hand-held tester.
- (f) When you use the hand-held tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DATA LIST".
- (g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT FLUID TEMP 2	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	<ul style="list-style-type: none"> • After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:

When DTC P2742 is output and hand-held tester output is 150°C (302°F) or more, there is a short circuit.

When DTC P2743 is output and hand-held tester output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO2 (OT2) and body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

1 Inspect transmission wire (ATF temperature sensor No.2)

PREPARATION:

Disconnect the transmission wire connector from the transmission.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
1 (OT2-) – 9 (OT2+)	25 Ω to 156 kΩ
1 (OT2-) – Body ground	10 kΩ or higher
9 (OT2+) – Body ground	10 kΩ or higher

HINT:

If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 4 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG **Repair or replace the transmission wire (ATF temperature sensor No.2) (See page AT-9).**

OK

2 Check harness and connector (Transmission wire - ECM)

PREPARATION:

- Connect the transmission wire connector.
- Disconnect the connector of the ECM.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E6 - 32 (THO2) - E7 - 28 (E2)	25 Ω to 156 k Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E6 - 32 (THO2) - Body ground	10 k Ω or higher
E7 - 28 (E2) - Body ground	↑

NG

Repair or replace the harness or connector (See page IN-30).

OK

Replace the ECM (See page SF-82).

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance(Shift Solenoid Valve SLU)
------------	--------------	--

SYSTEM DESCRIPTION

The ECM uses the signals from the throttle position sensor, Air-flow meter, turbine (input) speed sensor, output speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.

Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect a mechanical problems of the shift solenoid valve SLU, valve body and torque converter clutch.

DTC No.	DTC Detection Condition	Trouble Area
P2757	Lock-up does not occur when driving in the lock-up range (normal driving at 80 km/h [50 mph]), or lock-up remains ON in the lock-up OFF range. (2-trip detection logic)	<ul style="list-style-type: none"> • Shift solenoid valve SLU remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transmission (clutch, brake or gear, etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the turbine (input) speed sensor NT, output speed sensor SP2, engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to output shaft rpm (SP2). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid SLU. When the SLU is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.

If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance. The ECM will turn on the MIL and store the DTC.

Example:

When any of the following is met, the system judges it as a malfunction.

- (a) There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.
(Engine speed is at least 70 rpm greater than input turbine speed.)
- (b) There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up off.
(The difference between engine speed and input turbine speed is less than 35 rpm.)

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the hand-held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the hand-held tester to the DLC3.
- (d) Turn the ignition switch to the ON position.
- (e) Turn on the tester.
- (f) Select the item "DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST".
- (g) According to the display on the tester, perform the "ACTIVE TEST".

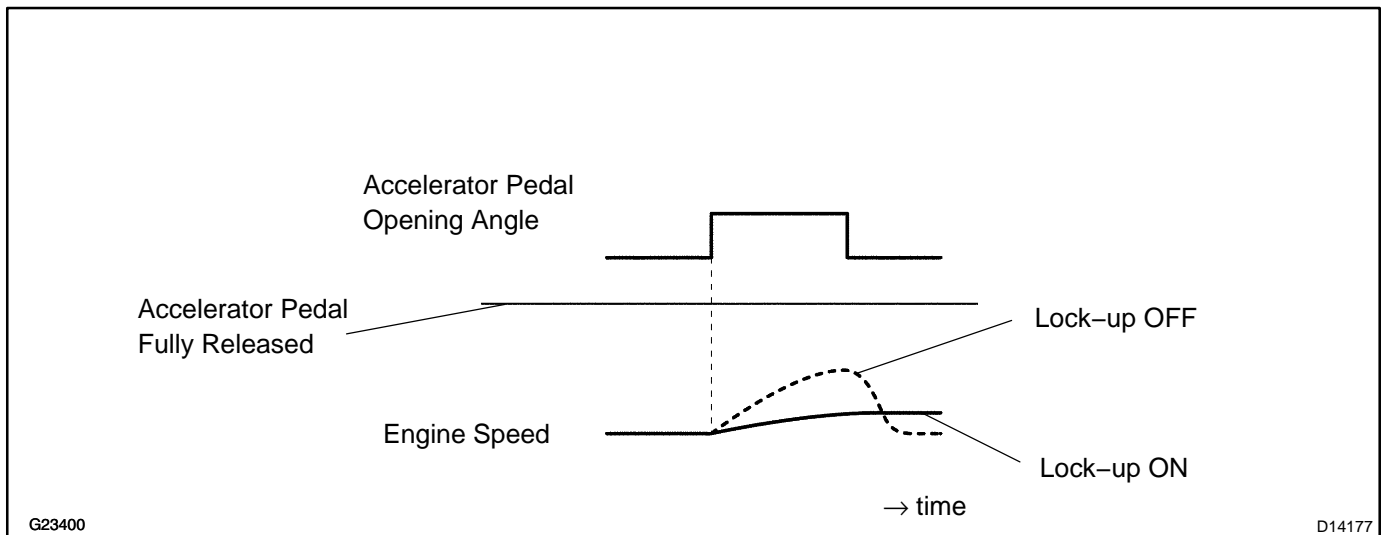

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] <ul style="list-style-type: none"> • Throttle valve opening angle: Less than 35 % • Vehicle Speed: 60 km/h (37 mph) or more 	Possible to check the SLU operation.

HINT:

- This test can be conducted when the vehicle speed is 60 km/h (37 mph) or more.
- This test can be conducted in the 5th gear.
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off automatically.)

1	Check other DTCs output (in addition to DTC P2757).
----------	--

PREPARATION:

- (a) Turn the ignition switch off.
- (b) Connect the OBD II scan tool or hand-held tester to the DLC3.
- (c) Turn the ignition switch to the ON position.
- (d) Turn on the tester.
- (e) Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".

CHECK:

Read the DTCs using the OBD II scan tool or the hand-held tester.

RESULT:

Display (DTC output)	Proceed to
Only "P2757" is output	A
"P2757" and other DTCs	B

HINT:

If any other codes besides "P2757" are output, perform troubleshooting for those DTCs first.

2 Check shift solenoid valve SLU operation.

PREPARATION:

Remove the shift solenoid valve SLU (See page AT-12).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

CHECK:

Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG Replace the shift solenoid valve SLU (See page AT-12).

OK

3 Inspect valve body (See page AT-12).

OK:

There are no foreign objects on each valve.

NG Repair or replace valve body.

OK

4	Check torque converter clutch (See page AT-39).
---	--

OK:

The torque converter clutch operates normally.

DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical(Shift Solenoid Valve SLU)
------------	--------------	---

CIRCUIT DESCRIPTION

The amount of current flow to the solenoid is controlled by the (*) duty ratio of the ECM output signal. The higher the duty ratio becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.

(*) Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

$$\text{Duty Ratio} = \frac{A}{A + B} \times 100 (\%)$$

P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving (1-trip detection logic).	<ul style="list-style-type: none"> • Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • ECM

MONITOR DESCRIPTION

When an open or short in a shift solenoid valve (SLU) circuit is detected, the ECM determines there is a malfunction. The ECM will turn on the MIL and store this DTC.

MONITOR STRATEGY

Related DTCs	P2759	Shift solenoid valve SLU/Range check
Required sensors/Components	Shift solenoid valve SLU	
Frequency of operation	Continuous	
Duration	1 sec.	
MIL operation	Immediate	
Sequence of operation	None	

TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
The monitor will run whenever this DTC is not present.	See page DI-1128	
Solenoid current cut status	Not cut	
CPU commanded duty	19% or more	-
Battery voltage	11 V or more	-
Ignition switch	ON	
Starter	OFF	

TYPICAL MALFUNCTION THRESHOLDS

Detection criteria	Threshold
Solenoid status from IC	Fail (Open or short)

COMPONENT OPERATING RANGE

Parameter	Standard value
Output signal duty	Less than 100%

WIRING DIAGRAM

INSPECTION PROCEDURE

1	Inspect transmission wire.
----------	-----------------------------------

PREPARATION:

Disconnect the transmission wire connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
13 (SLU+) – 5 (SLU-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
13 (SLU+) – Body ground	10 kΩ or higher
5 (SLU-) – Body ground	↑

NG	Go to step 3.
-----------	----------------------

2 Check harness and connector (Transmission wire - ECM)

PREPARATION:

- (a) Connect the transmission wire connector.
- (b) Disconnect the ECM connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
E6 - 15 (SLU+) - E6 - 14 (SLU-)	5.0 to 5.6 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E6 - 15 (SLU+) - Body ground	10 kΩ or higher
E6 - 14 (SLU-) - Body ground	↑

NG → **Repair or replace the harness or connector (See page IN-30).**

OK

Replace the ECM (See page SF-82).

3 Inspect shift solenoid valve SLU.

PREPARATION:

Remove the shift solenoid valve SLU (See page [AT-12](#)).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

CHECK:

Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG Replace the shift solenoid valve SLU (See page [AT-12](#)).

OK

Repair or replace the transmission wire (See page [AT-9](#)).

DTC	P2772	Transfer L4 SW Circuit
------------	--------------	-------------------------------

CIRCUIT DESCRIPTION

The ECM detects the signal from the transfer L4 position switch.
This DTC indicates that the transfer L4 position switch remains ON.

DTC No.	DTC Detecting Condition	Trouble Area
P2772	Transfer L4 position switch remains ON while vehicle running under conditions for 1.8 seconds or more (1-trip detection logic) (a) Output shaft speed 3000 rpm or less (b) Transfer shift position is H	<ul style="list-style-type: none"> • Short in transfer L4 position switch circuit • Transfer L4 position switch • ECM

MONITOR DESCRIPTION

The ECM monitors the transfer-case L4 position switch to determine when the transfer-case L4 gear is engaged. If the transfer-case L4 gears remain engaged under the following conditions, the ECM will conclude that there is a malfunction of the L4 position switch:

- L4 switch indicated that the L4 transfer-case gears are engaged.
- Transfer-case shifter is in the "H" position.
- Transfer-case output shaft rpm is between 750 and 3,000 rpm.
- The specified time period has elapsed.

If all of the above conditions are detected, the ECM will conclude that there is a malfunction of the L4 switch, and illuminate the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P2772	Transfer L4 position switch/ON malfunction
Required sensors/Components	Transfer L4 position switch	
Frequency of operation	Continuous	
Duration	ON malfunction (A)	1.8 sec.
	ON malfunction (B)	0.5 sec.
MIL operation	1 driving cycle	
Sequence of operation	None	

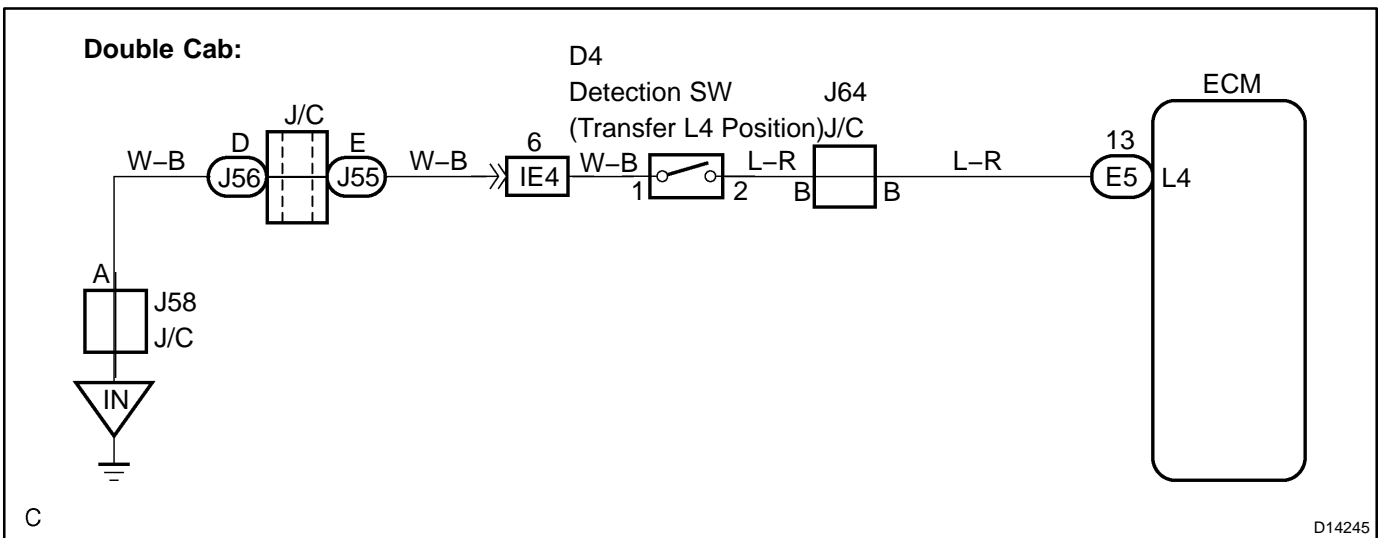

TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
All:		
Output speed sensor circuit	Not circuit malfunction	
Vehicle speed sensor circuit	Not circuit malfunction	
Transfer neutral position switch	OFF	
ON malfunction (A)		
Output speed (Transfer output speed)	1,000 to 3,000 rpm	
ON malfunction (B)		
Output speed (Transfer output speed)	143 rpm or more	–

TYPICAL MALFUNCTION THRESHOLDS

Detection criteria	Threshold
Both of the following conditions is met: ON malfunctions (A) and (B)	
ON malfunction (A)	
L4 switch	ON
ON malfunction (B)	
Actual Transfer gear ratio Transfer input speed/Transfer output speed	0.9 to 1.1

WIRING DIAGRAM

INSPECTION PROCEDURE

1 Check harness and connector (transfer L4 position switch – body ground).

Wire Harness Side:
(Connector Front View):

D4

D14209

PREPARATION:

Disconnect the transfer position L4 switch connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
1 – Body ground	Below 1 Ω

NG

Repair or replace the harness or connector
(See page IN-30).

OK

2 Inspect transfer L4 position switch.

P

D14208

PREPARATION:

Remove the transfer position L4 switch.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Switch position	Tester Connection	Specified Condition
Free	1 – 2	10 k Ω or higher
Pushed in	↑	Below 1 Ω

NG

Replace the transfer L4 position switch.

OK

3 Check harness and connector (transfer L4 position switch – ECM).

PREPARATION:

Disconnect the connector from the ECM.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E5 – 13 (L4) – D4 – 2 (L4)	Below 1 Ω

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
E5 – 13 (L4) – Body ground	10 kΩ or higher

NG Repair or replace the harness or connector (See page [IN-30](#)).

OK

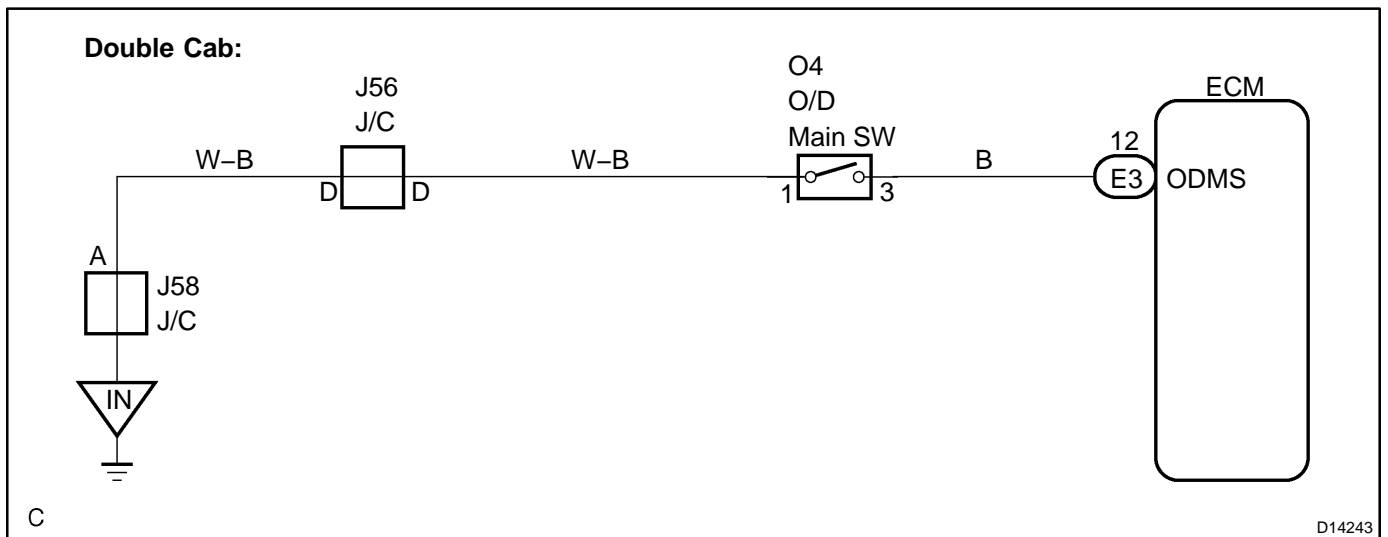

Replace the ECM (See page [SF-82](#)).

O/D Main Switch Circuit

CIRCUIT DESCRIPTION

The O/D main switch (transmission control switch) is a momentary type switch. When pressing the O/D main switch once, the O/D OFF indicator light comes on and the ECM prohibits shifting into O/D. When pressing it once again, the O/D OFF indicator light goes off and the ECM allows shifting into O/D. Turning the IG switch OFF will reset the O/D OFF indicator light.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 Check harness and connector (O/D main switch – body ground)

Wire Harness Side:
(Connector Front View):

O4

N

D14181

PREPARATION:

Disconnect the O/D main switch connector.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
1 – Body ground	Below 1 Ω

NG

Repair or replace the harness or connector (See page [IN-30](#)).

OK

2 Inspect O/D main switch.

Switch Side:
(Connector Front View):

O4

N

D14182

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Switch Condition	Tester Connection	Specified Condition
O/D main switch pressed and held	1 – 3	Below 1 Ω
O/D main switch released	↑	10 kΩ or higher

NG

Replace O/D main switch (See page [AT-19](#)).

OK

3 Check harness and connector (O/D main switch - ECM).

PREPARATION:

- Connect the O/D main switch connector.
- Disconnect the connector from the ECM.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Switch Condition	Tester Connection	Specified Condition
O/D main switch pressed and held	E3 - 12 (ODMS) - Body ground	Below 1 Ω
O/D main switch released	\uparrow	10 k Ω or higher

NG

Repair or replace the harness or connector (See page IN-30).

OK

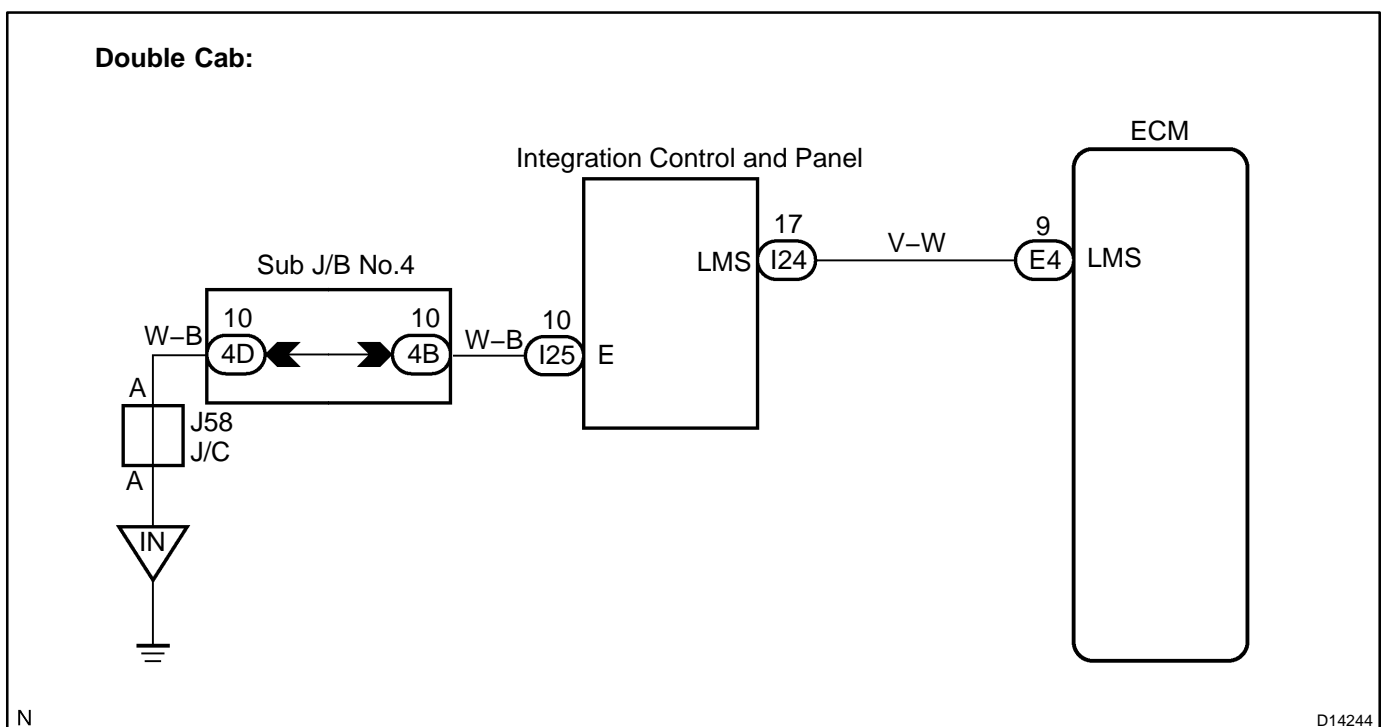

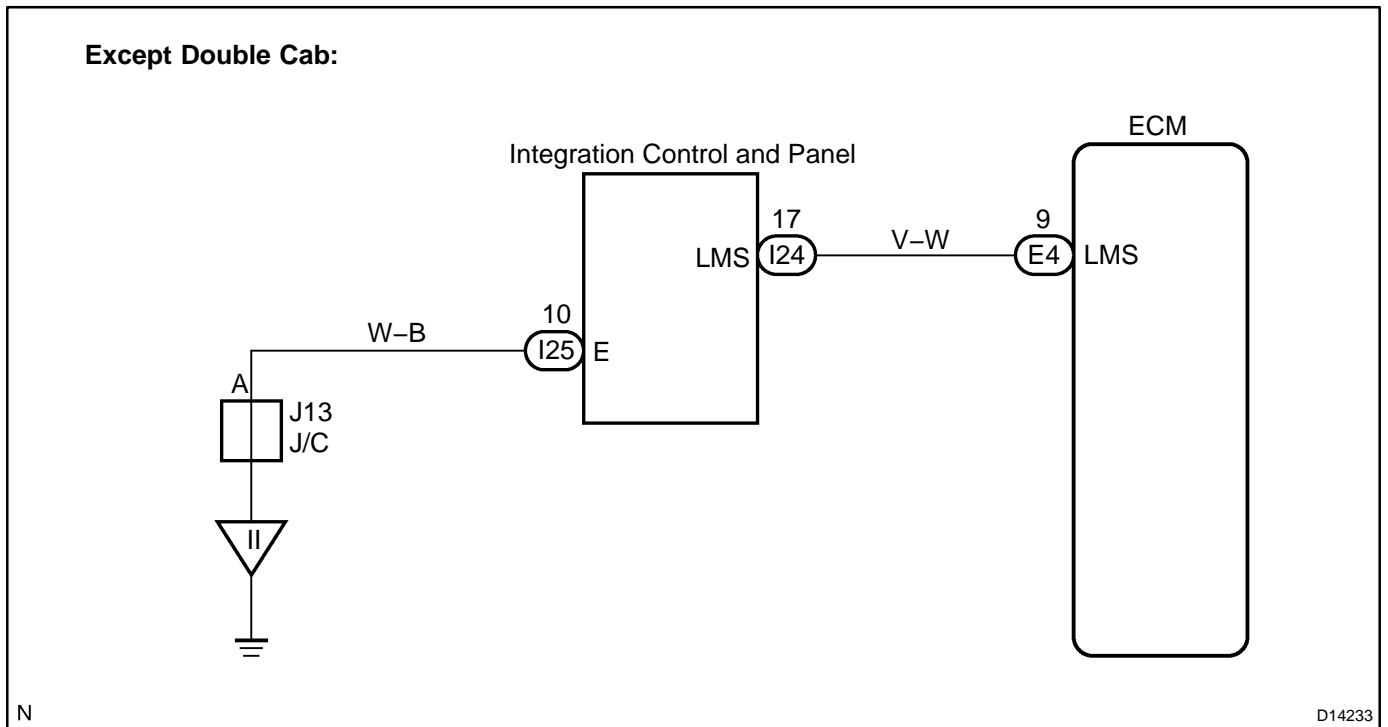

Proceed to next circuit inspection shown on matrix chart (See page DI-1136).

Shift Position L Switch Circuit

CIRCUIT DESCRIPTION

The shift position L switch is a momentary type switch. When the shift position L switch is pressed while driving with the shift lever in the 2 position, the L position indicator on the combination meter comes on and the transmission is locked in 1st gear. When the switch is pressed again, the indicator goes off and the transmission is released.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 Check harness and connector (shift position L switch – body ground).

**Wire Harness Side:
(Connector Front View):**

N

D14179

PREPARATION:

Remove the center cluster integration panel assembly (shift position L switch).

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Tester Connection	Specified Condition
10 – Body ground	Below 1 Ω

NG

Repair or replace the harness or connector (See page IN-30).

OK

2 Inspect center cluster integration panel (shift position L switch).

P

D13886

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Switch Condition	Tester Connection	Specified Condition
Shift position L switch pressed and held	I24 – 17 (LMS) – I25 – 10 (E)	Below 1 Ω
Shift position L switch released	↑	10 kΩ or higher

NG

Replace center cluster integration panel (shift position L switch).

OK

3 Check harness and connector (shift position L switch – ECM).

PREPARATION:

- (a) Install the center cluster integration panel assembly (shift position L switch).
- (b) Disconnect the connector from the ECM.

CHECK:

Measure the resistance according to the value(s) in the table below.

OK:

Switch Condition	Tester Connection	Specified Condition
Shift position L switch pressed and held	E4 – 9 (LMS) – Body ground	Below 1 Ω
Shift position L switch released	↑	10 kΩ or higher

NG Repair or replace the harness or connector (See page [IN-30](#)).

OK

Proceed to next circuit inspection shown on matrix chart (See page [DI-1136](#)).

CO/HC INSPECTION

EMOKG-10

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

1. INITIAL CONDITIONS

- (a) Engine at normal operating temperature
- (b) Air cleaner installed
- (c) All pipes and hoses of air induction system connected
- (d) All accessories switched OFF
- (e) All vacuum lines properly connected
- (f) SFI system wiring connectors fully plugged
- (g) Correct ignition timing
- (h) Transmission in neutral position
- (i) Tachometer and CO/HC meter calibrated by hand

2. START ENGINE

3. RACE ENGINE AT 2,500 RPM FOR APPROX. 180 SECONDS

4. INSERT CO/HC METER TESTING PROBE AT LEAST 40 cm (1.3 ft) INTO TAILPIPE DURING IDLING

5. IMMEDIATELY CHECK CO/HC CONCENTRATION AT IDLE AND/OR 2,500 RPM

HINT:

When performing the 2 mode (2,500 rpm and idle) test, follow the measurement orders prescribed by the applicable local regulations.

If the CO/HC concentration does not comply with regulations, perform troubleshooting in the order given below.

- (1) Check the A/F sensors and heated oxygen sensors operation (See page [DI-84](#) and [DI-90](#)).
- (2) See the table below for possible causes, and then inspect and correct the corresponding causes if necessary.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: <ul style="list-style-type: none"> • Incorrect timing • Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idle (fluctuating HC reading)	1. Vacuum leaks: <ul style="list-style-type: none"> • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: <ul style="list-style-type: none"> • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

COMPRESSION INSPECTION

EM06C-06

HINT:

If there is a lack of power, excessive oil consumption or poor fuel economy, measure the compression pressure.

1. WARM UP AND STOP ENGINE

Allow the engine to warm up to normal operating temperature.

2. REMOVE SPARK PLUGS

- (a) Remove the V-bank cover.
- (b) Remove the air cleaner.
- (c) Remove the intake air surge tank (See page [EM-62](#)).
- (d) Remove the 6 ignition coils.
- (e) Remove the 6 spark plugs.
- (f) Disconnect the 6 injector connectors.

3. CHECK CYLINDER COMPRESSION PRESSURE

- (a) Insert a compression gauge into the spark plug hole.
- (b) Fully open the throttle.
- (c) While cranking the engine, measure the compression pressure.

HINT:

Always use a fully charged battery to obtain an engine speed of 250 rpm or more.

- (d) Repeat steps (a) through (c) for each cylinder.

NOTICE:

This measurement must be done in the shortest possible time.

Compression pressure:

1.3 MPa (13.3 kgf/cm², 189 psi) or more

Minimum pressure: 1.0 MPa (10.2 kgf/cm², 145 psi)

Difference between each cylinder:

0.1 MPa (1.0 kgf/cm², 15 psi) or less

- (e) If the cylinder compression pressure in 1 or more cylinders is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat steps (a) through (c) for cylinders with low compression pressure.
 - If adding oil improves the compression pressure, it is likely that the piston rings and/or cylinder bore are worn or damaged.
 - If compression pressure stays low, a valve may be sticking, seating may be improper, or there may be a leak past the gasket.

4. REINSTALL SPARK PLUGS

- (a) Connect the 6 injector connectors.
- (b) Install the 6 spark plugs.
Torque: 20 N·m (200 kgf-cm, 15 ft-lbf)
- (c) Install the 6 ignition coils.
- (d) Install the intake air surge tank (See page [EM-89](#)).
- (e) Install the air cleaner.
- (f) Install the V-bank cover.

VALVE CLEARANCE INSPECTION

EM1XG-01

1. DRAIN ENGINE COOLANT (See page [CO-2](#))
2. REMOVE V-BANK COVER
3. REMOVE AIR CLEANER (See page [EM-62](#))
4. REMOVE INTAKE AIR SURGE TANK
(See page [EM-62](#))
5. REMOVE IGNITION COIL
6. REMOVE CYLINDER HEAD COVER
(See page [EM-62](#))

7. SET NO. 1 CYLINDER TO TDC/COMPRESSION
 - (a) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.

- (b) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing caps as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360 °) and align the timing marks as above.

8. INSPECT VALVE CLEARANCE

- (a) Check the valves indicated in the illustration.
- (1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (Cold):

Intake: 0.15 to 0.25 mm (0.006 to 0.010 in.)

Exhaust: 0.29 to 0.39 mm (0.011 to 0.015 in.)

- (2) Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

- (b) Turn the crankshaft $2/3$ of a revolution (240°), and check the valves indicated in the illustration.

- (1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (Cold):

Intake: 0.15 to 0.25 mm (0.006 to 0.010 in.)

Exhaust: 0.29 to 0.39 mm (0.011 to 0.015 in.)

- (2) Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

(c) Turn the crankshaft $2/3$ of a revolution (240°), and check the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Valve clearance (Cold):

Intake: 0.15 to 0.25 mm (0.006 to 0.010 in.)

Exhaust: 0.29 to 0.39 mm (0.011 to 0.015 in.)

(2) Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

9. ADJUST VALVE CLEARANCE

(a) Set the No. 1 cylinder to the TDC/compression.

(1) Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.

(2) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing caps as shown in the illustration.

If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

- (3) Place paint marks on the No. 1 chain links that correspond with the timing marks of the camshaft timing gears.

- (b) Remove the chain tensioner No. 1.

NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, turn the crankshaft counterclockwise 40 ° from the TDC first.**

- (1) Remove the 4 bolts, timing chain cover plate and gasket.

- (2) While rotating the stopper plate of the tensioner upward, push in the plunger of the chain tensioner as shown in the illustration.

- (3) While rotating the stopper plate of the tensioner downward, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.

- (4) Remove the 2 bolts and chain tensioner No.1.

- (c) Remove the No. 2 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) While raising up the chain tensioner No. 2, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (2) Hold the hexagonal portion of the No. 2 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.

NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

- (3) Separate the camshaft timing sprocket from the No. 2 camshaft.
- (4) Rotate the camshaft counterclockwise using the wrench so that the cam lobes of the No. 1 cylinder face upward as shown in the illustration.

- (5) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence as shown in the illustration.
- (6) Remove the 4 bearing caps and No. 2 camshaft.

- (d) Remove the chain tensioner No. 2.
 - (1) Remove the chain tensioner No. 2 bolt, and then remove the chain tensioner No. 2 and camshaft timing sprocket.
- (e) Remove the camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Hold the hexagonal portion of the No. 1 camshaft with a wrench, and loosen the camshaft timing gear assembly set bolt.

NOTICE:

- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear assembly.**

- (2) Slide the camshaft timing gear assembly and separate the No. 1 chain from the camshaft timing gear sprocket.

- (3) Rotate the No. 1 camshaft counterclockwise using a wrench so that the cam lobes of No. 1 cylinder face upward as shown in the illustration.

- (4) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence as shown in the illustration.

- (5) Remove the 4 bearing caps.

- (6) Remove the camshaft timing gear assembly set bolt with the No. 1 camshaft lifted up, and then remove the No. 1 camshaft and camshaft timing gear assembly w/ No. 2 chain.

- (7) Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

- (f) Remove the No. 4 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) While pushing down the chain tensioner No. 2, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (2) Hold the hexagonal portion of the No. 4 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.

NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

- (3) Separate the camshaft timing sprocket from the No. 4 camshaft.

- (4) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence as shown in the illustration.
- (5) Remove the 4 bearing caps and No. 4 camshaft.

- (g) Remove the chain tensioner No. 2.
 (1) Remove the chain tensioner No. 3 bolt, and then remove the chain tensioner No. 3 and camshaft timing sprocket.

- (h) Remove the No. 3 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence as shown in the illustration.
 (2) Remove the 4 bearing caps.

- (3) Hold the No. 1 chain, and remove the No. 3 camshaft, camshaft timing gear assembly and No. 2 chain.

- (4) Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

- (i) Remove the valve lifters.

- (j) Determine the size of the valve lifter to be installed according to the following formulas or charts:
- (1) Using a micrometer, measure the thickness of the removed lifter.
 - (2) Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

T: Thickness of removed lifter

A: Measured valve clearance

N: Thickness of new lifter

Intake:

$$N = T + (A - 0.20 \text{ mm (0.008 in.)})$$

Exhaust:

$$N = T + (A - 0.30 \text{ mm (0.012 in.)})$$

- (3) Select a new lifter with a thickness as close as possible to the calculated value.

HINT:

Lifters are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

(k) Install the No. 3 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Align the mark link (yellow) with the timing mark (2-dot mark) of the camshaft timing gear assembly as shown in the illustration.
- (2) Apply new engine oil to the thrust portions and journals of the camshafts.

- (3) Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear assembly.

- (4) Set the No. 3 camshaft onto the LH cylinder head with the cam lobes of the No. 2 cylinder facing downward as shown in the illustration.

- (5) Install the 4 bearing caps in their proper locations.
- (6) Apply a light coat of engine oil to the threads of the bearing cap bolts.

- (7) Install the 8 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in.-lbf) for 10 mm (0.39 in.) head
24 N·m (245 kgf·cm, 18 ft.-lbf) for 12 mm (0.47 in.) head

- (8) Set the paint mark of the No. 1 chain between the timing marks of the camshaft timing gear assembly.

- (l) Install the chain tensioner No. 2.
 (1) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (2) Temporarily install the camshaft timing assembly and chain tensioner No. 2 and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing sprocket and camshaft timing gear assembly.
 (3) Tighten the chain tensioner No. 3 bolt.

Torque: 19 N·m (194 kgf·cm, 14 ft.-lbf)

- (m) Install the No. 4 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Align the knock pin hole on the camshaft timing sprocket with the knock pin of the No. 4 camshaft, and insert the No. 4 camshaft into the camshaft timing sprocket.
- (2) Temporarily install the camshaft timing sprocket set bolt.

- (3) Install the 4 bearing caps in their proper locations.
- (4) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

- (5) Install the 8 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in·lbf) for 10 mm (0.39 in.) head
24 N·m (245 kgf·cm, 18 ft·lbf) for 12 mm (0.47 in.) head

- (6) Hold the hexagonal portion of the No. 4 camshaft with a wrench, and tighten the camshaft timing sprocket set bolt.

Torque: 100 N·m (1,020 kgf·cm, 74 ft·lbf)

- (7) Remove the pin from the chain tensioner No. 2.

- (n) Install the camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Align the mark link (yellow) with the timing mark (1-dot mark) of the camshaft timing gear assembly as shown in the illustration.
- (2) Apply new engine oil to the thrust portions and journals of the camshafts.
- (3) Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear assembly.
- (4) Align the knock pin hole on the camshaft timing gear assembly with the knock pin of the No. 1 camshaft, and insert the No. 1 camshaft into the camshaft timing gear assembly.
- (5) Temporarily install the camshaft timing gear assembly set bolt.
- (6) Set the No. 1 camshaft onto the RH cylinder head with the cam lobes of the No. 1 cylinder facing downward as shown in the illustration.
- (7) Install the 4 bearing caps in their proper locations.
- (8) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

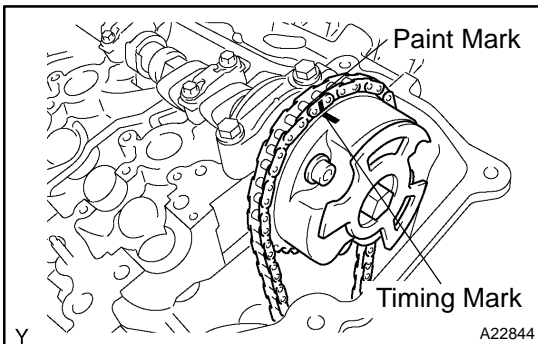

- (9) Install the 8 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in.-lbf) for 10 mm (0.39 in.) head
24 N·m (245 kgf·cm, 18 ft·lbf) for 12 mm (0.47 in.) head

- (10) Rotate the No. 1 camshaft clockwise using the hexagonal portion of the No. 1 camshaft so that the timing mark of the camshaft timing gear assembly is aligned with the timing mark of the camshaft bearing cap.

- (11) Align the paint mark of the No. 1 chain with the timing mark of the camshaft timing gear assembly.

- (12) Hold the hexagonal portion of the No. 1 camshaft with a wrench, and tighten the camshaft timing gear assembly set bolt.

Torque: 100 N·m (1,020 kgf·cm, 74 ft·lbf)

- (o) Install the chain tensioner No. 2.
 (1) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (2) Temporarily install the camshaft timing gear and chain tensioner No. 2 and align the mark links (yellow) with the timing marks (1-dot mark) of the camshaft timing gear assembly and camshaft timing sprocket.

- (3) Tighten the chain tensioner No. 2 bolt.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

- (p) Install the No. 2 camshaft.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (1) Set the No. 2 camshaft onto the RH cylinder head with the cam lobes of No. 1 cylinder facing upward as shown in the illustration.

- (2) Install the 4 bearing caps in their proper locations.
- (3) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

- (4) Install the 8 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in·lbf) for 10 mm (0.39 in.) head
24 N·m (245 kgf·cm, 18 ft·lbf) for 12 mm (0.47 in.) head

- (5) Rotate the No. 2 camshaft clockwise using a wrench so that the knock pin of the No. 2 camshaft is aligned with the knock pin hole of the camshaft timing sprocket.

- (6) Hold the hexagonal portion of the No. 2 camshaft with a wrench, and install the camshaft timing sprocket set bolt.

Torque: 100 N·m (1,020 kgf·cm, 74 ft·lbf)

- (7) Remove the pin from the chain tensioner No. 2.

- (q) Install the chain tensioner No. 1.
- (1) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.
 - (2) While turning the stopper plate of the tensioner counterclockwise, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate.
 - (3) Install the chain tensioner with the 2 bolts.
 - (4) Remove the bar from the chain tensioner.
 - (5) Install a new gasket and the timing chain cover plate with the 4 bolts.

Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

- (6) Turn the crankshaft pulley 2 complete revolutions slowly, and align the notch with the timing mark "0" of the timing chain cover.

(7) Check that the timing marks of the camshaft timing gear assembly and camshaft timing sprocket are aligned with the timing marks of the bearing caps as shown in the illustration.

10. **INSTALL CYLINDER HEAD COVER** (See page [EM-89](#))
11. **INSTALL IGNITION COIL**
12. **INSTALL INTAKE AIR SURGE TANK**
(See page [EM-89](#))
13. **INSTALL AIR CLEANER** (See page [EM-89](#))
14. **ADD ENGINE COOLANT** (See page [CO-2](#))
15. **INSTALL V-BANK COVER**
16. **INSPECT IGNITION TIMING** (See page [EM-23](#))

IGNITION TIMING INSPECTION

EM1XH-01

1. WARM UP ENGINE

Allow the engine to warm up to normal operating temperature.

2. INSPECT IGNITION TIMING

- (a) When using a hand-held tester or OBD II scan tool.
- (1) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
 - (2) Please refer to the hand-held tester operator's manual for further details.

**Ignition timing: 7 to 24° BTDC at idle
(Transmission in neutral)**

- (3) Disconnect the hand-held tester or OBD II scan tool from the DLC3.

- (b) When not using a hand-held tester or OBD II scan tool.
- (1) Remove the air cleaner cap.
 - (2) Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

- (3) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

- (4) Using the timing light, check the ignition timing.
**Ignition timing: 8 to 12° BTDC at idle
(Transmission in neutral position)**
- (5) Remove the SST from the DLC3.
- (6) Check the ignition timing.
**Ignition timing: 7 to 24° BTDC at idle
(Transmission in neutral position)**
- (7) Disconnect the timing light from the engine.
- (8) Install the air cleaner cap.

IDLE SPEED INSPECTION

EM1XI-01

1. **When using a hand-held tester or OBD II scan tool.**
 - (a) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
 - (b) Please refer to the hand-held tester operator's manual for further details.
 - (c) Switch the air conditioning OFF.
 - (d) Race the engine at 2,500 rpm for approx. 90 seconds.
 - (e) Check the idle speed.

Idle speed: 650 to 750 rpm

(Transmission in neutral position)

If the idle speed is not as specified, check the air intake system.

- (f) Disconnect the hand-held tester or OBD II scan tool from the DLC3.

2. **When not using a hand-held tester or OBD II scan tool.**

- (a) Using SST, connect the tachometer probe to terminal TAC of the DLC3.
SST 09843-18030
- (b) Switch the air conditioning OFF.
- (c) Race the engine at 2,500 rpm for approx. 90 seconds.
- (d) Check the idle speed.

Idle speed: 650 to 750 rpm

(Transmission in neutral position)

If the idle speed is not as specified, check the air intake system.

- (e) Disconnect the tachometer from the DLC3.

TIMING CHAIN COMPONENTS

EM1XJ-01

γ N·m (kgf·cm, ft·lbf) : Specified torque

γ N·m (kgf·cm, ft·lbf) : Specified torque

ENGINE MECHANICAL (1GR-FE) - TIMING CHAIN

ENGINE MECHANICAL (1GR-FE) - TIMING CHAIN

REMOVAL

1. DRAIN ENGINE COOLANT (See page [CO-2](#))
2. DRAIN ENGINE OIL
3. REMOVE BATTERY
4. REMOVE V-BANK COVER
5. REMOVE RADIATOR (See page [CO-17](#))
6. LOOSEN FAN W/FLUID COUPLING
(See page [EM-62](#))
7. REMOVE DRIVE BELT (See page [EM-62](#))
8. REMOVE FAN W/FLUID COUPLING
9. REMOVE AIR CLEANER (See page [EM-62](#))
10. REMOVE INTAKE AIR SURGE TANK
(See page [EM-62](#))
11. REMOVE CYLINDER HEAD COVER
(See page [EM-62](#))
12. REMOVE VVT SENSOR
13. REMOVE OIL LEVEL GAUGE GUIDE
 - (a) Remove the oil level gauge.
 - (b) Remove the bolt and pull out the oil level gauge guide.
 - (c) Remove the O-ring from the oil level gauge guide.

14. SEPARATE VANE PUMP

- (a) Disconnect the P/S oil pressure switch connector.
- (b) Remove the 2 bolts, and separate the vane pump.

NOTICE:

Do not hit the pulley to other parts when separating the vane pump.

HINT:

The vane pump is suspended securely.

15. REMOVE GENERATOR (See page [CH-7](#))
16. SEPARATE COOLER COMPRESSOR
(See page [AC-54](#))

17. REMOVE V-RIBBED BELT TENSIONER

Remove the 5 bolts and V-ribbed belt tensioner.

18. REMOVE IDLER PULLEY NO.1 AND NO.2

**19. REMOVE CRANKSHAFT PULLEY**

- (a) Using SST, hold the crankshaft pulley and loosen the pulley set bolt.

SST 09213-54015 (91651-60855), 09330-00021

- (b) Using the pulley set bolt and SST, remove the crankshaft pulley.

SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)

**20. REMOVE OIL PAN NO.2**

- (a) Remove the 15 bolts and 2 nuts.

- (b) Insert the blade of SST between the oil pan and oil pan No. 2, cut off applied sealer and remove the oil pan No. 2.

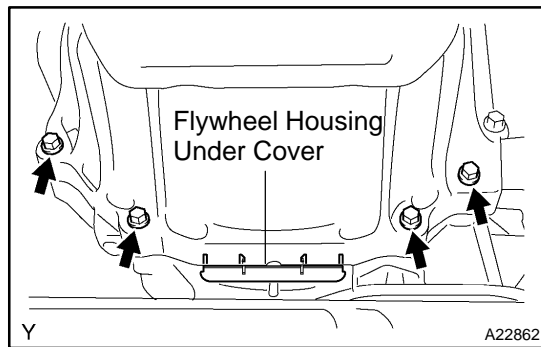

SST 09032-00100

NOTICE:

- Be careful not to damage the contact surface of the oil pan and oil pan No. 2.
- Be careful not to damage the oil pan No. 2 flange.

**21. REMOVE OIL STRAINER**

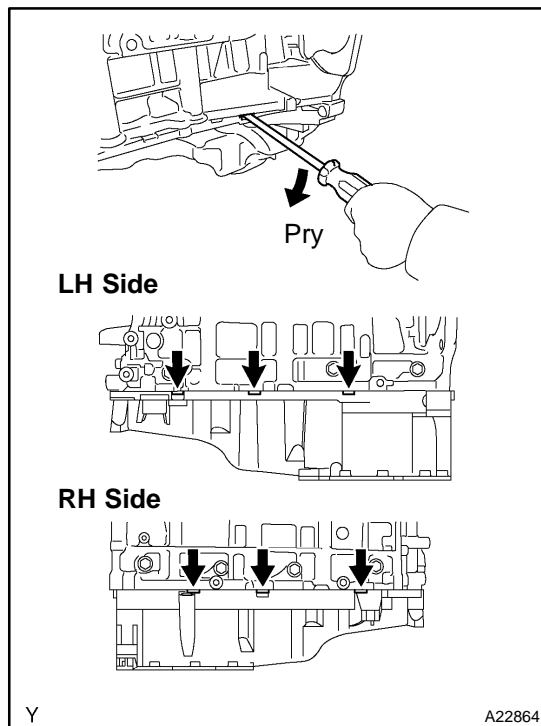

Remove the 2 nuts, oil strainer and gasket.

**22. REMOVE OIL PAN**

- (a) Remove the 4 housing bolts.
- (b) Remove the flywheel housing under cover.

- (c) Remove 17 bolts and 2 nuts.

- (d) Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block in the sequence shown.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and oil pan.

- (e) Remove the O-ring from the oil pump.

**23. REMOVE WATER INLET**

- (a) Disconnect the 2 oil cooler hoses (w/ oil cooler).

(b) Disconnect the 2 radiator hoses.

(c) Disconnect the 5 water by-pass hoses.

- (d) Remove the 5 bolts and water inlet.
- (e) Remove the O-ring from the water outlet pipe.
- (f) Remove the gasket from the water pump.

24. REMOVE TIMING CHAIN COVER

(a) Remove the 24 bolts and 2 nuts.

- (b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.

- (c) Remove the O-ring from the LH cylinder head.

**25. SET NO.1 CYLINDER TO TDC/COMPRESSION**

- (a) Install the crankshaft pulley set bolt, and turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

- (b) Check that the timing marks of the camshaft timing gear assembly and camshaft timing sprocket are aligned with the timing marks of the bearing caps as shown in the illustration.

If not, turn the crankshaft 1 complete revolution (360 °) and align the timing marks as above.

26. REMOVE CHAIN TENSIONER NO.1**NOTICE:**

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**

- (a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the chain tensioner as shown in the illustration.
- (b) While turning the stopper plate of the tensioner counter-clockwise, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.
- (c) Remove the 2 bolts and chain tensioner.

27. REMOVE CHAIN TENSIONER SLIPPER

28. REMOVE IDLE GEAR NO.1

Using a 10 mm hexagon wrench, remove the idle gear shaft No. 2, idle gear No. 1 and idle gear shaft No. 1.

29. REMOVE CHAIN VIBRATION DAMPER NO.2

Remove the 2 chain vibration damper No.2.

30. REMOVE NO.1 TIMING CHAIN

31. REMOVE CRANKSHAFT TIMING SPROCKET

32. REMOVE NO.2 TIMING CHAIN

- (a) While raising the chain tensioner No. 2, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts, camshaft timing sprocket, camshaft timing gear assembly and timing chain No.2.

NOTICE:

- Be careful not to damage the cylinder head and valve lifter with the wrench.
- Do not disassemble the camshaft timing gear assembly.

33. REMOVE CHAIN TENSIONER NO.2

Remove the bolt and chain tensioner No.2.

INSPECTION

1. INSPECT NO.1 AND NO.2 TIMING CHAINS

Using a spring scale, pull the chain sub assembly with 147 N (15.0 kgf, 33.1 lbf) of force and measure the length of the chain sub assembly using a vernier caliper.

Maximum chain elongation: 146.8 mm (5.780 in.)

NOTICE:

Perform the same measurements by pulling at random in 3 or more places to obtain an average length.

If the elongation is greater than the maximum, replace the chain.

2. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

- Put the No. 1 chain on the larger gear of the camshaft timing gear assembly.
- Using a vernier caliper, measure the timing gear with the chain.

Minimum gear diameter (w/ chain):

115.5 mm (4.547 in.)

NOTICE:

The vernier caliper must contact the chain rollers for the measuring.

If the diameter is less than the minimum, replace the No. 1 chain and camshaft timing gear assembly.

- (c) Put the No. 2 chain on the smaller gear of the camshaft timing gear assembly.
- (d) Using a vernier caliper, measure the timing gear with the chain.

Minimum gear diameter (w/ chain):
73.1 mm (2.878 in.)

NOTICE:

The vernier caliper must contact the chain rollers for the measuring.

If the diameter is less than the minimum, replace the No. 2 chain and camshaft timing gear assembly.

3. INSPECT CAMSHAFT TIMING SPROCKET

- (a) Put the No. 2 chain on the camshaft timing sprocket.
- (b) Using a vernier caliper, measure the camshaft timing sprocket diameter with the chain .

Minimum gear diameter (w/ chain):
73.1 mm (2.878 in.)

NOTICE:

The vernier caliper must contact the chain rollers for the measuring.

If the diameter is less than the minimum, replace the No. 2 chain and the camshaft timing sprocket.

4. INSPECT CRANKSHAFT TIMING SPROCKET

- (a) Put the No. 1 chain on the crankshaft timing sprocket.
- (b) Using a vernier caliper, measure the crankshaft timing gear diameter with the chain.

Minimum gear diameter (w/ chain):
61.0 mm (2.402 in.)

NOTICE:

The vernier caliper must contact the chain rollers for the measuring.

If the diameter is less than the minimum, replace the No. 1 chain and crankshaft timing sprocket.

5. INSPECT IDLE GEAR NO.1

- (a) Put the No. 1 chain on the idle gear.
- (b) Using a vernier caliper, measure the idle gear with the chain.

Minimum gear diameter (w/ chain):
61.0 mm (2.402 in.)

NOTICE:

The vernier caliper must contact the chain rollers for the measuring.

If the diameter is less than the minimum, replace the No. 1 chain and idle gear.

6. INSPECT IDLE GEAR SHAFT OIL CLEARANCE

- (a) Using a micrometer, measure the idle gear shaft diameter.

Idle gear shaft diameter:
22.987 to 23.000 mm (0.9050 to 0.9055 in.)

- (b) Using a caliper gauge, measure the inside diameter of the idle gear.

Idle gear inside diameter:
23.02 to 23.03 mm (0.9063 to 0.9067 in.)

- (c) Subtract the idle gear shaft diameter measurement from the idle gear inside diameter measurement.

Standard oil clearance:
0.020 to 0.043 mm (0.0008 to 0.0017 in.)

Maximum oil clearance:
0.093 mm (0.0037 in.)

7. INSPECT CHAIN TENSIONER NO.1

- (a) Check that the plunger moves smoothly when the ratchet pawl is raised with a finger.

- (b) Release the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushing with a finger.

8. INSPECT CHAIN TENSIONER NO.2

- (a) Check that the plunger moves smoothly.

- (b) Measure the worn depth of the chain tensioner slipper.
Maximum depth: 1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain tensioner No. 2.

9. INSPECT CHAIN TENSIONER SLIPPER

Measure the worn depth of the chain tensioner slipper.

Maximum depth: 1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain tensioner slipper.

10. INSPECT CHAIN VIBRATION DAMPER NO.1 AND NO.2

Measure the worn depth of the chain vibration damper No. 1 and No. 2.

Maximum depth: 1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper No. 1 or No.2.

REPLACEMENT

HINT:

There are 2 methods ((a) and (b)) to replace the oil seal.

REPLACE TIMING CHAIN COVER OIL SEAL

(a) If the rear timing chain cover is removed:

- (1) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the oil pump. Wrap the tip of the screwdriver with tape.

- (2) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST 09226-10010

- (3) Apply MP grease to the oil seal lip.

(b) If the rear timing chain cover is installed:

- (1) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Wrap the tip of the screwdriver with tape.

- (2) Using SST and a hammer, tap in the oil seal until its surface is flush with the timing chain cover edge.

SST 09226-10010

- (3) Apply MP grease to a new oil seal lip.

INSTALLATION

1. SET CRANKSHAFT POSITION

Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key into the left horizontal position.

NOTICE:

Having the crankshaft at the wrong angle can cause the piston head and valve head to come into contact with each other when you install the camshaft, causing damage. So always set the crankshaft at the correct angle.

2. INSTALL CHAIN TENSIONER NO.2

- (a) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

- (b) Install the chain tensioner No. 2 with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

3. INSTALL NO.2 TIMING CHAIN

- (a) Align the mark links (yellow) with the timing marks (1-dot mark) of the camshaft timing gear assembly and camshaft timing sprocket as shown in the illustration.

- (b) Align the timing marks on the camshaft timing gear assembly and camshaft timing sprocket with the timing marks on the bearing caps, and install the camshaft timing gears with the chain to the RH camshafts.
- (c) Temporarily install the 2 camshaft timing gear bolts.

NOTICE:

Do not push camshaft timing gear assembly to the camshaft forcibly when installing it.

- (d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N·m (1,020 kgf·cm, 74 ft·lbf)
- (e) Remove the pin from the chain tensioner No. 2.

4. INSTALL CHAIN VIBRATION DAMPER NO.1

- (a) Install the chain vibration damper No. 1 with the 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

5. INSTALL CRANKSHAFT TIMING SPROCKET

- (a) Align the timing gear set key with the key groove of the timing sprocket.
- (b) Install the timing gear onto the crankshaft with the sprocket side facing inward.

6. INSTALL CHAIN TENSIONER SLIPPER

7. INSTALL CHAIN TENSIONER NO.1

- (a) While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.
- (b) While turning the stopper plate of the tensioner counter-clockwise, insert a bar of ϕ 3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate.
- (c) Install the chain tensioner with the 2 bolts.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

8. SET NO.1 CYLINDER TO TDC/COMPRESSION

- (a) Align the timing marks of the camshaft timing gear assembly, camshaft timing sprocket and bearing caps.

- (b) Using the crankshaft pulley set bolt, turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

9. INSTALL TIMING CHAIN NO.1

- (a) Align the mark link (yellow) with the timing mark of the crankshaft timing sprocket.

- (b) Align the mark links (orange) with the timing marks of the camshaft timing gear assembly and camshaft timing sprocket, and install the chain.

10. INSTALL CHAIN VIBRATION DAMPER NO.2

- Install the 2 chain vibration damper No.2.

**11. INSTALL IDLE GEAR NO.1**

- (a) Apply a light coat of engine oil to the rotating surface of the idle gear shaft No. 1.
- (b) Temporarily install the idle gear shaft No. 1 and idle gear No. 1 with the idle gear shaft No. 2 while aligning the knock pin of the idle gear shaft No. 1 with the knock pin groove of the cylinder block.

NOTICE:

Be careful of the idle gear direction.

- (c) Using a 10 mm hexagon wrench, tighten the idle gear shaft No. 2.

Torque: 60 N·m (612 kgf·cm, 44 ft·lbf)

- (d) Remove the bar from the chain tensioner.

12. INSTALL TIMING CHAIN COVER

- (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.

- (b) Install a new O-ring to the LH cylinder head as shown in the illustration.

- (c) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to 4 locations as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- (d) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the timing chain cover as shown in the illustration.

Seal packing:

Water pump part: Part No. 08826-00100 or equivalent

Other part: Part No. 08826-00080 or equivalent

NOTICE:

- Install the timing chain cover within 3 minutes after applying seal packing. After installing it, the timing chain cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.
- Do not apply seal packing to the "A" as shown in the illustration.

- (e) Align the key way of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.

- (f) Install the timing chain cover with the 24 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

NOTICE:

- Pay attention not to wrap the chain and slipper over the timing chain cover seal line.
- Install the water pump within 15 minutes after installing the timing chain cover.

HINT:

Each bolt length is as follows:

A: 25 mm (0.98 in.)

B: 55 mm (2.17 in.)

**13. INSTALL WATER INLET**

- (a) Install a new O-ring to the water outlet pipe.
- (b) Install a new gasket to the water pump.
- (c) Apply soapy water to the O-ring.

- (d) Install the water inlet with the 5 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)
- (e) Connect the 5 water by-pass hoses.
- (f) Connect the 2 radiator hoses.
- (g) Connect the 2 oil cooler hoses (w/ oil cooler).

**14. INSTALL OIL PAN**

- (a) Install the 4 stud bolts.
Torque: 4.0 N·m (41 kgf·cm, 35 in.-lbf)
- (b) Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.

- (c) Install a new O-ring to the oil pump.

- (d) Apply a continuous bead of seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) to the oil pan as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the oil pan within 3 minutes after applying seal packing. After installing it, the oil pan bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (e) Install the oil pan with the 17 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:

Bolt A, B, Nut: 21 N·m (214 kgf·cm, 15 ft·lbf)

Bolt C: 10 N·m (102 kgf·cm, 7 ft·lbf)

HINT:

Each bolt length is as follows:

A: 25 mm (0.98 in.)

B: 45 mm (1.77 in.)

C: 14 mm (0.55 in.)

- (f) Install the 4 housing bolts.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

- (g) Install the flywheel housing under cover.

15. INSTALL OIL STRAINER

- (a) Install a new gasket and the oil strainer with the 2 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

16. INSTALL OIL PAN NO.2

- (a) Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the oil pan and oil pan No. 2.

- (b) Apply a continuous bead of the seal packing (diameter 3 to 4 mm (0.12 to 0.16 in.)) as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the oil pan No. 2 within 3 minutes after applying seal packing. After installing it, the oil pan No. 2 bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (c) Install the oil pan No. 2 with the 15 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:

Bolt: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

Nut: 10 N·m (102 kgf·cm, 7 ft·lbf)

17. INSTALL CRANKSHAFT PULLEY

Using SST, install the pulley set bolt.

SST 09213-54015 (91651-60855), 09330-00021

Torque: 250 N·m (2,549 kgf·cm, 184 ft·lbf)

18. INSTALL IDLER PULLEY NO.1

Install the idler pulley with the bolt.

Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

HINT:

"DOUBLE" is marked on the idler pulley No. 1 to distinguish it from the idler pulley No. 2.

19. INSTALL IDLER PULLEY NO.2

Install the 2 idler pulleys with the 2 bolts.

Torque: 39 N·m (398 kgf·cm, 29 ft·lbf)

20. INSTALL V-RIBBED BELT TENSIONER ASSY

Tighten bolts A-1 and B-1 in order first, then tighten the remaining bolts.

Torque: 36 N·m (367 kgf·cm, 27 ft·lbf)

HINT:

Each bolt length is as follows:

A: 70 mm (2.76 in.)

B: 33 mm (1.30 in.)

21. INSTALL COOLER COMPRESSOR

(See page [AC-58](#))

22. INSTALL GENERATOR (See page CH-15)**23. INSTALL VANE PUMP**

- (a) Install the vane pump with the 2 bolts.
Torque: 43 N·m (438 kgf·cm, 32 ft·lbf)

NOTICE:

Do not hit the pulley to other parts when installing the vane pump.

- (b) Connect the P/S oil pressure switch connector.

24. INSTALL WATER INLET (See page EM-89)**25. INSTALL OIL LEVEL GAUGE GUIDE**

- (a) Install a new O-ring to the oil level gauge guide.
 (b) Apply a light coat of engine oil to the O-ring.
 (c) Push in the oil level gauge guide end into the guide hole of the oil pan.
 (d) Install the oil level gauge guide with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)
 (e) Install the oil level gauge.

26. INSTALL CYLINDER HEAD COVER (See page EM-89)**27. INSTALL INTAKE AIR SURGE TANK (See page EM-89)****28. INSTALL AIR CLEANER (See page EM-89)****29. INSTALL FAN W/FLUID COUPLING (See page EM-89)****30. INSTALL DRIVE BELT (See page EM-89)****31. FULLY TIGHTEN FAN W/FLUID COUPLING****32. INSTALL RADIATOR (See page CO-18)****33. INSTALL V-BANK COVER****34. INSTALL BATTERY****35. ADD ENGINE OIL (See page LU-3)****36. ADD ENGINE COOLANT (See page CO-2)****37. CHECK FOR LEAKS****38. CHECK IGNITION TIMING (See page EM-23)****39. CHECK IDLE SPEED (See page EM-25)**

CYLINDER HEAD COMPONENTS

EM1X0-01

γ N·m (kgf·cm, ft·lbf) : Specified torque

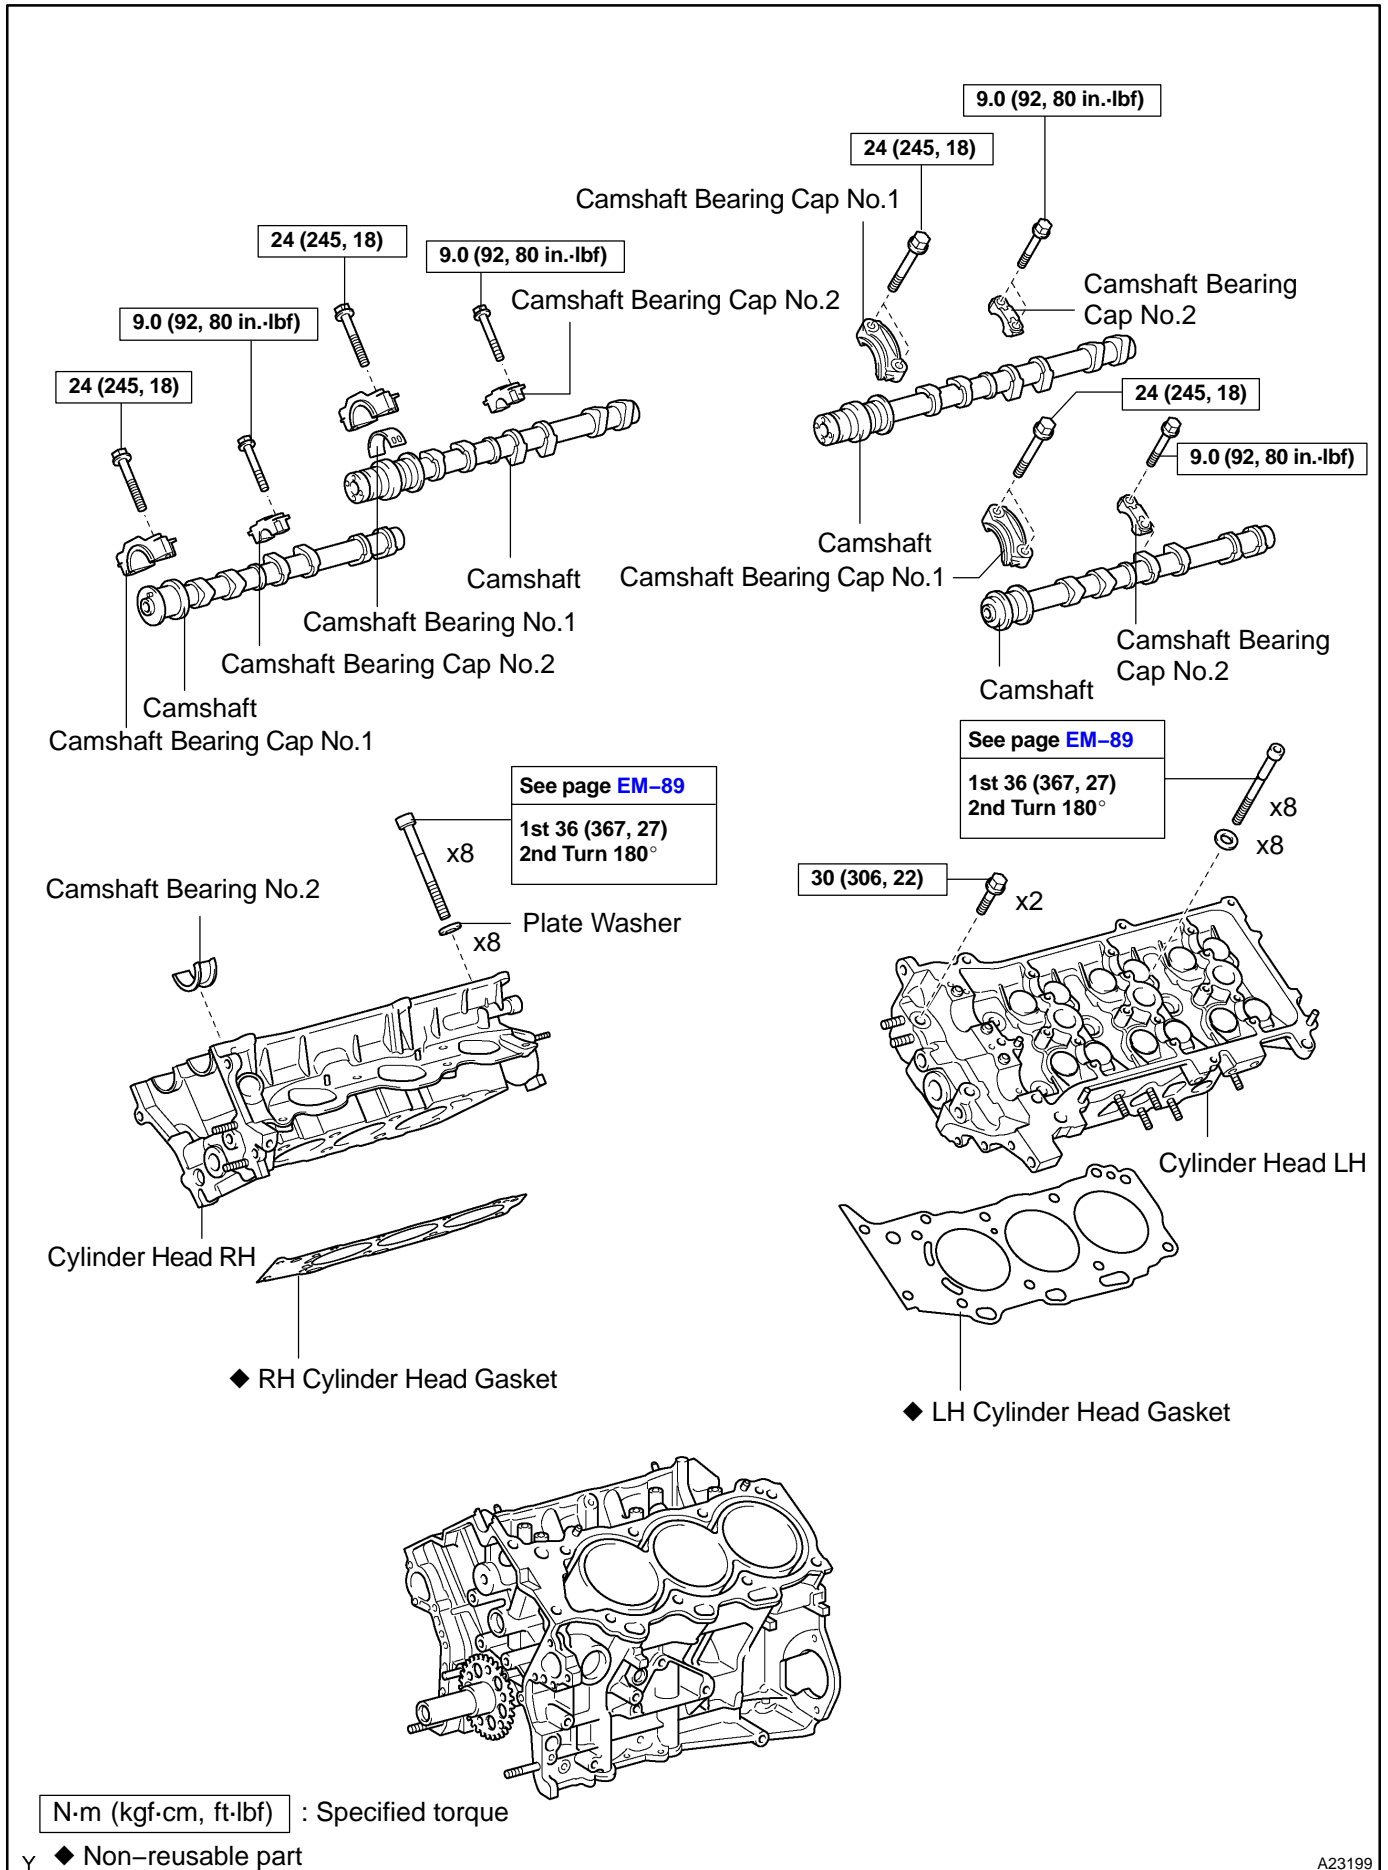

ENGINE MECHANICAL (1GR-FE) - CYLINDER HEAD

Y

◆ Non-reusable part

REMOVAL

1. PREVENT GASOLINE FROM SPILLING OUT
2. DRAIN ENGINE COOLANT (See page [CO-2](#))
3. DRAIN ENGINE OIL (See page [LU-3](#))

4. REMOVE V-BANK COVER

Remove the 2 nuts and V-bank cover.

5. REMOVE AIR CLEANER

- (a) Disconnect the ventilation hose No.2.

- (b) Disconnect the vacuum hose.
- (c) Disconnect the mass air flow meter connector.
- (d) Remove the 2 wire harness clamps.

- (e) Loosen the 2 hose clamps.
- (f) Remove the 2 bolts and air cleaner
6. DISCONNECT FUEL PIPE (See page [SF-1](#))
7. REMOVE FAN SHROUD
8. REMOVE RADIATOR (See page [CO-17](#))

**9. LOOSEN FAN W/FLUID COUPLING**

Loosen the 4 nuts of the fan w/ fluid coupling.

**10. REMOVE DRIVE BELT**

Release the belt tension by turning the belt tensioner counter-clockwise. Remove the V-ribbed belt from the belt tensioner.

11. REMOVE FAN W/FLUID COUPLING**12. SEPARATE VANE PUMP (See page [SR-47](#))****13. REMOVE GENERATOR (See page [CH-7](#))****14. SEPARATE COOLER COMPRESSOR**

(See page [AC-54](#))

15. DISCONNECT HEATER WATER OUTLET AND INLET HOSE**16. REMOVE INTAKE AIR SURGE TANK**

(a) Disconnect the 2 water by-pass hoses.

(b) Disconnect the fuel vapor feed hose.

(c) Disconnect the ventilation hose.

(d) Disconnect the 2 VSV connectors.

(e) Disconnect the throttle body w/ motor connector.

(f) Separate the 3 wire harness clamps and hose clamp.

(g) Remove the 2 bolts and throttle body bracket.

(h) Remove the bolt and oil baffle plate.

(i) Remove the 4 bolts and 2 surge tank stays.

- (j) Remove the 2 nuts.
- (k) Using a socket hexagon wrench 8, remove the 4 bolts, intake air surge tank and gasket.

17. REMOVE IGNITER (See page IG-6)

18. REMOVE CYLINDER HEAD COVER

- (a) Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover RH and gasket.
- (b) Remove the 2 nuts, oil filter cap housing and gasket.

- (c) Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover LH and gasket.

19. REMOVE INTAKE MANIFOLD

- (a) Disconnect the 6 fuel injector connectors.

- (b) Remove the 10 bolts, intake manifold and 2 gaskets.

20. REMOVE WATER BY-PASS JOINT

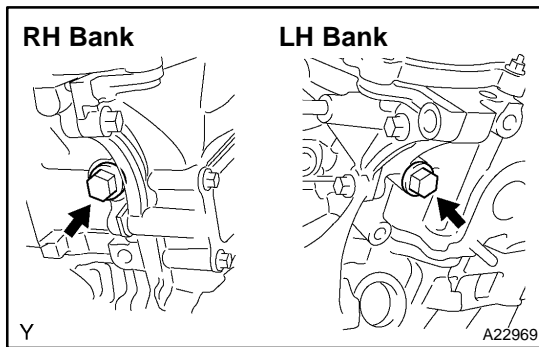

- (a) Disconnect the engine coolant temperature sensor connector.
- (b) Disconnect the heater hose.

- (c) Remove the 2 bolts, 4 nuts, water by-pass joint RR and 2 gaskets.

- (d) Remove the O-ring from the water outlet pipe.

21. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE

**22. REMOVE OIL CONTROL VALVE FILTER**

Remove the plug, filter and gasket from each cylinder head.

23. REMOVE VVT SENSOR**24. REMOVE RH AND LH FRONT EXHAUST PIPE****25. REMOVE RH AND LH EXHAUST MANIFOLD**

- (a) Remove the 6 bolts and 2 exhaust manifold stays.
- (b) Remove the 12 nuts, RH and LH exhaust manifold and 2 gaskets.

26. REMOVE OIL PAN (See page EM-32)**27. REMOVE TIMING CHAIN COVER (See page EM-32)****28. REMOVE TIMING CHAIN (See page EM-32)****29. REMOVE CAMSHAFT****NOTICE:**

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (a) Remove the camshafts of the RH bank.
 - (1) Rotate the camshafts counterclockwise using the wrench so that the cam lobes of the No. 1 cylinder face each direction as shown in the illustration.

- (2) Using several steps, uniformly loosen and remove the 16 bearing cap bolts in the sequence as shown in the illustration.
- (3) Remove the 8 bearing caps and 2 camshafts.

- (b) Remove the camshafts of the LH bank.
 - (1) Using several steps, uniformly loosen and remove the 16 bearing cap bolts in the sequence as shown in the illustration.
 - (2) Remove the 8 bearing caps and 2 camshafts.

30. REMOVE CAMSHAFT BEARING NO.1 AND NO.2

31. REMOVE CYLINDER HEAD

(a) Using several steps, remove the 2 cylinder head bolts on the LH cylinder head in the sequence as shown in the illustration.

(b) Using several steps, loosen the 8 cylinder head bolts on each cylinder head with a 10 mm bi-hexagon wrench in the sequence as shown in the illustration. Remove the 16 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing the bolts in the incorrect order.**

(c) Lift the cylinder head from the dowels on the cylinder block, and place the 2 cylinder heads on wooden blocks on a bench.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and cylinder block.

HINT:

If the cylinder head is difficult to lift off, pry between the cylinder head and cylinder block with a screwdriver.

(d) Remove the RH and LH cylinder head gaskets.

32. REMOVE CYLINDER HEAD GASKET

DISASSEMBLY

1. REMOVE VALVE LIFTER

HINT:

Arrange the valve lifter in the correct order.

2. REMOVE VALVE

HINT:

Arrange the valves, inner compression springs, valve spring retainers and valve spring retainer locks in the correct order.

- (a) Place the cylinder head on a wooden block.
- (b) Using SST, compress the inner compression spring and remove the 2 valve spring retainer locks.
SST 09202-70020 (09202-00010)
- (c) Remove the valve, inner compression spring, valve spring and valve spring retainer.

3. REMOVE VALVE SPRING SEAL

Using compressed air and a magnetic finger, remove the valve spring seal by blowing air.

4. REMOVE VALVE STEM OIL SEAL

Using needle-nose pliers, remove the valve stem oil seal.

5. CLEAN CYLINDER HEAD

- (a) Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the cylinder block contact surface.

- (b) Using a wire brush, remove all the carbon from the combustion chambers.

NOTICE:

Be careful not to scratch the combustion chambers.

- (c) Using a valve guide bushing brush and solvent, clean all the valve guide bushes.

- (d) Using a soft brush and solvent, thoroughly clean the cylinder head.

6. CLEAN VALVE

- (a) Using a gasket scraper, chip off any carbon from the valve head.
- (b) Using a wire brush, thoroughly clean the valve.

Cylinder Block Side:

Intake Manifold Side:

Exhaust Manifold Side:

Y

A22932

INSPECTION

1. INSPECT CYLINDER HEAD

(a) Inspect flatness.

Using a precision straight edge and feeler gauge, measure the flatness of the contact surfaces of the cylinder block and manifolds.

Maximum warpage: 0.10 mm (0.0039 in.)

If warpage is greater than the maximum, replace the cylinder head.

Y

A22933

(b) Inspect cranks.

Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.

If cracked, replace the cylinder head.

2. INSPECT INTAKE MANIFOLD FOR FLATNESS

Using a precision straight edge and feeler gauge, measure the flatness of the contact surfaces of the cylinder head and intake air surge tank.

Maximum warpage:

Intake air surge tank side: 0.8 mm (0.031 in.)

Cylinder head side: 0.2 mm (0.008 in.)

If warpage is greater than the maximum, replace the intake manifold.

3. INSPECT EXHAUST MANIFOLD FOR FLATNESS

Using a precision straight edge and feeler gauge, measure the flatness of the contact surface the cylinder head.

Maximum warpage: 0.7 mm (0.028 in.)

If warpage is greater than the maximum, replace the exhaust manifold.

HINT:

Maximum warpage of each installation surface:
0.3 mm (0.012 in.)

4. INSPECT VALVE

(a) Inspect valve stem diameter.

Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter:

Intake	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Exhaust	5.465 to 5.480 mm (0.2152 to 0.2158 in.)

(b) Inspect valve face angle.

- (1) Grind the valve enough to remove pits and carbon.
- (2) Check that the valve is ground to the correct valve face angle.

Valve face angle: 44.5°

- (c) Inspect valve head margin thickness.
Using vernier calipers, check the valve head margin thickness.

Standard margin thickness: 1.0 mm (0.039 in.)

Minimum margin thickness: 0.5 mm (0.020 in.)

If the margin thickness is less than the minimum, replace the valve.

- (d) Inspect overall length.
Using vernier calipers, check the overall length.

Standard overall length:

Intake	106.95 mm (4.2106 in.)
Exhaust	105.80 mm (4.1654 in.)

Minimum overall length:

Intake	106.40 mm (4.1890 in.)
Exhaust	105.30 mm (4.1457 in.)

If the overall length is less than the minimum, replace the valve.

- (e) Inspect valve stem tip.
Check the surface of the valve stem tip for wear.

NOTICE:

Do not grind off more than the minimum length.

If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

5. CLEAN VALVE SEAT

- (a) Using a 45° carbide cutter, resurface the valve seats.
(b) Clean the valve seats.

6. INSPECT VALVE SEAT

- (a) Apply a light coat of prussian blue (or white lead) to the valve face.
(b) Lightly press the valve against the valve seat.

NOTICE:

Do not rotate the valve.

- (c) Check the valve face and seat according to the following procedure.
(1) If prussian blue (or white lead) appears around the entire face, the valve is centered.

If not, replace the valve.

- (2) If the prussian blue (or white lead) appears around the entire valve seat, the guide and face are centered.

If not, resurface the valve seat.

- (3) Check that the seat contacts the middle of the valve face with the width below.

Standard width: 1.0 to 1.4 mm (0.039 to 0.055 in.)

7. REPAIR VALVE SEAT

NOTICE:

Take off a cutter gradually to make the intake valve seat smooth.

- (a) If the seating is too high to the valve face, use 30° and 45° cutters to correct the seat.

- (b) Intake side:
If the seating is too low to the valve face, use 60° and 45° cutters to correct the seat.

- (c) Exhaust side:
If the seating is too low to the valve face, use 75° and 45° cutters to correct the seat.

- (d) Handrub the valve and valve seat with an abrasive compound.
(e) After handrubbing, clean the valve and valve seat.

8. INSPECT INNER COMPRESSION SPRING

- (a) Inspect squareness.

Using a steel square, measure the squareness of the inner compression spring.

Maximum deviation: 2.0 mm (0.079 in.)

If the deviation is greater than the maximum, replace the inner compression spring.

- (b) Inspect free length.

Using vernier calipers, measure the free length of the inner compression spring.

Free length: 47.80 mm (1.8819 in.)

If the free length is not as specified, replace the inner compression spring.

- (c) Inspect tension.

Using a spring tester, measure the tension of the inner compression spring at the specified installed length.

Installed tension:

186.2 to 205.8 N (19.0 to 21.0 kgf, 41.9 to 46.3 lbf) at 33.3 mm (1.311 in.)

If the installed tension is not as specified, replace the inner compression spring.

9. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

- (a) Using a caliper gauge, measure the inside diameter of the valve guide bush.

Inside diameter:

5.51 to 5.53 mm (0.2169 to 0.2177 in.)

- (b) Subtract the valve stem diameter measurement (Step 8) from the valve guide bush inside diameter measurement.

Standard oil clearance:

Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

Maximum oil clearance:

Intake	0.08 mm (0.0031 in.)
Exhaust	0.10 mm (0.0039 in.)

If the oil clearance is greater than the maximum, replace the valve and valve guide bush.

**10. INSPECT VALVE LIFTER**

Using a micrometer, measure the valve lifter diameter.

Valve lifter diameter:

30.966 to 30.976 mm (1.2191 to 1.2195 in.)

**11. INSPECT VALVE LIFTER OIL CLEARANCE**

(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Lifter bore diameter:

31.009 to 31.025 mm (1.2208 to 1.2215 in.)

(b) Subtract the valve lifter diameter measurement (Step 10) from the lifter bore diameter measurement.

Standard oil clearance:

0.033 to 0.059 mm (0.0013 to 0.0023 in.)

Maximum oil clearance: 0.08 mm (0.0031 in.)

If the oil clearance is greater than the maximum, replace the valve lifter.

If necessary, replace the cylinder head.

**12. INSPECT CAMSHAFT OIL CLEARANCE**

(a) Clean the camshaft bearing caps, camshaft bearings and camshaft journals.

(b) Install the camshaft bearing (See page [EM-89](#)).

(c) Place the camshaft on the cylinder head.

(d) Lay a strip of Plastigage across each of the camshaft journals.

(e) Install the camshaft bearing caps (See page [EM-89](#)).

NOTICE:

Do not turn the camshafts.

(f) Remove the camshaft bearing caps (See page [EM-62](#)).

- (g) Measure the Plastigage at its widest point.
Standard oil clearance (Cylinder head RH):

No. 1 (Intake)	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
No. 1 (Exhaust)	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Others	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Standard oil clearance (Cylinder head LH):

No. 1	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Others	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance (Cylinder head RH):

No. 1 (Intake)	0.07 mm (0.0028 in.)
Others	0.10 mm (0.0039 in.)

Maximum oil clearance (Cylinder head LH):

0.10 mm (0.0039 in.)

If the oil clearance is greater than the maximum, replace the camshaft bearings and/or camshaft.

If necessary, replace the camshaft bearing caps and cylinder head together.

Reference:

Cylinder head journal bore diameter	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
Camshaft bearing center wall thickness (Mark "2")	2.004 to 2.008 mm (0.0789 to 0.0791 in.)
Camshaft journal diameter	35.971 to 35.985 mm (1.4165 to 1.4167 in.)

- (h) Remove the Plastigage completely.
 (i) Remove the camshafts.
 (j) Remove the camshaft bearing.

13. INSPECT CAMSHAFT THRUST CLEARANCE

- (a) Install the camshafts (See page [EM-89](#)).
 (b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:

0.04 to 0.09 mm (0.0016 to 0.0035 in.)

Maximum thrust clearance: 0.11 mm (0.0043 in.)

If the thrust clearance is greater than the maximum, replace the camshafts.

If necessary, replace the camshaft bearing caps and cylinder head as a set.

14. INSPECT CAMSHAFT

- (a) Inspect the camshaft for runout.
- (1) Place the camshaft on V-blocks.
 - (2) Using a dial indicator, measure the runout at the center journal.

Maximum runout: 0.06 mm (0.0024 in.)

If the runout is greater than the maximum, replace the camshaft

- (b) Inspect the cam lobes.
Using a micrometer, measure the cam lobe height.

Standard cam lobe height:

Intake: 44.168 to 44.268 mm (1.7389 to 1.7428 in.)

Exhaust: 44.580 to 44.680 mm (1.7551 to 1.7591 in.)

Minimum cam lobe height:

Intake: 44.018 mm (1.7330 in.)

Exhaust: 44.430 mm (1.7492 in.)

If the cam lobe height is less than the minimum, replace the camshaft.

- (c) Inspect the camshaft journals.
Using a micrometer, measure the journal diameter.

No. 1 journal diameter:

35.971 to 35.985 mm (1.4162 to 1.4167 in.)

Other journal diameter:

22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.

15. INSPECT CAMSHAFT TIMING GEAR

- (a) Fix the intake camshaft with a vise.

NOTICE:

Be careful not to damage the camshaft.

- (b) Align the knock pin hole in the camshaft timing gear assembly with the knock pin of the camshaft, and install the camshaft timing gear assembly with the bolt.

Torque: 100 N·m (1,020 kgf·cm, 74 ft·lbf)

- (c) Confirm that the camshaft timing gear assembly is locked.

- (d) Release the lock pin.

- (1) Cover the 4 oil paths of the cam journal with masking tape as shown in the illustration.

HINT:

One of the 2 grooves on the cam journal is for retards (upper) and the other is for advances (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with rubber pieces before wrapping the cam journal with tape.

- (2) Prick a hole in the tape placed on the advance side path. Prick a hole in the retard side path, on the opposite side to that of the advance side path, as shown in the illustration.

- (3) Apply about 200 kPa (2.0 kgf/cm²) of air pressure to the two broken paths (the advance side path and the retard side path).

NOTICE:

Cover the paths with a shop rag to avoid oil splashing.

- (4) Confirm that the camshaft timing gear assembly rotates in the advance direction when reducing the air pressure applied to the retard path.

HINT:

When the lock pin is released, the camshaft timing gear rotates in the advance direction.

- (5) When the camshaft timing gear comes to the most advanced position, release the air pressure from the retard side path, and then release the air pressure from the advance side path.

NOTICE:

The camshaft timing assembly gear occasionally shifts to the retard side abruptly if the air pressure of the advanced side path is released first. This often results in breakage of the lock pin.

- (e) Check for smooth revolution.

Allow the camshaft timing gear assembly to turn back and forth at any position, except where the lock pin meets at the most retarded angle. Check the movable range and that there is no disturbance.

Standard: Moves smoothly in a range of about 31 °

NOTICE:

Be sure to perform this check by hand, instead of air pressure.

- (f) Check the lock in the most retarded position.

Confirm that the camshaft timing gear assembly is locked at the most retarded position.

- (g) Remove the set bolt and camshaft timing gear assembly.

NOTICE:

Be sure not to remove the other 3 bolts.

**16. INSPECT CYLINDER HEAD SET BOLT**

Using a vernier caliper, measure the outside thread diameter of the bolt.

Standard outside diameter:

10.85 to 11.00 mm (0.4272 to 0.4331 in.)

Minimum outside diameter:

10.7 mm (0.421 in.)

REPLACEMENT

1. REPLACE VALVE GUIDE BUSH

- (a) Gradually heat the cylinder head to between 80 and 100°C (176 to 212°F).

- (b) Place the cylinder head on a wooden block.

- (c) Using SST, tap out the valve guide bush.

SST 09201-10000, 09201-01055, 09950-70010
(09951-07100)

- (d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Bush bore diameter:

10.295 to 10.315 mm (0.4053 to 0.4061 in.)

If the bush bore diameter of the cylinder head is greater than 10.315 mm (0.4061 in.), machine the bush bore to dimensions of 10.345 to 10.365 mm (0.4073 to 0.4081 in.).

Valve guide bush diameter

STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

- (e) Gradually heat the cylinder head to between 80 and 100°C (176 to 212°F).

- (f) Place the cylinder head on a wooden block.
- (g) Using SST, tap in a new valve guide bush to the specified protrusion height.

SST 09201-10000, 09201-01055, 09950-70010
(09951-07100)

Protrusion height: 9.3 to 9.7 mm (0.366 to 0.382 in.)

- (h) Using a sharp 5.5 mm reamer, ream the valve guide bush to obtain the standard specified clearance between the valve guide bush and valve stem.

Standard oil clearance:

Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

REASSEMBLY

1. INSTALL RING PIN

Using a plastic-faced hammer, tap in the new ring pins until they reach the specified protrusion height.

Specified protrusion height:

2.7 to 3.3 mm (0.106 to 0.130 in.)

2. INSTALL STRAIGHT PIN

Using a plastic-faced hammer, tap in the new straight pins until they reach the specified protrusion height.

Specified protrusion height:

A	17.5 to 19.5 mm (0.689 to 0.768 in.)
B	7.5 to 8.5 mm (0.295 to 0.335 in.)
C	7.0 to 9.0 mm (0.276 to 0.354 in.)

Cylinder Head RH Side:

Front Side:

Upper Side:

Intake Manifold Side:

Cylinder Head LH Side:

Upper Side:

Front Side:

Intake Manifold Side:

3. INSTALL STUD BOLT

Using the Torx® socket wrench E5 and E7, install the stud bolts.

Torque:

4.0 N·m (41 kgf·cm, 35 in·lbf) for stud bolt A, C

19.5 N·m (199 kgf·cm, 14 ft·lbf) for stud bolt B

Cylinder Head RH Side:

Rear Side:

Upper Side:

Exhaust Manifold Side:

Cylinder Head LH Side:

Upper Side:

Rear Side:

Exhaust Manifold Side:

4. INSTALL UNION

- (a) Apply adhesive to 2 or 3 threads of the bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) Using a deep socket wrench 12, install the unions.

Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

**5. INSTALL TIGHT PLUG**

- (a) Apply adhesive around the tight plugs.
- (b) Using SST, tap in the tight plugs to the specified depth.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07150)

Specified depth: 1.5 mm (0.059 in.)

6. INSTALL STRAIGHT SCREW PLUG

- (a) Using a straight hexagon wrench 14, install a new gasket and straight screw plug.

Torque: 80 N·m (816 kgf·cm, 59 ft·lbf)

**7. INSTALL VALVE STEM OIL SEAL**

HINT:

The intake valve stem oil seal is light brown and the exhaust valve stem oil seal is gray.

- (a) Apply a light coat of engine oil to the valve guide bush.

- (b) Using SST, push in a new valve stem oil seal.

SST 09201-41020

8. INSTALL VALVE SPRING SEAT

9. INSTALL VALVE

- (a) Apply engine oil to the valve as shown in the illustration.

- (b) Place the cylinder head on a wooden block.
 (c) Install the valve, inner compression spring and valve spring retainer.
 (d) Using SST, compress the inner compression spring and place the 2 valve spring retainer locks around the valve stem.

SST 09202-70020 (09202-00010)

- (e) Using a pin punch 5, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the valve stem tip.

10. INSTALL VALVE LIFTER

- (a) Apply engine oil to the valve stem end and valve lifter, and install the valve lifter to the valve stem.
 (b) Check that the valve lifter rotates smoothly by hand.

INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

- (a) Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.
- (b) Install the RH cylinder head gasket.

- (1) Apply a continuous bead of seal packing (diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the cylinder head within 3 minutes after applying seal packing. After installing it, the cylinder head bolts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (2) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upper side facing upward.

NOTICE:

- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

- (c) Install the LH cylinder head gasket.
- (1) Apply a continuous bead of seal packing (diameter 2.5 to 3 mm (0.098 to 0.118 in.)) to a new cylinder head gasket as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the cylinder head within 3 minutes after applying seal packing. After installing it, the cylinder head bolts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (2) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upper side facing upward.

NOTICE:

- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

2. INSTALL CYLINDER HEAD

- (a) Place the RH cylinder head on the cylinder head gasket.
- (b) Install the 8 cylinder head bolts.

HINT:

- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
 - If any cylinder head bolt is broken or deformed, replace it.
- (1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
- (2) Install the plate washer to the cylinder head bolt.

- (3) Using several steps, tighten each bolt with a 10 mm bi-hexagon wrench uniformly in the sequence as shown in the illustration.

Torque: 36 N·m (367 kgf·cm, 27 ft·lbf)

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the washers into the cylinder head.

- (4) Mark the front side of each cylinder head bolt with paint.
 - (5) Retighten the cylinder head bolts by 180° as shown.
 - (6) Check that the painted marks are now at 180° opposite to the engine front.
- (c) Place the LH cylinder head on the cylinder head gasket.
 (d) Install the 8 cylinder head bolts.

HINT:

- The cylinder head bolts are tightened in 2 successive steps (steps (3) and (5)).
 - If any cylinder head bolt is broken or deformed, replace it.
- (1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
 - (2) Install the plate washer to the cylinder head bolt.

- (3) Using several steps, tighten each bolt with a 10 mm bi-hexagon wrench uniformly in the sequence as shown in the illustration.

Torque: 36 N·m (367 kgf·cm, 27 ft·lbf)

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the washers into the cylinder head.

- (4) Mark the front side of each cylinder head bolt with paint.
- (5) Retighten the cylinder head bolts by 180° as shown.
- (6) Check that the painted marks are now at 180° opposite to the engine front.

- (e) Install the 2 cylinder head bolts.
- (1) Apply a light coat of engine oil to the threads of the cylinder head bolts.
 - (2) Install the 2 cylinder head bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

3. INSTALL CAMSHAFT BEARING NO.1

Align the bearing claw with the claw groove of the bearing cap, and push in the camshaft bearing.

NOTICE:

- Install the bearing while aligning it with the oil hole in the bearing cap.
- Clean the backside of the bearing and the bearing surface of the bearing cap and prevent oil from adhering to them.

4. INSTALL CAMSHAFT BEARING NO.2

Install the camshaft bearing No. 2 to the cylinder head.

NOTICE:

Clean the backside of the bearing and the bearing surface of the cylinder head and prevent oil from adhering to them.

5. INSTALL CAMSHAFT

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

(a) Set the crankshaft position.

Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key into the left horizontal position.

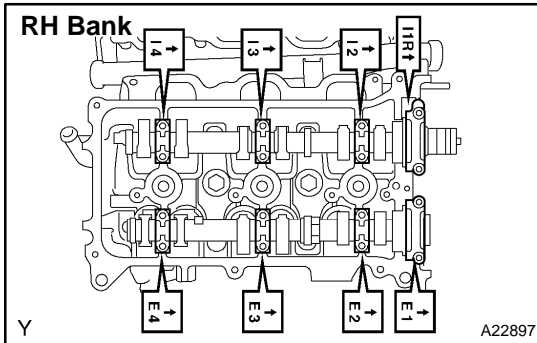

NOTICE:

Having the crankshaft at the wrong angle can cause the piston head and valve head to come into contact with each other when you install the camshaft, causing damage. So always set the crankshaft at the correct angle.

(b) Apply new engine oil to the thrust portion and journal of the camshafts.

- (c) Install the camshaft of the RH bank.
- (1) Place the 2 camshafts onto the RH cylinder head with the cam lobes of No. 1 cylinder facing each direction as shown in the illustration.

- (2) Install the 8 bearing caps in their proper locations.
- (3) Apply a light coat of engine oil to the threads of the bearing cap bolts.

- (4) Install the 16 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in.-lbf) for 10 mm (0.39 in.) head
24 N·m (245 kgf·cm, 18 ft.-lbf) for 12 mm (0.47 in.) head

- (5) Turn the camshafts clockwise with a wrench until the camshaft knock pin comes 90° position to the cylinder head.

- (d) Install the camshafts of the LH bank.
- (1) Place the 2 camshafts onto the LH cylinder head with the cam lobes of No. 2 cylinder facing as shown in the illustration.

- (2) Install the 8 bearing caps in their proper locations.
- (3) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

- (4) Install the 16 bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence as shown in the illustration.

Torque:

9.0 N·m (92 kgf·cm, 80 in.-lbf) for 10 mm (0.39 in.) head

24 N·m (245 kgf·cm, 18 ft.-lbf) for 12 mm (0.47 in.) head

- 6. INSTALL TIMING CHAIN (See page EM-44)**
- 7. INSTALL TIMING CHAIN COVER (See page EM-44)**
- 8. INSTALL OIL PAN (See page EM-44)**

**9. INSTALL EXHAUST MANIFOLD**

- (a) Install the RH exhaust manifold.
 - (1) Set a new gasket to the RH cylinder head with the oval shape facing forward.

NOTICE:

Be careful of the installation direction.

- (2) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N·m (214 kgf·cm, 15 ft.-lbf)

- (3) Connect the A/F sensor connector.

- (4) Install the manifold stay with the 3 bolts.

Torque: 40 N·m (408 kgf·cm, 30 ft.-lbf)

- (b) Install the LH exhaust manifold.

- (1) Set a new gasket to the LH cylinder head with the oval shape facing backward.

NOTICE:

Be careful of the installation direction.

- (2) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

- (3) Connect the A/F sensor connector.

- (4) Install the manifold stay with the 3 bolts.

Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

10. INSTALL RH AND LH FRONT EXHAUST PIPE

(See page [EM-138](#))

11. INSTALL VVT SENSOR (See page [IG-12](#))

12. INSTALL OIL CONTROL VALVE FILTER

- (a) Check that no foreign objects on the mesh part of the 2 filters.

- (b) Install 2 new gaskets to each new plug.

- (c) Insert the filters to the plugs.

- (d) Apply adhesive to 2 or 3 threads of the plugs.

**Adhesive: Part No. 08833-00080, THREE BOND 1344
LOCTITE 242 or equivalent**

- (e) Install the plugs to each cylinder head.

Torque: 62 N·m (632 kgf·cm, 46 ft·lbf)

13. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE

14. INSTALL WATER BY-PASS JOINT

- (a) Install a new O-ring to the water outlet pipe.

- (b) Apply soapy water to the O-ring.

- (c) Install 2 new gaskets and water by-pass joint with the 2 bolts and 4 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (d) Connect the heater hose.

- (e) Connect the engine coolant temperature sensor connector.

15. INSTALL INTAKE MANIFOLD

- (a) Set a new gasket on each cylinder head.

NOTICE:

- **Align the port holes of the gasket and cylinder head.**
 - **Be careful of the installation direction.**
- (b) Set the intake manifold on the cylinder heads.

- (c) Install and tighten the 10 bolts uniformly in several steps.

Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

- (d) Connect the 6 fuel injector connectors.

16. INSTALL CYLINDER HEAD COVER

- (a) Install the RH cylinder head cover.

- (1) Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

- (2) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the cylinder head and timing chain cover as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the cylinder head cover within 3 minutes after applying seal packing. After installing it, cylinder head cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (3) Install the seal washers to the bolts.

- (4) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:

Bolt A, Nut: 9.0 N·m (92 kgf·cm, 80 in·lbf)

Bolt B: 10 N·m (102 kgf·cm, 7 ft·lbf)

- (b) Install a new gasket and oil filler cap housing with the 2 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (c) Install the LH cylinder head cover.

- (1) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the cylinder head and timing chain cover as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Install the cylinder head cover within 3 minutes after applying seal packing. After installing it, cylinder head cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.

- (2) Install the seal washers to the bolts.

- (3) Install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:

Bolt A, Nut: 9.0 N·m (92 kgf·cm, 80 in·lbf)

Bolt B: 10 N·m (102 kgf·cm, 7 ft·lbf)

17. INSTALL IGNITER

18. INSTALL INTAKE AIR SURGE TANK

- (a) Install a new gasket to the intake air surge tank.

- (b) Using the socket hexagon wrench 8, install the intake air surge tank with the 4 bolts.

Torque: 28 N·m (286 kgf·cm, 21 ft·lbf)

- (c) Install the 2 intake air surge tank nuts.

Torque: 28 N·m (286 kgf·cm, 21 ft·lbf)

- (d) Install the 2 surge tank stays with the 4 bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

- (e) Install the oil baffle plate with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (f) Install the throttle body bracket with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

- (g) Install the 3 wire harness clamps and hose clamp.
- (h) Connect the throttle body w/ motor connector.
- (i) Connect the 2 VSV connectors.

- (j) Connect the ventilation hose.

- (k) Connect the fuel vapor feed hose.

- (l) Connect the 2 water by-pass hoses.
19. **CONNECT HEATER WATER OUTLET AND INLET HOSE**
 20. **INSTALL COOLER COMPRESSOR**
(See page [AC-58](#))
 21. **INSTALL GENERATOR** (See page [CH-15](#))
 22. **INSTALL VANE PUMP** (See page [SR-57](#))
 23. **INSTALL FAN W/FLUID COUPLING**

**24. INSTALL DRIVE BELT**

- (a) While turning the belt tensioner counterclockwise, align with the holes. Insert a bar of 6 mm (0.24 in.) into the holes to fix the belt tensioner.
- (b) Install the V-ribbed belt.
- (c) While turning the belt tensioner counterclockwise, remove the bar.

- (d) If it is hard to install the V-ribbed belt, perform the following procedure.

- (1) Put the V-ribbed belt on every parts except the P/S pump as shown in the illustration.
- (2) While releasing the belt tension by turning the belt tensioner counterclockwise, put the V-ribbed belt on the P/S pump.

**25. TIGHTEN FAN W/FLUID COUPLING**

Tighten the 4 fluid coupling bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

26. INSTALL RADIATOR (See page CO-18)**27. INSTALL FAN SHROUD****28. CONNECT FUEL PIPE (See page SF-1)****29. INSTALL AIR CLEANER**

- (a) Install the air cleaner with the 2 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)
- (b) Tighten the 2 hose clamps.

- (c) Install the 2 wire harness clamps.
- (d) Connect the mass air flow meter connector.
- (e) Connect the vacuum hose.

- (f) Connect the ventilation hose No.2.
- 30. ADD ENGINE COOLANT**
31. ADD ENGINE OIL
32. CHECK FOR LEAK

33. INSTALL V-BANK COVER

Install the V-bank cover with the 2 nuts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

ENGINE UNIT COMPONENTS

EM1XV-01

γ N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. PREVENT GASOLINE FROM SPILLING OUT
(See page [SF-1](#))
2. REMOVE ENGINE HOOD
3. REMOVE ENGINE V-BANK COVER
4. REMOVE ENGINE UNDER COVER
5. REMOVE AUTOMATIC TRANSMISSION
(See page [AT-27](#))
6. REMOVE MANUAL TRANSMISSION
(See page [MT-4](#))
7. REMOVE FRONT EXHAUST PIPES
(See page [EM-139](#))
8. REMOVE RADIATOR ASSEMBLY (See page [CO-17](#))
9. REMOVE BATTERY

10. REMOVE AIR CLEANER ASSEMBLY
 - (a) Disconnect the air cleaner hose No.2 from the air cleaner case.
 - (b) Disconnect the MAF meter connector.
 - (c) Disconnect the PCV hose from the air cleaner case.
 - (d) Disconnect the 2 wire clamps from the air cleaner case.
 - (e) Disconnect the air cleaner case from the air cleaner hose No.1.
 - (f) Remove the 2 bolts and air cleaner assembly.
11. REMOVE DRIVE BELT, FAN, FLUID COUPLING AND FAN PULLEY
 - (a) Loosen the 4 nuts holding the fluid coupling to the fan bracket.
 - (b) Remove the drive belt. (See page [CH-7](#))
 - (c) Remove the 4 nuts, fan, fluid coupling assembly and fan pulley.
12. DISCONNECT ENGINE WIRE FROM CABIN
 - (a) Remove the glove compartment door.
 - (b) Remove the lower No.2 finish panel.
 - (c) Remove the heater to register duct.
 - (d) Remove the 3 screws, and disconnect the ECM from the body bracket.
 - (e) Disconnect the 3 wire harness connectors from the ECM.

- (f) Disconnect the engine wire from the engine wire bracket and remove the 2 nuts, bolt and bracket.
- (g) Pull out the engine wire from the cowl panel.

13. DISCONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES

- (a) Disconnect the generator connector.
- (b) Disconnect the 2 heater hoses.
- (c) Disconnect the ground strap from the cowl panel.
- (d) Disconnect the fuel inlet hose and clamps.
- (e) Disconnect the fuel return hose and clamp.
- (f) Disconnect the air inlet hose from the charcoal canister.
- (g) Disconnect the EVAP hose from the charcoal canister.

14. DISCONNECT A/C COMPRESSOR FROM ENGINE

- (a) Disconnect the A/C compressor connector.
- (b) Remove the 3 bolts, and disconnect the A/C compressor from the engine.

HINT:

Suspend the A/C compressor securely.

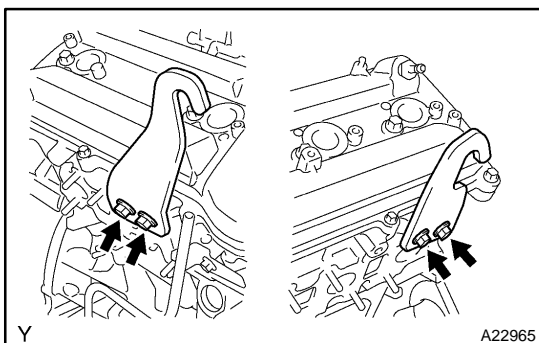

15. DISCONNECT PS PUMP FROM ENGINE

Remove the 3 bolts, and disconnect the PS pump from the engine.

HINT:

Suspend the PS pump securely.

16. REMOVE ENGINE ASSEMBLY FROM VEHICLE

- (a) Install the 2 engine hangers with the 4 bolts as shown in the illustration.

Part No. :

Engine hanger No. 1 12281-31060

Engine hanger No. 2 12282-31040

Bolt 90119-08177

Torque: 33 N·m (336 kgf·cm, 24 ft·lbf)

- (b) Attach the engine sling device and suspend the engine using a chain block.

- (c) Remove the 4 bolts and 4 nuts, and separate the engine mounting brackets from the frame brackets.
- (d) Lift the engine out of the vehicle carefully.

NOTICE:

Make sure the engine is clear of all wiring and hoses.

- (e) Place the engine onto a working bench.

17. REMOVE DRIVE PLATE

Remove the 8 bolts, front spacer, drive plate and rear spacer.

INSTALLATION

1. INSTALL DRIVE PLATE

HINT:

- The mounting bolts are tightened in 2 progressive steps (steps (c) and (e)).
- If any of the mounting bolts is broken or deformed, replace it.

- (a) Apply adhesive to 2 or 3 threads of the mounting bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) Install the front spacer, drive plate and rear spacer on the crankshaft.

- (c) Install and uniformly tighten the 8 mounting bolts in several steps, in the sequence shown in the illustration.

Torque: 49 N·m (500 kgf-cm, 36 ft-lbf)

If any of the mounting bolts do not meet the torque specification, replace it.

- (d) Mark the mounting bolt with paint.

- (e) Retighten the mounting bolts 90° in the order shown in the illustration.

- (f) Check that the painted mark is now at a 90° angle to what it was in step (e).

2. INSTALL ENGINE ASSEMBLY IN VEHICLE

- (a) Attach the engine chain hoist to the engine hangers.

- (b) Slowly lower the engine assembly into the engine compartment.

- (c) Attach the engine mounting brackets to the frame brackets.

- (d) Install the engine mounting brackets to the frame brackets with the 2 nuts and 4 bolts.

Torque: 38 N·m (388 kgf-cm, 28 ft-lbf)

- (e) Remove the engine chain hoist.

- (f) Remove the 4 bolts and 2 engine hangers.

3. INSTALL PS PUMP

Install the PS pump with the 3 bolts.

Torque: 17 N·m (175 kgf·cm, 13 ft·lbf)

4. INSTALL A/C COMPRESSOR

(a) Install the A/C compressor with the 3 bolts.

Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

(b) Connect the A/C compressor connector.

5. CONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES

(a) Connect the generator wire and connector.

(b) Connect the 2 heater hoses.

(c) Connect the ground strap to the cowl panel.

(d) Connect the fuel inlet hose and clamps.

(e) Connect the fuel return hose and clamp.

(f) Connect the air inlet hose to the charcoal canister.

(g) Connect the EVAP hose to the charcoal canister.

(h) Connect the brake booster tube.

6. CONNECT ENGINE WIRE TO CABIN

(a) Push the engine wire through the cowl panel.

(b) Install the engine wire bracket with the 2 nuts and bolt and connect the engine wire to the bracket.

(c) Connect the 3 connectors to the ECM.

(d) Connect the 2 wire harness connectors (cassette connector).

(e) Install the ECM with the 3 screws.

(f) Install the heater to register duct.

(g) Install the lower No.2 finish panel.

(h) Install the glove compartment door.

7. INSTALL AIR CLEANER ASSEMBLY

(a) Install the air cleaner assembly with the 2 bolts.

(b) Connect the air cleaner case to the air cleaner hose No.1.

(c) Connect the air cleaner case with the 2 wire clamps.

(d) Connect the PCV hose to the air cleaner case.

(e) Connect the MAF meter connector.

(f) Connect the air cleaner hose No.2 to the air cleaner case.

8. INSTALL BATTERY

9. INSTALL RADIATOR ASSEMBLY (See page [CO-18](#))

10. INSTALL FRONT EXHAUST PIPES

(See page [EM-139](#))

11. **INSTALL AUTOMATIC TRANSMISSION**
(See page [AT-31](#))
12. **INSTALL MANUAL TRANSMISSION**
(See page [MT-7](#))
13. **FILL WITH ENGINE COOLANT** (See page [CO-2](#))
14. **FILL WITH ENGINE OIL** (See page [LU-3](#))
15. **START ENGINE AND CHECK FOR LEAKS**
16. **INSTALL ENGINE UNDER COVERS**
17. **INSTALL V-BANK COVER**
18. **INSTALL HOOD**
19. **PERFORM ROAD TEST**

Check for abnormal noise, shock, slippage, correct shift points and smooth operation.

20. **RECHECK ENGINE COOLANT AND OIL LEVELS**

CYLINDER BLOCK COMPONENTS

EM1XY-01

DISASSEMBLY

1. **REMOVE WATER OUTLET PIPE NO.1**
 - (a) Separate the knock sensor wire.
 - (b) Remove the 3 bolts and water outlet pipe.

2. **REMOVE KNOCK SENSOR**
 - (a) Disconnect the knock sensor connectors.
 - (b) Remove the 2 bolts and 2 knock sensors.
3. **REMOVE WATER DRAIN COCK**

4. **REMOVE ENGINE REAR OIL SEAL RETAINER**
 - (a) Remove the 5 bolts and 2 nuts.
 - (b) Using a screwdriver, remove the oil seal retainer by prying between the oil seal retainer and crankshaft bearing cap.

5. **INSPECT CONNECTING ROD THRUST CLEARANCE**
Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:

0.15 to 0.30 mm (0.0059 to 0.0118 in.)

Maximum thrust clearance: 0.35 mm (0.0138 in.)

6. **INSPECT CONNECTING ROD OIL CLEARANCE**
 - (a) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembling.
 - (b) Using SST, remove the 2 connecting rod cap bolts.
SST 09011-38121
 - (c) Clean the crank pin, bearing and connecting rod.
 - (d) Check the crank pin and bearing for pits and scratches.

- (e) Lay a strip of Plastigage across the crank pin.

- (f) Check that the protrusion of the connecting rod cap is facing the correct direction.
 (g) Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

- (h) Using SST, tighten the bolts alternately to the specified torque.
 SST 09011-38121
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

- (i) Mark the front side of each connecting cap bolt with paint.
 (j) Retighten the cap bolts 90° as shown in the illustration.
NOTICE:
Do not turn the crankshaft.
 (k) Remove the 2 bolts, connecting rod cap and lower bearing.

- (l) Measure the Plastigage at its widest point.
Standard oil clearance:
0.026 to 0.046 mm (0.0010 to 0.0018 in.)
Maximum oil clearance: 0.066 mm (0.0025 in.)
NOTICE:
Completely remove the Plastigage.

- (m) If replacing a bearing, replace it with one that has the same number marked on the connecting rod. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.

HINT:

Standard bearing center wall thickness

Mark	mm (in.)
"1"	1.484 to 1.487 (0.0584 to 0.0585)
"2"	1.487 to 1.490 (0.0585 to 0.0587)
"3"	1.490 to 1.493 (0.0587 to 0.0588)
"4"	1.493 to 1.496 (0.0588 to 0.0589)

7. REMOVE PISTON W/CONNECTING ROD

- Using a ridge reamer, remove all the carbon from the top of the cylinder.
- Push in the piston w/ connecting rod and upper bearing through the top of the cylinder block.

HINT:

- Keep the bearings, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

8. REMOVE CONNECTING ROD BEARING

9. REMOVE PISTON RING SET

- Using a piston ring expander, remove the 2 compression rings.
- Remove the 2 side rails and oil ring by hand.

10. REMOVE PISTON PIN HOLE SNAP RING

Using a screwdriver, pry out the 2 snap rings.

**11. REMOVE PISTON PIN**

- (a) Gradually heat the piston to approx. 80°C (176°F).

- (b) Using a plastic-faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:

- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.

**12. INSPECT CRANKSHAFT THRUST CLEARANCE**

- (a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:

0.04 to 0.24 mm (0.0016 to 0.0094 in.)

Maximum thrust clearance: 0.30 mm (0.0118 in.)

If the thrust clearance is greater than the maximum, replace the pair of the thrust washers or the crankshaft.

HINT:

Thrust washer thickness is 1.93 to 1.98 mm (0.0760 to 0.0780 in.)

**13. REMOVE CRANKSHAFT**

- (a) Using several steps, uniformly loosen and remove the 8 main bearing cap bolts and seal washers in the sequence as shown in the illustration.

- (b) Using several steps, uniformly loosen and remove the 16 main bearing cap bolts in the sequence as shown in the illustration.

- (c) Using a screwdriver, pry out the main bearing caps. Remove the 4 main bearing caps and lower bearings.

NOTICE:

- Pull up the main bearing cap while turning it little by little to the right and the left.

- Be careful not to damage the joint surface of the cylinder block and the main bearing cap.

14. REMOVE CRANKSHAFT THRUST WASTER SET
15. REMOVE CRANKSHAFT BEARING

16. REMOVE OIL NOZZLE

- Using a 5 mm socket hexagon wrench, remove the 3 oil nozzles.

INSPECTION

1. INSPECT CYLINDER BLOCK FOR FLATNESS

Using a precision straight edge and feeler gauge, measure the flatness of the surface that is in contact with the cylinder head gasket.

Maximum warpage: 0.05 mm (0.0020 in.)

If warpage is greater than the maximum, replace the cylinder block.

2. INSPECT CYLINDER BORE

Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:

94.000 to 94.012 mm (3.7008 to 3.7013 in.)

Maximum diameter: 94.132mm (3.7060 in.)

If the average diameter of the 4 positions is greater than the maximum, replace the cylinder block.

3. INSPECT PISTON

Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 27.7 mm (1.091 in.) from the piston head.

Piston diameter:

93.910 to 93.940 mm (3.6972 to 3.6984 in.)

4. INSPECT PISTON OIL CLEARANCE

Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:

0.060 to 0.102 mm (0.0024 to 0.0040 in.)

Maximum oil clearance: 0.13 mm (0.0051 in.)

If the oil clearance is greater than the maximum, replace all the 6 pistons. If necessary, replace the cylinder block.

P01035 EM0288

Z00064

5. INSPECT CONNECTING ROD

Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.

Maximum misalignment:

0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If misalignment is greater than the maximum, replace the connecting rod assembly.

P01034 EM0290

Z00065

(2) Check twist.

Maximum twist:

0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If twist is greater than the maximum, replace the connecting rod assembly.

P

A13490

6. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the piston pin hole.

Piston pin hole inside diameter:

22.001 to 22.010 mm (0.8662 to 0.8665 in.)

HINT:

Piston pin hole inside diameter

Mark	mm (in.)
A	22.001 to 22.004 (0.8662 to 0.8663)
B	22.005 to 22.007 (0.8663 to 0.8664)
C	22.008 to 22.010 (0.8665 to 0.8665)

- (b) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)

HINT:

Piston pin diameter

Mark	mm (in.)
A	21.997 to 22.000 (0.8660 to 0.8661)
B	22.001 to 22.003 (0.8661 to 0.8663)
C	22.004 to 22.006 (0.8663 to 0.8664)

- (c) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.

Bushing inside diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)

HINT:

Bushing inside diameter

Mark	mm (in.)
A	22.005 to 22.008 (0.8663 to 0.8665)
B	22.009 to 22.011 (0.8665 to 0.8666)
C	22.012 to 22.014 (0.8666 to 0.8667)

- (d) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.00028 in.)
Maximum oil clearance: 0.040 mm (0.0016 in.)

- (e) If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the piston and piston pin together.

- (f) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance: 0.050 mm (0.0020 in.)

- (g) If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the connecting rod and piston pin together.

7. INSPECT RING GROOVE CLEARANCE

Using a feeler gauge, measure the clearance between the new piston ring and the wall of the ring groove.

Ring groove clearance:

No.1: 0.02 to 0.07 mm (0.0008 to 0.0028 in.)

No.2: 0.02 to 0.06 mm (0.0008 to 0.0024 in.)

Oil: 0.07 to 0.15 mm (0.0028 to 0.0060 in.)

8. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

(b) Using a feeler gauge, measure the end gap.

Standard end gap:

No. 1: 0.30 to 0.40 mm (0.0118 to 0.0157 in.)

No. 2: 0.40 to 0.50 mm (0.0157 to 0.0197 in.)

Oil (Side rail): 0.10 to 0.40 mm (0.0039 to 0.0157 in.)

Maximum end gap:

No. 1: 1.0 mm (0.039 in.)

No. 2: 1.1 mm (0.043 in.)

Oil (Side rail): 1.0 mm (0.039 in.)

9. INSPECT CONNECTING ROD BOLT

Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter: 7.2 to 7.3 mm (0.283 to 0.287 in.)

Minimum diameter: 7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the bolt.

10. INSPECT CRANKSHAFT BEARING CAP SET BOLT

Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:

10.0 to 10.2 mm (0.393 to 0.402 in.)

If the diameter is less than the minimum, replace the bolt.

**11. INSPECT CRANKSHAFT**

- (a) Using a dial indicator and V-blocks, measure the runout as shown in the illustration.

Maximum circle runout: 0.06 mm (0.0024 in.)

- (b) Using a micrometer, measure the diameter of each main journal.

Diameter: 71.988 to 72.000 mm (2.8342 to 2.8346 in.)

- (c) Check each main journal for taper and out-of-round as shown in the illustration.

**Maximum taper and out-of-round:
0.02 mm (0.0008 in.)**

- (d) Using a micrometer, measure the diameter of each crank pin.

Diameter: 55.992 to 56.000 mm (2.2044 to 2.2047 in.)

- (e) Check each crank pin for taper and out-of-round as shown in the illustration.

**Maximum taper and out-of-round:
0.02 mm (0.0008 in.)**

**12. INSPECT CRANKSHAFT OIL CLEARANCE****HINT:**

Main bearings come in widths of 19.0 mm (0.748 in.) and 22.4 mm (0.882 in.). Install the 22.4 mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

- (a) Clean each main journal and bearing.

- (b) Align the bearing claw with the claw groove of the cylinder block, and push in the 4 upper bearings.

NOTICE:

Do not apply engine oil to the bearing and its contact surface.

- (c) Align the bearing claw with the claw groove of the main bearing cap, and push in the 4 bottom bearings.

NOTICE:

Do not apply engine oil to the bearing or its contact surface.

HINT:

A number marked on each main bearing cap indicates the installation position.

- (d) Place the crankshaft on the cylinder block.

- (e) Lay a strip of Plastigage across each journal.

- (f) Examine the front marks and numbers and install the bearing caps on the cylinder block.

- (g) Apply a light coat of engine oil to the threads of the bearing cap bolts.

- (h) Temporarily install the 8 main bearing cap bolts to the inside positions.

- (i) Install the main bearing caps. Tighten the 2 bolts for each bearing cap until the clearance between the bearing cap and the cylinder block becomes less than 6 mm (0.23 in.).

- (j) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.

- (k) Apply a light coat of engine oil to the threads of the main bearing cap bolts.

- (l) Install the 16 main bearing cap bolts. Using several steps, uniformly tighten the bolts in the sequence as shown in the illustration.

Torque: 61 N·m (622 kgf·cm, 45 ft·lbf)

- (m) Mark the front side of the bearing cap bolts with paint.
 (n) Retighten the bearing cap bolts until 90° in the sequence as shown in the illustration.
 (o) Check that the painted mark is now at a 90° angle to the front.

NOTICE:

Do not turn the crankshaft.

- (p) Install the 8 main bearing cap bolts. Using several steps, uniformly tighten the bolts in the sequence as shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

- (q) Remove the main bearing caps.

- (r) Measure the Plastigage at its widest point.

Standard oil clearance:

0.018 to 0.030 mm (0.0007 to 0.0012 in.)

Maximum clearance: 0.046 mm (0.0018 in.)

If the oil clearance is greater than the maximum, replace the bearings. If necessary, replace the crankshaft.

NOTICE:

Completely remove the Plastigage.

- (s) If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly

Journal bearings

Cylinder block (A) + Crankshaft	0 to 5	6 to 11	12 to 17	18 to 23	24 to 28
Use Bearing	"1"	"2"	"3"	"4"	"5"

HINT:

EXAMPLE

Cylinder block "11" (A) + Crankshaft "06" (B)
= Total number 17 (Use bearing "3")

Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	"00"	77.000 (3.0315)
	"01"	77.001 (3.0315)
	"02"	77.002 (3.0316)
	"03"	77.003 (3.0316)
	"04"	77.004 (3.0317)
	"05"	77.005 (3.0317)
	"06"	77.006 (3.0317)
	"07"	77.007 (3.0318)
	"08"	77.008 (3.0318)
	"09"	77.009 (3.0319)
	"10"	77.010 (3.0319)
	"11"	77.011 (3.0319)
	"12"	77.012 (3.0320)
	"13"	77.013 (3.0320)
	"14"	77.014 (3.0320)
	"15"	77.015 (3.0321)
	"16"	77.016 (3.0321)

ENGINE MECHANICAL (1GR-FE) - CYLINDER BLOCK

Crankshaft main journal diameter (B)	"00"	71.999 to 72.000 (2.8346 to 2.8346)
	"01"	71.998 to 71.999 (2.8346 to 2.8346)
	"02"	71.997 to 71.998 (2.8345 to 2.8346)
	"03"	71.996 to 71.997 (2.8345 to 2.8346)
	"04"	71.995 to 71.996 (2.8344 to 2.8345)
	"05"	71.994 to 71.995 (2.8344 to 2.8344)
	"06"	71.993 to 71.994 (2.8343 to 2.8344)
	"07"	71.992 to 71.993 (2.8343 to 2.8343)
	"08"	71.991 to 71.992 (2.8343 to 2.8343)
	"09"	71.990 to 71.991 (2.8343 to 2.8343)
	"10"	71.989 to 71.990 (2.8342 to 2.8343)
"11"	71.988 to 71.989 (2.8342 to 2.8342)	
Standard bearing center wall thickness	"1"	2.488 to 2.491 (0.0980 to 0.0981)
	"2"	2.491 to 2.494 (0.0981 to 0.0982)
	"3"	2.494 to 2.497 (0.0982 to 0.0983)
	"4"	2.497 to 2.500 (0.0982 to 0.0984)
	"5"	2.500 to 2.503 (0.0984 to 0.0985)

REPLACEMENT

1. REPLACE CONNECTING ROD SMALL END BUSH

Using SST and a press, press out the bushing.

SST 09222-30010

2. INSTALL CONNECTING ROD SMALL END BUSH

(a) Align the oil holes of a new bushing and the connecting rod.

(b) Using SST and a press, press in the bushing.

SST 09222-30010

(c) Using a pin hole grinder, hone the bushing to obtain the standard specified clearance between the bushing and piston pin.

Standard oil clearance:

0.005 to 0.011 mm (0.0002 to 0.0004 in.)

HINT:

Check that the piston pin fits at a normal room temperature. Coat the piston pin with engine oil, and push it into the connecting rod with a thumb.

3. REPLACE ENGINE REAR OIL SEAL

HINT:

There are 2 methods ((a) and (b)) to replace the oil seal.

(a) If the rear oil seal retainer is removed from the cylinder block:

(1) Using a screwdriver and hammer, tap out the oil seal.

(2) Using SST and a hammer, tap in a new oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223-78010

(3) Apply MP grease to the oil seal lip.

(b) If the rear oil seal retainer is installed to the cylinder block:

(1) Using a knife, cut off the oil seal lip.

(2) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Tape the screwdriver tip.

(3) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223-78010

(4) Apply MP grease to a new oil seal lip.

REASSEMBLY

1. INSTALL STUD BOLT

- (a) Install the stud bolts as shown in the illustration.

Torque:

Stud bolt A: 11 N·m (112 kgf·cm, 8.1 ft·lbf)

Stud bolt B: 4.5 N·m (46 kgf·cm, 40 in·lbf)

Stud bolt C: 4.0 N·m (41 kgf·cm, 35 in·lbf)

2. INSTALL STRAIGHT PIN

- (a) Using a plastic-faced hammer, tap in the straight pin.

Standard protrusion:**Pin A: 22.5 to 23.5 mm (0.886 to 0.925 in.)****Pin B: 10.5 to 11.5 mm (0.413 to 0.453 in.)****Pin C: 8.5 to 9.5 mm (0.335 to 0.374 in.)****Pin D: 5.5 to 6.5 mm (0.217 to 0.256 in.)****Front Side**

Protrusion Height: 22.5 to 23.5 mm
(0.886 to 0.925 in.)

Rear Side

Protrusion Height: 10.5 to 11.5 mm
(0.413 to 0.453 in.)

Upper Side

Protrusion Height: 8.5 to 9.5 mm (0.335 to 0.374 in.)

Front Side

Protrusion Height: 5.5 to 6.5 mm (0.217 to 0.256 in.)

Rear Side

Protrusion Height: 5.5 to 6.5 mm (0.217 to 0.256 in.)

Lower Side

Protrusion Height: 5.5 to 6.5 mm
(0.217 to 0.256 in.)

3. INSTALL TIGHT PLUG

- (a) Apply adhesive around the tight plugs.

Adhesive: Part No. 08833-00070, THREE BOND 1324 or equivalent.

- (b) Using SST, install the tight plugs as shown in the illustration.

SST 09950-60010 (09951-00350), 09950-70010 (09951-07150)

Standard depth: 0.2 to 1.2 mm (0.008 to 0.047 in.)**4. INSTALL OIL JET**

Using a screwdriver and hammer, tap in an oil jet.

**5. INSTALL OIL NOZZLE**

Using a 5 mm socket hexagon wrench, install the 3 oil nozzles.

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

**6. INSTALL PISTON PIN HOLE SNAP RING**

Using a screwdriver, install a new snap ring at one side of the piston pin hole.

HINT:

Check that the end gap of the snap ring does not overlap the pin hole cutout portion of the piston.

**7. INSTALL PISTON**

(a) Gradually heat the piston to about 80°C (176°F).

(b) Coat the piston pin with engine oil.

(c) Align the front marks of the piston and connecting rod, and push in the piston pin with a thumb.

**8. INSTALL PISTON PIN HOLE SNAP RING**

Using a screwdriver, install a new snap ring on the other side of the piston pin hole.

HINT:

Be sure that the end gap of the snap ring does not overlap the pin hole cutout portion of the piston.

**9. INSTALL PISTON RING SET**

(a) Install the oil ring expander and 2 side rails by hand.

(b) Using a piston ring expander, install the 2 compression rings.

NOTICE:

Install the compression ring No. 2 with the painted mark facing upward.

- (c) Position the piston rings so that the ring ends are as shown in the illustration.

10. INSTALL CONNECTING ROD BEARING

Align the bearing claw with the groove of the connecting rod or connecting cap.

NOTICE:

Clean the backside of the bearing and the bearing surface of the connecting rod and prevent oil from adhering to them.

11. INSTALL CRANKSHAFT BEARING

HINT:

Main bearings come in widths of 19.0 mm (0.748 in.) and 22.4 mm (0.882 in.). Install the 22.4 mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

- (a) Clean each main journal and bearing.

- (b) Align the bearing claw with the claw groove of the cylinder block, and push in the 4 upper bearings.

NOTICE:

Do not apply engine oil to the bearing or its contact surface.

- (c) Align the bearing claw with the claw groove of the main bearing cap, and push in the 4 lower bearings.

NOTICE:

Do not apply engine oil to the bearing or its contact surface.

HINT:

The number marked on each main bearing cap indicates the installation position.

12. INSTALL CRANKSHAFT

- (a) Apply engine oil to the upper bearing and install the crankshaft on the cylinder block.

- (b) Install the 2 upper thrust washers to the No. 2 journal position of the cylinder block.
- (1) Push the crankshaft toward the front (rear) side.
 - (2) Install the 2 upper thrust washers with the oil grooves facing outward.

- (c) Install the 2 lower thrust washers on the No. 2 bearing cap with the grooves facing outward.

- (d) Examine the front marks and numbers and install the bearing caps on the cylinder block.
- (e) Apply a light coat of engine oil to the threads of the bearing cap bolts.
- (f) Temporarily install the 8 main bearing cap bolts to the inside positions.

- (g) Install the main bearing caps. Tighten the 2 bolts for each bearing cap until the clearance between the bearing cap and the cylinder block becomes less than 6 mm (0.23 in.).

- (h) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
- (i) Apply a light coat of engine oil to the threads of the main bearing cap bolts.

- (j) Install the 16 main bearing cap bolts. Using several steps, uniformly tighten the bolts in the sequence shown in the illustration.

Torque: 61 N·m (622 kgf·cm, 45 ft·lbf)

- (k) Mark the front side of the bearing cap bolts with paint.
- (l) Retighten the bearing cap bolts 90° in the sequence as shown in the illustration.
- (m) Check that the painted mark is now at a 90° angle to the front.
- (n) Check that the crankshaft turns smoothly.

- (o) Using several steps, uniformly tighten the 8 main bearing cap bolts in the sequence as shown in the illustration.
- Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)**

**13. INSTALL PISTON W/CONNECTING ROD**

- Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.
- Check the position of the piston ring ends.
- Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.

NOTICE:

- **Clean the backside of the bearing and the bearing surface of the connecting rod cap and prevent oil from adhering to them.**
- **Match the numbered connecting rod cap with the connecting rod.**

- Check that the protrusion of the connecting rod cap is facing the correct direction.
- Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

- Using SST, tighten the bolts alternately to the specified torque.
SST 09011-38121
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

- Mark the front side of each connecting cap bolt with paint.
 - Retighten the cap bolts 90° as shown.
 - Check that the crankshaft turns smoothly.
- 14. INSTALL ENGINE REAR OIL SEAL RETAINER**
- Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the oil seal retainer and cylinder block.

- (b) Apply a continuous bead of seal packing (diameter 2 to 3 mm (0.08 to 0.12 in.)) to the oil seal retainer as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Parts must be assembled within 3 minutes of application. Otherwise the seal packing must be removed and reapplied.

- (c) Install the oil seal retainer with the 5 bolts and 2 nuts.

Torque:

Bolt: 10 N·m (102 kgf·cm, 7 ft·lbf)

Nut: 9.0 N·m (92 kgf·cm, 80 in·lbf)

15. INSTALL WATER DRAIN COCK

- (a) Apply adhesive to 2 or 3 threads of the drain cock ends.
Adhesive: Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) After tightening the drain cocks to the specified torque, rotate them clockwise as shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

NOTICE:

- Do not rotate the drain cocks more than 1 complete revolution (360°) after tightening the drain cocks to the specified torque.
- Do not loosen the drain cocks after setting them correctly.

**16. INSTALL KNOCK SENSOR**

- (a) Install the 2 knock sensors with the 2 bolts within a 15° angle as shown in the illustration.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

- (b) Connect the knock sensor connectors.

**17. INSTALL WATER OUTLET PIPE NO.1**

Install the water outlet pipe with the 3 bolts.

Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

EXHAUST SYSTEM COMPONENTS

EM1Y3-01

REPLACEMENT

1. REMOVE EXHAUST TAIL PIPE

- (a) Remove the bolt and clamp.
- (b) Remove the 3 exhaust pipe supports and exhaust tail pipe.

2. REMOVE EXHAUST CENTER PIPE

- (a) Remove the 2 bolts and springs.
- (b) Remove the 2 bolts.
- (c) Remove the 2 exhaust pipe support and exhaust center pipe.
- (d) Remove the gasket from the exhaust tail pipe.

3. REMOVE HEATED OXYGEN SENSOR (BANK 1 OXYGEN SENSOR)

- (a) Disconnect the heated oxygen sensor.
- (b) Remove the heated oxygen sensor.

4. REMOVE RH FRONT EXHAUST PIPE

- (a) Remove the 2 nuts and RH front exhaust pipe.
- (b) Remove the 2 gaskets from the RH front exhaust pipe.

5. REMOVE HEATED OXYGEN SENSOR (BANK 2 OXYGEN SENSOR)

- (a) Disconnect the heated oxygen sensor connector.
- (b) Remove the heated oxygen sensor.

6. REMOVE LH FRONT EXHAUST PIPE

- (a) Remove the 2 nuts, exhaust pipe support and LH front exhaust pipe.
- (b) Remove the 2 gaskets from the LH front exhaust pipe.

7. INSTALL RH FRONT EXHAUST PIPE

- (a) Install 2 new gaskets to the LH front exhaust pipe.
- (b) Install the LH front exhaust pipe with the 2 new nuts.

Torque: 62 N·m (630 kgf·cm, 46 ft·lbf)

- (c) Install the exhaust pipe support.

8. INSTALL HEATED OXYGEN SENSOR (BANK 1 OXYGEN SENSOR)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

- (b) Connect the heated oxygen sensor connector.

**9. INSTALL RH FRONT EXHAUST PIPE**

- (a) Install 2 new gaskets to the RH front exhaust pipe.
- (b) Install the RH front exhaust pipe with the 2 new nuts.

Torque: 62 N·m (630 kgf·cm, 46 ft·lbf)

10. INSTALL HEATED OXYGEN SENSOR (BANK2 OXYGEN SENSOR)

- (a) Install the heated oxygen sensor.
- (b) Connect the heated oxygen sensor connector.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

**11. INSTALL EXHAUST CENTER PIPE**

- (a) Using a vernier caliper, measure the free length of the spring.

Minimum length: 40.5 mm (1.5945 in.)

If the free length is less than minimum, replace the spring.

- (b) Install the 2 exhaust pipe supports.

- (c) Install the 2 bolts.

Torque: 48 N·m (490 kgf·cm, 35 ft·lbf)

- (d) Install the 2 bolts and springs.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)

**12. INSTALL EXHAUST TAIL PIPE**

- (a) Install a new gasket to the exhaust center pipe.
- (b) Install the 3 exhaust pipe supports.
- (c) Install a new clamp and bolt.

Torque: 32 N·m (326 kgf·cm, 24 ft·lbf)

CO/HC INSPECTION

EMOKQ-09

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

1. INITIAL CONDITIONS

- (a) Engine at normal operating temperature
- (b) Air cleaner installed
- (c) All pipes and hoses of air induction system connected
- (d) All accessories switched OFF
- (e) All vacuum lines properly connected
- (f) SFI system wiring connectors fully plugged
- (g) Ignition timing checked correctly
- (h) Transmission in neutral position
- (i) Tachometer and CO/HC meter calibrated by hand

2. START ENGINE

3. RACE ENGINE AT 2,500 RPM FOR APPROX. 180 SECONDS

4. INSERT CO/HC METER TESTING PROBE AT LEAST 40 cm (1.3 ft) INTO TAILPIPE DURING IDLING

5. IMMEDIATELY CHECK CO/HC CONCENTRATION AT IDLE AND/OR 2,500 RPM

HINT:

When performing the 2 mode (2,500 rpm and idle) test, follow the measurement orders are prescribed by the applicable local regulations.

If the CO/HC concentration does not comply with regulations, perform troubleshooting in the order given below.

- (1) Check the air–fuel ratio sensors and heated oxygen sensors operation (see page [DI-507](#) and [DI-512](#)).
- (2) See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: <ul style="list-style-type: none"> • Incorrect timing • Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idle (fluctuating HC reading)	1. Vacuum leaks: <ul style="list-style-type: none"> • PCV hose • Intake manifold • Throttle body • Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: <ul style="list-style-type: none"> • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

COMPRESSION INSPECTION

EMOKR-11

HINT:

If there is lack of power, excessive oil consumption or poor fuel economy, measure the compression pressure.

1. WARM UP AND STOP ENGINE

Allow the engine to warm up to normal operating temperature.

2. REMOVE SPARK PLUGS (See page IG-1)

3. CHECK CYLINDER COMPRESSION PRESSURE

- (a) Insert a compression gauge into the spark plug hole.
- (b) Fully open the throttle.
- (c) While cranking the engine, measure the compression pressure.

HINT:

Always use a fully charged battery to obtain engine speed of 250 rpm or more.

- (d) Repeat steps (a) through (c) for each cylinder.

NOTICE:

This measurement must be done in as short a time as possible.

Compression pressure:

1,373 kPa (14.0 kgf/cm², 199 psi) or more

Minimum pressure:

1,030 kPa (10.5 kgf/cm², 149 psi)

Difference between each cylinder:

98 kPa (1.0 kgf/cm², 14 psi) or less

- (e) If the cylinder compression in one or more cylinders is low, pour small amount of engine oil into the cylinder through the spark plug hole and repeat steps (a) through (c) for cylinders with low compression.
 - If adding oil helps the compression, chances are that the piston rings and/or cylinder bore are worn or damaged.
 - If pressure stays low, a valve may be sticking or seating is improper, or there may be leakage past the gasket.

4. REINSTALL SPARK PLUGS (See page IG-1)

VALVE CLEARANCE INSPECTION

EMOKS-10

HINT:

Inspect and adjust the valve clearance when the engine is cold.

1. REMOVE BATTERY CLAMP COVER
2. REMOVE THROTTLE BODY COVER
3. REMOVE AIR CLEANER AND INTAKE AIR CONNECTOR ASSEMBLY
4. REMOVE NO.3 TIMING BELT COVERS
(See page [EM-16](#))

5. REMOVE IGNITION COILS (See page [IG-5](#))

6. REMOVE RH CYLINDER HEAD COVER

Remove the 9 bolts, seal washers and cylinder head cover.

7. REMOVE LH CYLINDER HEAD COVER

- (a) Remove the oil dipstick for the transmission.
- (b) Disconnect the PCV hose.
- (c) Disconnect the engine wire clamp from the wire bracket on the cylinder head cover.
- (d) Remove the 9 bolts, 9 seal washers and cylinder head cover.

8. SET NO.1 CYLINDER TO TDC/COMPRESSION

- (a) Turn the crankshaft pulley, and align its groove with timing mark "0" of the No.1 timing belt cover.

- (b) Check that the timing marks of the camshaft timing pulleys and timing belt rear plates are aligned.
If not, turn the crankshaft 1 revolution (360°) and align the mark as above.

9. INSPECT VALVE CLEARANCE

- (a) Check only the valves indicated.
- Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
 - Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):

Intake	0.15 – 0.25 mm (0.006 – 0.010 in.)
Exhaust	0.25 – 0.35 mm (0.010 – 0.014 in.)

- (b) Turn the crankshaft 1 revolution (360°) and align the mark as above. (See procedure in step 8)
- (c) Check only the valves indicated as shown. Measure the valve clearance. (See procedure in step (a))

10. ADJUST VALVE CLEARANCE

- (a) Remove the timing belt. (See page [EM-16](#))
- (b) Remove the camshafts. (See page [EM-36](#))
- (c) Remove the valve lifter and adjusting shim.

- (d) Determine the replacement adjusting shim size according to these Formula or Charts:
 - (1) Using a micrometer, measure the thickness of the removed shim.
 - (2) Calculate the thickness of a new shim so that the valve clearance comes within the specified value.

T Thickness of removed shim

A Measured valve clearance

N Thickness of new shim

Intake: $N = T + (A - 0.20 \text{ mm (0.008 in.)})$

Exhaust: $N = T + (A - 0.30 \text{ mm (0.012 in.)})$

- (3) Select a new shim with thickness as close as possible to the calculated value.

HINT:

Shims are available in 41 increments of 0.020 mm (0.0008 in.), from 2.00 mm (0.0787 in.) to 2.80 mm (0.1102 in.).

- (e) Place a new adjusting shim on the valve.
- (f) Place the valve lifter.
- (g) Reinstall the camshafts. (See page [EM-60](#))
- (h) Reinstall the timing belt. (See page [EM-23](#))
- (i) Recheck the valve clearance.

11. REINSTALL CYLINDER HEAD COVERS**12. REINSTALL IGNITION COILS****13. REINSTALL NO.3 TIMING BELT COVERS**

(See page [EM-23](#))

14. REINSTALL AIR CLEANER AND INTAKE AIR CONNECTOR ASSEMBLY**15. REINSTALL THROTTLE BODY COVER****16. REINSTALL BATTERY CLAMP COVER**

IGNITION TIMING INSPECTION

EMOKT-12

1. WARM UP ENGINE

Allow the engine to warm up to normal operating temperature.

2. INSPECT IGNITION TIMING

(a) When using a hand-held tester.

- (1) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
- (2) Please refer to the hand-held tester operator's manual for further details.

**Ignition timing: 5 to 15° BTDC at idle
(Transmission in neutral)**

- (3) Disconnect the hand-held tester and CAN VIM from the DLC3.

(b) When not using a hand-held tester.

- (1) Connect the tester probe of a timing light to the wire (black - red) of the ignition coil connector for the No.1 cylinder.

- (2) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

- (3) Using a timing light, check the ignition timing.
**Ignition timing: 5 to 15° BTDC at idle
(Transmission in neutral)**
- (4) Remove the SST from the DLC3.
SST 09843-18040
- (5) Disconnect the timing light from the engine.

IDLE SPEED INSPECTION

EM1X3-02

1. INITIAL CONDITIONS

- (a) Engine at normal operating temperature
- (b) Air cleaner installed
- (c) All pipes and hoses of air induction system connected
- (d) All accessories switched OFF
- (e) All vacuum lines properly connected
- (f) SFI system wiring connectors fully plugged
- (g) iCorrect ignition timing
- (h) Transmission in neutral
- (i) Air conditioning switched OFF

2. INSPECT ENGINE IDLE SPEED

- (a) When using a hand-held tester.
 - (1) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
 - (2) Please refer to the hand-held tester operator's manual for further details.
 - (3) Race the engine speed at 2,500 rpm for approx. 90 seconds.
 - (4) Check the idle speed.

**Idle speed: 700 ± 50 rpm
(Transmission in neutral)**

If the idle speed is not as specified, check the air intake system.

- (5) Disconnect the hand-held tester and CAN VIM from the DLC3.

- (b) When not using a hand-held tester.
 - (1) Using SST, connect the tachometer probe to terminal TAC of the DLC3.
SST 09843-18030
 - (2) Race the engine at 2,500 rpm for approx. 90 seconds.
 - (3) Check the idle speed.

**Idle speed: 700 ± 50 rpm
(Transmission in neutral)**

If the idle speed is not as specified, check the air intake system.

- (4) Disconnect the tachometer from the DLC3.

TIMING BELT COMPONENTS

EMOKV-12

N·m (kgf·cm, ft·lbf) : Specified torque

A23302

A23303

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DRAIN ENGINE COOLANT
3. REMOVE RADIATOR ASSEMBLY (See page [CO-17](#))
4. REMOVE THROTTLE BODY COVER
5. REMOVE INTAKE AIR CONNECTOR ASSEMBLY

6. REMOVE DRIVE BELT, FAN, FLUID COUPLING AND FAN PULLEY
 - (a) Loosen the 4 nuts holding the fluid coupling to the fan bracket.
 - (b) Remove the drive belt. (See page [CH-7](#) and [CH-19](#))
 - (c) Remove the 4 nuts, the fan, fluid coupling assembly and fan pulley.

7. DISCONNECT PS PUMP

Remove the 3 bolts, and disconnect the PS pump from the engine.

HINT:

Suspend the PS pump securely.

8. REMOVE DRIVE BELT IDLER PULLEY

Remove the pulley bolt, cover plate and idler pulley.

9. REMOVE RH NO.3 TIMING BELT COVER

Remove the 3 bolts, nut and RH No.3 timing belt cover.

10. REMOVE LH NO.3 TIMING BELT COVER

- (a) Disconnect the engine wire from the 2 wire clamps.
- (b) Remove the 4 bolts and nut.
- (c) Disconnect the camshaft position sensor wire from the wire clamp on the LH No.3 timing belt cover.
- (d) Disconnect the camshaft position sensor connector from the connector bracket.
- (e) Disconnect the camshaft position sensor connector.
- (f) Remove the wire grommet from the LH No.3 timing belt cover.

- (g) Remove the LH No.3 timing belt cover.
- (h) Remove the bolt, nut and oil cooler pipe.

- 11. REMOVE NO.2 TIMING BELT COVER**
Remove the 2 bolts and No.2 timing belt cover.

- 12. DISCONNECT A/C COMPRESSOR FROM ENGINE**
(See page [EM-79](#))

- 13. REMOVE FAN BRACKET**
Remove the 2 bolts, 2 nuts and fan bracket.

- 14. IF RE-USING TIMING BELT, CHECK INSTALLATION MARKS ON TIMING BELT**

Check that there are 3 installation marks on the timing belt by turning the crankshaft pulley as shown in the illustration.

HINT:

If the installation marks have disappeared, place a new installation mark on the timing belt before removing each part.

- 15. LOOSEN CRANKSHAFT PULLEY BOLT**

Using SST, loosen the pulley bolt.

SST 09213-70011 (90105-08076), 09330-00021

**16. SET NO.1 CYLINDER TO TDC/COMPRESSION**

- (a) Turn the crankshaft pulley and align its groove with timing mark "0" of the No.1 timing belt cover.

- (b) Check that the timing marks of the camshaft timing pulleys and timing belt rear plates are aligned.

If not, turn the crankshaft 1 revolution (360°).

- (c) Turn the crankshaft pulley approx. 50° clockwise, and align the timing mark of the crankshaft pulley with the centers of the crankshaft pulley bolt and the No.2 timing belt idler pulley bolt.

NOTICE:

If the timing belt is disengaged, having the crankshaft pulley at the wrong angle can cause the piston head and valve head to come into contact with each other when you remove the camshaft timing pulley (step 15), causing damage. So always set the crankshaft pulley at the correct angle.

- (d) Remove the crankshaft pulley bolt.

NOTICE:

Do not turn the crankshaft pulley.

**17. REMOVE TIMING BELT TENSIONER****HINT:**

- When re-using the timing belt:
If the installation marks have disappeared, before remove the timing belt, place 2 new installation marks on the timing belt to match the timing marks of the camshaft timing pulleys.

- When replacing the timing belt tensioner only:
To avoid meshing of the timing pulley and timing belt, secure one of them with string. And place matchmarks on the timing belt and RH camshaft timing pulley.

Alternately loosen the 2 bolts, and remove them, the belt tensioner and dust boot.

18. DISCONNECT TIMING BELT FROM CAMSHAFT TIMING PULLEYS

- Hold the camshaft timing pulley with SST, and loosen the tension spring between the LH and RH camshaft timing pulleys by slightly turning the LH camshaft timing pulley clockwise.

SST 09960-10010 (09962-01000, 09963-01000)

HINT:

Set the SST so that the claw comes in contact with the camshaft timing pulley bolt, and tighten the lock nut of the SST.

- Disconnect the timing belt from the camshaft timing pulleys.

19. REMOVE CAMSHAFT TIMING PULLEYS

- Hold the camshaft timing pulley with SST, loosen the 4 bolts of the timing pulley.

SST 09960-10010 (09962-01000, 09963-01000)

- Remove the 2 timing pulleys.

20. REMOVE GENERATOR

(See page [CH-7](#) and [CH-19](#))

21. REMOVE DRIVE BELT TENSIONER

Remove the bolt, 2 nuts and belt tensioner.

**22. REMOVE CRANKSHAFT PULLEY**

Using SST, remove the crankshaft pulley.

SST 09950-50013 (09951-05010, 09952-05010,
09953-05010, 09953-05020, 09954-05021)

NOTICE:

Do not turn the crankshaft pulley.

23. REMOVE NO.1 TIMING BELT COVER

Remove the 4 bolts and timing belt cover.

**24. REMOVE TIMING BELT GUIDE****25. REMOVE TIMING BELT COVER SPACER****26. REMOVE TIMING BELT****HINT:**

If re-using the belt and the installation mark has disappeared from it, place a new installation mark on the timing belt to the match the dot mark of the crankshaft timing pulley.

**27. REMOVE NO.1 IDLER PULLEY AND NO.2 IDLER PULLEY**

- (a) Using a 10 mm hexagon wrench, remove the bolt, No.1 idler pulley and plate washer.
- (b) Remove the bolt and No.2 idler pulley.

**28. REMOVE CRANKSHAFT TIMING PULLEY**

Using SST, remove the timing pulley.

SST 09950-50013 (09951-05010, 09952-05010,
09953-05010, 09953-05020, 09954-05011)

NOTICE:

Do not turn the timing pulley.

INSPECTION

1. INSPECT TIMING BELT

NOTICE:

- Do not bend, twist or turn the timing belt inside out.
- Do not allow the timing belt to come into contact with oil, water or steam.
- Do not utilize timing belt tension when installing or removing the mount bolt of the camshaft timing pulley.

If there is any defect, as shown in the illustration, check these points:

- Premature parting
 - Check for proper installation.
 - Check the timing cover gasket for damage and proper installation.
- If the belt teeth are cracked or damaged, check to see if either camshaft is locked.
- If there is noticeable wear or cracks on the belt face, check to see if there are nicks on the side of the idler pulley lock and water pump.
- If there is wear or damage on even one side of the belt, check the belt guide and the alignment of each pulley.
- If there is noticeable wear on the belt teeth, check timing cover for damage and for foreign material on the pulley teeth.

If necessary, replace the timing belt.

2. INSPECT IDLER PULLEYS

- Visually check the seal portion of the idler pulley for oil leakage.

If leakage is found, replace the idler pulley.

- Check that the idler pulley turns smoothly.

If necessary, replace the idler pulley.

3. INSPECT TIMING BELT TENSIONER

- Visually check the seal portion of the tensioner for oil leakage.

HINT:

If there is only the faintest trace of oil on the seal on the push rod side, the tensioner is all right.

If leakage is found, replace the tensioner.

- (b) Hold the tensioner with both hands and push the push rod strongly as shown to check that it doesn't move. If the push rod moves, replace the tensioner.

NOTICE:

Never hold the tensioner push rod facing downward.

- (c) Measure the protrusion of the push rod from the housing end.

Protrusion: 10.5 to 11.5 mm (0.413 to 0.453 in.)

If the protrusion is not as specified, replace the tensioner.

4. INSPECT WATER PUMP (See page [CO-7](#))

INSTALLATION

1. INSTALL CRANKSHAFT TIMING PULLEY

- (a) Align the timing pulley set key with the key groove of the pulley.
- (b) Using SST and a hammer, tap in the timing pulley, facing the flange side inward.
SST 09223-46011

2. INSTALL NO.1 IDLER PULLEY AND NO.2 IDLER PULLEY

- (a) Apply adhesive 2 or 3 threads of the pivot bolt.
Adhesive:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent
- (b) Using a 10 mm hexagon wrench, install the plate washer and No.1 idler pulley with the pivot bolt.
Torque: 34.5 N·m (350 kgf·cm, 25 ft·lbf)
- (c) Install the No.2 idler pulley with the bolt.
Torque: 34.5 N·m (350 kgf·cm, 25 ft·lbf)
- (d) Check that the No.1 and No.2 idler pulleys moves smoothly.

3. TEMPORARILY INSTALL TIMING BELT

NOTICE:

The engine should be cold.

- (a) Remove any oil or water on the crankshaft pulley, oil pump pulley, water pump pulley, No.1 idler pulley and No.2 idler pulley, and keep them clean.

NOTICE:

Only wipe the pulleys; do not use any cleansing agent.

- (b) Align the installation mark on the timing belt with the timing mark of the crankshaft timing pulley.
- (c) Install the timing belt on the crankshaft timing pulley, No.1 idler pulley and No.2 idler pulley.

4. INSTALL TIMING BELT COVER SPACER

- (a) Install the gasket to the cover spacer.
- (b) Install the cover spacer.

**5. INSTALL TIMING BELT GUIDE**

Install the belt guide with the cup side facing outward.

6. INSTALL NO.1 TIMING BELT COVER

Install the timing belt cover with the 4 bolts.

**7. INSTALL CRANKSHAFT PULLEY**

(a) Align the pulley set key with the key groove of the crankshaft pulley.

(b) Using SST and a hammer, tap in the crankshaft pulley.
SST 09223-46011

8. INSTALL DRIVE BELT TENSIONER

Install the belt tensioner with the bolt and 2 nuts.

Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

HINT:

Use a bolt of 106 mm (4.18 in.) in length.

9. INSTALL GENERATOR

(See page [CH-16](#) and [CH-28](#))

**10. CHECK CRANKSHAFT PULLEY POSITION**

Check that the timing mark of the crankshaft pulley is aligned with timing mark "0" of the No.1 timing belt cover.

**11. INSTALL, LH CAMSHAFT TIMING PULLEY**

(a) Align the camshaft knock pin with the knock pin groove of the timing pulley, and slide the timing pulley.

(b) Temporarily install the 4 bolts of the camshaft timing pulley.

(c) Hold the camshaft timing pulley with SST, and tighten the pulley bolt.

SST 09960-10010 (09962-01000, 09963-01000)

Torque: 8.1 N·m (83 kgf·cm, 72 in.-lbf)

HINT:

Set the SST so that the claw comes in contact with the camshaft timing pulley bolt, and tighten the lock nut of the SST.

**12. INSTALL RH CAMSHAFT TIMING PULLEY**

- (a) Align the camshaft timing tube knock pin with the knock pin groove of the timing pulley.
- (b) Temporarily install the 4 bolts of the camshaft timing pulley.
- (c) Hold the camshaft timing pulley with SST, and tighten the pulley bolt.

SST 09960-10010 (09962-01000, 09963-01000)

Torque: 8.1 N·m (83 kgf·cm, 72 in.-lbf)

**13. CONNECT TIMING BELT TO LH CAMSHAFT TIMING PULLEY**

- (a) Remove any oil or water on the timing pulley, and keep it clean.

NOTICE:

Only wipe the pulleys; do not use any cleansing agent.

- (b) Using SST, turn the timing pulley. Align the installation mark on the timing belt with the timing mark of the timing pulley, and hang the timing belt on the timing pulley.
SST 09960-10010 (09962-01000, 09963-01000)
- (c) Using SST, turn the LH camshaft timing pulley counter-clockwise until there is tension between the crankshaft timing pulley and LH camshaft timing pulley.
SST 09960-10010 (09962-01000, 09963-01000)

**14. CONNECT TIMING BELT TO RH CAMSHAFT TIMING PULLEY**

- (a) Remove any oil or water on the camshaft timing pulley and water pump pulley, and keep them clean.

NOTICE:

Only wipe the pulleys; do not use any cleansing agent.

- (b) Using SST, turn the timing pulley. Align the installation mark on the timing belt with the timing mark of the timing pulley, and hang the timing belt on the timing pulley.
SST 09960-10010 (09962-01000, 09963-01000)

**15. SET TIMING BELT TENSIONER**

- (a) Using a press, slowly press in the push rod using 981 – 9,807 N (100 – 1,000 kgf, 220 – 2,205 lbf) of pressure.
- (b) Align the holes of the push rod and housing, and pass a 1.27 mm hexagon wrench through the holes to keep the setting position of the push rod.
- (c) Remove the belt tensioner from the press.
- (d) Install the dust boot to the belt tensioner.

**16. INSTALL TIMING BELT TENSIONER**

- (a) Temporarily install the belt tensioner with the 2 bolts.
- (b) Alternately tighten the 2 bolts.
Torque: 26 N·m (270 kgf·cm, 19 ft·lbf)
- (c) Using pliers, remove the 1.27 mm hexagon wrench from the belt tensioner.

**17. CHECK VALVE TIMING**

- (a) Temporarily install the crankshaft pulley bolt.
- (b) Slowly turn the crankshaft pulley 2 revolutions from the TDC to TDC.

NOTICE:

Always turn the crankshaft pulley clockwise.

- (c) Check that each pulley aligns with the timing marks as shown in the illustration.

If the timing marks do not align, remove the timing belt and reinstall it.

**18. TIGHTEN CRANKSHAFT PULLEY BOLT**

Using SST, install the pulley bolt.

SST 09213-70011 (90119-08216), 09330-00021

Torque: 245 N·m (2,500 kgf·cm, 181 ft·lbf)

**19. INSTALL FAN BRACKET**

Install the fan bracket with the 2 bolts and 2 nuts.

Torque:

12 mm head

16 N·m (160 kgf·cm, 12 ft·lbf) for (A)

14 mm head

32 N·m (330 kgf·cm, 24 ft·lbf) for (B)

HINT:

Each bolt length is indicated in the illustration.

Bolt Length:

106 mm (4.17 in.) for 12 mm head (A)

114 mm (4.49 in.) for 14 mm head (B)

20. INSTALL A/C COMPRESSOR (See page [EM-83](#))**21. INSTALL NO.2 TIMING BELT COVER**

Install the No.2 timing belt cover with the 2 bolts.

Torque: 16 N·m (160 kgf·cm, 12 ft·lbf)

**22. INSTALL RH NO.3 TIMING BELT COVER**

(a) Fit the RH No.3 timing belt cover, matching it with the fan bracket.

(b) Install the RH No.3 timing belt cover with the 3 bolts and nut.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

**23. INSTALL LH NO.3 TIMING BELT COVER**

- (a) Install the oil cooler pipe with the bolt and nut.
- (b) Run the camshaft position sensor wire through the LH No.3 timing belt cover hole.
- (c) Fit the LH No.3 timing belt cover, matching it with the fan bracket.
- (d) Install the LH No.3 timing belt cover with the 4 bolts and nut.

Torque: 7.5 N·m (76 kgf-cm, 66 in.-lbf)

- (e) Install the wire grommet to the LH No.3 timing belt cover.
- (f) Install the camshaft position sensor connector to the connector bracket.
- (g) Connect the camshaft position sensor connector.
- (h) Install the sensor wire to the wire clamp on the LH No.3 timing belt cover.
- (i) Install the engine wire to the 2 wire clamps on the LH No.3 timing belt cover.

24. INSTALL DRIVE BELT IDLER PULLEY

Install the idler pulley and cover plate with the bolt.

Torque: 39 N·m (400 kgf-cm, 29 ft-lbf)

25. INSTALL PS PUMP

Install the PS pump with the 3 bolts.

Torque: 17 N·m (175 kgf-cm, 13 ft-lbf)

**26. INSTALL FAN PULLEY, FAN, FLUID COUPLING AND DRIVE BELT**

- (a) Temporarily install the fan pulley, the fan, fluid coupling assembly with the 4 nuts.
- (b) Install the drive belt. (See page [CH-16](#) and [CH-28](#))
- (c) Tighten the 4 nuts holding the fluid coupling to the fan bracket.

Torque: 29 N·m (296kgf-cm, 21 ft-lbf)

27. INTAKE AIR CONNECTOR ASSEMBLY**28. INSTALL THROTTLE BODY COVER****29. INSTALL RADIATOR ASSEMBLY (See page [CO-18](#))****30. FILL WITH ENGINE COOLANT****31. START ENGINE AND CHECK FOR LEAKS****32. RECHECK ENGINE COOLANT LEVEL****33. INSTALL ENGINE UNDER COVER**

CYLINDER HEAD COMPONENTS

EM1WZ-02

Y

N·m (kgf·cm, ft·lbf) : Specified torque
 ◆ Non-reusable part
 * For use with SST

Y

ENGINE MECHANICAL (2UZ-FE) - CYLINDER HEAD

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE THROTTLE BODY COVER
3. DISCONNECT TIMING BELT FROM CAMSHAFT TIMING PULLEYS (See page [EM-16](#))

NOTICE:

- Be careful not to drop anything inside the timing belt cover.
 - Do not allow the belt to come into contact with oil, water or dust.
4. REMOVE CAMSHAFT TIMING PULLEYS (See page [EM-16](#))
 5. REMOVE CAMSHAFT POSITION SENSOR (See page [IG-8](#))
 6. DISCONNECT PS PUMP FROM ENGINE (See page [EM-79](#))
 7. REMOVE FRONT EXHAUST PIPE (See page [EM-126](#))
 8. REMOVE OIL DIPSTICK AND GUIDE FOR A/T
 9. REMOVE IGNITION COILS (See page [IG-5](#))
 10. REMOVE TIMING BELT REAR PLATES
 - (a) Remove the 3 bolts, stud bolt and RH No.1 timing belt rear plates.
 - (b) Disconnect the wire clamp from the LH timing belt rear plate.
 - (c) Remove the 3 bolts, stud bolt and LH No.1 timing belt rear plates.
 11. DISCONNECT FUEL INLET HOSE (See page [SF-27](#)) AND FUEL RETURN HOSE
 12. DISCONNECT CONNECTORS FROM INTAKE MANIFOLD
 - (a) Disconnect the throttle control connector.
 - (b) Disconnect the VSV connector for EVAP.
 - (c) Disconnect the 8 injector connectors.
 - (d) Disconnect the ECT sensor connector.
 - (e) Disconnect the 2 VSV connectors for the air injection system.
 - (f) Disconnect the 8 ignition coil connectors.
 - (g) Disconnect the 2 air fuel ratio sensor connectors.

- 13. DISCONNECT HOSES FROM INTAKE MANIFOLD**
- Disconnect the vacuum hose from the fuel pressure regulator.
 - Disconnect the PCV hose from the PCV valve on the LH cylinder head.
 - Disconnect the EVAP hose (from charcoal canister) from the VSV for the EVAP.
 - Disconnect the 2 vacuum hoses from the VSV for the air injection system.

- 14. REMOVE INTAKE MANIFOLD ASSEMBLY**
- Disconnect the 2 water bypass hoses from the throttle body.

- Disconnect the 2 wire clamps from the wire clamp bracket on the RH delivery pipe.

- Remove the 2 bolts holding the engine wire protector from the intake manifold and cylinder head.
- Remove the 2 bolts and ground cables from the RH and LH cylinder heads.
- Remove the bolt and throttle body cover bracket from the intake manifold.

- (f) Disconnect the engine wire from the engine hanger and wire bracket.
- (g) Remove the wire bracket from the intake manifold.

- (h) Remove the 6 bolts, 4 nuts, intake manifold assembly and 2 gaskets.

15. DISASSEMBLE INTAKE MANIFOLD

- (a) Remove the 2 bolts and VSVs for the air injection system.
- (b) Disconnect the EVAP hose from the upper intake manifold, and remove the VSV for EVAP.
- (c) Remove the bolt, 2 unions, 4 gaskets and front fuel pipe from the intake manifold.
- (d) Remove the throttle body (see page [SF-44](#)).

- (e) Remove the bolt and VSV for ACIS from the intake manifold.

- (f) Disconnect the fuel return hose from the fuel pressure regulator.
- (g) Remove the 3 bolts and fuel return pipe from the intake manifold.
- (h) Remove the 2 bolts, fuel pressure regulator and O-ring.
- (i) Remove the fuel pressure pulsation damper and 2 gaskets.
- (j) Remove the 2 delivery pipes and 8 injectors (see page [SF-27](#)).

16. REMOVE WATER INLET AND INLET HOUSING ASSEMBLY (See page [CO-6](#))
17. REMOVE AIR PUMP ASSEMBLY (See page [EC-23](#))
18. REMOVE NO.2 AIR SWITCHING VALVES
(See page [EC-23](#))

19. REMOVE FRONT WATER BYPASS JOINT
Remove the 4 nuts, water bypass joint and 2 gaskets.

20. REMOVE REAR WATER BYPASS JOINT
Remove the 4 nuts, water bypass joint and 2 gaskets.
21. REMOVE ENGINE HANGERS

22. REMOVE CYLINDER HEAD COVERS
Remove the 18 bolts, seal washers, RH and LH cylinder head covers and 2 gaskets.
23. IF NECESSARY, REMOVE SEMI-CIRCULAR PLUGS AND CAMSHAFT HOUSING PLUGS
24. REMOVE CAMSHAFTS

NOTICE:

Since the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head receiving the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (a) Check the crankshaft pulley position.
Check that the timing mark of the crankshaft pulley is aligned with the centers of the crankshaft pulley bolt and idler pulley bolt.

NOTICE:

Having the crankshaft pulley at the wrong angle can cause the piston head and valve head to come into contact with each other when you remove the camshaft, causing damage. So always set the crankshaft pulley at the correct angle.

- (b) Release the oil from the front bearing caps.
Using SST, rotate the camshaft timing tube from left to right 2 to 3 times within its VVT-i range (25°) and use a waste cloth to collect the oil from the camshaft timing oil control valve installation hole.

SST 09960-10010 (09962-01000, 09963-00400)

NOTICE:

Approximately 20 cc (1.2 cu in.) of oil will be ejected. Take care not to spill it.

- (c) Remove the LH camshafts.
(1) Bring the service bolt hole of the sub-gear upward by turning the hexagon head portion of the exhaust camshaft with a wrench.
(2) Secure the sub-gear to the main gear with a service bolt.

Recommended service bolt:

Thread diameter	6 mm
Thread pitch	1.0 mm
Bolt length	16 to 20 mm (0.63 to 0.79 in.)

HINT:

When removing the camshaft, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.

- (3) Align the timing mark (2-dot mark) of the camshaft drive gear by turning the hexagon head portion of the exhaust camshaft with a wrench.

- (4) Uniformly loosen the 22 bearing cap bolts in several steps, in the sequence shown.
- (5) Remove the 22 bearing cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, oil control valve filter and 2 camshafts.

- (d) Remove the RH camshafts.
 - (1) Bring the service bolt hole of the sub-gear upward by turning the hexagon head portion of the exhaust camshaft with a wrench.
 - (2) Secure the sub-gear to the main gear with a service bolt.

Recommended service bolt:

Thread diameter	6 mm
Thread pitch	1.0 mm
Bolt length	16 to 20 mm (0.63 to 0.79 in.)

HINT:

When removing the camshafts, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.

- (3) Set the timing mark (1-dot mark) of the camshaft main gear at approx. 10° angle by turning the hexagon head portion of the exhaust camshaft with a wrench.

- (4) Uniformly loosen the 22 bearing cap bolts in several steps, in the sequence shown.
- (5) Remove the 22 bearing cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, strainer and 2 camshafts.

HINT:

Arrange the bearing caps for RH and LH sides.

25. DISASSEMBLE EXHAUST CAMSHAFTS

(a) Mount the hexagon head portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.

(b) Using SST, turn the sub-gear clockwise, and remove the service bolt.

SST 09960-10010 (09962-01000, 09963-00500)

(c) Using snap ring pliers, remove the snap ring.

(d) Remove the wave washer.

(e) Remove the camshaft sub-gear.

(f) Remove the camshaft gear spring.

NOTICE:

Be careful not to damage the camshaft.

26. REMOVE CAMSHAFT TIMING TUBE FROM INTAKE CAMSHAFT

(a) Mount the hexagon head portion of the intake camshaft in a vise.

NOTICE:

- **Be careful not to damage the camshaft.**
- **The 4 bolts shown in the illustration determine backlash of the gear in the timing tube, so do not remove them. If any of the 4 bolts are removed, install a new timing tube assembly.**

(b) Remove the screw plug and seal washer.

(c) Using a 10 mm hexagon wrench, and remove the bolt.

(d) Pull out the timing tube and drive gear assembly from the camshaft.

- (e) Using SST and a 5 mm hexagon wrench, remove the 4 bolts, drive gear and oil seal.
 SST 09960-10010 (09962-01000, 09963-00500)

NOTICE:

Be careful not to damage the timing tube.

27. REMOVE SPARK PLUGS

28. REMOVE CYLINDER HEAD AND EXHAUST MANIFOLD ASSEMBLIES

- (a) Uniformly loosen the 10 cylinder head bolts on one side of each cylinder head in several steps, in the sequence shown, then perform the same procedure to the other side as shown. Remove the 20 cylinder head bolts and plate washers.

NOTICE:

- **Cylinder head warpage or cracking could result from removing bolts in incorrect order.**

- **Do not drop the plate washer for cylinder head bolt into portion A of the cylinder head. If dropped into portion A, the plate washer will pass through the cylinder head and cylinder block into the oil pan.**

- (b) Lift the cylinder head from the dowels on the cylinder block, and place the 2 cylinder heads on wooden blocks on a bench.

HINT:

If the cylinder head is difficult to lift off, pry between the cylinder head and cylinder block with a screwdriver.

NOTICE:

- Be careful not to damage the contact surfaces of the cylinder head and cylinder block.
- The cylinder head should not be tilted so as to secure the valve lifter. If the cylinder head is tilted, remove the valve lifter and check that the adjusting shim is set correctly.

**29. REMOVE RH EXHAUST MANIFOLD FROM CYLINDER HEAD**

- (a) Remove the 4 bolts and heat insulator.
 (b) Remove the 8 nuts, exhaust manifold and gasket.

**30. REMOVE LH EXHAUST MANIFOLD FROM CYLINDER HEAD**

- (a) Remove the 4 bolts and heat insulator.
 (b) Remove the 8 nuts, exhaust manifold and gasket.

DISASSEMBLY

1. REMOVE VALVE LIFTERS AND SHIMS

HINT:

Arrange the valve lifters and shims in correct order.

2. REMOVE VALVES

- (a) Using SST, compress the valve spring and remove the 2 keepers.

SST 09202-70020 (09202-00010)

- (b) Remove the spring retainer, the valve spring, the valve and the spring seat.

HINT:

Arrange the valves, valve springs, spring seats and spring retainers incorrect order.

- (c) Using needle-nose pliers, remove the oil seal.

A03194

INSPECTION

1. CLEAN TOP SURFACES OF PISTONS AND CYLINDER BLOCK

- (a) Turn the crankshaft, and bring each piston to top dead center (TDC). Using a gasket scraper, remove all the carbon from the piston top surface.

A03193

- (b) Using a surface contacting gasket scraper, remove all the gasket materials from the cylinder block.

- (c) Using compressed air, blow carbon and oil from the bolt holes.

CAUTION:

Protect your eyes when using high pressure compressed air.

EM6323

2. REMOVE GASKET MATERIAL

Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the surface contacting the cylinder block.

EM6324

3. CLEAN COMBUSTION CHAMBERS

Using a wire brush, remove all the carbon from the combustion chambers.

NOTICE:

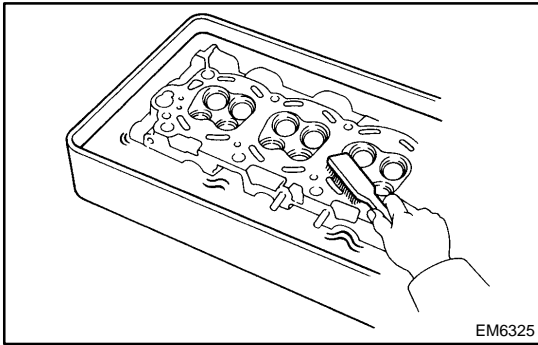

Be careful not to scratch the surface contacting the cylinder block.

P21861

4. CLEAN VALVE GUIDE BUSHINGS

Using a valve guide bushing brush and solvent, clean all the guide bushings.

5. CLEAN CYLINDER HEAD

Using a soft brush and solvent, thoroughly clean the cylinder head.

6. INSPECT FOR FLATNESS

Using a precision straight edge and feeler gauge, measure the surfaces contacting the cylinder block and the manifolds for warpage.

Maximum warpage: 0.10 mm (0.0039 in.)

If warpage is greater than maximum, replace the cylinder head.

7. INSPECT FOR CRACKS

Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks. If cracked, replace the cylinder head.

8. INSPECT CYLINDER HEAD BOLT

Using vernier calipers, measure the thread outside diameter of the cylinder head bolt.

Standard outside diameter:

9.810 to 9.960 mm (0.3862 to 0.3921 in.)

Minimum outside diameter: 9.70 mm (0.3819 in.)

If the diameter is less than minimum, replace the bolt.

9. CLEAN VALVES

- (a) Using a gasket scraper, chip off any carbon from the valve head.
- (b) Using a wire brush, thoroughly clean the valve.

10. INSPECT VALVE STEMS AND GUIDE BUSHINGS

- (a) Using a caliper gauge, measure the inside diameter of the guide bushing.

Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

- (b) Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter:

Intake	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Exhaust	5.465 to 5.480 mm (0.2152 to 0.2157 in.)

- (c) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.

Standard oil clearance:

Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

Maximum oil clearance:

Intake	0.08 mm (0.0031 in.)
Exhaust	0.10 mm (0.0039 in.)

If the clearance is greater than maximum, replace the valve and guide bushing. (See page [EM-56](#))

11. INSPECT AND GRIND VALVES

- (a) Grind the valve enough to remove pits and carbon.
- (b) Check that the valve is ground to the correct valve face angle.

Valve face angle: 44.5°

- (c) Check the valve head margin thickness.
Standard margin thickness: 1.0 mm (0.039 in.)
Minimum margin thickness: 0.5 mm (0.020 in.)
 If the margin thickness is less than minimum, replace the valve.

- (d) Check the valve overall length.
Standard overall length:

Intake	95.05 mm (3.7421 in.)
Exhaust	95.10 mm (3.7441 in.)

Minimum overall length:

Intake	94.55 mm (3.7224 in.)
Exhaust	94.60 mm (3.7244 in.)

If the overall length is less than minimum, replace the valve.

- (e) Check the surface of the valve stem tip for wear.
 If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

NOTICE:

Do not grind off more than minimum.

12. INSPECT AND CLEAN VALVE SEATS

- (a) Using a 45° carbide cutter, resurface the valve seats. Remove only metal enough to clean the seats.

- (b) Check the valve seating position.
 Apply a light coat of Prussian blue (or white lead) to the valve face. Lightly press the valve against the seat. Do not rotate the valve.

- (c) Check the valve face and seat for the following:
- If blue appears 360° around the face, the valve is concentric. If not, replace the valve.
 - If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.
 - Check that the seat contact is in the middle of the valve face with the following width:

1.0 to 1.4 mm (0.039 to 0.055 in.)

If not, correct the valve seats as follows:

- If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

- If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.

- (d) Hand-lap the valve and valve seat with an abrasive compound.
- (e) After hand-lapping, clean the valve and valve seat.

13. INSPECT VALVE SPRINGS

- (a) Using a steel square, measure the deviation of the valve spring.

Maximum deviation: 2.0 mm (0.079 in.)

If the deviation is greater than maximum, replace the valve spring.

- (b) Using vernier calipers, measure the free length of the valve spring.

Free length: 54.1 mm (2.130 in.)

If the free length is not as specified, replace the valve spring.

- (c) Using a spring tester, measure the tension of the valve spring at the specified installed length.

Installed tension:

210 to 226 N (21.4 to 23.0 kgf, 47.2 to 50.7 lbf)

at 35.0 mm (1.378 in.)

If the installed tension is not as specified, replace the valve spring.

14. INSPECT CAMSHAFT FOR RUNOUT

- (a) Place the camshaft on V-blocks.

- (b) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout: 0.03 mm (0.0012 in.)

If the circle runout is greater than maximum, replace the camshaft.

15. INSPECT CAM LOBES

Using a micrometer, measure the cam lobe height.

Standard cam lobe height:

Intake	42.61 to 42.71 mm (1.6776 to 1.6815 in.)
Exhaust	42.63 to 42.73 mm (1.6783 to 1.6823 in.)

Minimum cam lobe height:

Intake	42.46 mm (1.6717 in.)
Exhaust	42.48 mm (1.6724 in.)

If the cam lobe height is less than minimum, replace the camshaft.

**16. INSPECT CAMSHAFT JOURNALS**

Using a micrometer, measure the journal diameter.

Journal diameter:

26.954 to 26.970 mm (1.0612 to 1.0618 in.)

If the journal diameter is not as specified, check the oil clearance (see step 20).

**17. INSPECT CAMSHAFT TIMING TUBE**

(a) Using a micrometer, measure the journal diameter.

Journal diameter:

39.955 to 39.964 mm (1.5730 to 1.5734 in.)

If the journal diameter is not as specified, check the oil clearance.

(b) Install the timing tube to the intake camshaft, and check the timing tube turns smoothly.

If necessary, replace the timing tube and intake camshaft.

**18. INSPECT CAMSHAFT GEAR SPRING**

Using vernier calipers, measure the free distance between the spring ends.

Free distance: 18.2 to 18.8 mm (0.717 to 0.740 in.)

If the free distance is not as specified, replace the gear spring.

19. INSPECT CAMSHAFT BEARINGS

Check the bearings for flaking and scoring.

If the bearings are damaged, replace the bearing caps and cylinder head as a set.

**20. INSPECT CAMSHAFT JOURNAL OIL CLEARANCE**

(a) Install the camshaft timing tube to the intake camshaft (see page [EM-58](#)).

(b) Clean the bearing caps and camshaft journals.

(c) Place the camshafts on the cylinder head.

(d) Lay a strip of Plastigage across each of the camshaft journals.

(e) Install the bearing caps (see page EM-60).

Torque:
7.5 N·m (76 kgf·cm, 66 in.-lbf) for bolt A
16 N·m (160 kgf·cm, 12 ft-lbf) for others

NOTICE:

Do not turn the camshaft.

(f) Remove the bearing caps.

(g) Measure the Plastigage at its widest point.

Standard oil clearance:

Camshaft journal	0.030 to 0.071 mm (0.0012 to 0.0028 in.)
Camshaft timing tube journal	0.036 to 0.057 mm (0.0014 to 0.0022 in.)

Maximum oil clearance:

Camshaft journal	0.100 mm (0.0039 in.)
Camshaft timing tube journal	0.075 mm (0.0030 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and cylinder head as a set.

(h) Completely remove the Plastigage.

(i) Remove the camshafts.

(j) Remove the camshaft timing tube from the intake camshaft.

21. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshaft timing tube to the intake camshaft (see page EM-58).

(b) Install the camshaft (see page EM-58).

(c) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:

Intake	0 to 0.040 mm (0 to 0.0016 in.)
Exhaust	0.030 to 0.070 mm (0.0012 to 0.0028 in.)

Maximum thrust clearance:

Intake	0.12 mm (0.0047 in.)
Exhaust	0.10 mm (0.0039 in.)

If the thrust clearance is greater than the maximum, replace the camshaft. If necessary, replace the bearing caps and cylinder head as a set.

(d) Remove the camshafts.

(e) Remove the camshaft timing tube from the intake camshaft.

**22. INSPECT CAMSHAFT GEAR BACKLASH**

- (a) Install the drive gear to the camshaft timing tube (See page EM-58).
- (b) Install the camshaft timing tube to the intake camshaft (See page EM-58).
- (c) Install the camshafts without installing the exhaust camshaft sub-gear and front bearing cap (See page EM-58).
- (d) Using a dial indicator, measure the backlash.

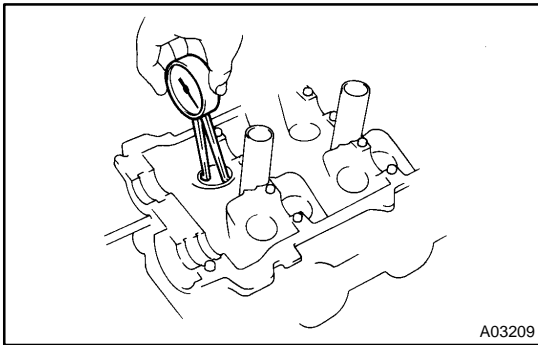

Standard backlash:

0.020 to 0.200 mm (0.0008 to 0.0079 in.)

Maximum backlash: 0.30 mm (0.0118 in.)

If the backlash is greater than the maximum, replace the intake camshaft drive gear and exhaust camshaft.

- (e) Remove the camshafts.
- (f) Remove the camshaft timing tube from the intake camshaft.
- (g) Remove the drive gear from the camshaft timing tube.

**23. INSPECT VALVE LIFTERS AND LIFTER BORES**

- (a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Lifter bore diameter:

31.000 to 31.016 mm (1.2205 to 1.2211 in.)

- (b) Using a micrometer, measure the lifter diameter at the valve lifter center line, 12.3 to 12.7 mm (0.484 to 0.500 in.) from the valve lifter head.

Lifter diameter:

30.968 to 30.976 mm (1.2192 to 1.2195 in.)

- (c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.

Standard oil clearance:

0.024 to 0.050 mm (0.0009 to 0.0020 in.)

Maximum oil clearance:

0.07 mm (0.0028 in.)

If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.

24. INSPECT EXHAUST MANIFOLDS

Using a precision straight edge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder head.

Maximum warpage: 0.10 mm (0.0394 in.)

If warpage is greater than maximum, replace the manifold.

REPLACEMENT

1. REPLACE VALVE GUIDE BUSHINGS

- (a) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

- (b) Using SST and a hammer, tap out the guide bushing.
SST 09201-01055, 09950-70010 (09951-07100)

- (c) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.

Both intake and exhaust

Bushing bore diameter mm (in.)	Bushing size
10.285 to 10.306 (0.4049 to 0.4057)	Use STD
10.335 to 10.356 (0.4069 to 0.4077)	Use O/S STD

- (d) Select a new guide bushing (STD or O/S 0.05).

If the bushing bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bushing bore to the following dimension:

10.335 to 10.356 mm (0.4069 to 0.4077 in.)

If the bushing bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

HINT:

Different the bushings are used for the intake and exhaust.

- (e) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

- (f) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.

Protrusion height:

Intake	9.2 to 9.8 mm (0.362 to 0.386 in.)
Exhaust	8.2 to 8.8 mm (0.323 to 0.346 in.)

SST 09201-01055, 09950-70010 (09951-07100)

- (g) Using a sharp 5.5 mm reamer, ream the guide bushing to obtain the standard specified clearance (see page EM-46) between the guide bushing and valve stem.

2. REPLACE SPARK PLUG TUBE GASKETS

- (a) Bend the 4 ventilation case claws installed on the cylinder head cover to an angle of 90° or more.
 (b) Using a screwdriver, pry out the gasket.

NOTICE:

Be careful not to damage the cylinder head cover. Tape the screwdriver tip.

- (c) Using SST and a hammer, tap in a new gasket until its surface is flush with the upper edge of the cylinder head cover.

SST 09950-60010 (09951-00240, 09951-00440, 09952-06010), 09950-70010 (09951-07100)

NOTICE:

Be careful of the installation direction.

- (d) Apply a light coat of MP grease to the gasket lip.
 (e) Return the 4 ventilation case claws to its original position.

REASSEMBLY

HINT:

- Thoroughly clean all parts to be assembled.
- Before installing the parts, apply fresh engine oil to all sliding and rotating surfaces.
- Replace all gaskets and oil seals with new ones.

1. INSTALL SPARK PLUG TUBES

HINT:

When using a new cylinder head, spark plug tubes must be installed.

- (a) Apply adhesive to the end of the spark plug tube.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) Using a wooden block and hammer, tap in a new spark tube until there is 40.9 – 42.1 mm (1.610 – 1.658 in.) protruding from the camshaft bearing cap installation surface of the cylinder head.

NOTICE:

Avoid tapping a new spark plug tube too far for measuring the amount of the protrusion while tapping.

2. INSTALL VALVES

- (a) Using SST, push in a new oil seal.
SST 09201-41020

- (b) Install the valve (1), spring seat (2), valve spring (3) and spring retainer (4).

- (c) Using SST, compress the valve spring and place the 2 keepers around the valve stem.
SST 09202-70020 (09202-00010)

- (d) Using a plastic-faced hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to assure proper fit.

NOTICE:

Be careful not to damage the valve stem tip.

3. INSTALL SHIMS AND VALVE LIFTERS

- (a) Install the shim and valve lifter.
(b) Check that the valve lifter rotates smoothly by hand.

INSTALLATION

1. INSTALL RH EXHAUST MANIFOLD TO CYLINDER HEAD

- (a) Place a new gasket on the cylinder head.

- (b) Install the exhaust manifold with 8 new nuts. Uniformly tighten the nuts in several steps.

Torque: 44 N·m (450 kgf·cm, 32 ft·lbf)

- (c) Install the heat insulator with the 4 bolts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

2. INSTALL LH EXHAUST MANIFOLD TO CYLINDER HEAD

- (a) Place a new gasket on the cylinder head.

- (b) Install the exhaust manifold with 8 new nuts. Uniformly tighten the nuts in several steps.

Torque: 44 N·m (450 kgf·cm, 32 ft·lbf)

- (c) Install the heat insulator with the 4 bolts.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- 3. PLACE CYLINDER HEADS ON CYLINDER BLOCK**
 (a) Place 2 new cylinder head gaskets in the positions on the cylinder block.

HINT:

On the rear side of the cylinder head gasket are marked to distinguish the LH and RH banks, a "2UR" mark for the RH bank and a "2UL" mark for the LH bank.

NOTICE:

Be careful of the installation direction.

- (b) Place the 2 cylinder heads in the positions on the cylinder head gaskets.

4. INSTALL CYLINDER HEAD BOLTS

HINT:

- The cylinder head bolts are tightened in 2 progressive steps (steps (c) and (e)).
 - If any cylinder head bolt is broken or deformed, replace it.
- (a) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.
 (b) Install the plate washer to the cylinder head bolt.
 (c) Install and uniformly tighten the 10 cylinder head bolts on one side of the cylinder head in several steps in the sequence shown, then perform the same procedure to the other side as shown.

Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

If any of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

**NOTICE:**

Do not drop the plate washer for cylinder head bolt into portion A of the cylinder head. If dropped into portion A, the plate washer will pass through the cylinder head and cylinder block into the oil pan.

- (d) Mark the front of the cylinder head bolt with paint.
- (e) Retighten the cylinder head bolts by 90° in the numerical order shown.
- (f) Check that the painted mark is now at a 90° angle to front.

5. INSTALL SPARK PLUGS**6. ASSEMBLE EXHAUST CAMSHAFT**

- (a) Install the camshaft gear spring, camshaft sub-gear and wave washer.

HINT:

Attach the pin on the gear to the gear spring end.

- (b) Using snap ring pliers, install the snap ring.

- (c) Mount the hexagon wrench head portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.

- (d) Using SST, align the holes of the camshaft main gear and sub-gear by turning the camshaft sub-gear counter-clockwise, and temporarily install a service bolt.

SST 09960-10010 (09962-01000, 09963-00500)

- (e) Align the gear teeth of the main gear and sub-gear, and tighten the service bolt.

7. INSTALL CAMSHAFT TIMING TUBE TO INTAKE CAM-SHAFT

- (a) Place a new oil seal to the timing tube.

NOTICE:

Be careful of the installation direction.

- (b) Align the timing tube knock pin with the knock pin groove of the drive gear, and temporarily install the drive gear with the 4 bolts.

- (c) Using SST and a 5 mm hexagon wrench, uniformly tighten the 4 bolts in several steps.

SST 09960-10010 (09962-01000, 09963-00500)

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

NOTICE:

Be careful not to damage the timing tube.

- (d) Mount the hexagon head portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.

- (e) Align the camshaft knock pin with the knock pin groove of the timing tube, and push the timing tube by hand until you it touches the bottom.
- (f) Using a 10 mm hexagon wrench, install the bolt.
Torque: 78 N·m (790 kgf-cm, 58 ft-lbf)
- (g) Install the seal washer and screw plug.
Torque: 15 N·m (150 kgf-cm, 11 ft-lbf)

8. INSTALL CAMSHAFTS

NOTICE:

Since the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head receiving the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

- (a) Set the crankshaft pulley position.
Turn the pulley clockwise or counterclockwise, and align the timing mark of the crankshaft pulley with the centers of the crankshaft pulley bolt and idler pulley bolt.

NOTICE:

Having the crankshaft pulley at the wrong angle can cause the piston head and valve head to come into contact with each other when you install the camshaft, causing damage. So always set the crankshaft pulley at the correct angle.

- (b) Install the LH camshafts.
 - (1) Apply MP grease to the thrust portion of the intake and exhaust camshafts.
 - (2) Align the timing marks (2-dot mark) of the camshaft drive and driven main gears, and place the intake and exhaust camshafts.

- (3) Apply seal packing to the camshaft housing plug.
 - Remove the old packing material (FIPG).
 - Apply seal packing to the housing plug.**Seal packing: Part No. 08826-00080 or equivalent**

- (4) Install the camshaft housing plug to the cylinder head as shown in the illustration.
- (5) Install the strainer to the cylinder head.

NOTICE:

Be careful of the installation direction.

- (6) Apply seal packing to the front bearing cap.
 - Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the bearing cap and cylinder head.

Using a razor blade and gasket scraper, remove all the old packing material (FIPG) from the gasket surfaces and groove.

Thoroughly clean all components to remove all the loose material.

Using a non-residue solvent, clean both sealing surfaces.
 - Apply seal packing to the bearing cap as shown in the illustration.

Install a nozzle that has been cut to a 1.5 mm (0.059 in.) opening.

Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied.

Immediately remove the nozzle from the tube and reinstall cap.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Do not apply seal packing to the front bearing cap grooves.

- (7) Install the front bearing cap.

HINT:

Installing the front bearing cap will determine the thrust portion of the camshaft.

- (8) Install the other bearing caps in the sequence shown with the arrow mark facing forward.

(9) Push in the camshaft oil seal.

(10) Install 4 new seal washers to the bearing cap bolts (A and B).

(11) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts (D and E).

NOTICE:

Do not apply engine oil under the heads of the bearing cap bolts (A), (B) and (C).

HINT:

Each bolt length is indicated in the illustration.

Bolt length:

94 mm (3.70 in.) for A with seal washer

72 mm (2.83 in.) for B with seal washer

25 mm (0.98 in.) for C

52 mm (2.05 in.) for D

38 mm (1.50 in.) for E

(12) Install the oil feed pipe and the 22 bearing cap bolts as shown in the illustration.

(13) Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown.

Torque:

7.5 N·m (76 kgf·cm, 66 in.-lbf) for bolt C

16 N·m (160 kgf·cm, 12 ft-lbf) for others

(14) Remove the service bolt.

- (c) Install the RH camshafts.
- (1) Apply MP grease to the thrust portions of the intake and exhaust camshafts.
 - (2) Align the timing marks (1-dot mark) of the camshaft drive and driven main gears, and place the intake and exhaust camshafts.
 - (3) Set the timing mark (1-dot mark) of the camshaft drive and driven main gears at approx. 10° angle.

- (4) Apply seal packing to the camshaft housing plug.
 - Remove the old packing material (FIPG).
 - Apply seal packing to the housing plug.

Seal packing: Part No. 08826-00080 or equivalent

- (5) Install the camshaft housing plug to the cylinder head as shown in the illustration.
- (6) Install the strainer to the cylinder head.

NOTICE:

Be careful of the installation direction.

- (7) Apply seal packing to the front bearing cap.
- Remove any old packing material (FIPG) and be careful not to drop any oil on the contact surfaces of the bearing cap and cylinder head. Using a razor blade and gasket scraper, remove all the old packing material (FIPG) from the gasket surfaces and groove. Thoroughly clean all components to remove all the loose material. Using a non-residue solvent, clean both sealing surfaces.
 - Apply seal packing to the bearing cap as shown in the illustration. Install a nozzle that has been cut to a 1.5 mm (0.059 in.) opening. Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied. Immediately remove the nozzle from the tube and reinstall cap.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Do not apply seal packing to the front bearing cap grooves.

- (8) Install the front bearing cap.

HINT:

Installing the front bearing cap will determine the thrust portion of the camshaft.

- (9) Install the other bearing caps in the sequence shown with the arrow mark facing forward.

- (10) Push in the camshaft oil seal.

ENGINE MECHANICAL (2UZ-FE) - CYLINDER HEAD

- (11) Install 4 new seal washers to the bearing cap bolts (A and B).
- (12) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts (D and E).

NOTICE:

Do not apply engine oil under the heads of the bearing cap bolts (A), (B) and (C).

HINT:

Each bolt length is indicated in the illustration.

Bolt length:

94 mm (3.70 in.) for A with seal washer

72 mm (2.83 in.) for B with seal washer

25 mm (0.98 in.) for C

52 mm (2.05 in.) for D

38 mm (1.50 in.) for E

- (13) Install the oil feed pipe and the 22 bearing cap bolts as shown in the illustration.

- (14) Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown.

Torque:

7.5 N·m (76 kgf-cm, 66 in.-lbf) for bolt C

16 N·m (160 kgf-cm, 12 ft-lbf) for others

- (15) Remove the service bolt.

9. CHECK AND ADJUST VALVE CLEARANCE
(See page [EM-4](#))

Turn the camshaft so that the cam lobe faces upward, and check and adjust the valve clearance.

10. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE
(See page [SF-50](#))

**11. INSTALL SEMI-CIRCULAR PLUGS**

(a) Remove any old packing material (FIPG).

(b) Apply seal packing to the semi-circular plug grooves.

Seal packing:

Part No. 08826-00080 or equivalent

- (c) Install the 4 semi-circular plugs to the cylinder heads as shown in the illustration.

12. INSTALL LH CYLINDER HEAD COVER

- (a) Remove any old packing material (FIPG).
 (b) Apply seal packing to the cylinder heads as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- (c) Install the gasket to the cylinder head cover.
 (d) Install the seal washer to the bolt.
 (e) Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.

Torque: 6.0 N·m (60 kgf·cm, 53 in.-lbf)

13. INSTALL RH CYLINDER HEAD COVER

- (a) Remove any old packing material (FIPG).
 (b) Apply seal packing to the cylinder heads as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- (c) Install the gasket to the cylinder head cover.
- (d) Install the seal washer to the bolt.
- (e) Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps. Install the 2 cylinder head covers.

Torque: 6.0 N·m (60 kgf·cm, 53 in.-lbf)

- (f) Install the wire clamp bracket on the engine wire to the camshaft bearing cap.

14. INSTALL ENGINE HANGERS

Torque: 37 N·m (380 kgf·cm, 27 ft-lbf)

- 15. INSTALL VVT SENSORS (See page [SF-79](#))
- 16. INSTALL OIL DIPSTICK AND GUIDE FOR ENGINE
- 17. INSTALL OIL DIPSTICK AND GUIDE FOR A/T
- 18. INSTALL IGNITION COILS (See page [IG-6](#))

19. INSTALL REAR WATER BYPASS JOINT

- (a) Install 2 new gaskets to the cylinder head.
- (b) Install the the water bypass joint with the 4 nuts to the cylinder heads. Alternately tighten the nuts.

Torque: 18 N·m (185 kgf·cm, 13 ft-lbf)

20. INSTALL NO.2 AIR SWITCHING VALVES

(See page [EC-27](#))

21. INSTALL AIR PUMP ASSEMBLY (See page [EC-27](#))

22. INSTALL FRONT WATER BYPASS JOINT

Install 2 new gaskets and the water bypass joint with the 4 nuts. Alternately tighten the nuts.

Torque: 18 N·m (185 kgf·cm, 13 ft-lbf)

23. INSTALL WATER INLET AND INLET HOUSING ASSEMBLY (See page [CO-8](#))

24. ASSEMBLE INTAKE MANIFOLDS

- (a) Install the 2 delivery pipes and 8 injectors (see page [SF-31](#)).
- (b) Install 2 new gaskets and fuel pulsation damper.
- (c) Install a new O-ring and fuel pressure regulator with the 2 bolts.
- (d) Install the fuel return pipe to the intake manifold with the 3 bolts.
- (e) Connect the fuel return hose to the fuel pressure regulator.

- (f) Install the VSV for ACIS with the bolt.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)
- (g) Install the throttle body (See page [SF-45](#)).

- (h) Install 4 new gaskets and front fuel pipe with the bolt and 2 unions to the intake manifold.
Torque:
39 N·m (400 kgf·cm, 29 ft·lbf) for union bolts
7.5 N·m (80 kgf·cm, 66 in.-lbf) for bolt
- (i) Install the VSV for EVAP with the bolt to the intake manifold and connect the EVAP hose.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)
- (j) Install the 2 VSVs for air injection system with the 2 bolts.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- 25. INSTALL INTAKE MANIFOLD ASSEMBLY**
- (a) Place 2 new gaskets on the intake manifold.

- (b) Place the intake manifold assembly on the cylinder heads.
- (c) Install and uniformly tighten the 6 bolts and 4 nuts in several steps.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

- (d) Install the throttle body cover bracket to the intake manifold.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (e) Install the wire bracket to the intake manifold with the bolt.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (f) Connect the engine wire to the engine hanger and wire bracket.

- (g) Install the engine wire to the LH No.1 timing belt rear plate.

- (h) Connect the wire protector to the intake manifold and cylinder heads with the 2 bolts.

- (i) Install the 2 ground cables with the 2 bolts to the RH and LH cylinder heads.

- (j) Connect the 2 water bypass hoses to the throttle body.

- (k) Connect the 2 wire clamps to the wire clamp bracket on the RH delivery pipe.

**26. CONNECT HOSES TO INTAKE MANIFOLD**

- (a) Connect the vacuum hose to the fuel pressure regulator.
- (b) Connect the PCV hose to the PCV valve on the LH the cylinder head.
- (c) Connect the EVAP hose (from charcoal canister) to the VSV for EVAP.
- (d) Connect the 2 vacuum hoses to the VSV for the air injection system.
- (e) Connect the brake booster tube.

27. CONNECT CONNECTORS TO INTAKE MANIFOLD

- (a) Connect the throttle control connector.
- (b) Connect the 2 VSV connectors for the air injection system.
- (c) Connect the VSV connector for the EVAP.
- (d) Connect the 8 injector connectors.
- (e) Connect the ECT sensor connector.
- (f) Connect the 2 air fuel ratio sensor connectors.

28. CONNECT FUEL INLET HOSE (See page SF-31) AND FUEL RETURN HOSE**29. INSTALL TIMING BELT REAR PLATES**

- (a) Install the RH No.1 timing belt rear plates.
Install the RH No.1 timing belt rear plates to the cylinder head with the 3 bolts and stud bolt.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (b) Install the LH No.1 timing belt rear plates.
 - (1) Connect the wire clamp to the No.1 timing belt rear plate.
 - (2) Install the LH No.1 timing belt rear plates to the cylinder head with the 3 bolts and stud bolt.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

30. INSTALL THROTTLE BODY COVER**31. INSTALL IGNITION COILS (See page IG-6)****32. INSTALL OIL DIPSTICK AND GUIDE FOR A/T****33. INSTALL FRONT EXHAUST PIPE (See page EM-127)****34. INSTALL PS PUMP (See page EM-83)****35. INSTALL CAMSHAFT POSITION SENSOR (See page IG-9)****36. INSTALL CAMSHAFT TIMING PULLEYS (See page EM-23)****37. CONNECT TIMING BELT TO CAMSHAFT TIMING PULLEYS (See page EM-23)****38. CHECK ENGINE OIL LEVEL**

ENGINE UNIT (2WD) COMPONENTS

EM11Z-08

REMOVAL

1. REMOVE ENGINE HOOD
2. REMOVE ENGINE UNDER COVER
3. DRAIN ENGINE COOLANT
4. REMOVE RADIATOR ASSEMBLY (See page [CO-17](#))
5. REMOVE THROTTLE BODY COVER
6. REMOVE AIR CLEANER AND INTAKE AIR CONNECTOR ASSEMBLY
 - (a) Disconnect the MAF meter connector.
 - (b) Loosen the 3 bolts, and remove the air cleaner case.
 - (c) Remove the A/C suction hose from the intake air connector.
 - (d) Disconnect the PS air hose, air inlet hose for EVAP, PCV hose and MAF meter wire from the air intake connector.
 - (e) Disconnect the intake air connector from the throttle body.
7. DISCONNECT BATTERY CABLES
 - (a) Disconnect the clamp on battery negative (-) cable from the No. 2 relay box.
 - (b) Disconnect the battery positive (+) terminal cable.
 - (c) Disconnect battery negative (-) cable from the left fender apron.
8. REMOVE DRIVE BELT, FAN, FLUID COUPLING AND FAN PULLEY
 - (a) Loosen the 4 nuts holding the fluid coupling to the fan bracket.
 - (b) Remove the drive belt (See page [CH-7](#) or [CH-19](#)).
 - (c) Remove the 4 nuts, the fan, fluid coupling assembly and fan pulley.
9. DISCONNECT ENGINE WIRE FROM CABIN
 - (a) Remove the glove compartment door.
 - (b) Remove the lower No. 2 panel.
 - (c) Remove the 3 screws, and disconnect the ECM from the body bracket.
 - (d) Disconnect the 3 wire harness connectors from the ECM.
 - (e) Disconnect the 2 wire harness connectors (cassette connector).

- (f) Disconnect the engine wire from the engine wire bracket and remove the bolt, 2 nuts and bracket.
- (g) Pull out the engine wire from the cowl panel.
10. DISCONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES
 - (a) Disconnect the 2 PS air hoses from hose clamp on the No. 3 RH timing belt cover.
 - (b) Disconnect the generator wire.
 - (c) Disconnect the generator connector.
 - (d) Disconnect the hose clamp for the PS air hose.

- (e) Disconnect the PS air hose from the upper intake manifold.
 - (f) Disconnect the 2 heater hoses.
 - (g) Disconnect the ground strap from the cowl panel.
 - (h) Disconnect the fuel inlet hose and clamps.
 - (i) Disconnect the fuel return hose and clamp.
 - (j) Disconnect the air inlet hose from the charcoal canister.
 - (k) Disconnect the EVAP hose from the VSV for EVAP.
 - (l) w/o Hydraulic brake booster:
Disconnect the brake booster tube.
11. **REMOVE FRONT EXHAUST PIPES** (See page [EM-125](#))
 12. **REMOVE PROPELLER SHAFT** (See page [PR-3](#))
 13. **REMOVE FRONT STABILIZER BAR** (See page [SA-89](#))
 14. **DISCONNECT POWER STEERING GEAR PIPES**
Disconnect the pressure feed tube, turn tube and pressure tubes from the PS gear assembly (See page [SR-73](#)).

15. **REMOVE TRANSMISSION CONTROL CABLE**
 - (a) Remove the 2 bolts and control cable bracket from the transmission.
 - (b) Remove the control cable from the control shift lever.

16. **DISCONNECT A/C COMPRESSOR FROM ENGINE**
 - (a) Disconnect the A/C compressor connector.
 - (b) Remove the 3 bolts, and disconnect the A/C compressor from the engine.

HINT:

Suspend the A/C compressor securely.

17. **DISCONNECT PS PUMP FROM ENGINE**
Remove the 3 bolts, and disconnect the PS pump from the engine.
HINT:
Suspend the PS pump securely.

**18. REMOVE ENGINE MOUNTING BRACKETS**

- (a) Attach the engine chain hoist to the engine hangers.
- (b) Remove the 4 nuts and 4 bolts holding the engine mounting brackets to the frame brackets.

19. PLACE JACK UNDER TRANSMISSION**20. REMOVE ENGINE REAR MOUNTING BRACKET**

- (a) Remove the 8 bolts, 2 nuts and frame crossmember.

- (b) Remove the 4 bolts and engine rear mounting bracket from the transmission.

**21. REMOVE ENGINE AND TRANSMISSION ASSEMBLY FROM VEHICLE**

- (a) Lift the engine out of the vehicle slowly and carefully.

HINT:

Make sure the engine is clear of all wiring, hoses and cables.

- (b) Place the engine and transmission assembly onto the stand.

22. DISCONNECT ENGINE WIRE FROM TRANSMISSION

- (a) Disconnect the 5 connectors.
- (b) Disconnect the 2 wire clamps.

23. REMOVE OIL DIPSTICK GUIDE AND DIPSTICK FOR TRANSMISSION

- (a) Disconnect the 2 breather hoses from the dipstick guide.
- (b) Remove the 2 bolts.
- (c) Pull out the dipstick guide and dipstick from the dipstick tube of transmission.
- (d) Remove the O-ring from the dipstick guide.

24. REMOVE OIL COOLER PIPES FOR TRANSMISSION

- (a) Remove the 3 bolts and 3 stays.

- (b) Loosen the 2 union nuts, and remove the 2 oil cooler pipes.

25. REMOVE TORQUE CONVERTER CLUTCH BOLTS

- (a) Remove the 2 bolts and flywheel housing under cover.

- (b) Turn the crankshaft pulley bolt to gain access to each bolt.
 (c) Hold the crankshaft pulley bolt with a wrench, and remove the 6 bolts.

26. REMOVE TRANSMISSION

- (a) Remove the 10 bolts.
 (b) Remove the transmission together with the torque converter clutch from the engine.

27. REMOVE DRIVE PLATE

- Remove the 8 bolts, front spacer, drive plate and rear spacer.

INSTALLATION

1. INSTALL DRIVE PLATE

HINT:

- The mounting bolts are tightened in 2 progressive steps (steps (c) and (e)).
- If any one of the mounting bolts is broken or deformed, replace it.

- (a) Apply adhesive to 2 or 3 threads of the mounting bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) Install the front spacer, drive plate and rear spacer on the crankshaft.
 (c) Install and uniformly tighten the 8 mounting bolts in several passes, in the sequence shown.
Torque: 49 N·m (500 kgf-cm, 36 ft-lbf)

If any one of the mounting bolts does not meet the torque specification, replace the mounting bolt.

- (d) Mark the mounting bolt with paint.
 (e) Retighten the mounting bolts by 90° in the numerical order shown.
 (f) Check that the painted mark is now at a 90° angle to (e).

2. INSTALL TRANSMISSION TO ENGINE

- (a) Check the torque converter clutch installation (See page [AT-38](#)).
 (b) Attach the transmission to the engine.
 (c) Install the 10 bolts.

Torque:

37 N·m (380 kgf-cm, 27 ft-lbf) for 14 mm head

72 N·m (730 kgf-cm, 53 ft-lbf) for 17 mm head

3. INSTALL TORQUE CONVERTER CLUTCH BOLTS

- (a) Apply adhesive to 2 or 3 threads of the bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) Hold the crankshaft pulley bolt with a wrench, and install the 6 bolts evenly.

Torque: 48 N·m (490 kgf-cm, 35 ft-lbf)

HINT:

First install the black colored bolt, install the other bolts.

- (c) Install the flywheel housing under cover with the 2 bolts.

Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)

4. INSTALL OIL COOLER PIPE FOR TRANSMISSION

5. INSTALL OIL DIPSTICK GUIDE AND DIPSTICK FOR TRANSMISSION

- (a) Install a new O-ring to the dipstick guide.
 (b) Apply soapy water to the O-ring.
 (c) Connect the dipstick guide end to the dipstick tube of the oil pan.
 (d) Install the dipstick guide with the bolt.
 (e) Install the dipstick.

- (f) Connect the 2 breather hoses to the dipstick guide.

6. CONNECT ENGINE WIRE TO TRANSMISSION

- (a) Connect the 5 connectors.
 (b) Connect the 2 wire clamps.

7. INSTALL ENGINE AND TRANSMISSION ASSEMBLY IN VEHICLE

- (a) Attach the engine chain hoist to the engine hangers.
 (b) Slowly lower the engine and transmission assembly into the engine compartment.
 (c) Attach the engine mounting brackets to the frame brackets.

- (d) Keep the engine level with a jack.

8. INSTALL ENGINE REAR MOUNTING BRACKET

- (a) Install the engine rear mounting bracket to the transmission with the 4 bolts.

Torque: 65 N·m (663 kgf·cm, 48 ft·lbf)

- (b) Install the frame crossmember with the 8 bolts and 4 nuts.

Torque:

18 N·m (183 kgf·cm, 13 ft·lbf) for bolts (A)

72 N·m (730 kgf·cm, 53 ft·lbf) for nuts (B)

9. INSTALL ENGINE MOUNTING BRACKETS

- (a) Install the engine mounting brackets to the frame brackets with the 2 nuts and 4 bolts.

Torque: 38 N·m (388 kgf·cm, 28 ft·lbf)

- (b) Remove the engine chain hoist.

10. INSTALL PS PUMP

Install the PS pump with the 3 bolts.

Torque: 17 N·m (175 kgf·cm, 13 ft·lbf)

**11. INSTALL A/C COMPRESSOR**

- (a) Install the A/C compressor with the 3 bolts.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
 (b) Connect the A/C compressor connector.

**12. INSTALL TRANSMISSION CONTROL CABLE**

- (a) Install the control cable to the control shift lever.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)
 (b) Install the control cable bracket to the transmission with the 2 bolts.

13. CONNECT POWER STEERING GEAR PIPES

Connect the pressure feed tube, turn tube and turn pressure tubes to the PS gear assembly (See page [SR-88](#)).

14. INSTALL FRONT STABILIZER BAR

(See page [SA-91](#))

15. INSTALL PROPELLER SHAFT (See page [PR-8](#))**16. INSTALL FRONT EXHAUST PIPES**

(See page [EM-125](#))

17. CONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES

- (a) Connect the 2 PS air hoses to hose clamp on the No. 3 RH timing belt cover.
 (b) Connect the generator wire.
 (c) Connect the generator connector.
 (d) Connect the hose clamp for the PS air hose.
 (e) Connect the PS air hose to the upper intake manifold.
 (f) Connect the 2 heater hoses.
 (g) Connect the ground strap connector.
 (h) Connect the fuel inlet hose and clamps.
 (i) Connect the fuel return hose and clamp.
 (j) Connect the air inlet hose to the charcoal canister.
 (k) Connect the EVAP hose to the VSV for EVAP.
 (l) w/o Hydraulic brake booster:
 Connect the brake booster tube.

**18. CONNECT ENGINE WIRE TO CABIN**

- (a) Push into the engine wire through the cowl panel.
 (b) Install the engine wire bracket with the 2 nuts and bolt and connect the engine wire to the bracket.
 (c) Connect the 2 wire harness connectors (cassette connector).
 (d) Connect the 3 connectors to the ECM.
 (e) Install the ECM with the 3 screws.
 (f) Install the lower No. 2 panel.
 (g) Install the glove compartment door.

19. INSTALL FAN PULLEY, FAN, FLUID COUPLING AND DRIVE BELT

- (a) Temporarily install the fan pulley, the fan and fluid coupling assembly with the 4 nuts.
- (b) Install the drive belt (See page [CH-16](#) or [CH-28](#)).
- (c) Tighten the 4 nuts holding the fluid coupling to the fan bracket.

20. INSTALL BATTERY CABLES

- (a) Connect the clamp on battery negative (-) cable to No.2 relay box.
- (b) Connect the battery positive (+) terminal cable.
- (c) Connect the battery negative cable to the left fender apron.

21. INSTALL AIR CLEANER AND INTAKE AIR CONNECTOR ASSEMBLY

- (a) Install the air cleaner with the 3 bolt.
Torque: 5 N·m (51 kgf·cm, 44 in.-lbf)
- (b) Connect the intake air connector to the throttle body.
- (c) Connect the MAF meter connector.
- (d) Install the A/C suction hose to the intake air connector.
- (e) Connect the PS air hose, air inlet hose for EVAP, PCV hose and MAF meter wire to the air intake connector.

22. INSTALL THROTTLE BODY COVER**23. INSTALL RADIATOR ASSEMBLY (See page [CO-18](#))****24. FILL WITH ENGINE COOLANT (See page [CO-2](#))****25. FILL WITH ENGINE OIL (See page [LU-2](#))****26. START ENGINE AND CHECK FOR LEAKS****27. INSTALL ENGINE UNDER COVER****28. INSTALL HOOD****29. PERFORM ROAD TEST**

Check for abnormal noise, shock, slippage, correct shift points and smooth operation.

30. RECHECK ENGINE COOLANT AND OIL LEVELS

ENGINE UNIT (4WD) COMPONENTS

EM1XC-01

REMOVAL

1. REMOVE FRONT EXHAUST PIPES
(See page [EM-125](#))
2. REMOVE FRONT AND REAR PROPELLER SHAFTS
(See page [PR-10](#))
3. REMOVE FRONT STABILIZER BAR
(See page [SA-89](#))
4. REMOVE TRANSMISSION (See page [AT-34](#))
5. REMOVE ENGINE HOOD
6. REMOVE ENGINE UNDER COVER
7. DRAIN ENGINE COOLANT
8. REMOVE RADIATOR ASSEMBLY (See page [CO-17](#))
9. REMOVE THROTTLE BODY COVER
10. REMOVE AIR CLEANER AND INTAKE AIR CONNECTOR ASSEMBLY
 - (a) Disconnect the MAF meter connector.
 - (b) Loosen the 3 bolts, and remove the air cleaner case.
 - (c) Remove the A/C suction hose from the intake air connector.
 - (d) Disconnect the PS air hose, air inlet hose for EVAP, PCV hose and MAF meter wire from the air intake connector.
 - (e) Disconnect the intake air connector from the throttle body.
11. DISCONNECT BATTERY CABLES
 - (a) Disconnect the clamp on battery negative (-) cable from the No. 2 relay box.
 - (b) Disconnect the battery positive (+) terminal cable.
 - (c) Disconnect the battery negative (-) cable from the left fender apron.
12. REMOVE DRIVE BELT, FAN, FLUID COUPLING AND FAN PULLEY
 - (a) Loosen the 4 nuts holding the fluid coupling to the fan bracket.
 - (b) Remove the drive belt (See page [CH-7](#) or [CH-19](#)).
 - (c) Remove the 4 nuts, the fan, fluid coupling assembly and fan pulley.

13. DISCONNECT ENGINE WIRE FROM CABIN
 - (a) Remove the glove compartment door.
 - (b) Remove the lower No. 2 panel.
 - (c) Remove the 3 screws, and disconnect the ECM from the body bracket.
 - (d) Disconnect the 3 wire harness connectors from the ECM.
 - (e) Disconnect the 2 wire harness connectors (cassette connector).
 - (f) Disconnect the engine wire from the engine wire bracket and remove the 2 nuts, bolt and bracket.

- (g) Pull out the engine wire from the cowl panel.
- 14. DISCONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES**
- (a) Disconnect the accelerator cable from the engine.
- (b) Disconnect the 2 PS air hoses from hose clamp on the No. 3 RH timing belt cover.
- (c) Disconnect the generator wire.
- (d) Disconnect the generator connector.
- (e) Disconnect the hose clamp for the PS air hose.
- (f) Disconnect the PS air hose from the upper intake manifold.
- (g) Disconnect the 2 heater hoses.
- (h) Disconnect the ground strap from the cowl panel.
- (i) Disconnect the fuel inlet hose and clamps.
- (j) Disconnect the fuel return hose and clamp.
- (k) Disconnect the air inlet hose from the charcoal canister.
- (l) Disconnect the EVAP hose from the VSV for EVAP.
- (m) w/o Hydraulic brake booster:
Disconnect the brake booster tube.

- 15. DISCONNECT A/C COMPRESSOR FROM ENGINE**
- (a) Disconnect the A/C compressor connector.
- (b) Remove the 3 bolts, and disconnect the A/C compressor from the engine.

HINT:

Suspend the A/C compressor securely.

- 16. DISCONNECT PS PUMP FROM ENGINE**
- Remove the 3 bolts, and disconnect the PS pump from the engine.

HINT:

Suspend the PS pump securely.

- 17. REMOVE OIL COOLER PIPES FOR TRANSMISSION**
- (a) Remove the 3 bolts and 3 stays.
- (b) Loosen the 2 union nuts, and remove the 2 oil cooler pipes.

- 18. REMOVE ENGINE ASSEMBLY FROM VEHICLE**
- (a) Attach the engine chain hoist to the engine hangers.
- (b) Remove the 4 bolts holding the engine mounting brackets to the frame brackets.

- (c) Lift the engine out of the vehicle slowly and carefully.
HINT:
Make sure the engine is clear of all wiring, hoses and cables.
- (d) Place the engine and transmission assembly onto the stand.

19. REMOVE DRIVE PLATE

Remove the 8 bolts, front spacer, drive plate and rear spacer.

INSTALLATION

1. INSTALL DRIVE PLATE

HINT:

- The mounting bolts are tightened in 2 progressive steps (steps (c) and (e)).
- If any one of the mounting bolts is broken or deformed, replace it.

(a) Apply adhesive to 2 or 3 threads of the mounting bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

(b) Install the front spacer, drive plate and rear spacer on the crankshaft.

(c) Install and uniformly tighten the 8 mounting bolts in several passes, in the sequence shown.

Torque: 49 N·m (500 kgf-cm, 36 ft-lbf)

If any one of the mounting bolts does not meet the torque specification, replace the mounting bolt.

(d) Mark the mounting bolt with paint.

(e) Retighten the mounting bolts by 90° in the numerical order shown.

(f) Check that the painted mark is now at a 90° angle to (e).

2. INSTALL ENGINE ASSEMBLY IN VEHICLE

(a) Attach the engine chain hoist to the engine hangers.

(b) Slowly lower the engine assembly into the engine compartment.

(c) Attach the engine mounting brackets to the frame brackets.

- (d) Install the engine mounting brackets to the frame brackets with the 2 nuts and 4 bolts.
Torque: 38 N·m (388 kgf-cm, 28 ft-lbf)
- (e) Remove the engine chain hoist.

3. INSTALL PS PUMP

Install the PS pump with the 3 bolts.

Torque: 17 N·m (175 kgf-cm, 13 ft-lbf)

4. INSTALL A/C COMPRESSOR

- (a) Install the A/C compressor with the 3 bolts.

Torque: 49 N·m (500 kgf-cm, 36 ft-lbf)

- (b) Connect the A/C compressor connector.

5. CONNECT HOSES, WIRES, CONNECTORS, CLAMPS, GROMMET AND CABLES

- (a) Connect the accelerator cable to the engine.
- (b) Connect the 2 PS air hoses to hose clamp on the No.3 RH timing belt cover.
- (c) Connect the generator wire.
- (d) Connect the generator connector.
- (e) Connect the hose clamp for the PS air hose.
- (f) Connect the PS air hose to the upper intake manifold.
- (g) Connect the 2 heater hoses.
- (h) Connect the ground strap to the cowl panel.
- (i) Connect the fuel inlet hose and clamps.
- (j) Connect the fuel return hose and clamp.
- (k) Connect the air inlet hose to the charcoal canister.
- (l) Connect the EVAP hose to the VSV for EVAP.
- (m) w/o Hydraulic brake booster:
 Connect the brake booster tube.

6. CONNECT ENGINE WIRE TO CABIN

- (a) Push into the engine wire through the cowl panel.
- (b) Install the engine wire bracket with the 2 nuts and bolt and connect the engine wire to the bracket.
- (c) Connect the 3 connectors to the ECM.
- (d) Connect the 2 wire harness connectors (cassette connector).
- (e) Install the ECM with the 3 screws.
- (f) Install the lower No. 2 panel.
- (g) Install the glove compartment door.

7. INSTALL FAN PULLEY, FAN, FLUID COUPLING AND DRIVE BELT

- (a) Temporarily install the fan pulley, the fan and fluid coupling assembly with the 4 nuts.
- (b) Install the drive belt (See page [CH-16](#) or [CH-28](#)).
- (c) Tighten the 4 nuts holding the coupling to the fan bracket.

8. INSTALL BATTERY CABLES

- (a) Connect the battery positive (+) terminal cable.
- (b) Connect the battery negative (-) cable to the battery and left fender apron.
- (c) Connect the clamp on battery negative (-) cable to No. 2 relay box.

9. INSTALL AIR CLEANER AND INTAKE AIR CONNECTOR PIPE ASSEMBLY

- (a) Install the air cleaner case with the 3 bolts.
Torque: 5 N·m (51 kgf·cm, 44 in·lbf)
- (b) Connect the intake air connector to the throttle body.
- (c) Connect the MAF meter connector.
- (d) Install the A/C suction hose to the intake air connector.
- (e) Connect the PS air hose, air inlet hose for EVAP, PCV hose and MAF meter connector to the intake air connector.

10. INSTALL THROTTLE BODY COVER

11. INSTALL TRANSMISSION (See page [AT-38](#))

12. INSTALL RADIATOR ASSEMBLY (See page [CO-18](#))

13. INSTALL FRONT STABILIZER BAR

(See page [SA-91](#))

14. INSTALL FRONT AND REAR PROPELLER SHAFTS

(See page [PR-15](#))

15. INSTALL FRONT EXHAUST PIPES

(See page [EM-125](#))

16. FILL WITH ENGINE COOLANT (See page [CO-2](#))

17. FILL WITH ENGINE OIL (See page [LU-2](#))

18. START ENGINE AND CHECK FOR LEAKS

19. INSTALL ENGINE UNDER COVERS

20. INSTALL HOOD

21. PERFORM ROAD TEST

Check for abnormal noise, shock, slippage, correct shift points and smooth operation.

22. RECHECK ENGINE COOLANT AND OIL LEVELS

DISASSEMBLY

1. **INSTALL ENGINE TO ENGINE STAND**
2. **REMOVE TIMING BELT AND PULLEYS**
(See page [EM-16](#))
3. **REMOVE CYLINDER HEAD** (See page [EM-36](#))

4. **REMOVE WATER BYPASS PIPE**
 - (a) Disconnect the wire clamp (for knock sensor 1, 2) from bracket of the water bypass pipe.
 - (b) Remove the bolt.
 - (c) Pull out the water bypass pipe from the water pump.
 - (d) Remove the O-ring from the water bypass pipe.
5. **REMOVE STARTER** (See page [ST-6](#))
6. **REMOVE KNOCK SENSORS** (See page [SF-70](#))
7. **REMOVE VVT SENSORS** (See page [SF-79](#))

8. **DISCONNECT ENGINE WIRE FROM LH SIDE OF CYLINDER BLOCK**
 - (a) Remove the 2 bolts and engine wire cover from the LH side of the cylinder block.
 - (b) Remove the 2 bolts, disconnect the brackets on the engine wire from the cylinder block and engine mounting bracket.
9. **REMOVE OIL COOLER PIPE BRACKET FOR A/T**
Remove the bolt and bracket.
10. **REMOVE ENGINE MOUNTING BRACKETS**
Remove the 4 bolts and mounting bracket. Remove the 2 mounting brackets.
11. **REMOVE WATER PUMP** (See page [CO-6](#))
12. **REMOVE NO.2 OIL PAN** (See page [LU-8](#))
13. **REMOVE OIL PAN BAFFLE PLATE**
14. **REMOVE NO.1 OIL PAN** (See page [LU-8](#))
15. **REMOVE OIL STRAINER**
16. **REMOVE OIL PUMP** (See page [LU-8](#))
17. **REMOVE ENGINE COOLANT DRAIN UNIONS**
Remove the 2 drain unions.

**18. REMOVE REAR OIL SEAL RETAINER**

- (a) Remove the 7 bolts.
- (b) Using a screwdriver, remove the oil seal retainer by prying the portion between the oil seal retainer and main bearing cap.
- (c) Remove the O-ring.

**19. CHECK CONNECTING ROD THRUST CLEARANCE**

Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:

0.160 to 0.290 mm (0.0063 to 0.0114 in.)

Maximum thrust clearance: 0.35 mm (0.0138 in.)

If the thrust clearance is greater than maximum, replace the connecting rod assembly(s). If necessary, replace the crankshaft.

Connecting rod thickness:

22.880 to 22.920 mm (0.9008 to 0.9024 in.)

**20. REMOVE CONNECTING ROD CAPS AND CHECK OIL CLEARANCE**

- (a) Check the matchmarks on the connecting rod and see it cap to ensure correct reassembly.
- (b) Remove the 2 connecting rod cap bolts.

- (c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:

Keep the lower bearing inserted with the connecting rod cap.

- (d) Clean the crank pin and bearing.
- (e) Check the crank pin and bearing for peeling and scratches.

If the crank pin or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.

(f) Lay a strip of Plastigage across the crank pin.

(g) Install the connecting rod cap with the 2 bolts.
(see page EM-118)

NOTICE:

Do not turn the crankshaft.

(h) Remove the 2 bolts, connecting rod cap and lower bearing. (See procedure (b) and (c) above)

(i) Measure the Plastigage at its widest point.

Standard oil clearance:

0.021 to 0.047 mm (0.0008 to 0.0019 in.)

Maximum oil clearance: 0.059 mm (0.0023 in.)

If the oil clearance is greater than maximum, replace the bearings. If necessary, replace the crankshaft.

HINT:

If using a standard bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the connecting rod cap and crankshaft, then selecting the bearing with the same number as the total. There are 6 sizes of standard bearings, marked "2", "3", "4", "5", "6" and "7".

	Number mark											
Connecting rod cap	1	1	2	1	2	3	2	3	4	3	4	4
Crankshaft	1	2	1	3	2	1	3	2	1	3	2	3
Use bearing	2		3		4			5		6		7

EXAMPLE:

Connecting rod cap "3" + Crankshaft "1"
= Total number 4 (Use bearing "4")

Reference**Connecting rod big end inside diameter:**

Mark "1"	55.000 to 55.006 mm (2.1654 to 2.1656 in.)
Mark "2"	55.006 to 55.012 mm (2.1656 to 2.1658 in.)
Mark "3"	55.012 to 55.018 mm (2.1658 to 2.1661 in.)
Mark "4"	55.018 to 55.024 mm (2.1661 to 2.1663 in.)

Crankshaft crank pin diameter:

Mark "1"	51.994 to 52.000 mm (2.0470 to 2.0472 in.)
Mark "2"	51.988 to 51.994 mm (2.0468 to 2.0470 in.)
Mark "3"	51.982 to 51.988 mm (2.0465 to 2.0468 in.)

Standard sized bearing center wall thickness:

Mark "2"	1.487 to 1.490 mm (0.0585 to 0.0587 in.)
Mark "3"	1.490 to 1.493 mm (0.0587 to 0.0588 in.)
Mark "4"	1.493 to 1.496 mm (0.0588 to 0.0589 in.)
Mark "5"	1.496 to 1.499 mm (0.0589 to 0.0590 in.)
Mark "6"	1.499 to 1.502 mm (0.0590 to 0.0591 in.)
Mark "7"	1.502 to 1.505 mm (0.0591 to 0.0593 in.)

(j) Completely remove the Plastigage.

21. REMOVE PISTON AND CONNECTING ROD ASSEMBLIES

- Using a ridge reamer, remove all the carbon from the top of the cylinder.
- Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

HINT:

- Keep the bearings, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in correct order.

22. CHECK CRANKSHAFT THRUST CLEARANCE

Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:

0.020 to 0.220 mm (0.0008 to 0.0087 in.)

Maximum thrust clearance: 0.30 mm (0.0118 in.)

If the thrust clearance is greater than maximum, replace the thrust washers as a set.

Thrust washer thickness:

2.440 to 2.490 mm (0.0961 to 0.0980 in.)

23. REMOVE MAIN BEARING CAPS AND CHECK OIL CLEARANCE

- Uniformly loosen and remove the 10 main bearing cap bolts in several passes, in the sequence shown.

- (b) Using 2 screwdrivers, pry out the main bearing cap, and remove the 5 main bearing caps, 5 lower bearings and 2 lower thrust washers (No.3 main bearing cap only).

NOTICE:

Be careful not to damage the cylinder block.

HINT:

- Keep the lower bearing and main bearing cap together.
- Arrange the main bearing caps and lower thrust washers in correct order.

- (c) Lift out the crankshaft.

HINT:

Keep the upper bearings and upper thrust washers together with the cylinder block.

- (d) Clean each main journal and bearing.
 (e) Check each main journal and bearing for peelings and scratches.

If the journal or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.

- (f) Place the crankshaft on the cylinder block.
 (g) Lay a strip of Plastigage across each journal.

- (h) Install the main bearing caps. (See page [EM-118](#))

NOTICE:

Do not turn the crankshaft.

- (i) Remove the main bearing caps.
 (See procedure (a) and (b) above)

- (j) Measure the Plastigage at its widest point.

Standard clearance:**No.1, No.5**

0.028 to 0.046 mm (0.0011 to 0.0018 in.)

Others

0.040 to 0.058 mm (0.0016 to 0.0023 in.)

Maximum clearance: 0.065 mm (0.0026 in.)

If the oil clearance is greater than maximum, replace the bearings. If necessary, replace the crankshaft.

**HINT:**

If using a standard bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of the standard bearings. For No.1 and No.5 position bearings, use bearings marked "3", "4", "5", "6" and "7". For others position bearings, use bearings marked "1", "2", "3", "4" and "5".

No.1, No.5

	Mark	Use bearing
Cylinder block (A) + Crankshaft (B)	0 to 5	3
	6 to 11	4
	12 to 17	5
	18 to 23	6
	24 to 28	7

EXAMPLE:

Cylinder block "08" + Crankshaft "06"
= Total number 14 (Use bearing "5")

Others

	Mark	Use bearing
Cylinder block (A) + Crankshaft (B)	0 to 5	1
	6 to 11	2
	12 to 17	3
	18 to 23	4
	24 to 28	5

EXAMPLE:

Cylinder block "08" + Crankshaft "06"
= Total number 14 (Use bearing "3")

Reference**Cylinder block main journal bore diameter (A):**

Mark "00"	72.000 mm (2.8346 in.)
Mark "01"	72.001 mm (2.8347 in.)
Mark "02"	72.002 mm (2.8347 in.)
Mark "03"	72.003 mm (2.8348 in.)
Mark "04"	72.004 mm (2.8348 in.)
Mark "05"	72.005 mm (2.8348 in.)
Mark "06"	72.006 mm (2.8349 in.)
Mark "07"	72.007 mm (2.8349 in.)
Mark "08"	72.008 mm (2.8350 in.)
Mark "09"	72.009 mm (2.8350 in.)
Mark "10"	72.010 mm (2.8350 in.)
Mark "11"	72.011 mm (2.8351 in.)
Mark "12"	72.012 mm (2.8351 in.)
Mark "13"	72.013 mm (2.8352 in.)
Mark "14"	72.014 mm (2.8352 in.)

Mark "15"	72.015 mm (2.8352 in.)
Mark "16"	72.016 mm (2.8353 in.)

Crankshaft main journal diameter (B):

Mark "00"	67.000 mm (2.6378 in.)
Mark "01"	66.999 mm (2.6378 in.)
Mark "02"	66.998 mm (2.6377 in.)
Mark "03"	66.997 mm (2.6377 in.)
Mark "04"	66.996 mm (2.6376 in.)
Mark "05"	66.995 mm (2.6376 in.)
Mark "06"	66.994 mm (2.6376 in.)
Mark "07"	66.993 mm (2.6375 in.)
Mark "08"	66.992 mm (2.6375 in.)
Mark "09"	66.991 mm (2.6374 in.)
Mark "10"	66.990 mm (2.6374 in.)
Mark "11"	66.989 mm (2.6374 in.)
Mark "12"	66.988 mm (2.6373 in.)

**Standard bearing center wall thickness:
No.1 and No.5**

Mark "3"	2.487 to 2.490 mm (0.0979 – 0.0980 in.)
Mark "4"	2.490 to 2.493 mm (0.0980 – 0.0981 in.)
Mark "5"	2.493 to 2.496 mm (0.0981 – 0.0983 in.)
Mark "6"	2.496 to 2.499 mm (0.0983 – 0.0984 in.)
Mark "7"	2.499 to 2.502 mm (0.0984 – 0.0985 in.)

Others

Mark "1"	2.481 to 2.484 mm (0.0977 – 0.0978 in.)
Mark "2"	2.484 to 2.487 mm (0.0978 – 0.0979 in.)
Mark "3"	2.487 to 2.490 mm (0.0979 – 0.0980 in.)
Mark "4"	2.490 to 2.493 mm (0.0980 – 0.0981 in.)
Mark "5"	2.493 to 2.496 mm (0.0981 – 0.0983 in.)

(k) Completely remove the Plastigage.

24. REMOVE CRANKSHAFT

- (a) Lift up the crankshaft.
- (b) Remove the 5 upper main bearings and 2 upper thrust washers from the cylinder block.

HINT:

Arrange the main bearing caps, bearings and thrust washers in correct order.

25. CHECK FIT BETWEEN PISTON AND PISTON PIN

Try to move the piston back and forth on the piston pin.
If any movement is felt, replace the piston and pin as a set.

A04862

**26. REMOVE PISTON RINGS**

- (a) Using a piston ring expander, remove the 2 compression rings.
- (b) Remove the 2 side rails and oil ring by hand.

HINT:

Arrange the piston rings in correct order only.

**27. DISCONNECT CONNECTING ROD FROM PISTON**

- (a) Using a small screwdriver, pry out the 2 snap rings.

- (b) Gradually heat the piston to approx. 60°C (140°F).

- (c) Using a plastic-faced hammer and brass bar, lightly tap out the piston pin and pin and remove the connecting rod.

HINT:

- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in correct order.

INSPECTION

1. CLEAN CYLINDER BLOCK

- (a) Using a gasket scraper, remove all the gasket material from the top surface of the cylinder block.
- (b) Using a soft brush and solvent, thoroughly clean the cylinder block.

2. INSPECT CYLINDER BLOCK

- (a) Inspect for flatness.
Using a precision straight edge and feeler gauge, measure the surfaces contacting the cylinder head and main bearing cap for warpage.

Maximum warpage: 0.07 mm (0.0028 in.)

If warpage is greater than maximum, replace the cylinder block.

Cylinder Block Side

Main Bearing Cap Side

A04850
A04210
A04212

A05178

- (b) Visually check the cylinder for vertical scratches.
If deep scratches are present, rebore all the 8 cylinders and replace all the 8 pistons. (See page [EM-115](#)) If necessary, replace the cylinder block.

(c) Inspect the cylinder bore diameter.

HINT:

There is 1 size of the standard cylinder bore diameter, marked "2" accordingly. The mark is stamped on the top of the cylinder block.

Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:

94.010 to 94.023 mm (3.7012 to 3.7017 in.)

Maximum diameter:

STD	94.223 mm (3.7096 in.)
O/S 0.50	94.723 mm (3.7292 in.)

If the diameter is greater than maximum, rebore all the 8 cylinders and replace all the 8 pistons. (See page [EM-115](#)) If necessary, replace the cylinder block.

(d) Remove the cylinder ridge.

If the wear is less than 0.2 mm (0.008 in.), using a ridge reamer, grind the top of the cylinder.

(e) Using vernier calipers, measure the thread outside diameter of the main bearing cap bolt.

Standard diameter:

10.760 to 10.970 mm (0.4236 to 0.4319 in.)

Minimum diameter: 10.40 mm (0.4094 in.)

If the diameter is less than minimum, replace the cap bolt.

3. CLEAN PISTON

- (a) Using a gasket scraper, remove the carbon from the piston top.

- (b) Using a groove cleaning tool or broken ring, clean the piston ring grooves.

- (c) Using solvent and a brush, thoroughly clean the piston.

NOTICE:

Do not use a wire brush.

4. INSPECT PISTON AND CONNECTING ROD

- (a) Inspect the piston oil clearance.

HINT:

There is 1 size of the standard piston diameter, marked "2" accordingly. The mark is stamped on the piston top.

- (1) Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 30.75 mm (1.2106 in.) from the piston head.

Piston diameter:

STD	Mark "2"	93.912 to 93.940 mm (3.6973 to 3.6984 in.)
O/S 0.50		94.392 to 94.440 mm (3.7162 to 3.7181 in.)

- (2) Measure the cylinder bore diameter in the thrust directions (see step 2 above).

- (3) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:

0.030 to 0.071 mm (0.0012 to 0.0028 in.)

Maximum oil clearance: 0.13 mm (0.0051 in.)

If the oil clearance is greater than maximum, replace all the 8 pistons and rebore all the 8 cylinders. (See page [EM-115](#)) If necessary, replace the cylinder block.

HINT

Use a new cylinder block:

- Use a piston with the same number mark as the cylinder diameter number marked on the cylinder block.

- (b) Inspect the piston ring groove clearance.
Using a feeler gauge, measure the clearance between the new piston ring and the wall of the ring groove.

Ring groove clearance:

No.1	0.030 to 0.080 mm (0.0012 to 0.0031 in.)
No.2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)

If the clearance is not as specified, replace the piston.

- (c) Inspect the piston ring end gap.
- Insert the piston ring into the cylinder bore.
 - Using a piston, push the piston ring a little to the bottom of the ring travel, 105 mm (4.13 in.) from the top of the cylinder block.

(3) Using a feeler gauge, measure the end gap.

Standard end gap:

No.1	0.300 to 0.400 mm (0.0118 to 0.0157 in.)
No.2	0.450 to 0.600 mm (0.0177 to 0.0236 in.)
Oil (Side rail)	0.100 to 0.350 mm (0.0039 to 0.0138 in.)

Maximum end gap:

No.1	1.10 mm (0.0433 in.)
No.2	1.30 mm (0.0512 in.)
Oil (Side rail)	0.75 mm (0.0295 in.)

If the end gap is greater than maximum, replace the piston ring. If the end gap is greater than maximum, even with a new piston ring, rebore all the 8 cylinders (See page EM-115) or replace the cylinder block.

(d) Inspect the piston pin fit.

At 60°C (140°F), you should be able to push the piston pin into the piston pin hole with your thumb.

(e) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for bend.

Maximum bend:

0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If bend is greater than maximum, replace the connecting rod assembly.

(2) Check for twist.

Maximum twist:

0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If twist is greater than maximum, replace the connecting rod assembly.

- (f) Inspect the piston pin oil clearance.
- (1) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.

Bushing inside diameter:

22.005 to 22.014 mm (0.8663 to 0.8667 in.)

- (2) Using a micrometer, measure the piston pin diameter.

Piston pin diameter:

21.997 to 22.009 mm (0.8660 to 0.8664 in.)

- (3) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.

Standard oil clearance:

0.005 to 0.011 mm (0.0002 to 0.0004 in.)

Maximum oil clearance: 0.05 mm (0.0020 in.)

If the oil clearance is greater than maximum, replace the bushing. If necessary, replace the piston and piston pin as a set.

- (g) Using vernier calipers, measure the tension portion of the connecting rod bolt.

Standard diameter:

7.200 to 7.300 mm (0.2835 to 0.2874 in.)

Minimum diameter: 7.00 mm (0.2756 in.)

If the diameter is less than the minimum, replace the bolt.

5. INSPECT CRANKSHAFT

- (a) Inspect for circle runout.
- (1) Place the crankshaft on V-blocks.
 - (2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout: 0.04 mm (0.0016 in.)

If the circle runout is greater than maximum, replace the crankshaft.

- (b) Inspect the main journals and crank pins.
- (1) Using a micrometer, measure the diameter of each main journal and crank pin.

Main journal diameter:

66.988 to 67.000 mm (2.6373 to 2.6378 in.)

Crank pin diameter:

51.982 to 52.000 mm (2.0465 to 2.0472 in.)

If the diameter is not as specified, check the oil clearance (See page [EM-100](#)). If necessary, replace the crankshaft.

- (2) Check each main journal and crank pin for taper and out-of-round as shown.

Maximum taper and out-of-round:

0.02 mm (0.0008 in.)

If the taper and out-of-round is greater than maximum, replace the crankshaft.

REPLACEMENT

1. REPLACE OVERSIZED (O/S) PISTONS FOR CYLINDER BORING

HINT:

- Bore all the 8 cylinders to match the oversized piston outside diameter.
 - Replace all the piston rings with ones to match the oversized pistons.
- (a) Keep 8 new oversized pistons.
**O/S 0.50 piston diameter:
 94.392 to 94.440 mm (3.7162 to 3.7181 in.)**
 - (b) Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 30.75 mm (1.2106 in.) from the piston head.
 - (c) Calculate the size to be rebored for each cylinder as follows:
Size to be rebored = P + C - H
P = Piston diameter
**C = Piston clearance:
 0.030 to 0.071 mm (0.0012 to 0.0028 in.)**
H = Allowance for honing: 0.02 mm (0.0008 in.) or less
 - (d) Bore and hone the cylinders to calculated dimensions.
Maximum honing: 0.02 mm (0.0008 in.)

NOTICE:

Excess honing will destroy the finished roundness.

2. REPLACE CONNECTING ROD BUSHINGS

- (a) Using SST and a press, press out the bushing.
 SST 09222-30010

- (b) Align the oil holes of a new bushing and the connecting rod.
- (c) Using SST and a press, press in the bushing.
 SST 09222-30010

- (d) Using a pin hole grinder, hone the bushing to obtain the standard specified clearance (See page [EM-100](#)) between the bushing and piston pin.

- (e) Check the piston pin fit at normal room temperature. Coat the piston pin with engine oil, and push it into the connecting rod with your thumb.

3. REPLACE CRANKSHAFT FRONT OIL SEAL (See page [LU-13](#))

4. REPLACE CRANKSHAFT REAR OIL SEAL

HINT:

There are 2 methods ((a) and (b)) to replace the oil seal.

- (a) If the rear oil seal retainer is removed from the cylinder block:

- (1) Using a screwdriver and hammer, tap out the oil seal.

- (2) Using SST and a hammer, tap in a new oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223-56010

- (3) Apply MP grease to the oil seal lip.

- (b) If the rear oil seal retainer is installed to the cylinder block:

- (1) Using a knife, cut off the oil seal lip.

- (2) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Tape the screwdriver tip.

- (3) Apply MP grease to a new oil seal lip.
- (4) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223-56010

REASSEMBLY

HINT:

- Thoroughly clean all parts to be assembled.
- Before installing the parts, apply new engine oil to all sliding and rotating surfaces.
- Replace all gaskets, O-rings and oil seals with new ones.

1. ASSEMBLE PISTON AND CONNECTING ROD

- (a) Using a screwdriver, install a new snap ring on one side of the piston pin hole.

- (b) Gradually heat the piston to about 60°C (140°F).

- (c) Coat the piston pin with engine oil.
- (d) Position the piston so that the front mark and to the outside mark on the connecting rod face in the same direction as shown in the illustration.
- (e) Align the piston pin holes of the piston and connecting rod, and push in the piston pin with your thumb.

- (f) Using a screwdriver, install a new snap ring on the other side of the piston pin hole.

2. INSTALL PISTON RINGS

- (a) Install the oil ring expander and 2 side rails by hand.
- (b) Using a piston ring expander, install the 2 compression rings.

Code mark:

No.1	None
No.2	2R

- (c) Position the piston rings so that the ring ends are as shown.

NOTICE:

Do not align the ring ends.

**3. INSTALL BEARINGS**

- (a) Align the bearing claw with the groove of the connecting rod or connecting cap.
 (b) Install the bearings in the connecting rod and connecting rod cap.

**4. INSTALL MAIN BEARINGS****HINT:**

- Main bearings are of 19.5 mm (0.768 in.) and 22.5 mm (0.886 in.) in width. Install the 22.5 mm (0.886 in.) bearings in the No.1 and No.5 cylinder block journal positions with the main bearing cap. Install the 19.5 mm (0.768 in.) bearings in the other positions.
- Upper bearings have an oil groove and oil holes, but lower bearings do not.

- (a) Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper bearings.

- (b) Align the bearing claw with the claw groove of the main bearing cap, and push in the 5 lower bearings.

HINT:

A number is marked on each main bearing cap to indicate the installation position.

5. INSTALL UPPER THRUST WASHERS

Install the 2 thrust washers under the No.3 journal position of the cylinder block with the oil grooves facing outward.

6. PLACE CRANKSHAFT ON CYLINDER BLOCK

7. PLACE MAIN BEARING CAPS AND LOWER THRUST WASHERS ON CYLINDER BLOCK

(a) Install the 2 thrust washers on the No.3 bearing cap with the grooves facing outward.

(b) Install the 5 main bearing caps in their proper locations.

8. INSTALL MAIN BEARING CAP BOLTS

HINT:

- The main bearing cap bolts are tightened in 2 progressive steps (steps (b) and (d)).
- If any one of the main bearing cap bolts is broken or deformed, replace it.

(a) Apply a light coat of engine oil to the threads and under the main bearing cap bolts.

(b) Install and uniformly tighten the 10 main bearing cap bolts in several steps, in the sequence shown.

Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)

If any of the main bearing cap bolts does not meet the torque specification, replace the main bearing cap bolt.

(c) Mark the front of the main bearing cap bolt with paint.

(d) Retighten the main bearing cap bolts by 90° in the numerical order shown.

(e) Check that the painted mark is now at a 90° angle to the front.

(f) Check that the crankshaft turns smoothly.

9. CHECK CRANKSHAFT THRUST CLEARANCE

(See page [EM-100](#))

10. INSTALL PISTON AND CONNECTING ROD ASSEMBLIES

Using a piston ring compressor, push correctly the numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.

11. PLACE CONNECTING ROD CAP ON CONNECTING ROD

- Match the numbered connecting rod cap with the connecting rod.
- Align the pin groove of the connecting rod cap with the pins of the connecting rod, and install the connecting rod cap.

- Check that the outside mark of the connecting rod cap is facing in correct direction.

12. INSTALL CONNECTING ROD CAP BOLTS

HINT:

- The connecting rod cap bolts are tightened in 2 progressive steps (steps (b) and (d)).
- If any one of the connecting rod cap bolts is broken or deformed, replace it.

- (a) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.
- (b) Install and alternately tighten the 2 connecting rod cap bolts in several passes.

Torque: 24.5 N·m (250 kgf·cm, 18 ft·lbf)

If any one of the connecting rod cap bolts does not meet the torque specification, replace the connecting rod cap bolts.

- (c) Mark the front of the connecting cap bolt with paint.
- (d) Retighten the cap bolts by 90° as shown.
- (e) Check that the painted mark is now at a 90° angle to the front.
- (f) Check that the crankshaft turns smoothly.

13. CHECK CONNECTING ROD THRUST CLEARANCE (See page EM-100)

14. INSTALL REAR OIL SEAL RETAINER

- (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contacting surfaces of the oil seal retainer and cylinder block.
 - Using a razor blade and gasket scraper, remove all the old packing (FIPG) materials from the gasket surfaces and sealing grooves.
 - Thoroughly clean all components to remove all the loose material.
 - Using a non-residue solvent, clean both sealing surfaces.
- (b) Apply seal packing to the oil seal retainer as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- Install a nozzle that has been cut to a 3 – 4 mm (0.12 – 0.16 in.) opening.
- Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.

- (c) Install a new O-ring to the cylinder block.
 - (d) Install the oil seal retainer with the 7 bolts.
- Torque: 8.0 N-m (80 kgf-cm, 71 in.-lbf)**

15. INSTALL ENGINE COOLANT DRAIN UNIONS

- (a) Apply seal packing to 2 or 3 threads.
- Seal packing: Part No. 08826-00100 or equivalent**

- (b) Install the 2 drain unions.
- Torque: 49 N-m (500 kgf-cm, 36 ft-lbf)**

HINT:

After applying the specified torque, rotate the drain union clockwise until its drain port is facing forward.

- 16. **INSTALL OIL PUMP** (See page [LU-15](#))
- 17. **INSTALL OIL STRAINER** (See page [LU-15](#))
- 18. **INSTALL NO.1 OIL PAN** (See page [LU-15](#))
- 19. **INSTALL OIL PAN Baffle PLATE**
(See page [LU-15](#))
- 20. **INSTALL NO.2 OIL PAN** (See page [LU-15](#))
- 21. **INSTALL WATER PUMP** (See page [CO-8](#))
- 22. **INSTALL ENGINE MOUNTING BRACKETS**

Install the mounting bracket with the 4 bolts. Install the 2 mounting brackets.

Torque: 36 N-m (370 kgf-cm, 27 ft-lbf)

23. INSTALL ENGINE WIRE TO LH SIDE OF CYLINDER BLOCK

- (a) Install the brackets on the engine wire with the 2 bolts.
- (b) Install the engine wire cover with the 2 bolts.

24. INSTALL OIL COOLER PIPE BRACKET FOR A/T

Install the bracket with the bolt.

- 25. **INSTALL VVT SENSORS** (See page [SF-79](#))
- 26. **INSTALL KNOCK SENSORS** (See page [SF-70](#))
- 27. **INSTALL STARTER** (See page [ST-19](#))

**28. INSTALL WATER BYPASS PIPE**

- (a) Install a new O-ring to the water bypass pipe.
- (b) Apply soapy water to the O-ring.
- (c) Push in the water bypass pipe end into the pipe hole of the water pump.
- (d) Install the water bypass pipe with the bolt.
Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)
- (e) Install the wire clamp to the bracket of the water bypass pipe.

29. INSTALL CYLINDER HEADS (See page [EM-60](#))**30. INSTALL TIMING BELT AND PULLEYS**

(See page [EM-23](#))

31. DISCONNECT ENGINE FROM ENGINE STAND

EXHAUST SYSTEM COMPONENTS

EMOEE-21

REMOVAL

1. REMOVE HEATED OXYGEN SENSOR (BANK 1)

- (a) Disconnect the heated oxygen sensor.
- (b) Remove the heated oxygen sensor.

2. REMOVE HEATED OXYGEN SENSOR (BANK2)

- (a) Disconnect the heated oxygen sensor connector.
- (b) Remove the heated oxygen sensor.

3. SEPARATE EXHAUST CENTER PIPE

Remove the 4 bolts and 2 gasket from the exhaust center pipe.

4. REMOVE RH FRONT EXHAUST PIPE

Remove the 3 nuts, gasket, and front exhaust pipe from the exhaust manifold.

5. REMOVE LH FRONT EXHAUST PIPE

Remove the 3 nuts, gasket, ring and front exhaust pipe from the exhaust manifold.

6. REMOVE CENTER EXHAUST PIPE

- (a) Loosen the clamp bolt, disconnect the center exhaust pipe and remove the gasket from the exhaust tailpipe.
- (b) Remove the 2 rings and center exhaust pipe.

7. REMOVE EXHAUST TAILPIPE

- (a) Remove the 3 rings and exhaust tailpipe.

8. REMOVE HEAT INSULATOR

- (a) Remove the 5 bolts and No.1 heat insulator.
- (b) Remove the 4 bolts and No.2 heat insulator.
- (c) Remove the 3 bolts and No.3 heat insulator.
- (d) Remove the 2 bolts and No.4 heat insulator.

INSTALLATION

1. REMOVE HEAT INSULATOR

- (a) Install the No.1 heat insulator with the 5 bolts.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (b) Install the No.2 heat insulator with the 4 bolts.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (c) Install the No.3 heat insulator with the 3 bolts.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (d) Install the No.4 heat insulator with the 2 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62 in.-lbf)

2. INSTALL EXHAUST TAIL PIPE

Install the 3 rings and exhaust tailpipe.

3. INSTALL CENTER EXHAUST PIPE

- (a) Install the 2 rings and center exhaust pipe.

- (b) Install a new gasket and connect the center exhaust pipe to the exhaust tailpipe with a new clamp.

Torque: 32 N·m (326 kgf·cm, 24 ft·lbf)

4. INSTALL LH FRONT EXHAUST PIPE

- (a) Install a new gasket and ring to the LH front exhaust pipe.

- (b) Install the LH front exhaust pipe to the exhaust manifold with 3 new nuts.

Torque: 62 N·m (632 kgf·cm, 46 ft·lbf)

5. INSTALL RH FRONT EXHAUST PIPE

- (a) Install a new gasket to the RH front exhaust pipe.

- (b) Install the RH front exhaust pipe to the exhaust manifold with 3 new nuts.

Torque: 62 N·m (632 kgf·cm, 46 ft·lbf)

6. CONNECT EXHAUST CENTER PIPE

- (a) Install a new gasket and connect the RH front exhaust pipe with the 2 bolts.

Torque: 48 N·m (489 kgf·cm, 35 ft·lbf)

- (b) Install a new gasket and connect the LH front exhaust pipe with the 2 bolts.

Torque: 48 N·m (489 kgf·cm, 35 ft·lbf)

7. INSTALL HEATED OXYGEN SENSOR (BANK2)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

- (b) Connect the heated oxygen sensor connector.

8. INSTALL HEATED OXYGEN SENSOR (BANK1)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

- (b) Connect the heated oxygen sensor connector.

EMISSION CONTROL SYSTEM

EC007-01

PURPOSE

The emission control systems are installed to reduce the amount of HC, CO and NO_x exhausted from the engine ((3) and (4)), to prevent the atmospheric release of blow-by gas containing HC (1) and evaporated fuel containing HC being released from the fuel tank (2).

The function of each system is shown in the table below:

System	Abbreviation	Function
(1) Positive Crankcase Ventilation	PCV	Reduces HC
(2) Evaporative Emission Control	EVAP	Reduces evaporated HC
(3) Three-way Catalytic Converter	TWC	Reduces HC, CO and NO _x
(4) Sequential Multiport Fuel Injection*	SFI	Injects a precisely timed, optimum amount of fuel for reduced exhaust emissions

Remark: * For inspection and repair of the SFI system, refer to the SF section in this manual.

PARTS LAYOUT AND SCHEMATIC DRAWING LOCATION

EC008-01

DRAWING

POSITIVE CRANKCASE VENTILATION (PCV) SYSTEM INSPECTION

EC00A-01

1. REMOVE V-BANK COVER
2. REMOVE VENTILATION VALVE
3. INSPECT VENTILATION VALVE
 - (a) Install a clean hose to the ventilation valve.
 - (b) Inspect ventilation valve operation.
 - (1) Blow air into the cylinder head side, and check that air passes through smoothly.

CAUTION:

Do not suck air through the valve. Petroleum substances inside the valve are harmful.

- (2) Blow air into the intake manifold side, and check that air does not pass through smoothly.

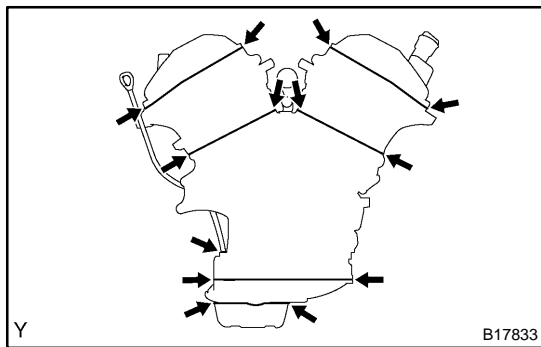

If operation is not as specified, replace the ventilation valve.

- (c) Remove the clean hose from the ventilation valve.

4. INSTALL VENTILATION VALVE

Install the ventilation valve to the LH cylinder head cover.

Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)

5. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

- (a) Check for cracks, leaks or damage.

HINT:

Separation of the engine oil dipstick, oil filler cap, PCV hose, etc. may cause engine failure or malfunctions. Disconnection, looseness or cracks in parts of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or malfunctions.

6. INSTALL V-BANK COVER

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENTS

EC00B-01

INSPECTION

1. INSPECT LINES AND CONNECTIONS

Visually check for loose connections, sharp bends or damage.

2. INSPECT FUEL TANK

Visually check for deformation, cracks or fuel leakage.

3. INSPECT FUEL TANK CAP

Visually check if the cap and/or gasket are deformed or damaged.

If necessary, repair or replace the cap.

4. INSPECT FUEL CUTOFF VALVE AND FILL CHECK VALVE

- (a) Disconnect the vent line hose from the fuel tank.
- (b) Connect the pressure gauge to the fuel tank.
- (c) Fill the fuel tank with fuel.
- (d) Apply pressure of 4 kPa (41 gf/cm², 0.58 psi) to the vent port of the fuel tank.

HINT:

It is necessary to check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.

- (e) Remove the fuel tank cap, and check that the pressure drops.

If the pressure does not drop, replace the fuel tank assembly.

- (f) Reconnect the vent line hose to the fuel tank.

5. CHECK AIR INLET LINE

- (a) Disconnect the air inlet line hose from the charcoal canister.

- (b) Check that air can flow freely into the air inlet line.

If air cannot flow freely into the air inlet line, repair or replace it.

- (c) Reconnect the air inlet line hose to the charcoal canister.

6. REMOVE CHARCOAL CANISTER ASSEMBLY

7. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks or damage.

If cracks or damage are found, replace the charcoal canister assembly.

(b) Check charcoal canister operation.

(1) With the purge port closed, blow 1.67 kPa (17.0 gf/cm², 0.24 psi) of air into the vent port, and check that air flows from the air inlet port.

If the result is not as specified, replace the charcoal canister assembly.

(2) With the vent port closed, blow 1.10 kPa (11.2 gf/cm², 0.16 psi) of air to the air inlet port, and check that air flows from the purge port.

If the result is not as specified, replace the charcoal canister assembly.

(c) Check for air leakage.

(1) Remove the air hose between ports A and B.

(2) Connect the pressure gauge to the vent port of the charcoal canister.

(3) While holding port B, with the purge port and the air inlet port closed and port A open, apply 19.6 kPa (0.2 kgf/cm², 2.81 psi) of pressurized air into the vent port, then confirm that pressure is retained for 1 minute.

If the result is not as specified, replace the charcoal canister assembly.

- (d) Check leak detection pump.
- (1) Remove the detection pump from the charcoal canister.
 - (2) Check that air flows from port A to B and then to C.
- If the result is not as specified, replace the charcoal canister assembly.

- (3) Connect the positive (+) lead of the battery to terminal 7 and the negative (-) lead to terminal 6.
 - (4) Check that the valve is closed.
- If the result is not as specified, replace the charcoal canister assembly.
- (5) Install the detection pump.

8. **INSPECT VSV FOR EVAP (See page [SF-65](#))**
9. **REINSTALL CHARCOAL CANISTER ASSEMBLY**

EC-10

EMISSION CONTROL (1GR-FE) - EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM

- MEMO -

- MEMO -

THREE-WAY CATALYTIC CONVERTER (TWC) SYSTEM

ON-VEHICLE INSPECTION

EC00D-01

1. CHECK EXHAUST PIPE ASSEMBLY

- (a) Check the connections for looseness or damage.
- (b) Check the clamps for weakness, cracks or damage.

2. INSPECT TWC

Check for dents or damage.

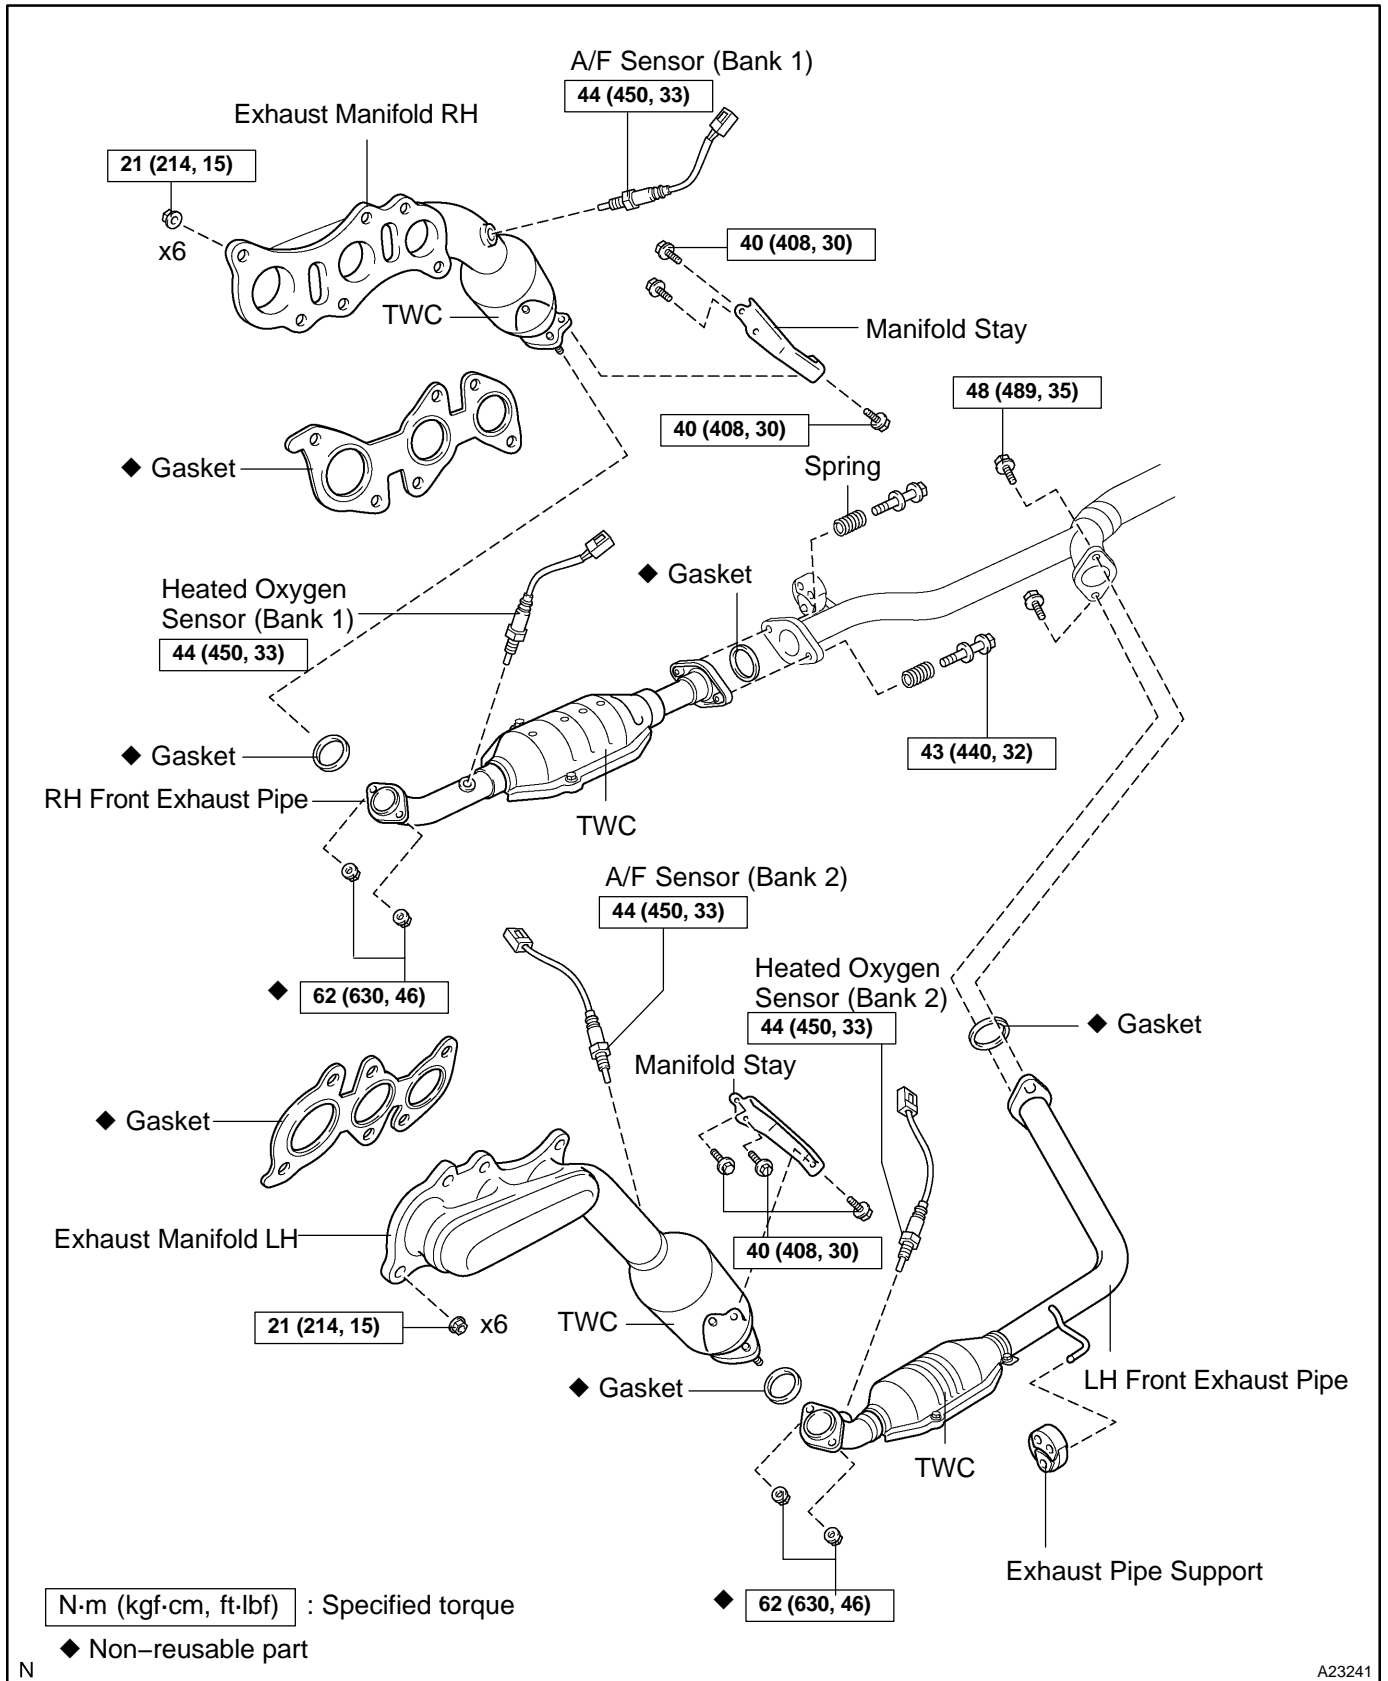

If any part of the protector is damaged or dented to the extent that it contacts the TWC, repair or replace it.

3. INSPECT HEAT INSULATOR

- (a) Check the heat insulator for damage.
- (b) Check for adequate clearance between the TWC and heat insulator.

THREE-WAY CATALYTIC CONVERTER (TWC) SYSTEM COMPONENTS

EC00E-01

REPLACEMENT

1. REMOVE HEATED OXYGEN SENSOR (BANK 1)

- (a) Disconnect the heated oxygen sensor.
- (b) Remove the heated oxygen sensor.

2. SEPARATE EXHAUST CENTER PIPE

Remove the 4 bolts and 2 springs from the exhaust center pipe.

3. REMOVE RH FRONT EXHAUST PIPE

- (a) Remove the 2 nuts and RH front exhaust pipe.
- (b) Remove the 2 gaskets from the RH front exhaust pipe.

4. REMOVE HEATED OXYGEN SENSOR (BANK 2 OXYGEN SENSOR)

- (a) Disconnect the heated oxygen sensor connector.
- (b) Remove the heated oxygen sensor.

5. REMOVE LH FRONT EXHAUST PIPE

- (a) Remove the 2 nuts, exhaust pipe support and LH front exhaust pipe.
- (b) Remove the 2 gaskets from the LH front exhaust pipe.

6. REMOVE MANIFOLD STAY

Remove the 6 bolts and 2 manifold stays.

7. REMOVE A/F SENSOR (BANK 1)

- (a) Disconnect the A/F sensor connector.
- (b) Remove the A/F sensor.

8. REMOVE EXHAUST MANIFOLD RH

Remove the 6 nuts, exhaust manifold RH and gasket.

9. REMOVE A/F SENSOR (BANK 2)

- (a) Disconnect the A/F sensor connector.
- (b) Remove the A/F sensor.

10. REMOVE EXHAUST MANIFOLD LH

Remove the 6 nuts, exhaust manifold LH and gasket.

11. INSTALL EXHAUST MANIFOLD RH

(a) Set a new gasket to the RH cylinder head with the oval shape facing forward.

NOTICE:

Be careful of the installation direction.

(b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

12. INSTALL A/F SENSOR (BANK 1)

(a) Install the A/F sensor.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

(b) Connect the A/F sensor connector.

13. INSTALL EXHAUST MANIFOLD LH

(a) Set a new gasket to the LH cylinder head with the oval shape facing backward.

NOTICE:

Be careful of the installation direction.

(b) Install the exhaust manifold with the 6 nuts. Tighten the nuts uniformly in several steps.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

14. INSTALL A/F SENSOR (BANK 2)

(a) Install the A/F sensor.

Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

(b) Connect the A/F sensor connector.

15. INSTALL MANIFOLD STAY

Install the 2 manifold stays with the 6 bolts.

Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

16. INSTALL LH FRONT EXHAUST PIPE

- (a) Install 2 new gaskets to the LH front exhaust pipe.
- (b) Install the LH front exhaust pipe with 2 new nuts.

Torque: 62 N·m (630 kgf-cm, 46 ft-lbf)

- (c) Install the exhaust pipe support.

17. INSTALL HEATED OXYGEN SENSOR (BANK 2 OXYGEN SENSOR)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf-cm, 33 ft-lbf)

- (b) Connect the heated oxygen sensor connector.

18. INSTALL RH FRONT EXHAUST PIPE

- (a) Install 2 new gaskets to the RH front exhaust pipe.
- (b) Install the RH front exhaust pipe with 2 new nuts.

Torque: 62 N·m (630 kgf-cm, 46 ft-lbf)

19. INSTALL HEATED OXYGEN SENSOR (BANK 1 OXYGEN SENSOR)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf-cm, 33 ft-lbf)

- (b) Connect the heated oxygen sensor connector.

20. CONNECT EXHAUST CENTER PIPE

- (a) Install the 2 bolts.

Torque: 48 N·m (489 kgf-cm, 35 ft-lbf)

- (b) Install the 2 bolts and springs.

Torque: 43 N·m (440 kgf-cm, 32 ft-lbf)

EMISSION CONTROL SYSTEM

EC087-03

PURPOSE

INSPECTION

1. REMOVE V-BANK COVER
2. INSPECT PCV VALVE
 - (a) Remove the PCV valve.

- (b) Install a clean hose to the PCV valve.
- (c) Inspect the PCV valve operation.
 - (1) Blow air into the cylinder head side, and check that air passes through easily.

CAUTION:

Do not suck air through the valve. Petroleum substances inside the valve are harmful.

- (2) Blow air into the intake manifold side, and check that air passes through with difficulty.
- If operation is not as specified, replace the PCV valve.
- (d) Remove the clean hose from the PCV valve.

- (e) Reinstall the PCV valve.
 - (1) Apply adhesive to 2 or 3 threads.

Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent

- (2) Reinstall the PCV valve.
- Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)**
- HINT:**
 After applying the specified torque, rotate the PCV valve clockwise with the port faced in the direction indicated in the illustration.
- (3) Install the PCV valve cover to the PCV valve.
 - (4) Connect the PCV hose to the PCV valve.

3. INSPECT HOSES, CONNECTIONS AND GASKETS

Visually for cracks, leaks or damage.

4. REINSTALL V-BANK COVER

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENTS

EC0JK-04

INSPECTION

1. INSPECT LINES AND CONNECTIONS

Visually check for loose connections, sharp bends or damage.

2. INSPECT FUEL TANK

Visually check for deformation, cracks or fuel leakage.

B17594

3. INSPECT FUEL TANK CAP

Visually check if the cap and/or gasket are deformed or damaged.

If necessary, repair or replace the cap.

B17662

4. INSPECT FUEL CUTOFF VALVE AND FILL CHECK VALVE

- (a) Disconnect the vent line hose from the fuel tank.
- (b) Connect the pressure gauge to the fuel tank.
- (c) Fill the fuel tank with fuel.
- (d) Apply pressure of 4 kPa (41 gf/cm², 0.58 psi) to the vent port of the fuel tank.

HINT:

It is necessary to check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.

- (e) Remove the fuel tank cap, and check that the pressure drops.

If the pressure does not drop, replace the fuel tank assembly.

- (f) Reconnect the vent line hose to the fuel tank.

B17598

5. CHECK AIR INLET LINE

- (a) Disconnect the air inlet line hose from the charcoal canister.

- (b) Check that air can flow freely into the air inlet line.

If air cannot flow freely into the air inlet line, repair or replace it.

- (c) Reconnect the air inlet line hose to the charcoal canister.

6. REMOVE CHARCOAL CANISTER ASSEMBLY

7. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks or damage.

If cracks or damage are found, replace the charcoal canister assembly.

(b) Check charcoal canister operation.

(1) With the purge port closed, blow 1.67 kPa (17.0 gf/cm², 0.24 psi) of air into the vent port, and check that air flows from the air inlet port.

If the result is not as specified, replace the charcoal canister assembly.

(2) With the vent port closed, blow 1.10 kPa (11.2 gf/cm², 0.16 psi) air to the air inlet port, and check that air flows from the purge port.

If the result is not as specified, replace the charcoal canister assembly.

(c) Check for air leakage.

(1) Remove the air hose between ports A and B.

(2) Connect the pressure gauge to the vent port of the charcoal canister.

(3) While holding port B, with the purge port and the air inlet port closed and port A open, apply pressurized air 19.6 kPa (0.2 kgf/cm², 2.81 psi) of pressurized air into the vent port, then confirm that the pressure is retained for 1 minute.

If the result is not as specified, replace the charcoal canister assembly.

- (d) Check leak detection pump.
- (1) Remove the detection pump from the charcoal canister.
 - (2) Check that air flows from port A to B and then C.
- If the result is not as specified, replace the charcoal canister assembly.

- (3) Connect the positive (+) lead to terminal 7 and the negative (-) lead to terminal 6.
 - (4) Check that the valve is closed.
- If the result is not as specified, replace the charcoal canister assembly.
- (5) Install the detection pump.

8. **INSPECT VSV FOR EVAP (See page [SF-65](#))**
9. **REINSTALL CHARCOAL CANISTER ASSEMBLY**

THREE-WAY CATALYTIC CONVERTER (TWC) SYSTEM

ON-VEHICLE INSPECTION

ECQJM-02

1. CHECK EXHAUST PIPE ASSEMBLY

- (a) Check the connections for looseness or damage.
- (b) Check the clamps for weakness, cracks or damage.

2. INSPECT TWC

Check for dents or damage.

If any part of protector is damaged or dented to the extent that it contacts the TWC, repair or replace it.

3. INSPECT HEAT INSULATOR

- (a) Check the heat insulator for damage.
- (b) Check for adequate clearance between the TWC and heat insulator.

COMPONENTS

REPLACEMENT

1. REMOVE HEATED OXYGEN SENSOR (BANK 1)

- (a) Disconnect the heated oxygen sensor.
- (b) Remove the heated oxygen sensor.

2. REMOVE HEATED OXYGEN SENSOR(BANK2)

- (a) Disconnect the heated oxygen sensor connector.
- (b) Remove the heated oxygen sensor.

3. SEPARATE EXHAUST CENTER PIPE

Remove the 4 bolts and 2 gasket from the exhaust center pipe.

4. REMOVE RH FRONT EXHAUST PIPE

- (a) Remove the 3 nuts and RH front exhaust pipe.
- (b) Remove the gasket from the RH front exhaust pipe.

5. REMOVE LH FRONT EXHAUST PIPE

- (a) Remove the 3 nuts and LH front exhaust pipe.
- (b) Remove the gasket from the LH front exhaust pipe.

6. INSTALL LH FRONT EXHAUST PIPE

- (a) Install a new gasket to the LH front exhaust pipe.
- (b) Install the LH front exhaust pipe with 3 new nuts.

Torque: 62 N·m (630 kgf·cm, 46 ft·lbf)

7. INSTALL RH FRONT EXHAUST PIPE

- (a) Install a new gasket to the RH front exhaust pipe.
- (b) Install the RH front exhaust pipe with 3 new nuts.

Torque: 62 N·m (630 kgf·cm, 46 ft·lbf)

8. CONNECT EXHAUST CENTER PIPE

Install the 4 bolts.

Torque: 48 N·m (489 kgf·cm, 35 ft·lbf)

9. INSTALL HEATED OXYGEN SENSOR (BANK2)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf-cm, 33 ft-lbf)

- (b) Connect the heated oxygen sensor connector.

10. INSTALL HEATED OXYGEN SENSOR (BANK1)

- (a) Install the heated oxygen sensor.

Torque: 44 N·m (450 kgf-cm, 33 ft-lbf)

- (b) Connect the heated oxygen sensor connector.

SECONDARY AIR INJECTION SYSTEM

ECONY-02

ON-VEHICLE INSPECTION

1. INSPECT PRESSURE SENSOR

- (a) Turn the ignition switch to the ON position.
- (b) Measure the voltage between terminals AIP and E2 of the ECM connector.

Voltage: 1.0 to 2.2 V

If the voltage is not as specified, replace the pressure sensor.

2. INSPECT VSV FOR AIR INJECTION SYSTEM

- (a) Disconnect the connector from the VSV.
- (b) Disconnect the 2 vacuum hoses from the VSV.

- (c) Using an ohmmeter, measure the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
1 – 2	33 to 39 Ω at 20°C (68°F)
1 – Body ground	10 MΩ or higher
2 – Body ground	10 MΩ or higher

If the resistance is not as specified, replace the VSV.

- (d) Check that air does not flow from the port as shown in the illustration.

If the result is not as specified, replace the VSV.

(e) Apply positive battery between the terminals, check that air flows from the ports.

If the result is not as specified, replace the VSV.

(f) Connect the 2 vacuum hoses to the VSV.

NOTICE:

Be sure to connect the vacuum hoses correctly.

(g) Connect the connector to the VSV.

(h) Perform procedures (a) to (g) to the other VSV.

3. INSPECT NO. 2 AIR SWITCHING VALVE

(a) Disconnect the vacuum hose from the VSV for the air injection system.

(b) Apply vacuum (30 kPa (306 gf/cm², 4.35 psi) to vacuum hose, check that the vacuum does not decrease.

If operation is not as specified, replace the No.2 air switching valve.

(c) Release the vacuum, and check that the operation sound is emitted from the No.2 air switching valve.

If operation is not as specified, replace the No.2 air switching valve.

(d) Perform procedures (a) to (c) to the other No.2 air switching valve.

COMPONENTS

γ N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE MANIFOLD (See page EM-36)
3. REMOVE VSV FOR AIR INJECTION SYSTEM
 - (a) Remove the 2 bolts and 2 VSVs from the intake manifold.
 - (b) Remove the 2 vacuum hoses from the 2 VSVs.

4. REMOVE AIR PUMP ASSEMBLY
 - (a) Disconnect the air hose No.2 from the air switching valve.
 - (b) Disconnect the air switching valve connector.
 - (c) Disconnect the pressure sensor connector for the air injection system.
 - (d) Remove the 4 bolts and air pump assembly.

5. REMOVE NO. 2 AIR SWITCHING VALVE
 - (a) Remove the 4 nuts and 2 gaskets, and disconnect the 2 No.3 air tubes from the exhaust manifolds.
 - (b) Remove the 4 bolts, 2 gaskets and the 2 No.3 air tubes from the 2 No.2 air switching valves.

- (c) Remove the 4 bolts, 2 gaskets and the 2 No.2 air switching valves from the rear water by-pass joint.
- (d) Remove the 2 vacuum hoses from the No.2 air switching valves.

6. REMOVE AIR INJECTION CONTROL DRIVER
 - (a) Disconnect the 2 connectors from the air injection control driver.
 - (b) Remove the 2 bolts and air injection control driver from the body.

DISASSEMBLY

1. REMOVE PRESSURE SENSOR

- (a) Remove the vacuum hose from the pressure sensor and air switching valve.
- (b) Remove the 2 bolts and pressure sensor from the air switching valve.

2. REMOVE AIR SWITCHING VALVE

- (a) Remove the 2 bolts and air switching valve from the air pump bracket.
- (b) Remove the No.1 air hose from the air switching valve and air pump.

INSPECTION

1. INSPECT AIR PUMP

- (a) Connect the positive (+) lead from the battery to terminal 1 and negative (-) lead to terminal 2, and check that air flows.

If operation is not as specified, replace the air pump.

2. INSPECT AIR SWITCHING VALVE

- (a) Blow air into port A and check that air is not discharged from port B.

- (b) Apply positive battery between the terminals.

- (c) Blow air into port A and check that air is discharged from port B.

If operation is not as specified, replace the air switching valve.

3. INSPECT NO. 2 AIR SWITCHING VALVE

- (a) Blow air into port B and check that air is not discharged from port C.

- (b) Apply vacuum (30 kPa (306 gf/cm², 4.35 psi) to port A, blow air into port B and check that air is discharged from port C.

If operation is not as specified, replace the No.2 air switching valve.

REASSEMBLY

1. INSTALL AIR SWITCHING VALVE

- (a) Install the No.1 air hose to the air switching valve and air pump.
- (b) Install the air switching valve with the 2 bolts to the air pump bracket.

Torque: 16 N·m (163 kgf·cm, 12 ft·lbf)

2. INSTALL PRESSURE SENSOR

- (a) Install the pressure sensor with the 2 bolts to the air switching valve.

Torque: 5.0 N·m (55 kgf·cm, 48 in.-lbf)

- (b) Install the vacuum hose to the pressure sensor and air switching valve.

INSTALLATION

1. INSTALL AIR INJECTION CONTROL DRIVER

- (a) Install the air injection control driver with the 2 bolts to the body.

Torque: 18 N·m (184 kgf-cm, 13 ft-lbf)

- (b) Connect the 2 connectors to the air injection control driver.

2. INSTALL NO. 2 AIR SWITCHING VALVE

- (a) Connect the 2 vacuum hoses to the No.2 air switching valves.

- (b) Install 2 new gaskets and 2 No.2 air switching valves with the 4 bolts to the rear water by-pass joint.

Torque: 10 N·m (102 kgf-cm, 7 ft-lbf)

- (c) Install 2 new gaskets, and connect the 2 No.3 air tubes with the 4 bolts to the No.2 air switching valve.

Torque: 10 N·m (102 kgf-cm, 7 ft-lbf)

- (d) Install the 2 new gaskets, and connect the 2 No.3 air tubes with the 4 nuts to the exhaust manifold.

Torque: 10 N·m (102 kgf-cm, 7 ft-lbf)

3. INSTALL AIR PUMP ASSEMBLY

- (a) Install the air pump assembly with the 4 bolts.

Torque: 16 N·m (163 kgf-cm, 12 ft-lbf)

- (b) Connect the pressure sensor connector for the air injection system.

- (c) Connect the air switching valve connector.

- (d) Connect the air hose No.2 to the air switching valve.

4. INSTALL VSV FOR AIR INJECTION SYSTEM

- (a) Install the 2 VSVs with the 2 bolts to the intake manifold.

Torque: 7.5 N·m (76 kgf-cm, 66 in.-lbf)

- (b) Connect the 2 vacuum hoses to the 2 VSVs.

5. INSTALL INTAKE MANIFOLD (See page [EM-60](#))

6. INSTALL THROTTLE BODY COVER

SFI SYSTEM PRECAUTION

SF1Y5-01

HINT:

All DTCs output from the computer will be erased when the negative (-) terminal cable is removed from the battery. Therefore, if necessary, read the DTCs before removing the negative (-) terminal cable from the battery.

1. **BEFORE WORKING ON FUEL SYSTEM, DISCONNECT NEGATIVE (-) TERMINAL CABLE FROM BATTERY**
2. **DO NOT SMOKE OR WORK NEAR FLAME WHEN WORKING ON THE FUEL SYSTEM**
3. **KEEP GASOLINE AWAY FROM RUBBER OR LEATHER PARTS**
4. **MAINTENANCE PRECAUTIONS**

(a) In the event of engine misfire, these precautions should be taken.

- (1) Check that the battery terminals are properly connected.
- (2) After repair work, check that the ignition coil terminals and all other ignition system lines are reconnected securely.
- (3) When cleaning the engine compartment, be especially careful to protect the electrical system from water.

(b) Precautions when handling the oxygen sensor and A/F sensor.

- (1) Do not drop the oxygen sensor or A/F sensor or hit them against another object.
- (2) Do not allow the sensor to come into contact with water.

5. **IF VEHICLE IS EQUIPPED WITH MOBILE RADIO SYSTEM (HAM, CB, ETC.)**

If the vehicle is equipped with a mobile communication system, refer to the precaution in the IN section.

6. **AIR INDUCTION SYSTEM**

- (a) Separation of the engine oil dipstick, oil filler cap, PCV hose, etc. may cause the engine to be out of tune.
- (b) Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will result in air suction and cause the engine to be out of tune.

7. **ELECTRONIC CONTROL SYSTEM**

- (a) Before removing SFI wiring connectors, terminals, etc., first disconnect the power by either turning the ignition switch off or disconnecting the negative (-) terminal cable from the battery.

HINT:

Always check for diagnostic trouble codes before disconnecting the negative (-) terminal cable from the battery.

- (b) When installing the battery, be especially careful to correctly connect the positive (+) and negative (-) cables.
- (c) Do not apply severe impact to the parts during removal or installation. Handle all SFI parts carefully, especially the ECM.
- (d) Be careful during troubleshooting as there are numerous transistor circuits, and even slight terminal contact can cause further trouble.
- (e) Do not open the ECM cover.
- (f) When inspecting in rainy weather, take care to prevent an intrusion of water. Also, when washing the engine compartment, prevent water from getting on the SFI parts and wiring connectors.
- (g) Parts should be replaced as an assembly.
- (h) Care should be taken when pulling out and inserting wiring connectors.
 - (1) Release the lock and pull out the connector, pulling on the connectors.
 - (2) Fully insert the connector and check that it is locked.

- (i) Use SST for inspection or test of the injector or its wiring connector.
SST 09842-30070

**8. FUEL SYSTEM**

- (a) When disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Be sure to observe the following procedures:
 - (1) Remove the circuit opening relay.
 - (2) Start the engine. After the engine has stopped on its own, turn the ignition switch off.

- (3) Put a container under the connecting part of the pressure line.
- (4) Slowly loosen the connection.
- (5) Disconnect the connection.
- (6) Plug the connection with a rubber plug.
- (7) Install the circuit opening relay.

- (b) Observe the following precautions when removing and installing the injectors.
 - (1) Never reuse the O-ring.
 - (2) When placing a new O-ring on the injector, take care not to damage it in any way.
 - (3) Coat a new O-ring with spindle oil or gasoline before installing. Never use engine oil, gear oil or brake fluid.

- (c) Install the injector to the delivery pipe and lower intake manifold as shown in the illustration.

NOTICE:

Before installing the injector, apply spindle oil or gasoline where the delivery pipe or cylinder head contacts the O-ring of the injector.

- (d) Observe the following when disconnecting the fuel tube connector:
 - (1) Check if there is any dirt in the pipe and around the connector before disconnecting the fuel tube connector. If necessary, clean the dirt away.
 - (2) Disconnect the fuel pipe clamp from the connector.

- (3) Be sure to disconnect them by hand.
- (4) When the connector and the pipe are stuck, push and pull the connector. Then disconnect and pull it out. Do not use any tools at this time.
- (5) Check if there is any dirt or other foreign matter on the seal surface of the disconnected pipe. If necessary, clean the dirt away.
- (6) Do not damage the disconnected pipe and connector and prevent intrusion of foreign objects by covering them with a plastic bag.

(e) Observe the following when connecting the fuel tube connector:

- (1) Check if there is any damage or foreign objects in the connected part of the pipe.
- (2) Match the axis of the connector with the axis of the pipe, and push into the connector until a "click" sound is heard. If the connection is tight, apply a small amount of fresh engine oil on the tip of the pipe.

(3) After finishing the connection, pull the pipe and the connector to ensure it is secure.

(4) Check to make sure no fuel leak is present.

If the result is not as specified, repair or replace.

(5) Install the fuel pipe clamp to the connector.

(6) Check to make sure no fuel leak is present.

If the result is not as specified, repair or replace.

FUEL PUMP

ON-VEHICLE INSPECTION

SF1Y6-01

1. CHECK FUEL PUMP OPERATION AND FUEL LEAK

- (a) When using the hand-held tester:
- (1) Connect the hand-held tester to the DLC3.
 - (2) Turn the ignition switch to the ON position and the hand-held tester main switch ON.

NOTICE:

Do not start the engine.

- (3) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD

HINT:

Please refer to the hand-held tester operator's manual for further details.

- (b) When not using the hand-held tester:
- (1) Remove the circuit opening relay.
 - (2) Using a service wire, connect terminals FP and +B of the relay block.

NOTICE:

Pay careful attention to the terminal connecting position to avoid a malfunction.

- (3) Turn the ignition switch to the ON position, and check that the fuel pump operates.

NOTICE:

Do not start the engine.

- (c) Check that there are no fuel leaks after performing maintenance of the fuel system.
- (d) Turn the ignition switch off.
- (e) Disconnect the hand-held tester from the DLC3.

2. CHECK FUEL PRESSURE

- (a) Prepare for inspection.
- (1) Prepare a new fuel tube, and take the fuel tube connector out of the tube.

HINT:

Part No. 23801-31070

- (b) Prevent gasoline from spilling out (See page SF-1).
- (c) Disconnect the fuel pipe clamp (See page SF-1).
- (d) Disconnect the fuel pipe No. 1 from the fuel main tube.

- (e) Install SST (pressure gauge) as shown in the illustration by using SSTs and a fuel tube connector.
 SST 09268-41047 (90467-13001, 95336-08070),
 09268-45014 (09268-41200, 09268-41220,
 09268-41250, 90467-13001)
- (f) Wipe off any spattered gasoline.
- (g) Start the engine.
- (h) Measure the fuel pressure at idle.
Fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf·cm², 40.8 to 41.7 psi)
- (i) Stop the engine.
- (j) Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.
Fuel pressure:
147 kPa (1.5 kgf·cm², 21 psi) or more
- If pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.
- (k) After checking the fuel pressure, disconnect the negative (-) terminal cable from the battery carefully, and remove the SST and fuel tube connector to prevent gasoline from splashing.
- (l) Reconnect the fuel tube to the fuel main tube.
- (m) Install the EFI fuel pipe clamp.
- (n) Check for fuel leak.

COMPONENTS

◆ Non-reusable part

REMOVAL

1. REMOVE FUEL TANK ASSEMBLY (See page SF-33)
2. DISCONNECT FUEL SUCTION TUBE

Remove the 2 tube clips, and pull out the 2 fuel tubes.

NOTICE:

- Before this operation, check the connector for dirt, mud or other contamination. Clean if necessary.
- Be careful of mud. The connector's O-ring, which seals the pipe and connector, is easily contaminated.
- Do not use any tool in this operation.
- Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.
- When the pipe and connector are stuck, push and pull the connector to release and pull the connector out carefully.

3. REMOVE FUEL PUMP ASSEMBLY

- (a) Using SST, loosen the fuel pump gauge retainer.
SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

A rib on the fuel pump gauge retainer fits into a tip of the SST.

- (b) Remove the fuel pump gauge retainer.
- (c) Remove the fuel suction tube.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

- (d) Remove the gasket from the fuel tank.

DISASSEMBLY

1. REMOVE FUEL SENDER GAUGE

- (a) Disconnect the sender gauge connector from the fuel suction plate No.1.

- (b) Unlock the fuel sender gauge and slide to remove.

2. REMOVE FUEL SUB-TANK

- (a) Disconnect the fuel pump harness connector from the fuel suction plate No.1.

- (b) Disconnect the suction filter hose from the fuel sub-tank.

- (c) Disconnect the 2 tubes from the tube clamps.

- (d) Using a screwdriver with the tip wrapped in tape, disconnect the 3 snap-claws from the fuel suction support No.2.

NOTICE:

Do not damage the fuel suction plate No.2 and fuel sub-tank.

- (e) Disconnect the fuel suction plate No.1 with the fuel filter assembly from the fuel sub-tank.

3. REMOVE FUEL FILTER WITH FUEL PUMP

- (a) Using a screwdriver with the tip wrapped in tape, disconnect the 2 snap-claws from the fuel suction support.

NOTICE:

Do not damage the fuel filter assembly and fuel suction support.

- (b) Remove the fuel filter assembly with fuel pump from the fuel suction support.

4. REMOVE FUEL PUMP

- (a) Using a screwdriver with the tip wrapped in tape, disconnect the 5 snap-claws from the suction filter.

NOTICE:

Do not damage the fuel filter assembly and suction filter.

- (b) Remove the fuel suction filter with fuel pump from the fuel filter.

- (c) Disconnect the fuel pump harness from the fuel pump.

- (d) Remove the O-ring from the fuel filter or fuel pump.

**5. REMOVE FUEL SUCTION PLATE NO.2**

- (a) Using a screwdriver, remove the 2 E-rings from the suction plate No.2.
- (b) Remove the suction plate No.2 and 2 springs from the fuel suction plate No.1.

INSPECTION

1. INSPECT FUEL PUMP RESISTANCE

Using an ohmmeter, measure the resistance between the terminals.

Resistance: 0.2 to 0.3 Ω at 20 °C (68 °F)

If the resistance is not as specified, replace the fuel pump.

2. INSPECT FUEL PUMP OPERATION

- (a) Connect the lead wire to the fuel pump.
- (b) Connect the positive (+) lead from the battery to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.

NOTICE:

- **These tests must be done quickly (within 10 seconds) to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always do switching on the battery side.**

If operation is not as specified, replace the fuel pump and/or read wire.

- (c) Disconnect the lead wire from the fuel pump.

REASSEMBLY

1. REMOVE FUEL SUCTION PLATE NO.2

- (a) Install the 2 springs and suction plate No.2 to the suction plate No.1.
- (b) Using needle-nose pliers, install 2 new E-rings to the suction plate No.2.

2. INSTALL FUEL PUMP

- (a) Apply a light coat of gasoline or spindle oil to a new O-ring, and install it to the fuel pump.

- (b) Connect the fuel pump harness connector to the fuel pump.

- (c) Install the fuel pump with the suction filter to the fuel filter.

3. INSTALL FUEL FILTER

Install the fuel filter to the fuel sub-tank.

4. INSTALL FUEL SUB-TANK

- (a) Connect the fuel suction plate No.2 to the fuel sub-tank with the 3 snap-claws engaged.

- (b) Connect the 2 tubes to the tube clamps.

- (c) Connect the suction filter hose to the fuel sub-tank.

- (d) Connect the fuel pump harness connector to the fuel suction plate No.1.

5. INSTALL FUEL SENDER GAUGE

- (a) Install the fuel sender gauge to the fuel suction support.

- (b) Connect the sender gauge connector to the fuel suction plate No.1.

INSTALLATION

1. INSTALL FUEL PUMP ASSEMBLY

- (a) Install a new gasket to the fuel tank.
- (b) Install the fuel pump assembly to the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

- (c) Align the keyway of the fuel suction tube support with the key of the fuel suction plate No.1.

- (d) Apply MP grease to the entire interior surface of the fuel pump gage retainer.
- (e) Align the triangle mark on new fuel pump gauge retainer with the "S" mark on the fuel tank while pushing down the fuel suction tube. Attach the fuel pump gauge retainer to the fuel tank.

- (f) Rotate the fuel pump gage retainer by hand. Use an SST to tighten the fuel pump gage retainer by turning it one and a half times. The triangle mark on the fuel pump gage retainer must be positioned between the "A" and "MAX." marks on the fuel tank.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

NOTICE:

Do not use other tools in this operation. Damage to the fuel pump gauge retainer and the fuel tank may result.

HINT:

A rib on the fuel pump gauge retainer fits into a tip of the SST.

2. CONNECT FUEL SUCTION TUBE

Connect the fuel pump tube and return tube to the fuel tank with the tube joint clips.

NOTICE:

- Check that there are no scratches or foreign objects on the connecting part.
 - Check that the fuel tube joint is inserted securely.
 - Check that the tube joint clip is on the collar of the fuel tube joint.
 - After installing the tube joint clip, check that the fuel tube joint has not been pulled off.
3. CHECK FOR FUEL LEAKS
 4. INSTALL FUEL TANK ASSEMBLY (See page [SF-36](#))

FUEL PRESSURE REGULATOR REMOVAL

SF1YD-01

1. PREVENT GASOLINE FROM SPILLING OUT
(See page [SF-1](#))
2. REMOVE V-BANK COVER
3. REMOVE AIR CLEANER (See page [EM-62](#))
4. DISCONNECT FUEL PIPE NO.2

5. REMOVE FUEL PRESSURE REGULATOR
 - (a) Remove the 2 bolts and fuel pressure regulator.
 - (b) Remove the vacuum hose.

INSTALLATION

1. INSTALL FUEL PRESSURE REGULATOR

- (a) Install the vacuum hose.
- (b) Apply a light coat of spindle oil or gasoline to a new O-ring and install it to the fuel pressure regulator.
- (c) Install the fuel pressure regulator with the 2 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

2. CONNECT FUEL PIPE NO.2

3. INSTALL AIR CLEANER (See page [EM-89](#))

4. INSTALL V-BANK COVER

5. CHECK FOR FUEL LEAKS

INJECTOR

SF1YF-01

ON-VEHICLE INSPECTION

1. REMOVE V-BANK COVER
2. REMOVE AIR CLEANER (See page [EM-62](#))
3. REMOVE INTAKE AIR SURGE TANK (See page [EM-62](#))
4. INSPECT INJECTOR RESISTANCE
 - (a) Disconnect the 6 injector connectors.
 - (b) Using an ohmmeter, measure the resistance between the terminals.
Resistance: 11.6 to 12.4 Ω at 20°C (68°F)

If the resistance is not as specified, replace the injector.

- (c) Reconnect the 6 injector connectors.
5. INSTALL INTAKE AIR SURGE TANK (See page [EM-89](#))
6. INSTALL AIR CLEANER (See page [EM-89](#))
7. INSTALL V-BANK COVER

SFI (1GR-FE) - INJECTOR

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

Y

REMOVAL

1. PREVENT GASOLINE FROM SPILLING OUT
(See page [SF-1](#))
2. DRAIN ENGINE COOLANT
3. REMOVE V-BANK COVER
4. REMOVE AIR CLEANER (See page [EM-62](#))
5. REMOVE INTAKE AIR SURGE TANK
(See page [EM-89](#))

6. DISCONNECT FUEL PIPE NO.1

- (a) Remove the fuel pipe clamp.
- (b) Pinch the tube connector then pull out the fuel pipe.

NOTICE:

- Check if there is any dirt around the connector before this work, because the quick connector has an O-ring to seal the fuel pipe and fuel delivery pipe. Clean dirt away if necessary.
- Do not use any tool in this work.
- Do not bend or twist the nylon tube.
- Keep the plug free from foreign objects.
- To protect the fuel pipe, cover it with a plastic bag after checking.
- When the fuel pipe and fuel delivery pipe are stuck, pinch the nylon tube with fingers, and turn it carefully to free and then disconnect the fuel pipe.

7. DISCONNECT FUEL PIPE NO.2

- (a) Remove the fuel pipe clamp.
- (b) Pinch the tube connector and then pull out the fuel pipe.

NOTICE:

- Check if there is any dirt around the connector before this work, because the quick connector has an O-ring to seal the fuel pipe and fuel delivery pipe. Clean dirt away if necessary.
- Do not use any tool in this work.
- Do not bend or twist the nylon tube.
- Keep the plug free from foreign objects.
- To protect the fuel pipe, cover it with a plastic bag after checking.
- When the fuel pipe and fuel pressure regulator are stuck, pinch the nylon tube with fingers, and turn it carefully to free and then disconnect the fuel pipe.

**8. REMOVE FUEL DELIVERY PIPE**

- (a) Disconnect the 6 fuel injector connectors.
- (b) Remove the 6 bolts and fuel delivery pipe together with the 6 fuel injectors.

NOTICE:

Be careful not to drop the injectors when removing the fuel delivery pipe.

**9. REMOVE FUEL INJECTOR**

- (a) Remove the 6 fuel injectors from the fuel delivery pipe.
- (b) Remove the O-ring and injector vibration insulator from each fuel injector.

INSPECTION

1. INSPECT INJECTOR INJECTION

CAUTION:

Keep the injector clear of sparks during the test.

- (a) Obtain a new No.1 fuel pipe (part No. 23801-31070) and take the fuel tube connector out of the pipe.

- (b) Install the fuel tube connector to the SST (hose), then connect the tube connector and fuel pipe.
SST 09268-41047 (95336-08070)

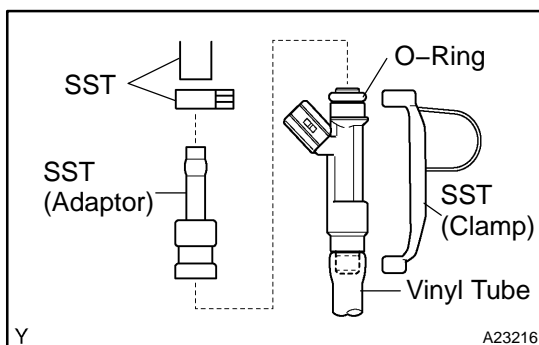

CAUTION:

Connect the fuel tube connector (quick type) after observing the precautions.

- (c) Remove the pressure regulator from the delivery pipe.
(d) Install the O-ring to the fuel inlet of the pressure regulator.

- (e) Connect the SST (hose) to the fuel inlet of the pressure regulator with another SST (union) and the 2 bolts.
SST 09268-41047 (95336-08070, 09268-41091)
Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)
(f) Connect the fuel return hose to the fuel outlet of the pressure regulator.

- (g) Install the O-ring to the injector.
(h) Connect SSTs (adaptor and hose) to the injector, and hold the injector and union with SST (clamp).
SST 09268-41047 (09268-41140, 09268-41400, 95336-08070)

- (i) Put the injector into a graduated cylinder.

CAUTION:

Install a suitable vinyl tube onto the injector to prevent gasoline from splashing out.

- (j) Operate the fuel pump (see page SF-5).

- (k) Connect the SST (wire) to the injector and battery for 15 seconds, and measure the injection volume with a graduated cylinder. Test each injector 2 or 3 times.

SST 09842-30080

Volume: 76 to 91 cm³ (4.6 to 5.5 cu in.) per 15 seconds

Difference between each injector:

15 cm³ (0.9 cu in.) or less

If the injection volume is not as specified, replace the injector.

2. INSPECT LEAKAGE

Under the above conditions, disconnect the tester probes of the SST (wire) from the battery and check the fuel leakage from the injector.

SST 09842-30080

Fuel drop: 1 drop or less per 12 minutes

INSTALLATION

1. INSTALL FUEL INJECTOR

- (a) Install a new insulator to the fuel injector.
- (b) Apply a light coat of spindle oil or gasoline to a new O-ring and install it to the fuel injector.

- (c) While turning the fuel injector to the left and right, install it to the fuel delivery pipe.
- (d) Position the fuel injector connector facing out from the fuel delivery pipe.
- (e) Apply the above procedures to the other fuel injectors.

2. INSTALL FUEL DELIVERY PIPE

- (a) Place the fuel delivery pipe together with the 6 fuel injectors on the intake manifold.
- (b) Temporarily install the 6 bolts which are used to hold the fuel delivery pipe to the intake manifold.
- (c) Check that the fuel injectors rotate smoothly.

HINT:

If the fuel injectors do not rotate smoothly, the probable cause is incorrect installation of O-rings. Replace the O-ring of the injector that does not rotate smoothly.

- (d) Position the fuel injector connector facing out from the fuel delivery pipe.
- (e) Tighten the 6 bolts which are used to hold the fuel delivery pipe to the intake manifold.

Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

- (f) Connect the 6 fuel injector connectors.

3. CONNECT FUEL PIPE NO.2

- (a) Push in the tube connector to the pipe, then tube connector makes a "click" sound.

NOTICE:

- Check if there is any damage or foreign objects on the connected part of the fuel pipe.
- After connecting, check if the pipe and connector are securely connected by pulling them.

- (b) Install the fuel pipe clamp.

4. CONNECT FUEL PIPE NO.1

- (a) Push in the tube connector to the pipe, then tube connector makes a "click" sound.

NOTICE:

- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check if the pipe and connector are securely connected by pulling them.**

- (b) Install the fuel pipe clamp.

5. INSTALL INTAKE AIR SURGE TANK

(See page [EM-62](#))

6. INSTALL AIR CLEANER (See page [EM-89](#))**7. INSTALL V-BANK COVER****8. ADD ENGINE COOLANT****9. CHECK FOR FUEL LEAKS**

FUEL PRESSURE PULSATION DAMPER REMOVAL

SF1YL-01

1. PREVENT GASOLINE FROM SPILLING OUT
(See page [SF-1](#))
2. REMOVE V-BANK COVER

3. REMOVE FUEL PRESSURE PULSATION DAMPER
 - (a) Remove the clip.
 - (b) Pull out the fuel pressure pulsation damper from the fuel delivery pipe.

INSTALLATION

1. **INSTALL FUEL PRESSURE PULSATION DAMPER**
 - (a) Apply a light coat of spindle oil or gasoline to a new O-ring and install it to the fuel pressure pulsation damper.
 - (b) Install the fuel pressure pulsation damper to the fuel delivery pipe.
 - (c) Install the clip.
2. **INSTALL V-BANK COVER**
3. **CHECK FOR FUEL LEAKS**

FUEL TANK AND LINE COMPONENTS

SF1YM-01

CAUTION:

- Always use new gaskets when replacing the fuel tank or component parts.
- Apply the proper torque to all parts tightened.

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

Y

B17585

REMOVAL

1. **PREVENT GASOLINE FROM SPILLING OUT**
(See page [SF-1](#))
2. **REMOVE FUEL TANK CAP**
3. **REMOVE FUEL INLET PIPE SHIELD**

Remove the 4 bolts and fuel inlet pipe shield.

4. REMOVE CHARCOAL CANISTER ASSEMBLY

- (a) Remove the 4 bolts and charcoal canister assembly.
- (b) Disconnect the pump module connector, vent hose and purge line hose from the charcoal canister.

5. DISCONNECT SPEED SENSOR WIRE

Remove the nut and disconnect the speed sensor wire from the fuel tank.

6. DISCONNECT FUEL MAIN TUBE AND RETURN TUBE (See page [SF-1](#))

7. REMOVE FUEL TANK ASSEMBLY

- (a) Set up a transmission jack under the fuel tank.
- (b) Remove the 2 nuts and disconnect the fuel pipe bracket from the body.

- (c) Remove the 2 bolts and disconnect the 2 fuel tank bands from the fuel tank.
 - (d) Operate the transmission jack and remove the fuel tank.
- 8. REMOVE FUEL PUMP ASSEMBLY**
(See page [SF-9](#))

INSPECTION

INSPECT FUEL TANK AND LINE

- (a) Check the fuel lines for cracks or leakage, and all connections for deformation.
- (b) Check the fuel tank vapor vent system hoses and connections for looseness, sharp bends or damage.
- (c) Check the fuel tank for deformation, cracks, fuel leakage or tank band looseness.
- (d) Check the filler neck for damage or fuel leakage.
- (e) Hose and pipe connections are as shown in the illustration.

If a problem is found, repair or replace the parts as necessary.

INSTALLATION

1. **INSTALL FUEL PUMP ASSEMBLY** (See page [SF-17](#))
2. **INSTALL FUEL TANK ASSEMBLY**
 - (a) Set up the fuel tank on the transmission jack.
 - (b) Operate the transmission jack and install the fuel tank.
 - (c) Install the 2 fuel tank bands with the 2 bolts.

Torque: 62 N·m (632 kgf·cm, 45 ft·lbf)

- (d) Install the fuel pipe bracket to the body with the 2 nuts.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

3. **CONNECT FUEL PUMP CONNECTOR**

4. **CONNECT FUEL MAIN TUBE AND RETURN TUBE**
(See page [SF-1](#))

5. **CONNECT SPEED SENSOR WIRE**

Connect the speed sensor wire to the fuel tank with the nut.

6. **INSTALL CHARCOAL CANISTER ASSEMBLY**

- (a) Connect the pump module connector, vent hose and purge line hose to the charcoal canister.
- (b) Install the charcoal canister assembly with the 4 bolts.

Torque: 14.7 N·m (150 kgf·cm, 11 ft·lbf)

**7. INSTALL FUEL INLET PIPE SHIELD**

- (a) Install the fuel inlet pipe shield with the 4 bolts.
- (b) Install the fuel tank cap.

8. CHECK FOR FUEL LEAKS**9. INSTALL SPARE TIRE**

MASS AIR FLOW (MAF) METER INSPECTION

SF1YQ-01

1. INSPECT OUTPUT VOLTAGE

- Apply battery voltage across terminals 1 (+B) and 2 (E2G).
- Connect the positive (+) tester probe to terminal 3 (VG), and the negative (-) tester probe to terminal 2 (E2G).
- Blow air into the MAF meter, and check if the voltage fluctuates.

2. INSPECT RESISTANCE

Using an ohmmeter, measure the resistance between terminals 4 (THA) and 5 (E2).

Resistance:

13.6 to 18.4 kΩ at -20°C (-4°F)

2.21 to 2.69 kΩ at 20°C (68°F)

0.49 to 0.67 kΩ at 60°C (140°F)

3. INSPECT MASS AIR FLOW METER

- If using a hand-held tester:
 - Connect the hand-held tester to the DLC3.
 - Turn the ignition switch to the ON position.
 - Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MAF
 - Blow air into the MAF meter, and check that the air flow value of the CURRENT DATA changes.

If operation is not as specified, check the MAF meter (see page [DI-98](#)) as well as the wiring and the ECM.

- If not using a hand-held tester:

- Turn the ignition switch to the ON position.
- Connect the positive tester probe of the voltmeter to terminal VG of the ECM and the negative tester probe of the voltmeter to terminal E2G of the ECM.
- Blow air into the air flow meter, and check if the voltage fluctuates.

If operation is not as specified, check the MAF meter (see page [DI-98](#)), the wiring and the ECM.

THROTTLE BODY ON-VEHICLE INSPECTION

SF1YR-01

1. CHECK FOR OPERATING SOUND

- Turn the ignition switch to the ON position.
- When turning the accelerator pedal position sensor lever, listen to the running sound of the motor. Also, check that there is no friction sound.

If operation is not as specified, check the throttle control motor (see page [DI-283](#)), wiring and ECM.

2. INSPECT THROTTLE POSITION SENSOR

- Connect the hand-held tester to the DLC3.
- Turn the ignition switch to the ON position.
- When turning the accelerator pedal position sensor lever to the full-open position, check the percentage of the throttle valve opening angle (THROTTLE POS) of the CURRENT DATA.

**Standard percentage of the valve opening angle:
60 % or more**

If operation is not as specified, check the accelerator pedal position sensor (see page [DI-299](#)), the wiring and the ECM.

If not using a hand-held tester, measure the voltage between the terminals (VTA1 - E2, VTA2 - E2) of the ECM connector (see page [DI-34](#)).

3. INSPECT AIR ASSIST SYSTEM

- Start the engine and check that the MIL does not illuminate.
- Let the engine warm up to the normal operating temperature.
- Switch the A/C compressor from ON to OFF, and check the idle speed.

Idle speed (Transmission in neutral): 650 to 750 rpm

NOTICE:

Perform inspection without an electrical load.

4. INSPECT THROTTLE BODY RESISTANCE

Using an ohmmeter, measure the resistance between the terminals.

Terminal No.	Resistance
2 (M+) ↔ 1 (M-)	0.3 to 100 Ω at 20 °C (68 °F)

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE V-BANK COVER
3. REMOVE AIR CLEANER (See page [EM-62](#))

4. DISCONNECT WATER BY-PASS HOSE NO.5

5. DISCONNECT WATER BY-PASS HOSE NO.4

6. REMOVE THROTTLE BODY
 - (a) Disconnect the throttle motor connector.
 - (b) Remove the 4 bolts, throttle body and gasket.

INSTALLATION

1. INSTALL THROTTLE BODY

- (a) Install a new gasket and the throttle body w/ motor with the 4 bolts.

Torque: 11 N·m (112 kgf·cm, 9 ft·lbf)

- (b) Connect the throttle motor connector.

2. CONNECT WATER BY-PASS HOSE NO.4

3. CONNECT WATER BY-PASS HOSE NO.5

4. INSTALL AIR CLEANER (See page [EM-89](#))

5. INSTALL V-BANK COVER

6. ADD ENGINE COOLANT

7. CHECK FOR ENGINE COOLANT LEAKS

CAMSHAFT TIMING OIL CONTROL VALVE

SF1YV-01

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE

- (a) Connect the hand-held tester to the DLC3.
- (b) Turn the ignition switch to the ON position.
- (c) Start the engine and warm it up.
- (d) Connect the hand-held tester and select the VVT from the ACTIVE TEST menu.
- (e) Check the engine speed when the OCV is operated by the hand-held tester.

Standard:

VVT system is OFF (OCV is OFF): Normal engine speed

VVT system is ON (OCV is ON): Rough idle or engine stalled

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

Y

REMOVAL

1. REMOVE V-BANK COVER
2. REMOVE AIR CLEANER (See page [EM-62](#))
3. REMOVE INTAKE AIR SURGE TANK (See page [EM-62](#))
4. REMOVE FUEL DELIVERY PIPE
5. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE
 - (a) Disconnect the 2 oil control valve connectors.
 - (b) Remove the 2 bolts and 2 camshaft timing oil control valves.

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE RESISTANCE

Using an ohmmeter, measure the resistance between the terminals.

Resistance: 6.9 to 7.9 Ω at 20°C (68°F)

2. INSPECT VALVE MOVEMENT

Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve does not catch.

HINT:

Bad returning of the valve by catching foreign objects causes subtle pressure leak in the advanced direction. DTCs could be detected.

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE

- (a) Install the 2 camshaft timing oil control valves to each cylinder head, and tighten the 2 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

- (b) Connect the 2 oil control valve connectors.

2. INSTALL FUEL DELIVERY PIPE

3. INSTALL INTAKE AIR SURGE TANK (See page [EM-89](#))

4. INSTALL AIR CLEANER (See page [EM-89](#))

5. INSTALL V-BANK COVER

ACOUSTIC CONTROL INDUCTION SYSTEM (ACIS) ON-VEHICLE INSPECTION

SF120-01

1. INSPECT INTAKE AIR CONTROL FUNCTION

- (a) Remove the V-bank cover.
- (b) Connect the hand-held tester to the DLC3.
- (c) Perform the ACTIVE TEST, then check that the actuator rod operates.
- (d) Start the engine.
- (e) Check that the VSV for ACIS is ON under the following conditions:
 - Depressing the accelerator pedal to 60% accelerator opening angle.
 - Racing the engine above 4,700 rpm.
- (f) Check that the VSV for ACIS is OFF under the following conditions:
 - The engine idling.
 - Release the accelerator pedal from the condition of step (e).

2. INSPECT INTAKE AIR CONTROL VALVE

- (a) Remove the V-bank cover.
- (b) Using a 3-way connector, connect the vacuum gauge to the actuator hose.
- (c) Start the engine.
- (d) While the engine is idling, check that the vacuum gauge needle momentarily fluctuates up to approx. 39.9 kPa (300 mmHg, 11.8 in.Hg). (The actuator rod is pulled out.)
- (e) Rapidly and fully depress the accelerator pedal and check that the vacuum gauge needle points to 0 kPa (0 mmHg, 0 in.Hg). (The actuator rod is returned.)
- (f) Remove the vacuum gauge, and connect the vacuum hose to the actuator.
- (g) Reinstall the V-bank cover.

3. INSPECT INTAKE AIR SURGE TANK

Inspect the diaphragm.

- (1) Check that the lever moves when a vacuum of 26.6 kPa (200 mmHg, 7.9 in.Hg) is applied with the MI-TYVAC (hand-held vacuum pump) on.
- (2) Check that the vacuum of 26.6 kPa (200 mmHg, 7.9 in.Hg) is sustained for 1 minute in the above state.

4. INSPECT VSV FOR ACIS

- (a) Inspect the VSV for an open circuit. Using an ohmmeter, check that there is continuity between each terminal.

Resistance: 33 to 39 Ω at 20°C (68°F)

- (b) Inspect the VSV for ground. Using an ohmmeter, check that there is no continuity between each terminal and the body.

(c) Inspect VSV operation.

- (1) Check that air flows from port E to the filter.

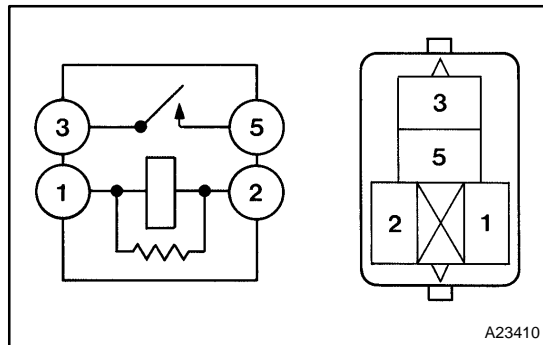

- (2) Apply battery voltage across the terminals.

- (3) Check that air flows from port E to port F.

EFI MAIN RELAY INSPECTION

1. REMOVE EFI MAIN RELAY

2. INSPECT EFI MAIN RELAY

- (a) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 - 2	Continuity
3 - 5	No continuity

- (b) Using an ohmmeter, check for continuity between terminals 3 and 5 when the battery voltage is applied across terminals 1 and 2.

Specified condition: Continuity

3. INSTALL EFI MAIN RELAY

A/F SENSOR HEATER RELAY INSPECTION

SF122-01

1. REMOVE A/F SENSOR HEATER RELAY

2. INSPECT A/F SENSOR HEATER RELAY

- (a) Using an ohmmeter, check for continuity between each terminal.

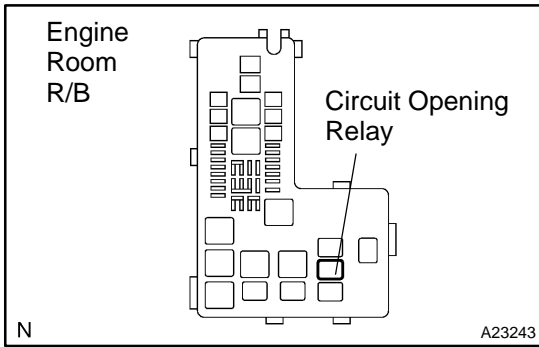

Specified condition:

Terminal No.	Specified condition
1 - 2	Continuity
3 - 5	No continuity

- (b) Using an ohmmeter, check for continuity between terminals 3 and 5 when the battery voltage is applied across terminals 1 and 2.

Specified condition: Continuity

3. INSTALL A/F SENSOR HEATER RELAY

CIRCUIT OPENING RELAY INSPECTION

1. REMOVE CIRCUIT OPENING RELAY

2. INSPECT CIRCUIT OPENING RELAY

- (a) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 - 2	Continuity
3 - 5	No continuity

- (b) Using an ohmmeter, check for continuity between terminals 3 and 5 when the battery voltage is applied across terminals 1 and 2.

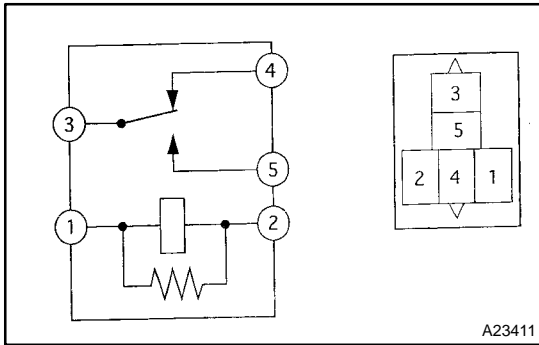

Specified condition: Continuity

3. INSTALL CIRCUIT OPENING RELAY

ACC CUT RELAY INSPECTION

SF125-01

1. REMOVE ACC CUT RELAY

2. INSPECT ACC CUT RELAY

- (a) Using an ohmmeter, check for continuity between each terminal.

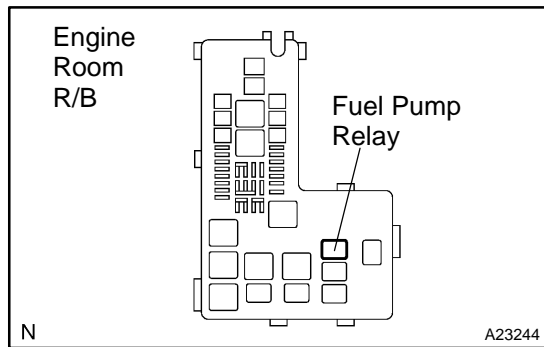

Specified condition:

Terminal No.	Specified condition
1 - 2	Continuity
3 - 4	
3 - 5	No continuity

- (b) Using an ohmmeter, check for continuity between terminals 3 and 5 when the battery voltage is applied across terminals 1 and 2.

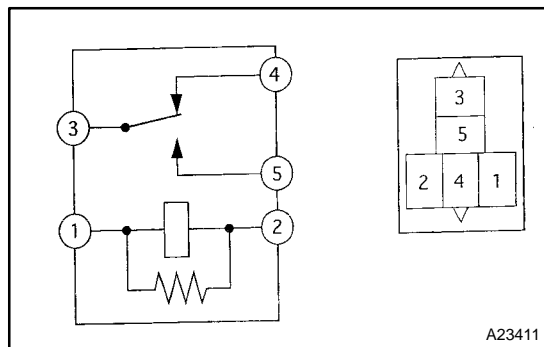

Specified condition: Continuity

3. INSTALL ACC CUT RELAY

FUEL PUMP RELAY INSPECTION

1. REMOVE FUEL PUMP RELAY

2. INSPECT FUEL PUMP RELAY

- (a) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 - 2	Continuity
3 - 4	
3 - 5	No continuity

- (b) Using an ohmmeter, check for continuity between terminals 3 and 5 when the battery voltage is applied across terminals 1 and 2.

Specified condition: Continuity

3. INSTALL FUEL PUMP RELAY

FUEL PUMP RESISTOR INSPECTION

SF126-01

INSPECT FUEL PUMP RESISTOR

Using an ohmmeter, measure the resistance between terminals.

Resistance: 0.70 to 0.76 Ω at 20°C (68°F)

VSV FOR EVAPORATIVE EMISSION (EVAP) INSPECTION

SF1Z7-01

1. REMOVE VSV
2. INSPECT VSV
 - (a) Inspect the VSV for an open circuit.

Using an ohmmeter, measure the resistance between the terminals.

Resistance: 26 to 30 Ω at 20 °C (68 °F)

If the resistance is not as specified, replace the VSV.

- (b) Inspect the VSV for ground.

Using an ohmmeter, check that there is no continuity between each terminal and the body.

If there is continuity, replace the VSV.

- (c) Inspect VSV operation.
 - (1) Check that air does not flow from the ports.

- (2) Apply battery voltage across the terminals.
 - (3) Check that air flows from the ports.
- If operation is not as specified, replace the VSV.

3. REINSTALL VSV

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION

SF128-01

1. DRAIN ENGINE COOLANT
2. REMOVE V-BANK COVER
3. REMOVE ENGINE COOLANT TEMPERATURE SENSOR
 - (a) Disconnect the engine coolant temperature sensor connector.
 - (b) Remove the engine coolant temperature sensor and gasket from the water by-pass joint.

4. INSPECT ENGINE COOLANT TEMPERATURE SENSOR RESISTANCE

Using an ohmmeter, measure the resistance between terminals.

Resistance:

2.32 to 2.59 kΩ at 20 °C (68 °F)

0.310 to 0.326 kΩ at 80 °C (176 °F)

NOTICE:

When inspecting the water temperature sensor in water, prevent water flow into the terminals. After inspection, wipe the water off from the sensor.

5. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

- (a) Install a new gasket and engine coolant temperature sensor to the water by-pass joint.

Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)

- (b) Connect the engine coolant temperature connector.

6. ADD ENGINE COOLANT

7. CHECK FOR COOLANT LEAKS

8. INSTALL V-BANK COVER

KNOCK SENSOR REMOVAL

SF129-01

1. REMOVE CYLINDER HEAD (See page [EM-62](#))

2. DISCONNECT HEATER WATER INLET HOSE

3. REMOVE WATER OUTLET PIPE NO.1
 - (a) Remove the 4 wire harness clamps.
 - (b) Remove the 3 bolts and water outlet pipe.

4. REMOVE KNOCK SENSOR
 - (a) Disconnect the 2 knock sensor connectors.
 - (b) Remove the 2 bolts and 2 knock sensors.

INSPECTION

1. INSPECT KNOCK SENSOR

Using an ohmmeter, measure the resistance between terminals.

Resistance: 120 to 280 k Ω at 20 °C (68 °F)

HINT:

If the resistance is not as specified, replace the sensor.

INSTALLATION

1. INSTALL KNOCK SENSOR

- (a) Install the 2 knock sensors with the 2 bolts so that the center of the sensor comes within the range of 15° from the bolt center as shown in the illustration.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

- (b) Connect the 2 knock sensor connectors.

2. INSTALL WATER OUTLET PIPE NO.1

- (a) Install the water outlet pipe with the 3 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (b) Install the 4 wire harness clamps.

3. CONNECT HEATER WATER INLET HOSE

4. **INSTALL CYLINDER HEAD (See page [EM-89](#))**

AIR-FUEL RATIO (A/F) SENSOR INSPECTION

SF1ZC-01

1. INSPECT AIR FUEL RATIO SENSOR (BANK1, BANK2 AIR FUEL RATIO SENSOR)

Using an ohmmeter, measure the resistance between the terminals.

Resistance:

Terminal No.	Resistance
1 (HT) ⇔ 2 (+B)	1.8 to 3.4 Ω at 20 °C (68 °F)
1 (HT) ⇔ 2 (+B)	5.0 to 7.5 Ω at 500 °C (932 °F)
1 (HT) ⇔ 4 (AF-)	No Continuity

If the resistance is not as specified, replace the sensor.

2. INSPECT AIR-FUEL RATIO COMPENSATION SYSTEM

(a) Measure the voltage between terminals of the ECM.

Standard voltage:

Terminal No.	Condition	Voltage
A1A+ ⇔ E1	IG switch ON	3.3V
A1A- ⇔ E1	IG switch ON	3.0V
A2A+ ⇔ E1	IG switch ON	3.3V
A2A- ⇔ E1	IG switch ON	3.0V

NOTICE:

Connect test leads from the back side of the ECM connector.

HINT:

The voltage between terminals of the ECM is kept constant regardless of the voltage of the A/F sensor.

- (b) Connect the hand-held tester to the DLC3.
- (c) Select "DATA MONITOR" - "A/FS B1 S1", "A/FS B2 S1" and "O2S B1 S2" to display the monitor.
- (d) Warm up the A/F sensor by running the engine at 2,500 rpm for approx. 2 minutes.
- (e) Keep the engine speed at 2,500 rpm and confirm that the displays of the "A/FS B1 S1" and "A/FS B2 S1" are similar to the illustration on the left.

NOTICE:

The illustration differs from the real display.

HINT:

The waveform of the A/F sensor is displayed only on the hand-held tester.

- (f) Confirm that the display of the "O2S B1 S2" changes between 0V to 1V with the engine speed at 2,500 rpm.

HEATED OXYGEN SENSOR INSPECTION

SF1ZD-01

INSPECT HEATED OXYGEN SENSOR (BANK1, BANK2 OXYGEN SENSOR)

Using an ohmmeter, measure the resistance between the terminals.

Resistance:

Terminal No.	Resistance
1 (HT) \leftrightarrow 2 (+B)	5 to 10 Ω at 20 °C (68 °F)
1 (HT) \leftrightarrow 4 (E1)	No Continuity

If the resistance is not as specified, replace the sensor.

ACCELERATOR PEDAL POSITION SENSOR INSPECTION

SF1ZE-01

1. INSPECT ACCELERATOR PEDAL POSITION SENSOR

- (a) Connect the hand-held tester to the DLC3.
- (b) Turn the ignition switch to the ON position.
- (c) Check if the voltage (ACCEL POS) of the CURRENT DATA indicates the standard value.

Accelerator pedal released: 0.5 to 1.1 V

Accelerator pedal depressed: 2.6 to 4.5 V

- (d) Check if the voltage (ACCEL POS #2) of the CURRENT DATA indicates the standard value.

Accelerator pedal released: 1.2 to 2.0 V

Accelerator pedal depressed: 3.4 to 5.3 V

If not using a hand-held tester, measure the voltage between terminals (VPA – EPA, VPA2 – EPA2) of the ECM connector (see page [DI-34](#)).

2. REMOVE ACCELERATOR PEDAL ROD

- (a) Disconnect the accelerator pedal connector.
- (b) Remove the 2 nuts and the accelerator pedal assy.

3. INSTALL ACCELERATOR PEDAL ROD

NOTICE:

- **Avoid physical shock to the accelerator pedal assy.**
- **Do not disassemble the accelerator pedal assy.**

- (a) Install the accelerator pedal assy with the 2 nuts.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (b) Connect the accelerator pedal connector.

ENGINE CONTROL MODULE (ECM) COMPONENTS

SF1ZF-01

INSPECTION

INSPECT ECM (See page [DI-1](#))

FUEL CUT RPM

SF12H-01

INSPECTION

INSPECT FUEL CUT OFF RPM

- (a) Increase the engine speed to at least 3,500 rpm.
- (b) Use a sound scope to check for injector operating noise.
- (c) Check that the injector operation noise stops momentarily and then resumes when the accelerator pedal is released.

Fuel cut off rpm: 2,500 rpm

Fuel return rpm: 1,200 rpm

SFI SYSTEM PRECAUTION

SF1XD-02

HINT:

All DTCs retained in the ECM will be erased when the negative (-) terminal cable is removed from the battery.

If necessary, read the DTC before removing the negative (-) terminal cable from the battery.

- 1. BEFORE WORKING ON FUEL SYSTEM, DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL**
- 2. DO NOT SMOKE OR WORK NEAR AN OPEN FLAME WHEN WORKING ON FUEL SYSTEM**
- 3. KEEP GASOLINE AWAY FROM RUBBER OR LEATHER PARTS**
- 4. MAINTENANCE PRECAUTIONS**
 - (a) To prevent engine misfire, these precautions should be taken.
 - (1) Check the battery terminals are proper connected.
 - (2) After repair, check that the ignition coil terminals and all other ignition system lines are reconnected securely.
 - (3) When cleaning the engine compartment, be especially careful to protect the electrical system from water.
 - (b) Observe the following when handling the air fuel ratio sensors and oxygen sensor.
 - (1) Do not drop the sensor or hit it against another object.
 - (2) The sensor should be free from any contact with water.
- 5. IF VEHICLE IS EQUIPPED WITH MOBILE RADIO SYSTEM (HAM, CB, ETC.)**

If the vehicle is equipped with a mobile communication system, refer to the precaution in the IN section.

6. AIR INDUCTION SYSTEM

- (a) Removal of the engine oil dipstick, oil filler cap, PCV hose, may break the engine.
- (b) Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head may result in air suction and break the engine.

7. ELECTRONIC CONTROL SYSTEM

- (a) Before removing SFI wiring connectors, terminals, first disconnect the power by turning the ignition switch off or disconnecting the negative (-) terminal cable from the battery.

HINT:

Be sure to check DTCs before disconnecting the negative (-) terminal cable from the battery.

- (b) When installing the battery, be especially careful to correctly connect the positive (+) and negative (-) cables.
- (c) Do not give a severe impact to the SFI parts during removal or installation. Handle all SFI parts carefully, especially the ECM.
- (d) Be careful during troubleshooting. Numerous transistor circuits are used and even slight terminal contact can cause further trouble.
- (e) Do not open the ECM cover.
- (f) When inspecting during rainy weather, take care to prevent entry of water. Also, when washing the engine compartment, prevent water from getting into the SFI parts and wiring connectors.
- (g) Parts should be replaced as an assembly.
- (h) Care should be taken when pulling out and inserting wiring connectors.
 - (1) Release the lock and pull out the connector, pulling on the connectors.
 - (2) Fully insert the connector and check that it is locked.

- (i) Use SST for inspection or test of the injector or its wiring connector.

SST 09842-30070

8. FUEL SYSTEM

- (a) When disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Observe the following procedures:
 - (1) Disconnect the circuit opening relay.
 - (2) Start the engine. After the engine has stopped on its own, turn the ignition switch off.
 - (3) Put a container under the connecting part of the pressure line.
 - (4) Slowly loosen the connection.
 - (5) Disconnect the high fuel pressure line.
 - (6) Reconnect the fuel pump connector.

- (b) When connecting the union bolt (fuel pressure pulsation damper) on the high pressure pipe union, observe the following procedures:
 - (1) Always use 2 new gaskets.
 - (2) Tighten the union bolt by hand.

- (3) Using SST, tighten the union bolt to the specified torque.

SST 09612-24014 (09617-24011)

Torque:

33 N-m (340 kgf-cm, 24 ft-lbf) for use with SST

39 N-m (400 kgf-cm, 29 ft-lbf)

HINT:

Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

- (c) Observe the following precautions when removing or installing the injectors.

- (1) Never reuse the O-ring.
- (2) When placing a new O-ring on the injector, take care not to damage it in any way.
- (3) Coat a new O-ring with spindle oil or gasoline before installing. Never use engine, gear or brake oil.

- (d) Install the injector to the delivery pipe and intake manifold as shown in the illustration.

Before installing the injector, apply spindle oil or gasoline on the place where the delivery pipe or the intake manifold touches the O-ring of the injector.

- (e) Observe the following when disconnecting the fuel tube connector (quick type):

- (1) Check if there is any dirt in the pipe and around the connector before disconnecting the fuel tube connector. If necessary, clean the dirt away.
- (2) Disconnect the fuel pipe clamp from the connector.

- (3) Be sure to disconnect them by hand.
- (4) When the connector and the pipe are stuck, push and pull the connector. Then disconnect and pull it out. Do not use any tools at this time.
- (5) Check if there is any dirt or other foreign matter on the seal surface of the disconnected pipe. If necessary, clean the dirt away.
- (6) Do not damage the disconnected pipe and connector and prevent intrusion of foreign objects by covering them with a plastic bag.

(f) Observe the following when connecting the fuel tube connector (quick type):

- (1) Check if there is any damage or foreign objects in the connected part of the pipe.
- (2) Match the axis of the connector with the axis of the pipe, and push into the connector until a "click" sound is heard. If the connection is tight, apply a small amount of fresh engine oil on the tip of the pipe.

(3) After finishing the connection, pull the pipe and the connector to ensure it is secure.

(4) Check to make sure no fuel leak is present.

If the result is not specified, repair or replace.

(5) Install the fuel pipe clamp to the connector.

(6) Check to make sure no fuel leak is present.

If the result is not specified, repair or replace.

(g) Observe the following when disconnecting the fuel tube connector (metallic type):

HINT:

The structure of the metallic connector is shown on the left.

- (1) Check if there is any dirt in the pipe and around the connector before disconnecting the fuel tube connector. If necessary, clean the dirt away.

(2) Assemble SST to the connecting part, as shown in the illustration.

SST 09268-21010

- (3) Turn the SST, align the retainers inside the connector with the SST chamfered parts and insert the SST into the connector.

- (4) While holding the SST, pull the connector towards the SST to put the retainers on the SST chamfered parts.
- (5) Slide the SST and connector together towards the fuel tube assembly.

- (h) Observe the following when connecting the fuel tube connector (metallic type):
 - (1) Check if there is any damage or foreign objects in the connected part of the pipe.
 - (2) Match the axis of the connector with the axis of the pipe, and push into the connector until a "click" sound is heard. If the connection is tight, apply a small amount of fresh engine oil on the tip of the pipe.

- (3) After finishing the connection, pull the pipe and the connector to ensure it is secure.
- (4) Check to make sure no fuel leak is present.

If the result is not specified, repair or replace.

- (i) Observe the following when handling the nylon tube:
 - (1) Pay attention not to turn the connected part of the nylon tube and the quick connector with tube when connecting them.
 - (2) Pay attention not to kink the nylon tube.
 - (3) Do not remove the nylon tube.
 - (4) Do not close the piping with the nylon tube by bending it.

- (j) Check that there is any fuel leak after maintenance anywhere on the fuel system.
- (1) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
 - (2) Turn the ignition switch ON and push the hand-held tester main switch ON.

NOTICE:

Do not start the engine.

- (3) Enter the following menus: DIAGNOSIS / ENHANCED OBDII / ACTIVE TEST / FUEL PUMP / SPD.
- (4) Please refer to the hand-held tester operator's manual for further details.

- (5) Pinch the fuel return hose. The pressure in the high pressure line will rise to approx. 392 kPa (4 kgf/cm², 57 psi). In this state, check to see that there are no leaks from any part of the fuel system.

NOTICE:

Always pinch the hose. Avoid bending as it may cause the hose to crack.

- (6) Turn the ignition switch OFF.
- (7) Disconnect the hand-held tester and CAN VIM from the DLC3.

FUEL PUMP ON-VEHICLE INSPECTION

SF12Y-06

1. CHECK FUEL PUMP OPERATION

- (a) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
- (b) Turn the ignition switch ON, and push the hand-held tester main switch ON.

NOTICE:

Do not start the engine.

- (c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
- (d) Please refer to the hand-held tester operator's manual for further details.

- (e) Check that the pulsation damper screw rises up when the fuel pump operates.

If operation is not as specified, check the fusible link, fuses, EFI main relay, fuel pump, ECM and wiring connections.

- (f) Turn the ignition switch OFF.
- (g) Disconnect the hand-held tester and CAN VIM from the DLC3.

2. CHECK FUEL PRESSURE

- (a) Check the battery positive voltage is above 12 V.
- (b) Disconnect the negative (-) terminal cable from the battery.
- (c) Remove the front fuel pipe from the LH delivery pipe (see page SF-27).

- (d) Install the front fuel pipe and SST (pressure gauge) to the delivery pipe with 3 lower gaskets and SST (adaptor).
SST 09268-45014 (09268-41190, 90405-06167)

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

- (e) Wipe off any splattered gasoline.
- (f) Reconnect the negative (-) terminal cable to the battery.
- (g) Connect a hand-held tester to the DLC3. (See step 1 in check fuel pump operation (a) to (e))

- (h) Measure the fuel pressure.

Fuel pressure:

265 – 304 kPa (2.7 – 3.1 kgf/cm², 38 – 44 psi)

If pressure is high, replace the fuel pressure regulator.

If pressure is low, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

- (i) Disconnect the hand-held tester from the DLC3.

- (j) Start the engine.

- (k) Measure the fuel pressure at idle.

Fuel pressure:

265 – 304 kPa (2.7 – 3.1 kgf/cm², 38 – 44 psi)

- (l) Stop the engine.

- (m) Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

Fuel pressure: 147 kPa (1.5 kgf/cm², 21 psi) or more

If pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

- (n) After checking fuel pressure, disconnect the negative (–) terminal cable from the battery and carefully remove the SST to prevent gasoline from splashing.

SST 09268–45014

- (o) Reinstall the front fuel pipe to the LH delivery pipe. (see page [SF-31](#))

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

4. INSPECT FOR FUEL LEAKS (See page [SF-1](#))

COMPONENTS

◆ Non-reusable part

REMOVAL

1. REMOVE FUEL TANK ASSEMBLY (See page SF-34)
2. DISCONNECT FUEL SUCTION TUBE

Remove the 2 tube clips, and pull out the 2 fuel tubes.

NOTICE:

- Before this operation, check the connector for dirt, mud or other contamination. Clean if necessary.
- Be careful of mud. The connector's O-ring, which seals the pipe and connector, becomes contaminated easily.
- Do not use any tool in this operation.
- Do not bend or twist the nylon tube. Protect the connector by covering it with a vinyl or plastic bag.
- When the pipe and connector are stuck, push and pull the connector to release and pull the connector out carefully.

3. REMOVE FUEL PUMP ASSEMBLY

- (a) Using SST, loosen the fuel pump gage retainer.
SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

A rib on the fuel pump gage retainer can be fitted into a tip of the SST.

- (b) Remove the fuel pump gage retainer.
- (c) Remove the fuel suction tube.

NOTICE:

Be careful not to bend the arm of the fuel sender gage.

- (d) Remove the gasket from the fuel tank.

DISASSEMBLY

1. REMOVE FUEL SENDER GAGE

- (a) Disconnect the sender gage connector from the fuel suction plate No.1.

- (b) Unlock the fuel sender gage and slide the remove.

2. REMOVE FUEL SUB-TANK

- (a) Disconnect the fuel pump harness connector from the fuel suction plate No.1.

- (b) Disconnect the suction filter hose from the fuel sub-tank.

- (c) Disconnect the 2 tubes from the tube clamps.

- (d) Using a screwdriver with the tip wrapped in tape, disconnect the 3 snap-claws from the fuel suction support No.2.

NOTICE:

Do not damage the fuel suction plate No.2 or fuel sub-tank.

- (e) Disconnect the fuel suction plate No.1 with the fuel filter assembly from the fuel sub-tank.

3. REMOVE FUEL FILTER WITH FUEL PUMP

- (a) Using a screwdriver with the tip wrapped in tape, disconnect the 2 snap-claws from the fuel suction support.

NOTICE:

Do not damage the fuel filter assembly or fuel suction support.

- (b) Remove the fuel filter assembly with fuel pump from the fuel suction support.

4. REMOVE FUEL PUMP

- (a) Using a screwdriver with the tip wrapped in tape, disconnect the 5 snap-claws from the suction filter.

NOTICE:

Do not damage the fuel filter assembly or suction filter.

- (b) Remove the fuel suction filter with fuel pump from the fuel filter.

- (c) Disconnect the fuel pump harness from the fuel pump.

- (d) Remove the O-ring from the fuel filter or fuel pump.

**5. REMOVE FUEL SUCTION PLATE NO.2**

- (a) Using a screwdriver, remove the 2 E-rings from the suction plate No.2.
- (b) Remove the suction plate No.2 and 2 springs from the fuel suction plate No.1.

INSPECTION

1. INSPECT FUEL PUMP RESISTANCE

Using an ohmmeter, measure the resistance between the terminals.

Resistance: 0.2 – 3.0 Ω at 20°C (68°F)

If the resistance is not as specified, replace the fuel pump.

2. INSPECT FUEL PUMP OPERATION

- (a) Connect the lead wire to the fuel pump.
- (b) Connect the positive (+) lead from the battery to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.

NOTICE:

- **These tests must be done quickly (within 10 seconds) to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always do switching at the battery side.**

If operation is not as specified, replace the fuel pump and/or read wire.

- (c) Disconnect the lead wire to the fuel pump.

REASSEMBLY

1. REMOVE FUEL SUCTION PLATE NO.2

- (a) Install the 2 springs and suction plate No.2 to the suction plate No.1.
- (b) Using a needle-nose pliers, install the 2 new E-rings to the suction plate No.2.

2. INSTALL FUEL PUMP

- (a) Apply a light coat of gasoline or spindle oil to a new O-ring, and install it to the fuel pump.

- (b) Connect the fuel pump harness connector to the fuel pump.

- (c) Install the fuel pump with the suction filter to the fuel filter.

3. INSTALL FUEL FILTER

Install the fuel filter to the fuel sub-tank.

4. INSTALL FUEL SUB-TANK

- (a) Connect the fuel suction plate No.2 to the fuel sub-tank with the 3 snap-claws engaged.

- (b) Connect the 2 tubes to the tube clamps.

- (c) Connect the suction filter hose to the fuel sub-tank.

- (d) Connect the fuel pump harness connector to the fuel suction plate No.1.

5. INSTALL FUEL SENDER GAGE

- (a) Install the fuel sender gage to the fuel suction support.

- (b) Connect the sender gage connector to the fuel suction plate No.1.

INSTALLATION

1. INSTALL FUEL PUMP ASSEMBLY

- (a) Install a new gasket to the fuel tank.
- (b) Install the fuel pump assembly to the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gage.

- (c) Align the keyway of the fuel suction tube support with the key of the fuel suction plate No.1.

- (d) Apply MP grease to the entire interior surface of the fuel pump gage retainer.
- (e) Align the triangle mark on new fuel pump gage retainer with the "S" mark on the fuel tank while pushing down the fuel suction tube, attach the fuel pump gage retainer.

- (f) Rotate the fuel pump gage retainer by hand, then tighten it one complete turn and half using SST. Triangle mark on the fuel pump gage retainer must be positioned between "A" and "MAX." indications on the fuel tank.

SST 09808-14020 (09808-01410, 09808-01420, 09808-01430)

NOTICE:

Do not use other tools in this operation. Damage to the fuel pump gage retainer and the fuel tank may result.

HINT:

A rib on the fuel pump gage retainer can be fitted into a tip of the SST.

2. CONNECT FUEL SUCTION TUBE

Connect the fuel pump tube and return tube to the fuel tank with the tube joint clips.

NOTICE:

- Check that there are no scratches or foreign objects on the connecting part.
 - Check that the fuel tube joint is inserted securely.
 - Check that the tube joint clip is on the collar of the fuel tube joint.
 - After installing the tube join clip, check that the fuel tube joint has not been pulled off.
3. CHECK FOR FUEL LEAKS
 4. INSTALL FUEL TANK ASSEMBLY (See page [SF-37](#))

FUEL PRESSURE REGULATOR COMPONENTS

SFOXZ-13

REMOVAL

REMOVE FUEL PRESSURE REGULATOR

- (a) Disconnect the vacuum hose from intake air resonator.
- (b) Disconnect the fuel return hose from the pressure regulator.

CAUTION:

Put a shop towel under the pressure regulator.

- (c) Remove the 2 bolts, and pull out the pressure regulator.
- (d) Remove the O-ring from the pressure regulator.

INSTALLATION

1. INSTALL FUEL PRESSURE REGULATOR

- (a) Apply a light coat of gasoline to a new O-ring, and install it to the pressure regulator.
- (b) While turning the pressure regulator left and right, install it to the delivery pipe.
- (c) Install the pressure regulator with the 2 bolts.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (d) Connect the vacuum hose to intake air resonator.
 - (e) Connect the fuel return hose to the pressure regulator.
- ### 2. CHECK FOR FUEL LEAKS (See page [SF-1](#))

INJECTOR

ON-VEHICLE INSPECTION

SF00R-12

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE AIR CONNECTOR

3. INSPECT INJECTOR RESISTANCE

- (a) Disconnect the 8 injector connectors.
- (b) Using an ohmmeter, measure the resistance between the terminals.

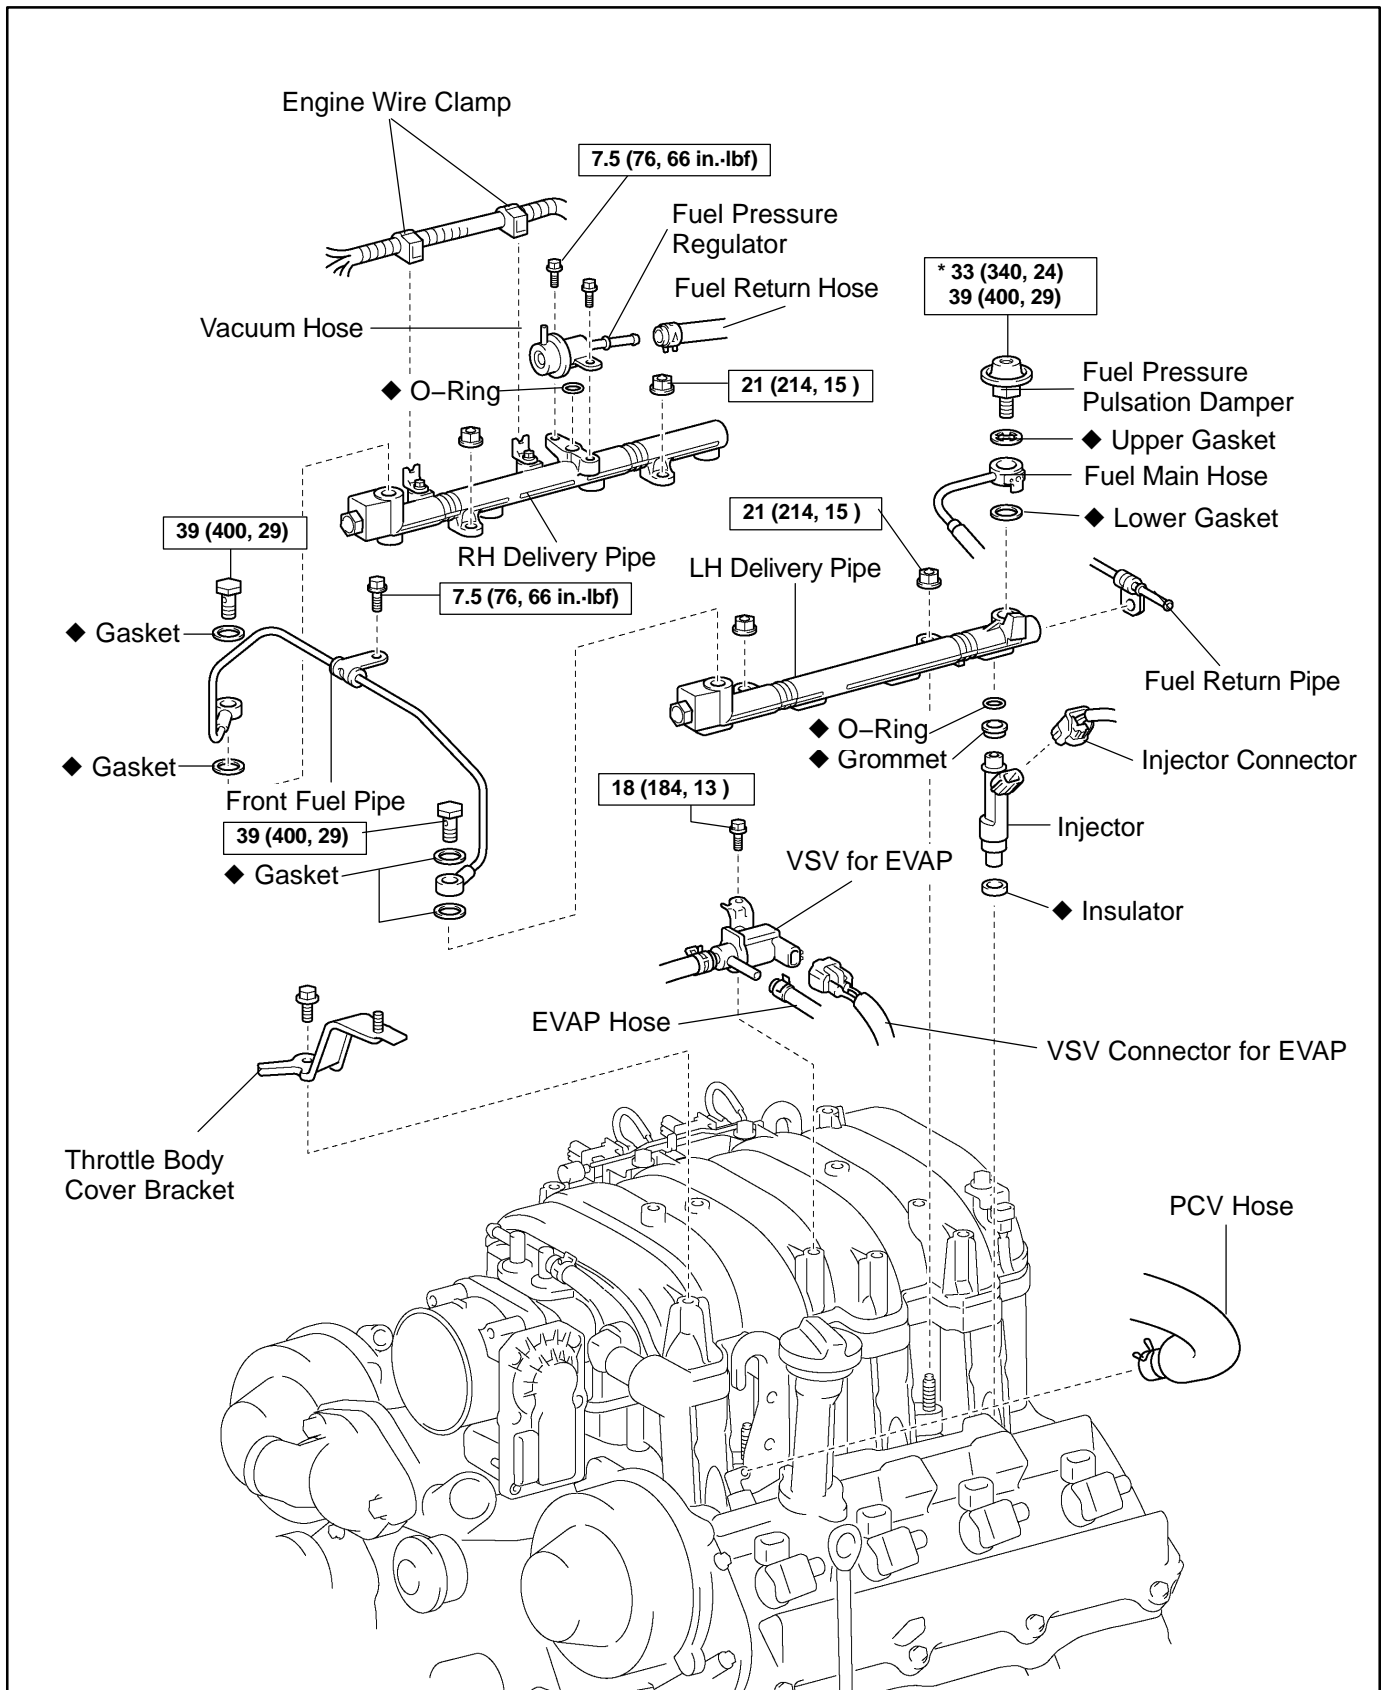

Resistance: 13.4 to 14.2 Ω at 20°C (68°F)

If the resistance is not as specified, replace the injector.

- (c) Reconnect the 8 injector connectors.
4. REINSTALL INTAKE AIR CONNECTOR
 5. REINSTALL THROTTLE BODY COVER

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

γ * For use with SST

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE
(See page SF-1)
2. REMOVE THROTTLE BODY COVER
3. REMOVE INTAKE AIR CONNECTOR

4. REMOVE FUEL PRESSURE PULSATION DAMPER
Remove the pulsation damper, upper gasket, fuel main hose and lower gasket.

NOTICE:

- Put a shop rag under the delivery pipe.
 - Slowly loosen the pulsation damper.
5. DISCONNECT PCV HOSE FROM PCV VALVE

6. DISCONNECT VSV FOR EVAP
 - (a) Disconnect the VSV connector for EVAP.
 - (b) Disconnect the EVAP hose.
 - (c) Remove the VSV for EVAP from the intake manifold.
7. REMOVE THROTTLE BODY COVER BRACKET
Remove the bolt and throttle body cover bracket.

8. DISCONNECT ENGINE WIRES
 - (a) Disconnect the engine wire clamps from the No.1 engine hanger and engine wire bracket.
 - (b) Disconnect the 2 wire clamps on the engine wire from the brackets on the RH delivery pipe.
9. REMOVE DELIVERY PIPES AND INJECTORS
NOTICE:
 - Be careful not to drop the injectors when removing the delivery pipes.
 - Do not apply any load to the injector in horizontal direction.

- (a) Remove the bolt holding the clamp on the fuel return pipe to the LH delivery pipe.
- (b) Remove the bolt, 2 union bolts, 4 gaskets and front fuel pipe.
- (c) Disconnect the 8 injector connectors.
- (d) Remove the 4 nuts holding the delivery pipes to the lower intake manifold.
- (e) Remove the 2 delivery pipes, 8 injectors, and 8 insulators.
- (f) Remove the O-ring and grommet from each injector.

INSPECTION

1. INSPECT INJECTOR INJECTION

CAUTION:

Keep the injector clean of sparks during the test.

- (a) Disconnect the fuel inlet hose (fuel tube connector) from the fuel filter.
- (b) Connect SST (attachment and hose) to the fuel tube.
SST 09268-41047 (09268-52011)

- (c) Remove the pressure regulator from the delivery pipe.
- (d) Install the O-ring to the fuel inlet of the pressure regulator.
- (e) Connect SST (hose) to the fuel inlet of the pressure regulator with SST (union) and the 2 bolts.
SST 09268-41047 (09268-41091)

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (f) Connect the fuel return hose to the fuel outlet of the pressure regulator.

- (g) Install the O-ring to the injector.
- (h) Connect SST (adaptor and hose) to the injector, and hold the injector and union with SST (clamp).
SST 09268-41047 (09268-41110, 09268-41300)

- (i) Put the injector into the graduated cylinder.

CAUTION:

Install a suitable vinyl hose onto the injector to prevent gasoline from splashing out.

- (j) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
- (k) Connect the battery negative (-) cable to the battery.
- (l) Turn the ignition switch ON, and push the hand-held tester main switch ON.

NOTICE:

Do not start the engine.

- (m) Enter the following menus: DIAGNOSIS / ENHANCED OBDII / ACTIVE TEST / FUEL PUMP / SPD
- (n) Please refer to the hand-held tester operator's manual for further details.

- (o) Connect SST (wire) to the injector and battery for 15 seconds, and measure the injection volume with a graduated cylinder. Test each injector 2 or 3 times.

SST 09842-30070

Volume: 56 to 69 cm³ (3.4 to 4.2 cu in.) per 15 seconds

Difference between each injector:

13 cm³ (0.8 cu in.) or less

If the injection volume is not as specified, replace the injector.

2. INSPECT LEAKAGE

- (a) Under the above conditions, disconnect the tester probes of SST (wire) from the battery and check fuel leakage from the injector.

SST 09842-30070

Fuel drop: 1 drop or less per 12 minutes

- (b) Turn the ignition switch off.
 (c) Disconnect the negative (-) terminal cable from the battery.
 (d) Remove the SST and fuel tube connector.
 SST 09268-41047, 09842-30070
 (e) Disconnect the hand-held tester and CAN VIM from the DLC3.
 (f) Reconnect the fuel inlet pipe to the fuel tube.

INSTALLATION

1. INSTALL INJECTORS AND DELIVERY PIPES

NOTICE:

- Be careful not to drop the injectors when installing the delivery pipes.
- Do not apply any load to the injector on horizontal direction.

- (a) Install a new grommet to each injector.
 (b) Apply a light coat of gasoline to a new O-ring and install it to each injector.

- (c) While turning the injector clockwise and counterclockwise, push it to the delivery pipes. Install the 8 injectors.
 (d) Position the injector connector outward.
 (e) Place the 8 new insulators on the intake manifold.
 (f) Place the 2 delivery pipes and injectors assemblies on the lower intake manifold.
 (g) Temporarily install the 4 nuts.
 (h) Install the front fuel pipe with the bolt, 4 new gaskets and 2 union bolts.

Torque:

39 N·m (400 kgf·cm, 29 ft·lbf) for union bolts

7.5 N·m (76 kgf·cm, 66 in.-lbf) for bolt

- (i) Install the bolt holding the clamp on the fuel return pipe to the LH delivery pipe.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

- (j) Check that the injectors rotate smoothly.

HINT:

If the injectors do not rotate smoothly, the probable cause is incorrect installation of O-rings. Replace the O-ring of the injector that does not rotate smoothly.

- (k) Position injector connector outward.
 (l) Tighten the 4 nuts holding the delivery pipes to the lower intake manifold.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

- (m) Connect the 8 injector connectors.

2. INSTALL ENGINE WIRES

- (a) Install the 2 wire clamps on the engine wire to the brackets on the RH delivery pipe.
- (b) Connect the engine wire clamps to the No.1 engine hanger and engine wire bracket.
- (c) Install the engine wire protector with the 2 bolts.

3. CONNECT PCV HOSE TO PCV VALVE

4. CONNECT VSV FOR EVAP TO UPPER INTAKE MANIFOLD

- (a) Install the VSV for the EVAP to the upper intake manifold.
- (b) Connect the EVAP hose.
- (c) Connect the VSV connector for the EVAP.

5. INSTALL THROTTLE BODY COVER BRACKET

Install the throttle body cover bracket with the bolt.

6. INSTALL FUEL PRESSURE PULSATION DAMPER (See page SF-1)

7. INSTALL INTAKE AIR CONNECTOR

8. INSTALL THROTTLE BODY COVER

FUEL TANK AND LINE COMPONENTS

SFO0Z-18

CAUTION:

- Always use new gaskets when replacing the fuel tank or component parts.
- Apply the proper torque to all parts tightened

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

Y

REMOVAL

1. **PREVENT GASOLINE FROM SPILLING OUT**
(See page [SF-1](#))
2. **REMOVE FUEL TANK CAP**
3. **REMOVE FUEL INLET PIPE SHIELD**

Remove the 4 bolts and fuel inlet pipe shield.

4. **REMOVE CHARCOAL CANISTER ASSEMBLY**

- (a) Remove the 4 bolts and charcoal canister assembly.
- (b) Disconnect the pump module connector, vent hose and purge line hose from the charcoal canister.

5. **DISCONNECT SPEED SENSOR WIRE**

Remove the nut and disconnect the speed sensor wire from the fuel tank.

6. **DISCONNECT FUEL MAIN TUBE AND RETURN TUBE**
(See page [SF-1](#))

7. **REMOVE FUEL TANK ASSEMBLY**

- (a) Set up a transmission jack under the fuel tank.
- (b) Remove the 2 nuts and disconnect the fuel pipe bracket from the body.

- (c) Remove the 2 bolts and disconnect the 2 fuel tank bands from the fuel tank.
 - (d) Operate the transmission jack and remove the fuel tank.
- 8. REMOVE FUEL PUMP ASSEMBLY**
(See page [SF-11](#))

INSPECTION

INSPECT FUEL TANK AND LINE

- Check the fuel lines for cracks or leakage, and all connections for deformation.
- Check the fuel tank vapor vent system hoses and connections for looseness, sharp bends or damage.
- Check the fuel tank for deformation, cracks, fuel leakage or tank band looseness.
- Check the filler neck for damage or fuel leakage.
- Hose and pipe connections are as shown in the illustration.

If a problem is found, repair or replace the parts as necessary.

INSTALLATION

1. **INSTALL FUEL PUMP ASSEMBLY** (See page [SF-19](#))
2. **INSTALL FUEL TANK ASSEMBLY**
 - (a) Set up the fuel tank on the transmission jack.
 - (b) Operate the transmission jack and install the fuel tank.
 - (c) Install the 2 fuel tank bands with the 2 bolts.

Torque: 62 N·m (632 kgf·cm, 45 ft·lbf)

- (d) Install the fuel pipe bracket to the body with the 2 nuts.
- Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)**

3. CONNECT FUEL PUMP CONNECTOR

4. **CONNECT FUEL MAIN TUBE AND RETURN TUBE**
(See page [SF-1](#))

5. CONNECT SPEED SENSOR WIRE

Connect the speed sensor wire to the fuel tank with the nut.

6. INSTALL CHARCOAL CANISTER ASSEMBLY

- (a) Connect the pump module connector, vent hose and purge line hose to the charcoal canister.
- (b) Install the charcoal canister assembly with the 4 bolts.

Torque: 14.7 N·m (150 kgf·cm, 11 ft·lbf)

**7. INSTALL FUEL INLET PIPE SHIELD**

- (a) Install the fuel inlet pipe shield with the 4 bolts.
- (b) Install the fuel tank cap.

8. CHECK FOR FUEL LEAKS**9. INSTALL SPARE TIRE**

MASS AIR FLOW (MAF) METER COMPONENTS

SF0P1-12

INSPECTION

1. INSPECT OUTPUT VOLTAGE

- Apply battery voltage across terminals 1 (+B) and 2 (E2G).
- Connect the positive (+) tester probe to terminal 3 (VG), and the negative (-) tester probe to terminal 2 (E2G).
- Blow air into the MAF meter, and check if the voltage fluctuates.

2. INSPECT RESISTANCE

Using an ohmmeter, measure the resistance between terminals 4 (THA) and 5 (E2).

Resistance:

12.5 to 16.9 kΩ at -20°C (-4°F)

2.19 to 2.67 kΩ at 20°C (68°F)

0.50 to 0.68 kΩ at 60°C (140°F)

3. INSPECT MASS AIR FLOW METER

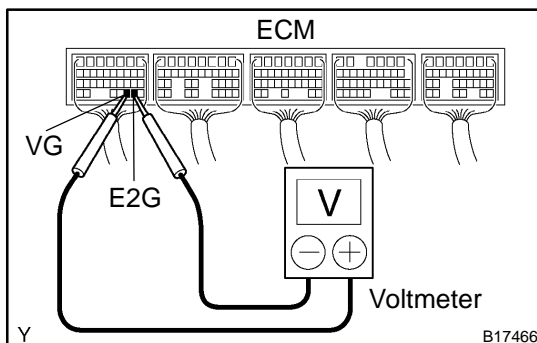

- If using a hand-held tester:
 - Connect the hand-held tester to the DLC3.
 - Turn the ignition switch to the ON position.
 - Blow air into the MAF meter, and check that the air flow value of the CURRENT DATA changes.

If operation is not as specified, check the MAF meter (see page [DI-531](#) and [DI-534](#)) as well as the wiring and the ECM.

- If not using a hand-held tester:

- Turn the ignition switch to the ON position.
- Connect the positive tester probe of the voltmeter to terminal VG of the ECM and the negative tester probe of the voltmeter to terminal E2G of the ECM.
- Blow air into the air flow meter, and check if the voltage fluctuates.

If operation is not as specified, check the MAF meter (see page [DI-531](#) and [DI-534](#)), the wiring and the ECM.

THROTTLE BODY ON-VEHICLE INSPECTION

SF1XJ-02

1. REMOVE THROTTLE BODY COVER
2. INSPECT SYSTEM OPERATION

- (a) Inspect the throttle control motor for operating sound.
 - (1) Turn the ignition switch ON.
 - (2) When depressing the accelerator pedal, check the running sound of the motor. Also, check that there is no friction sound.

If operation is not as specified, check the throttle control motor (see step 3), wiring and ECM.

- (b) Inspect the accelerator pedal position sensor.
 - (1) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
 - (2) Check that the MIL does not light up.
 - (3) When turning the accelerator pedal position sensor lever to the full-open position, check that the throttle valve opening percentage (THROTTLE POS) of the CURRENT DATA shows the standard value.

Standard throttle valve opening percentage: 60% or more

If operation is not as specified, check that the accelerator pedal position sensor (see page [DI-794](#)), wiring and ECM.

If not using a hand-held tester, measure the voltage between terminals (VTA1-E2, VTA2-E2) of the ECM connector (See page [DI-548](#)).

- (c) Inspect the idle speed.
 - (1) Start the engine and check that the MIL does not light up.
 - (2) Allow the engine to warm up to normal operating temperature.
 - (3) Turn the A/C compressor ON to OFF, and check the idle speed.

Idle speed (Transmission in neutral): 700 ± 50 rpm

NOTICE:

Perform inspection without an electrical load.

- (d) After checking the above (a) to (c), perform the driving test and check that there is no sense of incongruity.

3. INSPECT THROTTLE CONTROL MOTOR

- (a) Disconnect the throttle control motor connector.
- (b) Using an ohmmeter, measure the motor resistance between terminals M+ and M-.

Motor resistance: 0.3 to 100 Ω at 20°C (68°F)

If the resistance is not as specified, replace the throttle body assembly (see page [SF-44](#)).

- (c) Reconnect the throttle control motor connector.

4. INSPECT THROTTLE POSITION SENSOR

(See page [DI-548](#))

If necessary, replace the throttle body assembly (see page [SF-44](#)).

5. REINSTALL THROTTLE BODY COVER

COMPONENTS

REMOVAL

1. REMOVE THROTTLE BODY COVER
2. DRAIN ENGINE COOLANT
3. REMOVE INTAKE AIR CONNECTOR
4. REMOVE THROTTLE BODY
 - (a) Disconnect the throttle control connector.

- (b) Disconnect the 2 water bypass hoses from the throttle body.

- (c) Remove the nut and 3 bolts, and remove the throttle body from the intake manifold.

INSTALLATION

1. INSTALL THROTTLE BODY

- (a) Install the throttle body with the nut and 3 bolts.

Torque: 14 N·m (143 kgf·cm, 10 ft·lbf)

- (b) Connect the 2 water bypass hoses to the throttle body.

- (c) Connect the throttle control connector.

2. INSTALL INTAKE AIR CONNECTOR

3. **FILL WITH ENGINE COOLANT (See page [CO-2](#))**

4. **START ENGINE AND CHECK FOR ENGINE COOLANT LEAKS**

5. **INSTALL THROTTLE BODY COVER**

CAMSHAFT TIMING OIL CONTROL VALVE

ON-VEHICLE INSPECTION

SF0P8-03

- (a) Remove the throttle body cover.
- (b) Remove the intake air connector.
- (c) Disconnect the oil control valve connector.

- (d) Using an ohmmeter, measure the resistance between the terminals.

Resistance: 6.9 to 7.9 Ω at 20°C (68°F)

If the resistance is not as specified, replace the valve.

- (e) Reconnect the oil control valve connector.
- (f) Reinstall the intake air connector.
- (g) Reinstall the throttle body cover.

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE AIR CONNECTOR

3. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE
 - (a) Disconnect the 2 camshaft oil control valve connectors.
 - (b) Remove the bolt, camshaft oil control valve and O-ring.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)
 - (c) Remove the O-ring from the each camshaft oil control valve.

HINT:

At the time of installation, please refer to the following items.
Use a new O-rings.

INSPECTION

INSPECT OIL CONTROL VALVE OPERATION

Connect the positive ⊕ lead to terminal 1 of the connector and the negative ⊖ lead to terminal 2, then check the movement of the valve.

When battery positive voltage is applied.	Valve moves in  direction.
When battery positive voltage is cut off.	Valve moves in  direction.

If operation is not as specified, replace the oil control valve.

INSTALLATION

Installation is in the reverse order of removal. (See page [SF-48](#))

ACOUSTIC CONTROL INDUCTION SYSTEM (ACIS)

SFOPD-04

ON-VEHICLE INSPECTION

INSPECT INTAKE AIR CONTROL VALVE OPERATION

(a) Start the engine.

(b) While the engine idling, check that the actuator rod moves.

(c) Disconnect the VSV connector, and check that the actuator rod is returned.

If the operation is not as specified, inspect the intake air control valve, VSV and ECM.

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

N·m (kgf·cm, ft·lbf) : Specified torque

Y

REMOVAL

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE MANIFOLD ASSEMBLY
(See page [EM-36](#))

3. REMOVE VSV FOR ACIS

- (a) Remove the 2 vacuum hoses from the VSV.
- (b) Remove the bolt and VSV from the intake manifold.

INSPECTION

1. INSPECT INTAKE AIR CONTROL VALVE

- With 39.9 kPa (300 mmHg, 11.8 in.Hg) of vacuum applied to the actuator, check that the actuator rod moves.
- One minute after applying the vacuum in step (a), check that the actuator rod does not return.

If the operation is not as specified, replace the intake manifold.

2. INSPECT VSV

- Using an ohmmeter, check that there is continuity between each terminal.

Resistance: 33 to 39 Ω at 20°C (68°F)

If there is no continuity, replace the VSV.

- Using an ohmmeter, check that there is no continuity between each terminal and the body.

If there is continuity, replace the VSV.

- Check that air flows from port E to the filter.

- Apply battery voltage across the terminals.

- Check that air flows from port E to port F.

If operation is not as specified, replace the VSV.

INSTALLATION

1. **INSTALL VSV FOR ACIS**
 - (a) Install the VSV to the intake manifold with the bolt.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)
 - (b) Connect the 2 vacuum hoses to the VSV.
2. **INSTALL INTAKE MANIFOLD ASSEMBLY**
(See page [EM-60](#))
3. **INSTALL THROTTLE BODY COVER**

EFI MAIN RELAY INSPECTION

1. REMOVE RELAY BOX COVER
2. REMOVE EFI MAIN RELAY (Marking: EFI)

3. INSPECT EFI MAIN RELAY CONTINUITY

- (a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

- (b) Check that there is no continuity between terminals 3 and 5.

If there is continuity, replace the relay.

4. INSPECT EFI MAIN RELAY OPERATION

- (a) Apply battery voltage across terminals 1 and 2.

- (b) Using an ohmmeter, check that there is continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

5. REINSTALL EFI MAIN RELAY

6. REINSTALL RELAY BOX COVER

A/F SENSOR HEATER RELAY INSPECTION

SF1XR-01

1. REMOVE RELAY BOX COVER
2. REMOVE A/F SENSOR HEATER RELAY (Marking: A/F HTR)

3. **INSPECT A/F SENSOR HEATER RELAY CONTINUITY**
 - (a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.
 - (b) Check that there is no continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

If there is continuity, replace the relay.

4. **INSPECT A/F SENSOR HEATER RELAY OPERATION**
 - (a) Apply battery voltage across terminals 1 and 2.
 - (b) Using an ohmmeter, check that there is continuity between terminals 3 and 5.
5. **REINSTALL A/F SENSOR HEATER RELAY**
6. **REINSTALL RELAY BOX COVER**

If there is no continuity, replace the relay.

CIRCUIT OPENING RELAY INSPECTION

SF1XS-01

1. REMOVE RELAY BOX COVER
2. REMOVE CIRCUIT OPENING RELAY
(Marking: C/O)

3. **INSPECT CIRCUIT OPENING RELAY CONTINUITY**
 - (a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.
If there is no continuity, replace the relay.
 - (b) Check that there is no continuity between terminals 3 and 5.
If there is continuity, replace the relay.

4. **INSPECT CIRCUIT OPENING RELAY OPERATION**
 - (a) Apply battery positive voltage across terminals 1 and 2.
 - (b) Using an ohmmeter, check that there is continuity between terminals 3 and 5.
If there is no continuity, replace the relay.
5. **REINSTALL CIRCUIT OPENING RELAY**
6. **REINSTALL RELAY BOX COVER**

FUEL PUMP RELAY INSPECTION

SF1XT-01

1. REMOVE RELAY BOX COVER
2. REMOVE FUEL PUMP RELAY (Marking: F/P)

3. INSPECT FUEL PUMP RELAY CONTINUITY

- (a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

- (b) Check that there is continuity between terminals 3 and 4.
- If there is no continuity, replace the relay.

4. INSPECT FUEL PUMP RELAY OPERATION

- (a) Apply battery positive voltage across terminals 1 and 2.
- (b) Using an ohmmeter, check that there is no continuity between terminals 3 and 4.

If there is continuity, replace the relay.

5. REINSTALL FUEL PUMP RELAY
6. REINSTALL RELAY BOX COVER

FUEL PUMP RESISTOR COMPONENTS

SF138-05

N·m (kgf·cm, ft·lbf) : Specified torque

Y

B17500

INSPECTION

1. REMOVE FUEL PUMP RESISTOR
2. INSPECT FUEL PUMP RESISTOR

Using an ohmmeter, measure the resistance between the terminals.

Resistance: 0.70 to 0.76 Ω at 20°C (68°F)

If the resistance is not as specified, replace the resistor.

3. REINSTALL FUEL PUMP RESISTOR

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

VSV FOR EVAPORATIVE EMISSION (EVAP) COMPONENTS

SF0Y7-10

INSPECTION

1. REMOVE VSV

2. INSPECT VSV

- (a) Inspect the VSV for open circuit.

Using an ohmmeter, check that there is continuity between the terminals.

Resistance: 30 to 34 Ω at 20°C (68°F)

If there is no continuity, replace the VSV.

- (b) Inspect the VSV for ground.

Using an ohmmeter, check that there is no continuity between each terminal and the body.

If there is continuity, replace the VSV.

- (c) Inspect the VSV operation.

- (1) Check that air does not flow from port.

- (2) Apply battery positive voltage across the terminals.

- (3) Check that air flows from port.

If operation is not as specified, replace the VSV.

3. REINSTALL VSV

ENGINE COOLANT TEMPERATURE (ECT) SENSOR COMPONENTS

SF0PN-13

INSPECTION

1. DRAIN ENGINE COOLANT
2. REMOVE THROTTLE BODY COVER
3. REMOVE INTAKE AIR CONNECTOR
4. DISCONNECT THROTTLE BODY FROM INTAKE MANIFOLDS

Remove the nut and 3 bolts, and disconnect the throttle body from the intake manifold.

5. REMOVE ECT SENSOR
 - (a) Disconnect the ECT sensor connector.
 - (b) Remove the ECT sensor and gasket.

6. INSPECT ECT SENSOR

Using an ohmmeter, measure the resistance between the terminals.

Resistance: Refer to the graph

If the resistance is not as specified, replace the ECT sensor.

7. REINSTALL ECT SENSOR

- (a) Install a new gasket and the ECT sensor.
Torque: 19.6 N·m (200 kgf·cm, 14 ft·lbf)
- (b) Connect the ECT sensor connector.

8. REINSTALL THROTTLE BODY TO INTAKE MANIFOLDS

Install a new gasket and the throttle body with the 2 bolts and 2 nuts.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

9. REINSTALL INTAKE AIR CONNECTOR

10. REFILL WITH ENGINE COOLANT (See page CO-2)

11. REINSTALL THROTTLE BODY COVER

KNOCK SENSOR COMPONENTS

SFOPR-16

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

γ

INSPECTION

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE AIR CONNECTOR
3. REMOVE INTAKE MANIFOLDS ASSEMBLY
(See page [EM-36](#))

4. **INSPECT KNOCK SENSORS 1 AND 2**
 - (a) Disconnect the knock sensor connectors.
 - (b) Using an ohmmeter, measure the resistance between terminals.

Resistance: 120 to 280 k Ω at 20°C (68°F)

HINT:

If the resistance is not as specified, replace the sensor.

5. **REMOVE KNOCK SENSOR**
 - (a) Disconnect the 2 knock sensor connectors.
 - (b) Remove the 2 nuts and 2 knock sensors.

6. **INSTALL KNOCK SENSOR**
 - (a) Install the 2 knock sensors with the 2 nuts as shown in the illustration.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)
 - (b) Connect the 2 knock sensor connectors.
7. **INSTALL INTAKE MANIFOLD ASSEMBLY**
(See page [EM-60](#))
8. **INSTALL INTAKE AIR CONNECTOR**
9. **INSTALL THROTTLE BODY COVER**

AIR-FUEL RATIO (A/F) SENSOR COMPONENTS

SF1XV-02

INSPECTION

1. INSPECT HEATER RESISTANCE OF AIR FUEL RATIO SENSOR

- (a) Disconnect the air fuel ratio sensor connector.
- (b) Using an ohmmeter, measure the resistance between terminals +B and HT.

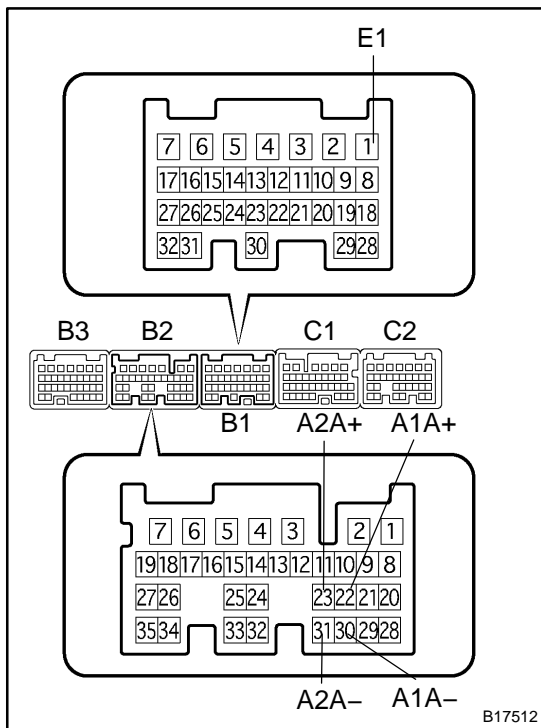

Resistance 11 to 16 kΩ at 20°C (68°F)

If the resistance is not as specified, replace the sensor.

Torque: 44 N·m (450 kgf·cm, 32 ft·lbf)

- (c) Reconnect the air fuel ratio sensor connector.

2. INSPECT OPERATION OF AIR FUEL RATIO SENSOR (See page [DI-507](#))

3. INSPECT AIR-FUEL RATIO COMPENSATION SYSTEM

- (a) Measure the voltage between the terminals of the ECM connectors.

Standard:

Tester Connection	Condition	Specified Condition
B2-22 (A1A+) - B1-1 (E1)	Ignition switch ON	3.3 V
B2-30 (A1A-) - B1-1 (E1)	Ignition switch ON	2.9 V
B2-23 (A2A+) - B1-1 (E1)	Ignition switch ON	3.3 V
B2-31 (A2A-) - B1-1 (E1)	Ignition switch ON	2.9 V

NOTICE:

Connect test leads from the back side of the connector. The connectors should not be disconnected from the ECM.

HINT:

The voltage between the terminals of the ECM is kept constant regardless of the voltage of the A/F sensor.

- (b) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
- (c) Turn the ignition switch ON.
- (d) Select the following menu items : Data List / A/FS B1 S1 and O2S B1 S2.
- (e) Warm up the A/F sensor by running the engine at 2,500 rpm for approximately 2 minutes.

- (f) Keep the engine speed at 2,500 rpm and confirm that the display of the "A/FS B1 S1" is as shown in the illustration.

HINT:

- The illustration may slightly differ from the display on the hand-held tester.
 - The waveform of the A/F sensor is displayed only on the hand-held tester.
- (g) Confirm that the display of the "O2S B1 S2" changes between 0 and 1 V with the engine speed at 2,500 rpm.

OK:

The voltage output oscillates more than 8 times in 10 seconds.

CAUTION:

- Perform the check immediately after warming up the engine.
- If the voltage variation could not be verified, warm up the heated oxygen sensor again. If it could not be verified even after warming up the sensor again, check the DTC No. (See page [DI-507](#))

HEATED OXYGEN SENSOR COMPONENTS

SFOY9-12

INSPECTION

1. INSPECT HEATER RESISTANCE OF HEATED OXYGEN SENSOR

- Disconnect the oxygen sensor connector.
- Using an ohmmeter, measure the resistance between terminals +B and HT.

Resistance: 11 to 16 Ω at 20°C (68°F)

If the resistance is not as specified, replace the sensor.

Torque: 44 N·m (450 kgf·cm, 32 ft·lbf)

- Reconnect the oxygen sensor connector.
- ### 2. INSPECT OPERATION OF HEATED OXYGEN SENSOR (See page [DI-512](#))

VVT SENSOR COMPONENTS

SF1XX-01

SFI (2UZ-FE) - VVT SENSOR

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

Y

INSPECTION

NOTICE:

”Cold” and ”Hot in these sentences express the temperature of the sensors themselves. ”Cold” is from -10°C (14°F) to 50°C (122°F) and ”Hot” is from 50°C (122°F) to 100°C (212°F).

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE MANIFOLD ASSEMBLY
(See page [EM-36](#))
3. INSPECT VVT SENSOR RESISTANCE
 - (a) Disconnect the VVT sensor connector.

- (b) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

Cold	835 to 1,400 Ω
Hot	1,060 to 1,645 Ω

If the resistance is not as specified, replace the sensor.

- (c) Reconnect the VVT sensor connector.
- (d) Connect the VVT sensor connector.
4. REINSTALL INTAKE MANIFOLD ASSEMBLY
(See page [EM-60](#))
5. REINSTALL THROTTLE BODY COVER

REPLACEMENT

1. REMOVE THROTTLE BODY COVER
2. REMOVE INTAKE MANIFOLD ASSEMBLY
(See page [EM-36](#))
3. REMOVE VVT SENSOR
 - (a) Disconnect the VVT sensor connector.
 - (b) Remove the bolt and VVT sensor.
4. INSTALL VVT SENSOR
 - (a) Attach a new VVT sensor to the cylinder head.
 - (b) Install the VVT sensor with the bolt.
Torque: 6.5 N·m (65 kgf·cm, 58 in.-lbf)
5. REINSTALL INTAKE MANIFOLD ASSEMBLY
(See page [EM-60](#))
6. REINSTALL THROTTLE BODY COVER

ACCELERATOR PEDAL POSITION SENSOR COMPONENTS

SF1UM-05

INSPECTION

INSPECT ACCELERATOR PEDAL POSITION SENSOR (See page [DI-794](#))

If necessary, replace the accelerator pedal assembly.

NOTICE:

- Be care not to give a shock to the accelerator pedal assembly.
- Be care not to disassemble the accelerator pedal assembly.

ENGINE CONTROL MODULE (ECM) COMPONENTS

SFO00-14

INSPECTION

1. **DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL**
2. **REMOVE REMOVE GLOVE COMPARTMENT**
 - (a) Remove the 2 screws and glove compartment door.
 - (b) Remove the 3 screws and lower No.2 finish panel.
3. **REMOVE HEATER TO REGISTER DUCT**
4. **REMOVE ECM**
 - (a) Disconnect the 5 connectors.
 - (b) Remove the 2 bolts and ECM.
5. **INSPECT ECM (See page [DI-453](#))**
6. **REINSTALL ECM**
 - (a) Install the ECM with the 2 bolts.
 - (b) Connect the 5 connectors.
7. **INSTALL HEATER TO REGISTER DUCT**
8. **INSTALL GLOVE COMPARTMENT**
 - (a) Install the lower No.2 finish panel with 3 screws.
 - (b) Install the glove compartment door with the 2 screws.
9. **CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL**

FUEL CUT RPM INSPECTION

SFO02-16

1. WARM UP ENGINE

Allow the engine to warm up to normal operating temperature.

2. CONNECT HAND-HELD TESTER

- (a) Connect a hand-held tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).
- (b) Please refer to the hand-held tester operator's manual for further details.

3. INSPECT FUEL CUTOFF RPM OPERATION

- (a) Increase the engine speed to at least 2,500 rpm.
- (b) Check for injector operating noise.
- (c) Check that when the throttle lever is released, injector operation noise stops momentarily and then resumes.

HINT:

- The vehicle should be stopped.
- Measure with the A/C OFF.

Fuel return speed: 1,400 rpm

- (d) Disconnect the hand-held tester and CAN VIM from the DLC3.

COOLANT INSPECTION

CO1D4-01

HINT:

Check the coolant level when the engine is cold.

1. CHECK ENGINE COOLANT LEVEL AT RADIATOR RESERVOIR

The engine coolant level should be between the "LOW" and "FULL" lines at normal temperature (20°C(68°F)).

If low, check for leaks and add "Toyota Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology up to the "FULL" line.

2. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

(b) There should not be any excessive deposits of rust or scale around the radiator cap or radiator filler hole, and the coolant should be free from oil.

If excessively dirty, clean the coolant passages and replace the coolant.

(c) Reinstall the radiator cap.

REPLACEMENT

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot as fluid and steam can be blown out under pressure.

1. REMOVE ENGINE UNDER COVER

2. DRAIN ENGINE COOLANT

(a) Remove the radiator cap.

(b) Remove the 3 drain plugs on the engine and radiator, and drain the coolant.

(c) Close the 3 drain plugs.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf) for engine

3. REFILL WITH ENGINE COOLANT

(a) Slowly fill the system with coolant.

Capacity: 11.6 liters (12.3 US qts, 10.2 Imp. qts)

NOTICE:

Do not use plain water alone.

HINT:

- Use of improper coolants may damage the engine cooling system.
- Use "Toyota Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology.
- New Toyota vehicles are filled with Toyota Super Long Life Coolant (color is pink, premixed ethylene glycol concentration is approximately 50 % and freezing temperature is -35°C (-31°F)). When replacing the coolant, Toyota Super long Life Coolant is recommended.
- Observe the coolant level inside the radiator by pressing the inlet and outlet radiator hoses several times by hand. if the coolant level goes down, add the coolant.

(b) Install the radiator cap.

(c) Bleed the cooling system.

(1) Start the engine, and open the heater water valve.

(2) Maintain the engine speed at 2,000 – 2,500 rpm, and warm up the engine.

(d) Stop the engine, and wait until the engine coolant cools down.

(e) Refill coolant into the reservoir until it is "FULL".

4. CHECK FOR ENGINE COOLANT LEAKS

5. CHECK ENGINE COOLANT SPECIFIC GRAVITY CORRECTLY

6. REINSTALL ENGINE UNDER COVER

WATER PUMP COMPONENTS

CO1D6-01

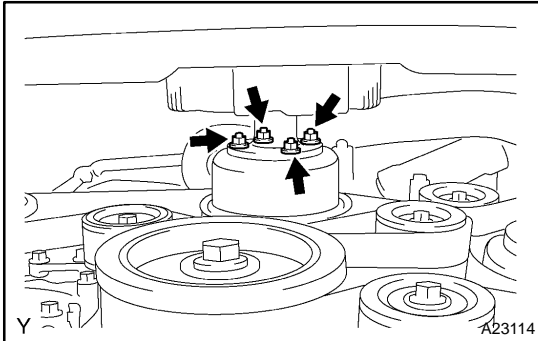

Y **N·m (kgf·cm, ft·lbf)** : Specified torque

COOLING (1GR-FE) - WATER PUMP

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DRAIN ENGINE COOLANT
3. REMOVE V-BANK COVER

4. **LOOSEN FAN W/ FLUID COUPLING**
 - (a) Loosen the 4 fluid coupling bolts.
5. **REMOVE FAN AND GENERATOR V BELT**
(See page [EM-62](#))
6. **REMOVE FAN W/ FLUID COUPLING**
 - (a) Disconnect the radiator reserve tank hose.
 - (b) Remove the 4 fan shroud bolts.
 - (c) Remove the 4 fluid coupling nuts, and then remove the fan w/ fluid coupling and fan shroud together.
 - (d) Remove the fan pulley.
7. **DISCONNECT VENTILATION HOSE NO.2**
8. **REMOVE AIR CLEANER**

9. **REMOVE WATER INLET**
 - (a) Disconnect the 2 oil cooler hoses (w/ oil cooler).

- (b) Disconnect the 2 radiator hoses.

(c) Disconnect the 5 water by-pass hoses.

(d) Remove the 5 bolts and water inlet.
 (e) Remove the O-ring from the water outlet pipe.
 (f) Remove the gasket from the water pump.

10. REMOVE IDLER PULLEY NO.2
 (a) Remove the 2 bolts and 2 idler pulleys.
11. REMOVE GENERATOR (See page CH-7)
12. SEPARATE COOLER COMPRESSOR (See page EM-105)
13. REMOVE V-RIBBED BELT TENSIONER (See page EM-32)

14. REMOVE WATER PUMP
 (a) Remove the 17 bolts, water pump and gasket.

INSPECTION

1. INSPECT WATER PUMP

- (a) Visually check the air hole and water hole for coolant leakage.

If leakage is found, replace the water pump and timing belt.

- (b) Turn the pulley, and check that the water pump bearing moves smoothly and quietly.

If necessary, replace the water pump.

2. INSPECT FLUID COUPLING

- (a) Check that the fluid coupling is not damaged and that no silicon oil leaks.

If necessary, replace the fluid coupling.

INSTALLATION

1. INSTALL WATER PUMP

- (a) Install a new gasket and the water pump with the 17 bolts.

Torque:

9.0 N·m (92 kgf·cm, 80 in.-lbf) for 10 mm (0.39 in.) head

23 N·m (235 kgf·cm, 17 ft.-lbf) for 12 mm (0.47 in.) head

2. INSTALL V-RIBBED BELT TENSIONER ASSY

(See page [EM-44](#))

3. INSTALL COOLER COMPRESSOR

(See page [EM-108](#))

4. INSTALL GENERATOR (See page [CH-15](#))

5. INSTALL IDLER PULLEY

- (a) Install the 2 idler pulleys with the 2 bolts.

Torque: 39 N·m (398 kgf·cm, 29 ft.-lbf)

6. INSTALL WATER INLET

- (a) Install a new O-ring to the water outlet pipe.
 (b) Install a new gasket to the water pump.
 (c) Apply soapy water to the O-ring.

- (d) Install the water inlet with the 5 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)
 (e) Connect the 5 water by-pass hoses.
 (f) Connect the 2 radiator hoses.
 (g) Connect the 2 oil cooler hoses (w/ oil cooler).

7. INSTALL AIR CLEANER

8. CONNECT VENTILATION HOSE NO.2

9. INSTALL FAN W/ FLUID COUPLING

- (a) Put the fan pulley to the water pump.
 (b) Put the fan w/ fluid coupling and fan shroud together.
 (c) Temporarily install the 4 fluid coupling nuts.
 (d) Tighten the 4 fan shroud bolts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)
 (e) Connect the reserve tank hose.
 (f) Fasten the 2 oil cooler hoses with the hose clamp.

10. **INSTALL FAN AND GENERATOR V BELT**
(See page [EM-89](#))
11. **FULLY TIGHTEN FAN W/ FLUID COUPLING**
 - (a) Tighten the 4 fluid coupling bolts.
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)
12. **ADD ENGINE COOLANT (See page [CO-2](#))**
13. **CHECK FOR ENGINE COOLANT LEAKS**
14. **INSTALL ENGINE UNDER COVER**
 - (a) Install the engine under cover with the 4 bolts.
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)
15. **INSTALL V-BANK COVER**
 - (a) Install the V-bank cover with the 2 nuts.
Torque: 9.8 N·m (100 kgf·cm, 87 in·lbf)
16. **RECHECK ENGINE COOLANT LEVEL**
17. **FILL WITH ENGINE COOLANT**
18. **START ENGINE AND CHECK FOR ENGINE COOLANT LEAKS**
19. **RECHECK ENGINE COOLANT LEVEL**

THERMOSTAT REMOVAL

CO1DA-01

HINT:

If the thermostat was not installed, cooling efficiency would be harmed. If the engine should tend to overheat, do not remove the thermostat.

1. **DRAIN ENGINE COOLANT (See page CO-2)**
2. **REMOVE V-BANK COVER**
3. **DISCONNECT RADIATOR OUTLET, NO.2 HOSE CLAMP OR CLIP**

4. **REMOVE WATER INLET W/THERMOSTAT**
 - (a) Remove the 3 nuts, water inlet w/ thermostat and gasket.

INSPECTION

INSPECT THERMOSTAT

HINT:

The valve opening temperature is inscribed on the thermostat.

(a) Immerse the thermostat in the water, then heat the water gradually.

(b) Check the valve opening temperature of the thermostat.

Valve opening temperature:

80 to 84°C (176 to 183°F)

If the valve opening temperature is not as specified, replace the thermostat.

(c) Check the valve lift.

Valve lift: 8 mm (0.31 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the thermostat.

(d) Check that the valve is fully closed when the thermostat is at low temperature (below 40 °C (104 °F)).

If not fully closed, replace the thermostat.

INSTALLATION

1. INSTALL WATER INLET W/THERMOSTAT

- (a) Install a new gasket to the water inlet w/ thermostat.
- (b) Install the water inlet w/ thermostat with the 3 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

2. CONNECT RADIATOR OUTLET, NO.2 HOSE CLAMP OR CLIP

3. ADD ENGINE COOLANT (See page [CO-2](#))

4. CHECK FOR ENGINE COOLANT LEAKS

5. INSTALL V-BANK COVER

Install the V-bank cover with the 2 nuts.

Torque: 9.8 N·m (100 kgf·cm, 87 in.-lbf)

RADIATOR ON-VEHICLE CLEANING

CO1DD-01

INSPECT FINS FOR BLOCKAGE

If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.

NOTICE:

- If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fin, so keep the following injection distance.

Injection Pressure	Injection Distance
2,942 to 4,903 kpa (30 to 50 kg/cm ² , 427 to 711 psi)	300 mm (11.811 in)
4,903 to 7,845 kpa (50 to 80 kg/cm ² , 711 to 1,138 psi)	500 mm (19.685 in)

- If the fins are bent, straighten them with a screwdriver or pliers.
- Never apply water directly onto the electronic components.

ON-VEHICLE INSPECTION

1. REMOVE RADIATOR CAP

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

2. INSPECT RADIATOR CAP

NOTICE:

- If the radiator cap has contaminations, always rinse it with water.
 - Before using a radiator cap tester, wet the relief valve and pressure valve with engine coolant or water.
 - When performing steps (a) and (b) below, keep the tester at an angle of over 30° above the horizontal.
- (a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push/(3 seconds or more)

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the radiator cap.

- (b) Pump the radiator cap tester, and measure the relief valve opening pressure.

Pump speed: 1 push within 1 second

NOTICE:

This pump speed is for the first pump only (in order to close the vacuum valve). After this, the pump speed can be reduced.

Opening pressure:

Standard	93 to 123 kPa (0.95 to 1.25 kgf/cm ² , 13.5 to 17.8 psi)
Minimum	78 kPa (0.8 kgf/cm ² , 11.4 psi)

HINT:

Use the tester's maximum reading as the opening pressure. If the opening pressure is less than minimum, replace the radiator cap.

3. INSPECT COOLING SYSTEM FOR LEAKS

- (a) Fill the radiator with coolant and attach a radiator cap tester.
- (b) Warm up the engine.
- (c) Pump it to 118 kPa (1.2 kgf/cm², 17.1 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator or water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

4. REINSTALL RADIATOR CAP

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DRAIN ENGINE COOLANT
3. DISCONNECT RADIATOR RESERVOIR HOSE FROM RADIATOR
4. DISCONNECT UPPER RADIATOR HOSE FROM RADIATOR
5. DISCONNECT LOWER RADIATOR HOSE FROM RADIATOR
6. DISCONNECT A/T OIL COOLER HOSES FROM RADIATOR
7. REMOVE NO.2 FAN SHROUD

Remove the 2 clips and No.2 fan shroud.

8. REMOVE RADIATOR ASSEMBLY

Remove the 4 bolts and radiator assembly.

9. REMOVE NO.1 FAN SHROUD

Remove the 4 bolts and No.1 fan shroud.

INSTALLATION

1. INSTALL NO.1 FAN SHROUD

Install the No.1 fan shroud with the 4 bolts.

Torque: 5.0 N·m (50 kgf·cm, 44 in.-lbf)

2. INSTALL RADIATOR ASSEMBLY

(a) Set the radiator bracket hooks to the radiator support holes.

(b) Install the 4 bolts.

Torque: 12 N·m (120 N·m, 9 ft·lbf)

3. INSTALL NO.2 FAN SHROUD

Install the No.2 fan shroud with the 2 clips.

4. CONNECT A/T OIL COOLER HOSES TO RADIATOR
5. CONNECT UPPER RADIATOR HOSE TO RADIATOR
6. CONNECT LOWER RADIATOR HOSE TO RADIATOR
7. CONNECT RADIATOR RESERVOIR HOSE TO RADIATOR
8. FILL WITH ENGINE COOLANT
9. START ENGINE AND CHECK FOR ENGINE COOLANT LEAKS
10. RECHECK ENGINE COOLANT LEVEL
11. INSTALL ENGINE UNDER COVER

COOLANT INSPECTION

COO10-03

HINT:

Check the coolant level when the engine is cold.

1. CHECK ENGINE COOLANT LEVEL AT RADIATOR RESERVOIR

The engine coolant level should be between the "LOW" and "FULL" lines at normal temperature (20°C(68°F)).

If low, check for leaks and add "TOYOTA Long Life Coolant" or equivalent up to the "FULL" line.

2. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

(b) There should not be any excessive deposits of rust or scale around the radiator cap or radiator filler hole, and the coolant should be free from oil.

If excessively dirty, clean the coolant passages and replace the coolant.

(c) Reinstall the radiator cap.

REPLACEMENT

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

1. REMOVE ENGINE UNDER COVER

2. DRAIN ENGINE COOLANT

(a) Remove the radiator cap.

(b) Remove the 3 drain plugs on the engine and radiator, and drain the coolant.

(c) Close the 3 drain plugs.

Torque: 12.7 N·m (130 kgf·cm, 9 ft·lbf) for engine

3. REFILL WITH ENGINE COOLANT

(a) Slowly fill the system with coolant.

Capacity: 11.6 liters (12.3 US qts, 10.2 Imp. qts)

NOTICE:

Do not use plain water alone.

HINT:

- Use of improper coolants may damage the engine cooling system.
- Use "Toyota Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology.
- New Toyota vehicles are filled with Toyota Super Long Life Coolant (color is pink, premixed ethylene glycol concentration is approximately 50 % and freezing temperature is -35°C (-31°F)). When replacing the coolant, Toyota Super long Life Coolant is recommended.
- Observe the coolant level inside the radiator by pressing the inlet and outlet radiator hoses several times by hand. If the coolant level goes down, add the coolant.

(b) Install the radiator cap.

(c) Bleed the cooling system.

(1) Start the engine, and open the heater water valve.

(2) Maintain the engine speed at 2,000 – 2,500 rpm, and warm up the engine.

(d) Stop the engine, and wait until the engine coolant cools down.

(e) Refill coolant into the reservoir until it is "FULL".

4. CHECK FOR ENGINE COOLANT LEAKS

5. CHECK ENGINE COOLANT SPECIFIC GRAVITY CORRECTLY

6. REINSTALL ENGINE UNDER COVER

WATER PUMP COMPONENTS

CO01Q-11

Y

D12721

COOLING (2UZ-FE) - WATER PUMP

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE TIMING BELT (See page [EM-16](#))
3. REMOVE NO.2 IDLER PULLEY (See page [EM-16](#))

4. REMOVE WATER INLET AND INLET HOUSING ASSEMBLY

- (a) Disconnect the water bypass hose from the water inlet housing.
- (b) Remove the 2 bolts holding the water inlet housing to the water pump.
- (c) Disconnect the water inlet housing from the front water bypass joint, and remove the water inlet and inlet housing assembly.
- (d) Remove the O-ring from the water inlet housing.

5. REMOVE WATER PUMP

- (a) Remove the 5 bolts, 2 stud bolts, nut, water pump and gasket.
- (b) Remove the O-ring from the water bypass pipe.

INSPECTION

1. INSPECT WATER PUMP

- (a) Visually check the air hole and water hole for coolant leakage.

If leakage is found, replace the water pump and timing belt.

- (b) Turn the pulley, and check that the water pump bearing moves smoothly and quietly.

If necessary, replace the water pump.

2. INSPECT FLUID COUPLING

- (a) Remove the 4 nuts and fan from the fluid coupling.

- (b) Check that the fluid coupling is not damaged and that no silicon oil leaks.

If necessary, replace the fluid coupling.

- (c) Reinstall the fan to the fluid coupling with the 4 nuts.

Torque: 5.4 N·m (55 kgf·cm, 47 in.-lbf)

3. INSPECT FAN PULLEY BRACKET

Check the turning smoothness of the fan pulley.

If necessary, replace the pulley bracket.

4. INSPECT TIMING BELT COMPONENTS

(See page [EM-21](#))

INSTALLATION

1. INSTALL WATER PUMP

- Install a new O-ring to the water bypass pipe end.
- Apply soapy water to the O-ring.
- Connect the water pump to the water bypass pipe end.
- Install the water pump and a new gasket with the 5 bolts, 2 stud bolts and nut. Uniformly tighten the bolts, stud bolts and nut in several passes.

Torque:

Bolt: 21 N·m (215 kgf·cm, 15 ft·lbf)

Stud bolt and nut: 18 N·m (185 kgf·cm, 13 ft·lbf)

2. INSTALL WATER INLET AND INLET HOUSING ASSEMBLY

- Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the water inlet housing and water pump.
 - Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces and sealing groove.
 - Thoroughly clean all components to remove all the loose material.
 - Using a non-residue solvent, clean both sealing surfaces.

- Apply seal packing to the sealing groove of water inlet housing as shown in the illustration.

Seal packing: Part No. 08826-00100 or equivalent

- Install a nozzle that has been cut to a 2 – 3 mm (0.08 – 0.12 in.) opening.
 - Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied.
 - Immediately remove nozzle from the tube and reinstall cap.
- Install a new O-ring to the water inlet housing.
 - Apply soapy water on the O-ring.
 - Attach the water inlet housing end to the front water bypass joint hole.

- (f) Install the water inlet and housing assembly with the 2 bolts. Alternately tighten the bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

HINT:

Each bolt length is indicated in the illustration.

Bolt length:

76 mm (3.00 in.) for A

22 mm (0.87 in.) for B

- (g) Connect the water bypass hose to the water inlet housing.

3. **INSTALL NO.2 IDLER PULLEY (See page [EM-23](#))**
4. **INSTALL TIMING BELT (See page [EM-23](#))**
5. **FILL WITH ENGINE COOLANT**
6. **START ENGINE AND CHECK FOR ENGINE COOLANT LEAKS**
7. **RECHECK ENGINE COOLANT LEVEL**

THERMOSTAT COMPONENTS

CO0IU-08

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

HINT:

Removal of the thermostat would have an adverse effect, causing a lowering of cooling efficiency. Do not remove the thermostat, even if the engine tends to overheat.

1. DRAIN ENGINE COOLANT

2. DISCONNECT WATER INLET FROM WATER INLET HOUSING

Remove the 3 nuts and disconnect the water inlet from the water inlet housing.

3. REMOVE THERMOSTAT

- (a) Remove the thermostat.
- (b) Remove the gasket from the thermostat.

INSPECTION

INSPECT THERMOSTAT

HINT:

The thermostat is numbered with the valve opening temperature.

(a) Immerse the thermostat in water and gradually heat the water.

(b) Check the valve opening temperature.

Valve opening temperature: 80 to 84 °C (176 to 183 °F)

If the valve opening temperature is not as specified, replace the thermostat.

(c) Check the valve lift.

Valve lift: 10 mm (0.39 in.) or more at 95 °C (203 °F)

If the valve lift is not as specified, replace the thermostat.

(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 40 °C (104 °F)).

If not closed, replace the thermostat.

INSTALLATION

1. PLACE THERMOSTAT IN WATER INLET HOUSING

- (a) Install a new gasket to the thermostat.
- (b) Insert the thermostat into the water inlet housing with the jiggle valve facing straight upward.

HINT:

The jiggle valve may be set within 30° of either side of the prescribed position.

2. INSTALL WATER INLET

Install the water inlet with the 3 nuts.

Torque: 19 N·m (195 kgf·cm, 14 ft·lbf)

3. **FILL WITH ENGINE COOLANT**
4. **START ENGINE AND CHECK FOR COOLANT LEAKS**
5. **RECHECK ENGINE COOLANT LEVEL**

RADIATOR ON-VEHICLE CLEANING

CO1C6-02

INSPECT FINS FOR BLOCKAGE

If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.

NOTICE:

- If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fin, so keep the following injection distance.

Injection Pressure	Injection Distance
2,942 to 4,903 kPa (30 to 80 kgf·cm ² , 427 to 711 psi)	300 mm (11.81 in.)
4,903 to 7,845 kPa (50 to 80 kgf·cm ² , 711 to 1,138 psi)	500 mm (19.69 in.)

- If the fins are bent, straighten them with a screwdriver or pliers.
- Never apply water directly onto the electronic components.

ON-VEHICLE INSPECTION

1. REMOVE RADIATOR CAP

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

2. INSPECT RADIATOR CAP

NOTICE:

- If the radiator cap has contaminations, always rinse it with water.
 - Before using a radiator cap tester, wet the relief valve and pressure valve with engine coolant or water.
 - When performing steps (a) and (b) below, keep the tester at an angle of over 30° above the horizontal.
- (a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push/(3 seconds or more)

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the radiator cap.

- (b) Pump the radiator cap tester, and measure the relief valve opening pressure.

Pump speed: 1 push within 1 second

NOTICE:

This pump speed is for the first pump only (in order to close the vacuum valve). After this, the pump speed can be reduced.

Opening pressure:

Standard	74 to 103 kPa (0.75 to 1.05 kgf/cm ² , 10.7 to 14.9 psi)
Minimum	59 kPa (0.6 kgf/cm ² , 8.6 psi)

HINT:

Use the tester's maximum reading as the opening pressure. If the opening pressure is less than minimum, replace the radiator cap.

3. INSPECT COOLING SYSTEM FOR LEAKS

- (a) Fill the radiator with coolant and attach a radiator cap tester.
- (b) Warm up the engine.
- (c) Pump it to 118 kPa (1.2 kgf/cm², 17.1 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator or water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

4. REINSTALL RADIATOR CAP

COMPONENTS

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DRAIN ENGINE COOLANT
3. DISCONNECT RADIATOR RESERVOIR HOSE FROM RADIATOR
4. DISCONNECT UPPER RADIATOR HOSE FROM RADIATOR
5. DISCONNECT LOWER RADIATOR HOSE FROM RADIATOR
6. DISCONNECT A/T OIL COOLER HOSES FROM RADIATOR
7. REMOVE NO.2 FAN SHROUD

Remove the 2 clips and No.2 fan shroud.

8. REMOVE RADIATOR ASSEMBLY

Remove the 4 bolts and radiator assembly.

9. REMOVE NO.1 FAN SHROUD

Remove the 4 bolts and No.1 fan shroud.

INSTALLATION

1. INSTALL NO.1 FAN SHROUD

Install the No.1 fan shroud with the 4 bolts.

Torque: 5.0 N·m (50 kgf·cm, 44 in.-lbf)

2. INSTALL RADIATOR ASSEMBLY

(a) Set the radiator bracket hooks to the radiator support holes.

(b) Install the 4 bolts.

Torque: 12 N·m (120 N·m, 9 ft-lbf)

3. INSTALL NO.2 FAN SHROUD

Install the No.2 fan shroud with the 2 clips.

4. CONNECT A/T OIL COOLER HOSES TO RADIATOR
5. CONNECT UPPER RADIATOR HOSE TO RADIATOR
6. CONNECT LOWER RADIATOR HOSE TO RADIATOR
7. CONNECT RADIATOR RESERVOIR HOSE TO RADIATOR
8. FILL WITH ENGINE COOLANT
9. START ENGINE AND CHECK FOR ENGINE COOLANT LEAKS
10. RECHECK ENGINE COOLANT LEVEL
11. INSTALL ENGINE UNDER COVER

OIL AND FILTER INSPECTION

LU008-01

1. CHECK ENGINE OIL QUALITY

- (a) Check the oil for deterioration, water mixing, discoloring or thinning.
- (b) If the oil quality is visibly poor, replace it.

Oil grade:

ILSAC multigrade engine oil.

SAE 5W-30 is the best choice for good fuel economy, and good starting in cold weather.

If SAE 5W-30 is not available, SAE 10W-30 may be used. However, it should be replaced with SAE 5W-30 at the next oil replacement.

2. CHECK ENGINE OIL LEVEL

Check the engine oil level 5 minutes or more after the engine has stopped.

If the engine is too hot, a false level will be read. The oil level should be between the low and full level marks of the dipstick. If it is below the low level mark, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil over the full level mark.

3. REMOVE OIL PRESSURE SWITCH ASSY

- (a) Disconnect the oil pressure switch connector.
- (b) Using a 24 mm deep socket wrench, remove the oil pressure switch.

4. INSTALL OIL PRESSURE GAUGE

- (a) Install the oil pressure gauge.

5. WARM UP ENGINE

6. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf·cm ² , 4.3 psi) or more
At 3,000 rpm	294 to 588 kPa (3.0 to 6.0 kgf·cm ² , 43 to 85 psi)

7. INSTALL OIL PRESSURE SWITCH

- (a) Remove the oil pressure gauge.
- (b) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

- (c) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: 15 N·m (152 kgf·cm, 11 ft·lbf)

HINT:

Do not start the engine for 1 hour after installation.

- (d) Connect the oil pressure switch connector.

8. START ENGINE AND CHECK FOR LEAKS

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Precautions should be taken when replacing engine oil to minimize the risk of contact with used engine oil. Protective clothing and gloves that cannot be penetrated by oil should be worn. The skin should be washed with soap and water, or use water-less hand cleaner, to remove any used engine oil thoroughly. Do not use gasoline, thinners, or solvents.
- In order to preserve the environment, used oil and used oil filters must be disposed of at designated disposal sites.

1. DRAIN ENGINE OIL

- (a) Remove the engine under cover seal No. 3.
- (b) Remove the oil pan drain plug and drain the engine oil.
- (c) Clean the oil pan drain plug and install it and a new gasket.

Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

2. REMOVE OIL FILTER

When using a container:

- (a) Remove the drain pipe cap.
- (b) While removing the oil filter with SST, catch the oil from the oil filter with a container.
SST 09228-07501
- (c) Install the drain pipe cap.
- (d) Clean the oil catch plate.

When using a drain hose:

- (e) Remove the drain pipe cap.
- (f) Connect a drain hose to the oil filter bracket.

HINT:

- Drain hose inside diameter: 8 mm (0.31 in.)
 - Drain hose length: 900 mm (35.43 in.)
- (g) Pass the drain hose down through the engine under cover, and put the drain oil container beneath the drain hose in order to catch the oil from the oil filter.

- (h) Using SST, remove the oil filter.
SST 09228-07501
- (i) Remove the drain hose and install the drain pipe cap.
- (j) Clean the oil catch plate.

3. INSTALL OIL FILTER

- (a) Clean the oil filter contact surface on the oil filter bracket.
- (b) Lubricate the rubber gasket of a new oil filter with clean engine oil.
- (c) Tighten the oil filter by hand until the rubber gasket contacts the seat of the filter bracket.

- (d) Using SST, give it an additional 3/4 turn to set the filter.
SST 09228-07501

4. ADD ENGINE OIL

- (a) Fill with new engine oil.

Capacity:

Drain and refill:

w/ Oil filter change: 4.5 liters (4.8 US qts, 4.0 Imp. qts)

w/o Oil filter change: 4.2 liters (4.4 US qts, 3.7 Imp. qts)

Dry fill: 5.6 liters (5.9 US qts, 4.9 Imp. qts)

- (b) Reinstall the oil filler cap.

5. CHECK FOR ENGINE OIL LEAKS

6. CHECK ENGINE OIL LEVEL

OIL PUMP COMPONENTS

LU00A-01

γ N·m (kgf·cm, ft·lbf) : Specified torque

LUBRICATION (1GR-FE) - OIL PUMP

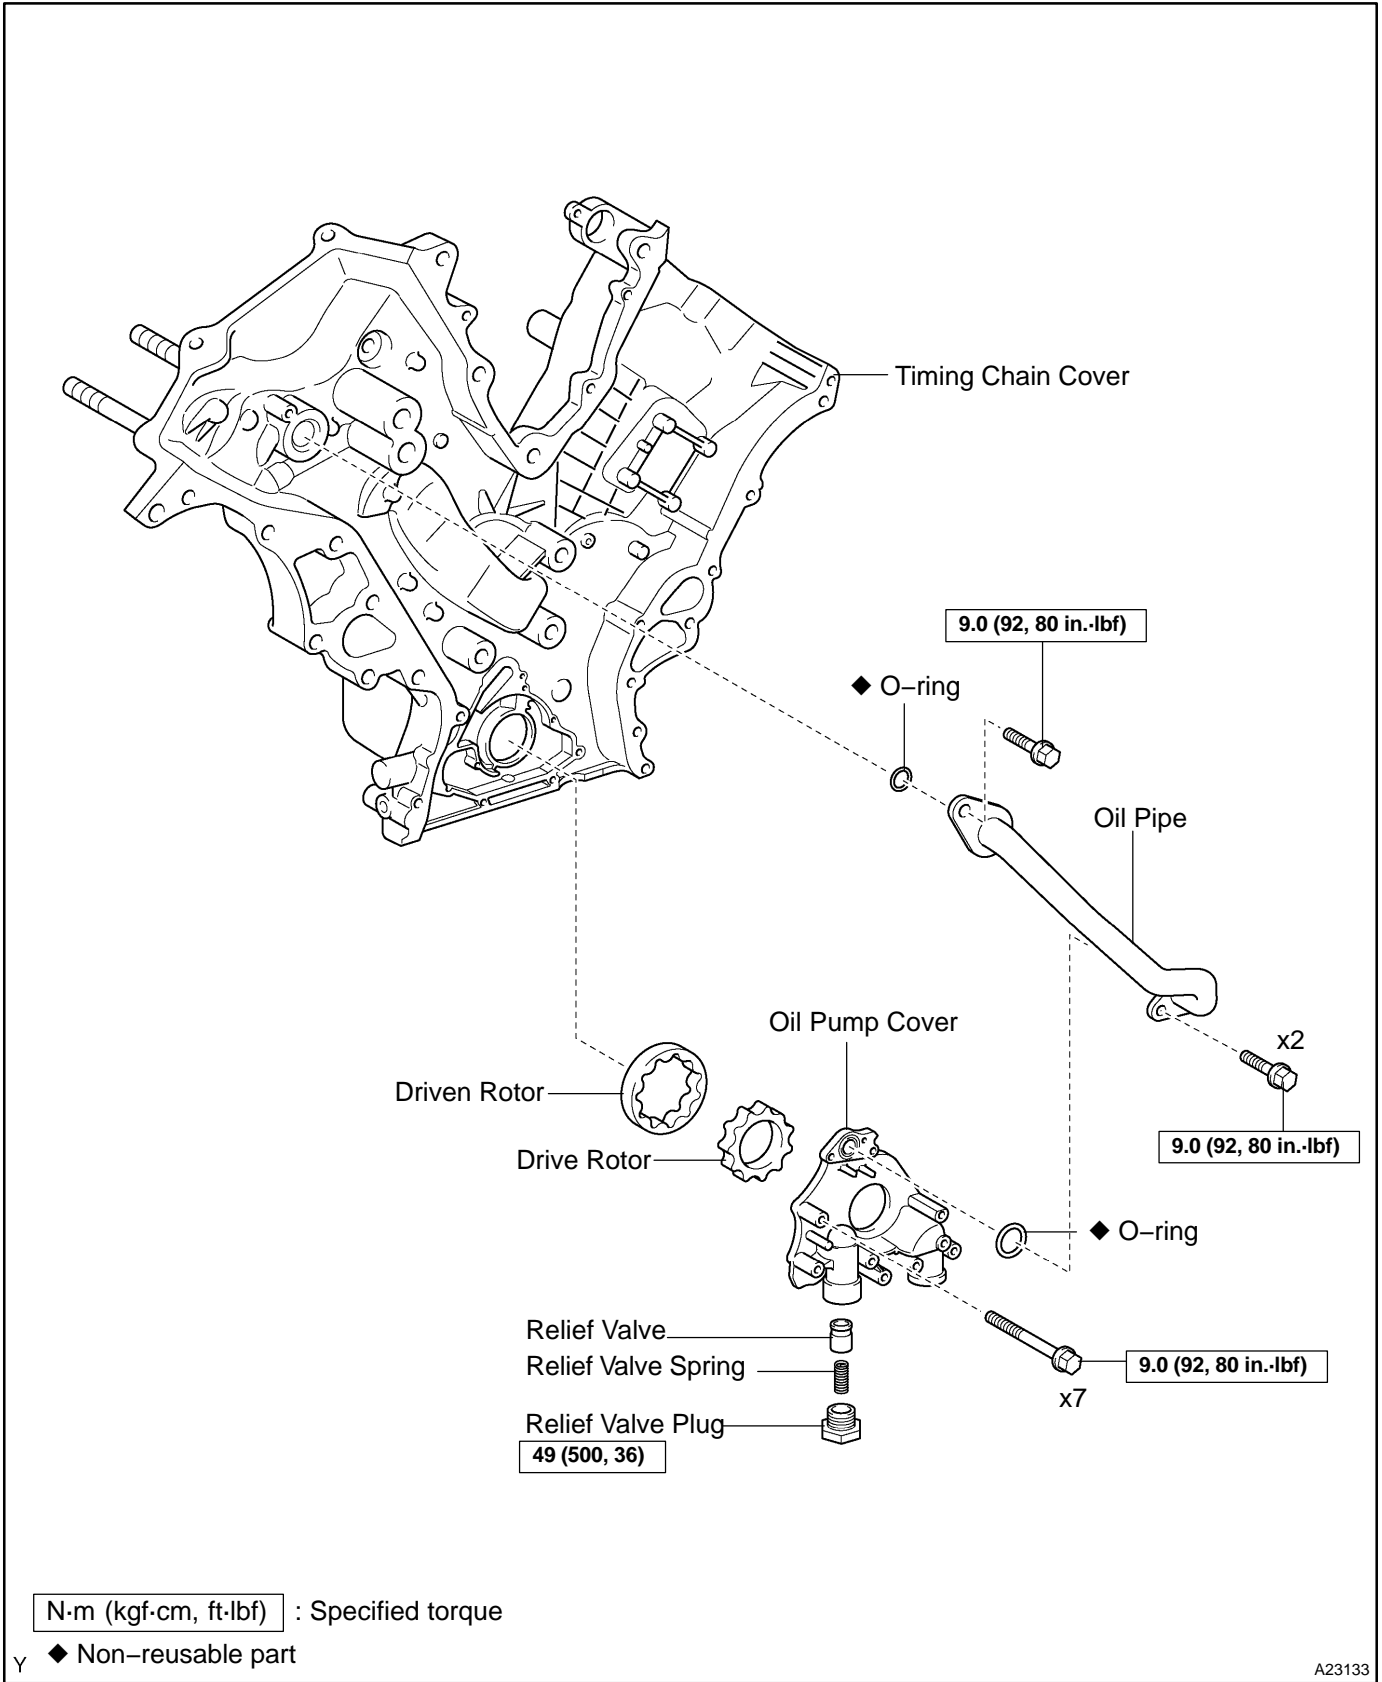

LUBRICATION (1GR-FE) - OIL PUMP

REMOVAL

1. REMOVE TIMING CHAIN COVER (See page [EM-32](#))

2. REMOVE OIL PUMP COVER

- (a) Remove the 3 bolts and oil pipe.
- (b) Remove the 2 O-rings.

- (c) Remove the 7 bolts, oil pump cover, drive rotor and driven rotor.

3. REMOVE OIL PUMP RELIEF VALVE

Remove the plug, spring and relief valve.

INSPECTION

1. INSPECT OIL PUMP RELIEF VALVE

Coat the valve with engine oil and check that it falls smoothly into the valve hole by its own weight.

If it does not, replace the relief valve. If necessary, replace the oil pump assembly.

2. INSPECT OIL PUMP ROTOR SET

(a) Place the drive and driven rotors into the timing chain cover with the marks facing upward.

(b) Inspect rotor tip clearance.

Using a feeler gauge, measure the clearance between each drive and driven rotor tip.

Standard clearance:

0.06 to 0.16 mm (0.0024 to 0.0063 in.)

Maximum tip clearance: 0.16 mm (0.0063 in.)

If the clearance is greater than the maximum, replace the rotors as a set.

(c) Inspect rotor side clearance.

Using a feeler gauge and precision straight edge, measure the clearance between the rotors and the precision straight edge.

Standard clearance:

0.03 to 0.09 mm (0.0012 to 0.0035 in.)

Maximum side clearance: 0.09 mm (0.0035 in.)

If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.

(d) Inspect rotor body clearance.

Using a feeler gauge, measure the clearance between the driven rotor and the body.

Standard clearance:

0.250 to 0.325 mm (0.0098 to 0.0128 in.)

Maximum body clearance: 0.325 mm (0.0128 in.)

If the clearance is greater than the maximum, replace the drive and driven rotors. If necessary, replace the timing chain cover assembly.

REPLACEMENT

REPLACE TIMING CHAIN COVER OIL SEAL

(a) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the oil pump assembly. Wrap the tip of the screwdriver with tape.

(b) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST 09226-10010

(c) Apply MP grease to the oil seal lip.

INSTALLATION

1. INSTALL OIL PUMP RELIEF VALVE

- (a) Coat the relief valve with engine oil and insert the relief valve and spring into the valve hole.
- (b) Install the relief valve plug.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

2. INSTALL OIL PUMP COVER

- (a) Apply new engine oil to the drive and driven rotors.
- (b) Place the drive and driven rotors into the timing chain cover with the marks facing upward.

- (c) Install the oil pump cover with the 7 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)
- (d) Install a new O-ring to the oil pump cover.
- (e) Install a new O-ring to the oil pipe.

- (f) Install the oil pipe with the 3 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)
- ### 3. INSTALL TIMING CHAIN COVER (See page [EM-44](#))

OIL COOLER COMPONENTS

LU00F-01

N

A23253

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE OIL FILTER
3. REMOVE V-BANK COVER
4. REMOVE OIL COOLER
 - (a) Disconnect the 2 oil cooler hoses from the oil cooler.

- (b) Remove the union bolt, plate washer and oil cooler.
 - (c) Remove the O-ring from the oil cooler.
5. REMOVE OIL FILTER BRACKET
 - (a) Disconnect the lower radiator hose.
 - (b) Remove the 2 nuts, 3 bolts, oil filter bracket and O-ring.

INSPECTION

INSPECT OIL COOLER

Check the oil cooler for damage or clogging.
If necessary, replace the oil cooler.

INSTALLATION

1. INSTALL OIL FILTER BRACKET

- (a) Install a new O-ring and oil filter bracket with the 2 nuts and 3 bolts.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

- (b) Connect the lower radiator hose.

2. INSTALL OIL COOLER

- (a) Clean the contact surface of the oil filter bracket with the cooler mounting.
- (b) Place a new O-ring on the oil cooler.
- (c) Apply a light coat of engine oil to the threads of the union bolt.

- (d) Install the oil cooler and plate washer with the union bolt.

Torque: 68 N·m (693 kgf·cm, 50 ft·lbf)

- (e) Connect the 2 oil cooler hoses to the oil cooler.

3. INSTALL OIL FILTER

4. ADD ENGINE COOLANT

5. ADD ENGINE OIL

6. INSTALL V-BANK COVER

OIL AND FILTER INSPECTION

LU0GV-05

1. CHECK ENGINE OIL QUALITY

Check the oil for deterioration, entry of water, discoloring or thinning.

If the quality is visibly poor, replace the oil.

Oil grade:

ILSAC multigrade engine oil.

2. CHECK ENGINE OIL LEVEL

The oil level should be between the "L" and "F" marks on the dipstick.

If low, check for leakage and add oil up to the "F" mark.

NOTICE:

Do not fill with engine oil above the "F" mark.

3. REMOVE ENGINE UNDER COVER

4. REMOVE OIL PRESSURE SWITCH

5. INSTALL OIL PRESSURE GAUGE

6. WARM UP ENGINE

Allow the engine to warm up to normal operating temperature.

7. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf/cm ² , 4.2 psi) or more
At 3,000 rpm	294 - 588 kPa (3.0 - 6.0 kgf/cm ² , 43 - 85 psi)

8. REMOVE OIL PRESSURE GAUGE

9. REINSTALL OIL PRESSURE SWITCH

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Reinstall the oil pressure switch.

10. START ENGINE, AND CHECK FOR ENGINE OIL LEAKS

11. REINSTALL ENGINE UNDER COVER

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with mineral oil will result in the removal of natural fats from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Care should be taken, therefore, when changing engine oil to minimize the frequency and length of time your skin is exposed to used engine oil. Protective clothing and gloves that cannot be penetrated by oil should be worn. The skin should be thoroughly washed with soap and water, or use water-less hand cleaner, to remove any used engine oil. Do not use gasoline, thinners, or solvents.
- In order to preserve the environment, used oil and used oil filters must be disposed of only at designated disposal sites.

1. **w/ Oil filter change:**
REMOVE ENGINE UNDER COVER
2. **DRAIN ENGINE OIL**
 - (a) Remove the oil filler cap.

- (b) Remove the oil drain plug and gasket, and drain the oil into a container.

3. **REPLACE OIL FILTER**
 - (a) Using SST, remove the oil filter.
SST 09228-07501
 - (b) Clean the oil filter contact surface on the oil filter mounting.
 - (c) Lubricate the filter rubber gasket with clean engine oil.

- (d) Tighten the oil filter by hand until the rubber gasket contacts the seat of the filter mounting.

- (e) Using SST, give it an additional 3/4 turn to seat the filter.
SST 09228-07501

4. REFILL WITH ENGINE OIL

- (a) Clean and install the oil drain plug with a new gasket.
Torque: 39 N·m (400 kgf-cm, 29 ft-lbf)
- (b) Fill with fresh engine oil.

Capacity:

Drain and refill	w/ Oil filter change	6.2 liters (6.6 Us qts, 5.5 Imp. qts)
	w/o Oil filter change	5.7 liters (6.0 Us qts, 5.0 Imp. qts)
Dry fill		7.1 liters (7.5 Us qts, 6.2 Imp. qts)

- (c) Reinstall the oil filler cap.

HINT:

Install the oil filler cap facing the direction as shown in the illustration.

- 5. START ENGINE AND CHECK FOR ENGINE OIL LEAKS**
- 6. RECHECK ENGINE OIL LEVEL**
- 7. w/ Oil filter change:
REINSTALL ENGINE UNDER COVER**

OIL PUMP COMPONENTS

LU08P-09

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

HINT:

When repairing the oil pump, the oil pan and strainer should be removed and cleaned.

1. **REMOVE ENGINE FROM VEHICLE**
(2WD: See page [EM-79](#))
(4WD: See page [EM-92](#))
2. **INSTALL ENGINE TO ENGINE STAND FOR DISASSEMBLY**
3. **REMOVE TIMING BELT** (See page [EM-16](#))
4. **REMOVE NO.1 IDLER PULLEY** (See page [EM-16](#))
5. **REMOVE NO.2 IDLER PULLEY** (See page [EM-16](#))
6. **REMOVE CRANKSHAFT TIMING PULLEY**
(See page [EM-16](#))
7. **REMOVE CRANKSHAFT POSITION SENSOR**
(See page [IG-11](#))

8. **REMOVE OIL DIPSTICK AND GUIDE**
 - (a) Remove the bolt holding the oil dipstick to the LH cylinder head.
 - (b) Pull out the dipstick guide together with the dipstick from the No.1 oil pan.
 - (c) Remove the O-ring from the dipstick guide.

9. REMOVE OIL FILTER, OIL COOLER AND FILTER BRACKET ASSEMBLY

- (a) Disconnect the oil pressure switch connector.
- (b) Take out the vinyl tape, and disconnect the wire from the clamp.
- (c) Turn the clamp counterclockwise, and remove the clamp from the oil filter bracket.
- (d) Disconnect the oil cooler hose from the oil cooler.

- (e) Remove the 2 bolts, nut, the oil filter, oil cooler and filter bracket assembly.
- (f) Remove the gasket from the filter bracket.

10. REMOVE NO.2 OIL PAN

- (a) Remove the 24 bolts and 2 nuts.
- (b) Insert the blade of SST between the No.1 and No.2 oil pans, cut off applied sealer and remove the No.2 oil pan.
SST 09032-00100

NOTICE:

- Be careful not to damage the No.2 oil pan contact surface of the No.1 oil pan.
- Be careful not to damage the No.2 oil pan flange.

11. REMOVE OIL PAN Baffle PLATE

Remove the 7 bolts, 2 nuts and baffle plate.

12. REMOVE NO.1 OIL PAN

- (a) Remove the 18 bolts and 2 nuts.

- (b) Using a screwdriver, remove the No.1 oil pan by prying between the oil pan and cylinder block in the sequence shown.

NOTICE:

Be careful not to damage the contact surface of the cylinder block and No.1 oil pan.

13. REMOVE OIL STRAINER

Remove the 2 bolt, 2 nuts, oil strainer and gasket.

14. REMOVE OIL PUMP

(a) Remove the 8 bolts.

HINT:

Use a 6 mm hexagon wrench for the hexagon head bolt.

(b) Using a screwdriver, remove the oil pump by prying the portions between the oil pump and cylinder block.

NOTICE:

Be careful not to damage the contact surface of the cylinder block and oil pump.

(c) Remove the O-ring from the cylinder block.

DISASSEMBLY

1. REMOVE RELIEF VALVE

Remove the plug, compression spring and relief valve.

2. REMOVE DRIVE AND DRIVEN ROTORS

Remove the 10 screws, pump body cover, the drive and driven rotors.

INSPECTION

1. INSPECT RELIEF VALVE

Coat the valve with engine oil and check that it falls smoothly into the valve hole by its own weight.

If it doesn't, replace the relief valve. If necessary, replace the oil pump assembly.

2. INSPECT DRIVE AND DRIVEN ROTORS

(a) Place the drive and driven rotors into the oil pump body. (see page [LU-14](#))

(b) Inspect the rotors for the body clearance. Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard tip clearance:

0.060 to 0.180 mm (0.0024 to 0.0071 in.)

Maximum tip clearance: 0.18 mm (0.0071 in.)

If the tip clearance is greater than maximum, replace the rotors as a set.

(c) Inspect the rotors for the side clearance. Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.

Side clearance:

0.030 to 0.090 mm (0.0012 to 0.0035 in.)

Maximum body clearance: 0.09 mm (0.0035 in.)

If the side clearance is greater than maximum, replace the rotors as a set. If necessary, replace the oil pump assembly.

(d) Inspect the rotor for the body clearance. Using a feeler gauge, measure the clearance between the driven rotor and body.

Standard body clearance:

0.250 to 0.325 mm (0.0098 to 0.0128 in.)

Maximum body clearance: 0.325 mm (0.0128 in.)

If the body clearance is greater than maximum, replace the rotors as a set. If necessary, replace the oil pump assembly.

(e) Remove the drive and drive rotors.

REPLACEMENT

REPLACE CRANKSHAFT FRONT OIL SEAL

HINT:

There are 2 methods ((a) and (b)) to replace the oil seal.

(a) If the oil pump is removed from the cylinder block:

(1) Using a screwdriver, pry out the oil seal.

(2) Using SST and a hammer, tap in a new oil seal until its surface is flush with the oil pump body edge.

SST 09316-60011 (09316-00011)

(3) Apply MP grease to the oil seal lip.

(b) If the oil pump is installed to the cylinder block:

(1) Using a knife, cut off the oil seal lip.

(2) Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Tape the screwdriver tip.

(3) Apply MP grease to a new oil seal lip.

(4) Using SST and a hammer, tap in the oil seal until its surface is flush with the oil pump body edge.

SST 09316-60011 (09316-00011)

REASSEMBLY

1. INSTALL DRIVE AND DRIVEN ROTORS

- (a) Place the drive and driven rotors into pump body with the marks facing the pump body cover side.

- (b) Install the pump body cover with the 10 screws.

Torque: 10 N·m (105 kgf-cm, 7 ft-lbf)

2. INSTALL RELIEF VALVE

- (a) Insert the relief valve and compression spring into the oil pump body hole.
- (b) Install the plug.

Torque: 49 N·m (500 kgf-cm, 36 ft-lbf)

INSTALLATION

1. INSTALL OIL PUMP

- (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the oil pump and cylinder block.
 - Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces and sealing groove.
 - Thoroughly clean all components to remove all the loose material.
 - Using a non-residue solvent, clean both sealing surfaces.
- (b) Apply seal packing to the oil pump as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

NOTICE:

Avoid applying an excessive amount to the surface. Be particularly careful near oil passage.

- Install a nozzle that has been cut to a 2 – 3 mm (0.08 – 0.12 in.) opening.
- Parts must be assembled within 3 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.

- (c) Install a new O-ring to the cylinder block.
- (d) Engage the spline teeth of the oil pump drive gear with the large teeth of the crankshaft, and slide the oil pump on the crankshaft.

- (e) Install the oil pump with the 8 bolts. Uniformly tighten the bolts in several passes.

Torque:

30.5 N·m (310 kgf·cm, 22 ft·lbf) for 14 mm head

15.5 N·m (160 kgf·cm, 11 ft·lbf) for others

HINT:

- Use a 6 mm hexagon wrench for the hexagon head bolt.
- Each bolt length is indicated in the illustration.

Bolt length:

- 35 mm (1.38 in.) for A of 12 mm head
- 50 mm (1.97 in.) for B of 12 mm head
- 106 mm (4.17 in.) for C of 12 mm head
- 40 mm (1.57 in.) for D of 14 mm head
- 30 mm (1.18 in.) for E of 6 mm hexagon head

2. INSTALL OIL STRAINER

Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

3. INSTALL NO.1 OIL PAN

- (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the No.1 oil pan, cylinder block, oil pump and rear oil seal retainer.
- Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces and sealing groove.
 - Thoroughly clean all components to remove all the loose material.
 - Using a non-residue solvent, clean both sealing surfaces.
- (b) Apply seal packing to the No.1 oil pan as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- Install a nozzle that has been cut to a 2 – 3 mm (0.08 – 0.12 in.) opening.
- Parts must be assembled within 3 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.

(c) Temporarily install the No.1 oil pan with the 18 bolts, stud bolt and 2 nuts.

HINT:

Each bolt length is indicated in the illustration.

Bolt length:

20 mm (0.79 in.) for A of 10 mm head

25 mm (0.98 in.) for B of 12 mm head

60 mm (2.36 in.) for C of 12 mm head

35 mm (1.38 in.) for D of 10 mm head

(d) Set the No.1 oil pan as shown in the illustration.

NOTICE:

Make sure the clearance between the rear ends of the No.1 oil pan and cylinder block is 0.2 mm (0.008 in.) or less. If the clearance is more than 0.2 mm (0.008 in.), the No.1 oil pan will be stretched.

(e) Uniformly tighten the bolts, and nuts in several passes.

Torque:

7.5 N·m (76 kgf·cm, 66 in.-lbf) for 10 mm head

28 N·m (290 kgf·cm, 21 ft·lbf) for 12 mm head

4. INSTALL OIL PAN Baffle PLATE

Install the baffle plate with the 7 bolts and 2 nuts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

5. INSTALL NO.2 OIL PAN

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the No.1 and No.2 oil pans.

- Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces and sealing groove.
- Thoroughly clean all components to remove all the loose material.
- Using a non-residue solvent, clean both sealing surfaces.

NOTICE:

Do not use a solvent which will affect the painted surfaces.

(b) Apply seal packing to the No.2 oil pan as shown in the illustration.

Seal packing: Part No. 08826-00080 or equivalent

- Install a nozzle that has been cut to a 3 – 4 mm (0.12 – 0.16 in.) opening.

- Parts must be assembled within 3 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.

(c) Install the No.2 oil pan with the 24 bolts and 2 nuts. Uniformly tighten the bolts and nuts in several passes.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

6. INSTALL CRANKSHAFT POSITION SENSOR

(See page [IG-13](#))

7. INSTALL OIL FILTER, OIL COOLER AND FILTER BRACKET ASSEMBLY

(a) Install a new gasket to the oil filter bracket.

(b) Install the oil filter, oil cooler and filter bracket assembly with the 2 bolts and nut.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

(c) Connect the oil cooler hose to the oil cooler.

(d) Install the clamp.

Turn the clamp clockwise, and install the clamp to the oil filter bracket.

(e) Install the wire to the clamp with a vinyl tape.

(f) Connect the oil pressure switch connector.

8. INSTALL OIL DIPSTICK GUIDE AND DIPSTICK

(a) Install a new O-ring to the dipstick guide.

(b) Apply soapy water to the O-ring.

(c) Push in the oil dipstick guide end into the guide hole of the No.1 oil pan.

(d) Install the oil dipstick guide with the bolt.

Torque: 15 N·m, (155 kgf·cm, 11 ft·lbf)

(e) Install the oil dipstick.

9. INSTALL CRANKSHAFT TIMING PULLEY

(See page [EM-23](#))

10. **INSTALL NO.1 IDLER PULLEY** (See page [EM-23](#))
11. **INSTALL NO.2 IDLER PULLEY** (See page [EM-23](#))
12. **INSTALL TIMING BELT** (See page [EM-23](#))
13. **DISCONNECT ENGINE FROM ENGINE STAND**
14. **INSTALL ENGINE TO VEHICLE**
(2WD: See page [EM-83](#))
(4WD: See page [EM-95](#))

OIL COOLER COMPONENTS

LU08W-10

N·m (kgf·cm, ft·lbf) : Specified torque
◆ Non-reusable part

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE OIL FILTER (See page [LU-2](#))

3. REMOVE OIL COOLER

- (a) Disconnect the 2 oil cooler hoses from the oil cooler.
- (b) Remove the union bolt, plate washer and oil cooler.
- (c) Remove the O-ring from the oil cooler.

INSPECTION

INSPECT OIL COOLER

Check the oil cooler for damage or clogging.
If necessary, replace the oil cooler.

INSTALLATION

1. INSTALL OIL COOLER

- (a) Clean the oil cooler contact surface on the cooler mounting.

- (b) Place a new O-ring to the oil cooler.
- (c) Apply a light coat of engine oil on the threads and under the head of the union bolt.

- (d) Install the oil cooler and plate washer with the union bolt.
Torque: 68.6 N·m (700 kgf·cm, 51 ft·lbf)
 - (e) Connect the 2 oil cooler hoses to the oil cooler.
2. **INSTALL OIL FILTER (See page [LU-2](#))**
 3. **FILL WITH ENGINE COOLANT**
 4. **START ENGINE AND CHECK FOR ENGINE OIL LEAKS**
 5. **CHECK ENGINE OIL LEVEL**

OIL NOZZLE COMPONENTS

LU01H-08

REMOVAL

1. REMOVE CRANKSHAFT (See page [EM-100](#))
2. REMOVE OIL NOZZLE (WITH RELIEF VALVE)

Using a 5 mm hexagon wrench, remove the bolt and oil nozzle.

INSPECTION

INSPECT RELIEF VALVE (OIL NOZZLE)

Push the valve with a wooden stick to check if it is stuck.

If stuck, replace the relief valve.

INSTALLATION

1. INSTALL OIL NOZZLE (WITH RELIEF VALVE)

Using a 5 mm hexagon wrench, install the oil nozzle with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80 in.-lbf)

2. INSTALL CRANKSHAFT (See page [EM-118](#))

IGNITION SYSTEM

ON-VEHICLE INSPECTION

IGOMI-01

NOTICE:

”Cold” and ”Hot” in this section mean the temperature of the coils themselves. ”Cold” is from -10°C (14°F) to 50°C (122°F) and ”Hot” is from 50°C (122°F) to 100°C (212°F).

1. INSPECT IGNITION COIL AND SPARK TEST

(a) Confirm DTCs.

NOTICE:

If a DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

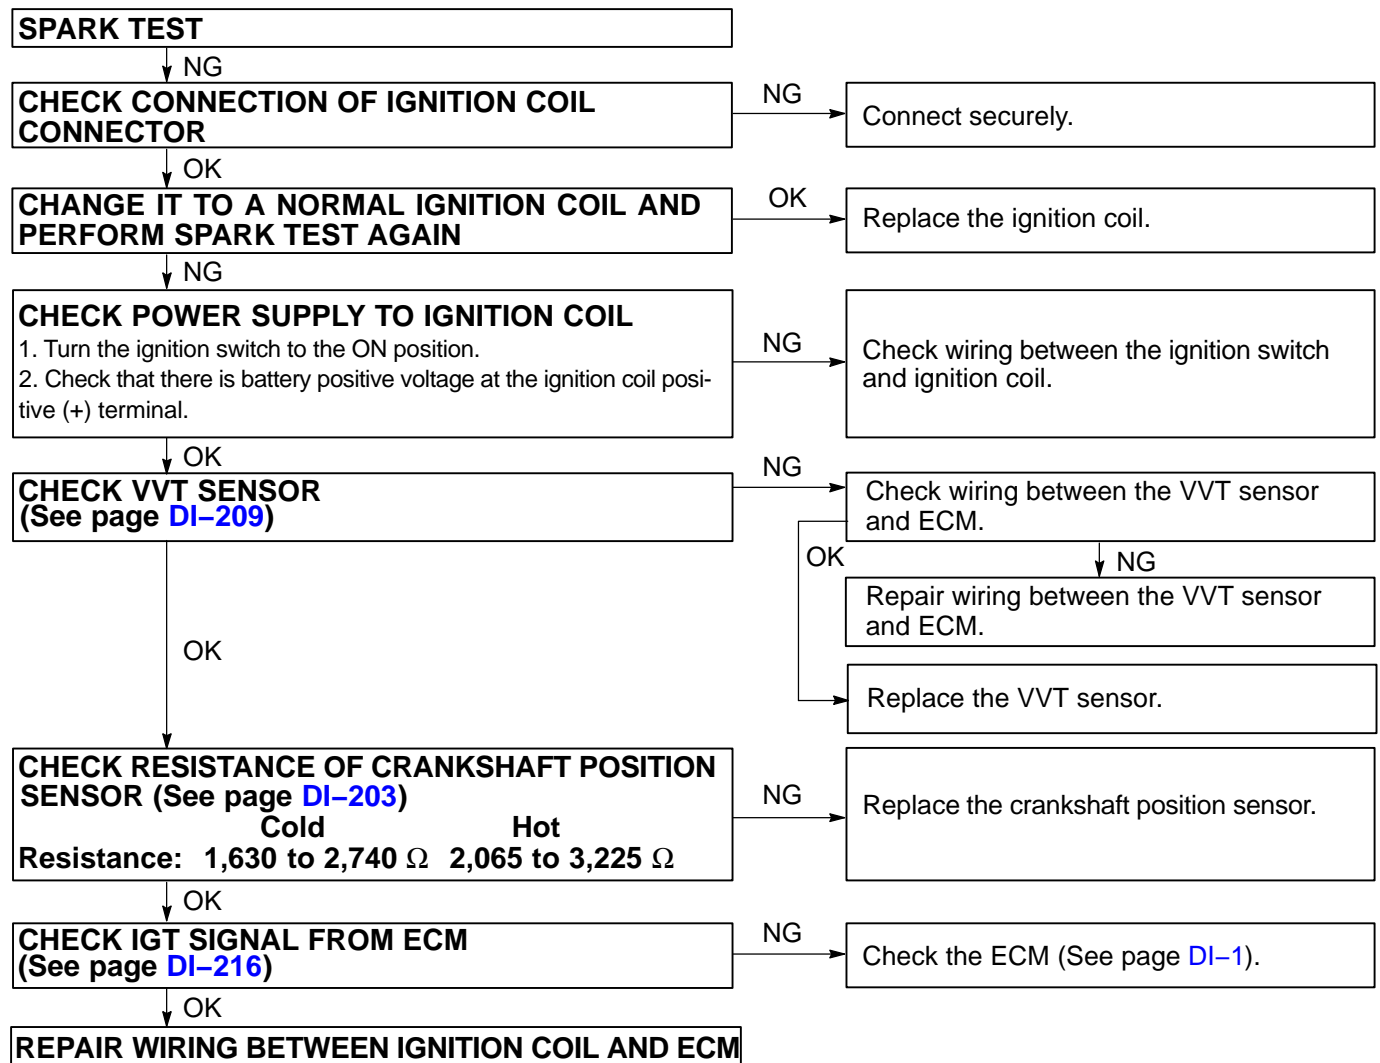

(b) Check that spark occurs.

- (1) Remove the ignition coils.
- (2) Using a 16 mm (0.63 in) plug wrench, remove the spark plugs.
- (3) Install the spark plugs to each ignition coil, and connect the ignition coil connectors.
- (4) Disconnect the 6 injector connectors.
- (5) Ground the spark plugs.
- (6) Check if spark occurs while the engine is being cranked.

NOTICE:

- Be sure to ground the spark plugs when checking.
- Replace the ignition coil when subjected to an impact.
- Do not crank the engine for more than 2 seconds.

If spark does not occur, do the test as follows:

- (c) Using a 16 mm (0.63 in.) plug wrench, install the spark plugs.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)
- (d) Install the ignition coils.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

IG0152

2. INSPECT SPARK PLUGS

- (a) Clean the spark plugs.
Air pressure: Below 588 kPa (6 kg/cm², 85 psi)
Duration: 20 seconds or less

P03783

- (b) Check the spark plug for any damage to its thread and insulator.

If there is damage, replace the spark plug.

Recommended spark plug:

NGK made	LFR6C-11
DENSO made	K20HR-U11

P03792

- (c) Adjust electrode gap.
Electrode gap: 1.0 to 1.1 mm (0.039 to 0.043 in.)
Maximum electrode gap: 1.46 mm (0.057 in.)

3. CHECK VVT SENSOR OUTPUT VOLTAGE

- (a) Turn the ignition switch to the ON position.
- (b) Check that the voltage between terminal VC1 of the ECM and ground is 5 V.

HINT:

For the terminal arrangement of the ECM, see page [DI-34](#).

- (c) While turning the crankshaft pulley by hand, measure the voltage between each terminal. Check that the voltage changes between the Hi range and Lo range as shown in the table below.

HINT:

For the terminal arrangement of the ECM, see page [DI-34](#).

Sensor position	Terminal No.	Voltage (Hi)	Voltage (Lo)
Bank 1	VV1+ ↔ VV1-	3.75 to 4.5 V	0.5 to 1.25 V
Bank 2	VV2+ ↔ VV2-	3.75 to 4.5 V	0.5 to 1.25 V

4. INSPECT CRANKSHAFT POSITION SENSOR

- (a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:

1630 to 2740 Ω at cold

2065 to 3225 Ω at hot

NOTICE:

”Cold” and ”Hot” mean the temperature of the coils themselves. ”Cold” is from -10°C (14°F) to 50°C (122°F) and ”Hot” is from 50°C (122°F) to 100°C (212°F).

REMOVAL

1. REMOVE V-BANK COVER
2. REMOVE AIR CLEANER (See page [EM-62](#))
3. REMOVE INTAKE AIR SURGE TANK
(See page [EM-62](#))
4. REMOVE IGNITION COIL
 - (a) Disconnect the ignition coil connector.

- (b) Remove the bolt and ignition coil.

INSTALLATION

1. **INSTALL IGNITION COIL**
 - (a) Install the ignition coil with the bolt.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)
 - (b) Connect the ignition coil connector.
2. **INSTALL INTAKE AIR SURGE TANK**
(See page [EM-89](#))
3. **INSTALL AIR CLEANER** (See page [EM-89](#))
4. **INSTALL V-BANK COVER**

CRANKSHAFT POSITION SENSOR REMOVAL

IG0MM-01

1. REMOVE ENGINE UNDER COVER
2. REMOVE GENERATOR (See page [CH-7](#))

3. **SEPARATE COOLER COMPRESSOR**
 - (a) Remove the bolt and separate the suction hose sub-assy.
 - (b) Disconnect the cooler compressor assy connector.
 - (c) Remove the 4 bolts, and separate the cooler compressor from the V-ribbed belt tensioner.

4. **REMOVE CRANKSHAFT POSITION SENSOR**
 - (a) Disconnect the crankshaft position sensor connector.
 - (b) Remove the bolt and crankshaft position sensor.

INSPECTION

INSPECT CRANKSHAFT POSITION SENSOR

Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:

1,630 to 2,740 Ω at cold

2,065 to 3,225 Ω at hot

NOTICE:

"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from -10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

INSTALLATION

1. INSTALL CRANKSHAFT POSITION SENSOR

- (a) Apply a light coat of engine oil to an O-ring of the crankshaft position sensor.
- (b) Install the crankshaft position sensor with the bolt.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)
- (c) Connect the crankshaft position sensor connector.

2. INSTALL COOLER COMPRESSOR

- (a) Install the cooler compressor assy with the 4 bolts.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)
- (b) Connect the cooler compressor assy connector.

- (c) Install the suction hose sub-assy with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

3. INSTALL GENERATOR (See page [CH-15](#))

4. INSTALL ENGINE UNDER COVER

VVT SENSOR REMOVAL

IGOMP-01

1. DRAIN ENGINE COOLANT
2. REMOVE V-BANK COVER
3. REMOVE AIR CLEANER (See page [EM-62](#))

4. REMOVE VVT SENSOR

(a) RH bank side VVT sensor.

- (1) Disconnect the VVT sensor connector.
- (2) Remove the bolt and VVT sensor.

(b) LH bank side VVT sensor.

- (1) Disconnect the water by-pass hose No. 4 and No. 5.
- (2) Disconnect the VVT sensor connector.

- (3) Remove the bolt and VVT sensor.

INSTALLATION

1. INSTALL VVT SENSOR

(a) LH bank side VVT sensor.

- (1) Apply a light coat of engine oil to an O-ring of the VVT sensor.
- (2) Install the VVT sensor with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (3) Connect the VVT sensor connector.

- (4) Connect the water by-pass hose No. 4 and No. 5.

(b) RH bank side VVT sensor.

- (1) Apply a light coat of engine oil to an O-ring of the VVT sensor.
- (2) Install the VVT sensor with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

- (3) Connect the VVT sensor connector.

2. INSTALL AIR CLEANER (See page [EM-89](#))

3. INSTALL V-BANK COVER

4. ADD ENGINE COOLANT

IGNITION SYSTEM

ON-VEHICLE INSPECTION

IGOMF-02

NOTICE:

"Cold" and "Hot" in these sentences express the temperature of the coils themselves. "Cold" is from -10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

1. INSPECT IGNITION COIL (WITH IGNITER) AND SPARK TEST

Check that the spark occurs.

- (1) Remove the ignition coils (with igniter).
(see page [IG-5](#))
- (2) Remove the spark plugs.
- (3) Install the spark plugs to each ignition coil (with igniter), and connect the ignition coil (with igniter) connector.
- (4) Disconnect the 8 injector connectors.
- (5) Ground the spark plug.
- (6) Check that spark occurs while engine is being cranked.

NOTICE:

To prevent gasoline from being injected out of injectors during this test, crank the engine for no more than 5 to 10 seconds at a time.

If the spark does not occur, do the test as follows:

(7) Using a 16 mm plug wrench, install the spark plugs.

Torque: 17.5 N·m (180 kgf·cm, 13 ft·lbf)

(8) Reinstall the ignition coils (with igniter).
(see page IG-6)

2. INSPECT SPARK PLUGS

(a) Remove the ignition coils (with igniter).
(see page IG-5)

(b) Using a 16 mm plug wrench, remove the spark plugs.

IG0152

- (c) Clean the spark plugs.
If the electrode has traces of wet carbon, allow it to dry and then clean with a spark plug cleaner.

Air pressure: Below 588 kPa (6 kgf/cm², 85 psi)

Duration: 20 seconds or less

HINT:

If there are traces of oil, remove it with gasoline before using the spark plug cleaner.

IG0148

- (d) Check the spark plug for thread damage and insulator damage.

If abnormal, replace the spark plug.

Recommended spark plug:

DENSO made	SK20R11
NGK made	IFR6A11

P03792

- (e) Adjust the spark plug electrode gap.
Electrode gap: 1.0 to 1.1 mm (0.039 to 0.043 in.)
- (f) Using a 16 mm plug wrench, install the spark plugs.
Torque: 17.5 N·m (180 kgf·cm, 13 ft·lbf)
- (g) Reinstall the ignition coils (with igniter).
(see page [IG-6](#))

IGNITION COIL COMPONENTS

IG08Q-06

REMOVAL

1. DISCONNECT IGNITION COIL (WITH IGNITER) CONNECTORS

2. REMOVE IGNITION COILS (WITH IGNITER)

Remove the bolt, and pull out the ignition coil (with igniter). Remove the 8 ignition coils (with igniter).

INSTALLATION

1. INSTALL IGNITION COILS (WITH IGNITER)

Install the ignition coil (with igniter) with the bolt. Install the 8 ignition coils (with igniter).

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

2. CONNECT IGNITION COIL (WITH IGNITER) CONNECTORS

CAMSHAFT POSITION SENSOR COMPONENTS

IG08T-08

REMOVAL

1. DRAIN ENGINE COOLANT
2. REMOVE DRIVE BELT
(See page [CH-7](#) and [CH-19](#))
3. REMOVE LH NO.3 TIMING BELT COVER
(See page [EM-16](#))

4. REMOVE CAMSHAFT POSITION SENSOR
Remove the bolt, stud bolt and camshaft position sensor.

INSTALLATION

1. INSTALL CAMSHAFT POSITION SENSOR

Install the camshaft position sensor with the bolt and stud bolt

Torque: 7.5 N·m (80 kgf·cm, 66 in.-lbf)

2. INSTALL LH NO.3 TIMING BELT COVER

(See page [EM-23](#))

3. INSTALL DRIVE BELT

(See page [CH-16](#) and [CH-28](#))

4. FILL ENGINE COOLANT (See page [CO-2](#))

5. CHECK ENGINE COOLANT FOR LEAKS

6. CHECK IGNITION TIMING (See page [EM-9](#))

CRANKSHAFT POSITION SENSOR COMPONENTS

IG08W-06

γ N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. REMOVE ENGINE UNDER COVER

2. REMOVE CRANKSHAFT POSITION SENSOR

- (a) Disconnect the crankshaft position sensor connector.
- (b) Remove the bolt and crankshaft position sensor.

INSPECTION

NOTICE:

”Cold” and ”Hot” in these sentences express the temperature of the coils themselves. ”Cold” is from -10°C (14°F) to 50°C (122°F) and ”Hot” is from 50°C (122°F) to 100°C (212°F).

INSPECT CRANKSHAFT POSITION SENSOR

Using an ohmmeter, measure the resistance between the terminals.

Resistance:

Cold	1,630 to 2,740 Ω
Hot	2,065 to 3,225 Ω

If the resistance is not as specified, replace the crankshaft position sensor.

INSTALLATION

1. **INSTALL CRANKSHAFT POSITION SENSOR**
 - (a) Install the crankshaft position sensor with the bolt.
Torque: 6.5 N·m (65 kgf·cm, 58 in.-lbf)
 - (b) Connect the crankshaft position sensor connector.
2. **INSTALL ENGINE UNDER COVER**

STARTING SYSTEM

ON-VEHICLE INSPECTION

STOPL-01

NOTICE:**Before changing the starter, check these items again:**

- Connector connection
- Accessory installation, e.g.: engine immobilizer system

STARTER (1.6 kW) COMPONENTS

ST0PM-01

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL

3. REMOVE STARTER ASSEMBLY
 - (a) Disconnect the terminal 50 connector from the starter.
 - (b) Remove the nut and disconnect the wire harness from terminal 30.
 - (c) Remove the 2 bolts and the starter.

DISASSEMBLY

1. REMOVE REPAIR SERVICE STARTER KIT

- (a) Remove the nut, and disconnect the lead wire from the repair service starter kit.

- (b) Remove the 2 screws which are used to secure the repair service starter kit to the starter drive housing.
- (c) Remove the repair service starter kit.
- (d) Remove the return spring and plunger.

2. REMOVE STARTER YOKE ASSY

- (a) Remove the 2 through bolts, and pull out the starter yoke assy together with the commutator end frame assy.

3. REMOVE STARTER COMMUTATOR END FRAME ASSY

- (a) Remove the commutator end frame assy from the starter yoke assy.

4. REMOVE STARTER ARMATURE PLATE

- (a) Remove the starter armature plate from the starter yoke assy.

5. REMOVE STARTER COMMUTATOR END FRAME COVER

- (a) Using a screwdriver, remove the cover.

6. REMOVE STARTER ARMATURE ASSY

- (a) Using snap ring pliers, remove the snap ring and plate washer.
- (b) Remove the starter armature assy from commutator end frame assy.

**7. REMOVE PLANETARY GEAR**

- (a) Remove the 3 planetary gears.

**8. REMOVE STARTER CENTER BEARING CLUTCH SUB-ASSY**

- (a) Remove the starter center bearing clutch and drive lever set pin together from the starter drive housing.
- (b) Remove the drive lever set pin from the starter center bearing clutch.

INSPECTION

1. INSPECT COMMUTATOR FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segment, replace the armature.

2. INSPECT COMMUTATOR FOR GROUND

(a) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.

(b) Check that the commutator for dirty and burm on surface. If the surface is dirty or burnt, correct it with sandpaper (No.400) or on a lathe.

3. INSPECT COMMUTATOR LENGTH

(a) Using vernier calipers, measure the commutator length.

Standard length: 3.1 mm (0.122 in.)

Maximum length: 3.8 mm (0.150 in.)

If the length is greater than maximum, replace the armature.

4. INSPECT STARTER COMMUTATOR END FRAME ASSY

(a) Using vernier calipers, measure the brush holder length.

Standard length: 9.0 mm (0.354 in.)

Maximum length: 4.0 mm (0.158 in.)

If the length is less than minimum, replace the starter commutator end frame assy.

(b) Check the brush holder.

(1) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (-) brush holders.

If the there is continuity, repair or replace the starter commutator end frame assy.

If there is no continuity, repair or replace the field frame.

5. INSPECT CLUTCH PINION GEAR

Rotate the pinion gear clockwise, and check that it turns freely. Check that it locks by rotating the pinion gear counterclockwise. If necessary, replace the clutch assembly.

6. INSPECT REPAIR SERVICE STARTER KIT

(a) Check the plunger.

- (1) Push in the plunger and check that it returns quickly to its original position.

If necessary, replace the repair service starter kit.

7. INSPECT MAGNET STATER SWITCH

(a) Check the pull-in coil for open circuit.

- (1) Using an ohmmeter, check that there is continuity between terminal 50 and C.

If there is no continuity, replace the repair service starter kit.

(b) Check whether or not the hold-in coil has an open circuit.

- (1) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

If there is no continuity, replace the repair service starter kit.

REASSEMBLY

1. INSTALL STARTER CENTER BEARING CLUTCH SUB-ASSY

- Install the drive lever set pin to the starter center bearing clutch.
- Install the starter center bearing clutch and drive lever set pin together to the starter drive housing.

2. INSTALL PLANETARY GEAR

- Apply grease to the planetary gears and pin parts of the planetary shaft.
- Install the 3 planetary gears.

3. INSTALL STARTER ARMATURE ASSY

- Apply grease to the plate washer and armature shaft.
- Install the armature shaft to the starter commutator end frame assy.

- Using snap ring pliers, install the plate washer and new snap ring.

- Using vernier calipers, measure the snap ring.
Maximum length: 5.0 mm (0.197 in.)

If the length is greater than maximum, replace the new snap ring.

4. INSTALL STARTER COMMUTATOR END FRAME COVER

5. INSTALL STARTER ARMATURE PLATE

- Insert the starter armature plate to the starter yoke assy.

- Align the keyway of the plate with the key inside the starter yoke, and install the plate.

6. INSTALL STARTER COMMUTATOR END FRAME ASSY

- (a) Align the starter-commutator-rubber-end frame with the convex cutout of starter yoke.
- (b) Install starter-commutator-end-frame to starter yoke assy.

7. INSTALL STARTER YOKE ASSY

- (a) Align the key of the starter yoke assy with the keyway of starter drive housing.

- (b) Install the starter yoke assy with the 2 through bolts.

Torque: 6.0 N·m (61 kgf·cm, 53 in·lbf)

8. INSTALL REPAIR SERVICE STARTER KIT

- (a) Apply grease to the plunger and hook.

- (b) Hang the plunger hook of the repair service starter kit to the drive lever.
- (c) Install the plunger and return spring.

- (d) Install the repair service starter kit with the 2 screws.

Torque: 7.5 N·m (76 kgf·cm, 66 in·lbf)

STARTING (1GR-FE) - STARTER (1.6 kW)

- (e) Connect the lead wire to the terminal with the nut.
Torque: 10 N·m (102 kgf·cm, 7.4 ft·lbf)

TEST

NOTICE:

These tests must be done within 3 to 5 seconds to avoid the coil to be burned – out.

1. INSPECT STARTER ASSY

- (a) Do pull-in test.
 - (1) Disconnect the field coil lead wire from terminal C.
 - (2) Connect the battery to the magnetic switch as shown. Check that the clutch pinion gear protrudes.
- (b) Do holding test.
 - (1) Disconnect the negative (-) lead from the terminal C with the above condition (a) is being sustained. Check that the pinion gear remains protruded.
- (c) Inspect clutch pinion gear return.
 - (1) Disconnect the negative (-) lead from the switch body. Check that the clutch pinion gear returns inward.

- (d) Perform the operation test without load.
 - (1) Connect the field coil lead wire to terminal C.
 - (2) Hold the starter with a vise.
 - (3) Connect the battery and ammeter to the starter as shown.
 - (4) Check that the ammeter indicates the specified current.

Specified current: 90 A or less at 11.5 V

INSTALLATION

1. INSTALL STARTER

Install the starter with the 2 bolts.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

- (a) Connect the wire harness to the terminal 30 and install the nut.

Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

- (b) Connect the terminal 50 to the starter.

2. INSTALL ENGINE UNDER COVER ASSY REAR

3. CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL

STARTER (2.0 kW) COMPONENTS

STOPT-01

STARTING (1GR-FE) - STARTER (2.0 kW)

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL

3. REMOVE STARTER ASSEMBLY
 - (a) Disconnect the terminal 50 connector from the starter.
 - (b) Remove the nut and disconnect the wire harness from terminal 30.
 - (c) Remove the 2 bolts and the starter.

DISASSEMBLY

1. REMOVE STARTER YOKE ASSY

- (a) Remove the nut, and disconnect the lead wire from the C terminal.
- (b) Remove the 2 through bolts.
- (c) Pull out the starter yoke and the armature together.
- (d) Remove the O-ring from the starter yoke.

2. REMOVE MAGNET STARTER SWITCH ASSY

- (a) Remove the 2 screws and magnet starter switch.

- (b) Remove these parts from the starter drive housing.

(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch

- (c) Using a magnetic finger, remove the steel ball from the clutch shaft hole.

3. REMOVE STARTER BRUSH HOLDER ASSY

- (a) Remove the 2 screws and end cover from the starter yoke.
- (b) Remove the O-ring from the starter yoke.

- (c) Using a screwdriver, hold the spring back and disconnect the 4 brushes from the brush holder.
 - (d) Remove the brush holder from the armature.
- 4. REMOVE STARTER ARMATURE ASSY**

INSPECTION

1. INSPECT COMMUTATOR FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segment, replace the armature.

2. INSPECT COMMUTATOR FOR GROUND

(a) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.

(b) Check that the commutator for dirty and burm on surface. If the surface is dirty or burnt, correct it with sandpaper (No.400) or on a lathe.

3. INSPECT COMMUTATOR CIRCLE RUNOUT

(a) Place the commutator on V-blocks.

(b) Using a dial indicator, measure the circle runout.

Maximum circle runout: 0.05 mm (0.0020 in.)

If the circle runout is greater than maximum, correct it on a lathe.

4. INSPECT COMMUTATOR DIAMETER

Using vernier calipers, measure the commutator diameter.

Standard diameter: 35.0 mm (1.378 in.)

Minimum diameter: 34.0 mm (1.339 in.)

If the diameter is less than minimum, replace the armature.

5. INSPECT UNDERCUT DEPTH

Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.

Standard undercut depth: 0.7 mm (0.028 in.)

Minimum undercut depth: 0.2 mm (0.008 in.)

If the undercut depth is less than minimum, correct it with a hacksaw blade.

6. INSPECT BRUSH

- (a) Check the brushes length
- (1) Using vernier calipers, measure the brush length.
- Standard length: 15.0 mm (0.591 in.)**
- Minimum length: 9.0 mm (0.354 in.)**
- If the length is less than minimum, replace the brush holder and starter yoke.

7. INSPECT STARTER BRUSH HOLDER ASSY

- (a) Check the brush holder insulation
- (1) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (-) brush holders.
- If there is continuity, repair or replace the brush holder.

- (b) Check the brush spring load.
- (1) Take a pull scale reading at the instant the brush spring separates from the brush.
- Standard spring load:**
- 21.5 to 27.5 N (2.2 to 2.8 kgf, 4.8 to 6.2 lbf)**
- Minimum spring load: 12.7 N (1.3 kgf, 2.9 lbf)**
- If the spring load is less than the minimum, replace the brush holder.

8. INSPECT FIELD COIL FOR OPEN CIRCUIT

- Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.
- If there is no continuity, replace the field frame.

9. INSPECT SHUNT COIL FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the field coil end and field frame.
If there is no continuity, repair or replace the field frame.

10. INSPECT SHUNT COIL FOR OPEN CIRCUIT

Using an ohmmeter, measure the resistance between shunt coil terminals (A) and (B).

Resistance: 1.5 to 1.9 Ω at 20 °C (68 °F)

If the resistance is not as specified, replace the field frame.

11. INSPECT CLUTCH PINION GEAR

Rotate the pinion gear clockwise, and check that it turns freely.
Check that it locks by rotating the pinion gear counterclockwise.
If necessary, replace the clutch assembly.

12. INSPECT MAGNET STATER SWITCH

(a) Check the pull-in coil for open circuit.

(1) Using an ohmmeter, check that there is continuity between terminal 50 and C.

If there is no continuity, replace the magnet starter switch.

(b) Check whether or not the hold-in coil has an open circuit.

(1) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

If there is no continuity, replace the magnet starter switch.

REASSEMBLY

1. INSTALL STARTER BRUSH HOLDER ASSY

- (a) Apply grease to the bearings, and install it to the starter yoke.
- (b) Place the brush holder on the armature.
- (c) Using a screwdriver, install the 4 brushes.
- (d) Install a new O-ring to the groove of the field frame.

- (e) Install the end frame with the 2 screws.
Torque: 3.8 N·m (39 kgf·cm, 34 in·lbf)

2. INSTALL MAGNET STARTER SWITCH ASSY

- (a) Apply grease to the steel ball, and install it to the clutch shaft hole.
- (b) Apply grease to the these parts (2) – (5), and install them to the starter drive housing.

(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear clutch roller
(4)	Starter idle gear retainer
(5)	Starter clutch

- (c) Install the magnet starter switch with the 2 screws.
Torque: 9.3 N·m (95 kgf·cm, 82 in·lbf)

3. INSTALL STARTER YOKE ASSY

- (a) Install a new O-ring to the groove of the starter yoke.
- (b) Align the key of the starter yoke with the groove of the magnet starter switch.

- (c) Install the starter yoke and armature with the 2 through bolts.

Torque: 9.3 N·m (95 kgf·cm, 82 in.-lbf)

- (d) Connect the lead wire to the C terminal with the nut.

Torque: 5.9 N·m (60 kgf·cm, 52 in.-lbf)

TEST

NOTICE:

These tests must be done within 3 to 5 seconds to avoid the coil to be burned – out.

1. INSPECT STARTER ASSY

- (a) Do pull-in test.
- (1) Disconnect the field coil lead wire from terminal C.
 - (2) Connect the battery to the magnetic switch as shown. Check that the clutch pinion gear protrudes.

- (b) Do holding test.
- (1) Disconnect the negative (-) lead from the terminal C with the above condition (a) is being sustained. Check that the pinion gear remains protruded.

- (c) Inspect clutch pinion gear return.
- (1) Disconnect the negative (-) lead from the switch body. Check that the clutch pinion gear returns inward.

- (d) Perform the operation test without load.
- (1) Connect the field coil lead wire to terminal C.
 - (2) Hold the starter with a vise.
 - (3) Connect the battery and ammeter to the starter as shown.
 - (4) Check that the ammeter indicates the specified current.

Specified current: 100 A or less at 11.5 V

INSTALLATION

1. INSTALL STARTER

Install the starter with the 2 bolts.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

- (a) Connect the wire harness to the terminal 30 and install the nut.

Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

- (b) Connect the terminal 50 to the starter.

2. INSTALL ENGINE UNDER COVER ASSY REAR

3. CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL

STARTER RELAY INSPECTION

1. REMOVE STARTER RELAY

Remove the relay box cover and starter relay.

2. INSPECT STARTER RELAY CONTINUITY

- (a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

- (b) Check that there is no continuity between terminals 3 and 5.

If there is continuity, replace the relay.

3. INSPECT STARTER RELAY OPERATION

- (a) Apply battery positive voltage across terminals 1 and 2.

- (b) Using an ohmmeter, check that there is continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

4. REINSTALL STARTER RELAY

ACC CUT RELAY INSPECTION

ST001-01

1. REMOVE ACC CUT RELAY

Remove the cowl side trim board LH and ACC cut relay.

2. INSPECT ACC CUT RELAY CONTINUITY

(a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

(b) Check that there is no continuity between terminals 3 and 5.

If there is continuity, replace the relay.

(c) Check that there is continuity between terminals 3 and 4. If there is no continuity, replace the relay.

3. INSPECT ACC CUT RELAY OPERATION

(a) Apply battery positive voltage across terminals 1 and 2.

(b) Using an ohmmeter, check that there is no continuity between terminals 3 and 4.

If there is continuity, replace the relay.

(c) Using an ohmmeter, check that there is continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

4. REINSTALL ACC CUT RELAY

STARTING SYSTEM

ON-VEHICLE INSPECTION

ST08A-04

NOTICE:**Before changing the starter, check these items again:**

- Connector connection
- Accessory installation, e.g.: engine immobilizer system

2.0 kW Type

Magnetic Switch Assembly

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

1. REMOVE THROTTLE BODY COVER
2. DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL
3. REMOVE INTAKE AIR CONNECTOR
4. DISCONNECT THROTTLE BODY ASSEMBLY FROM INTAKE MANIFOLD (See page [SF-44](#))
5. REMOVE INTAKE MANIFOLD ASSEMBLY (See page [EM-36](#))
6. REMOVE AIR PUMP ASSEMBLY (See page [EC-23](#))

7. REMOVE STARTER

- (a) Remove the 2 bolts holding the starter to the cylinder block.
- (b) Disconnect the starter from the cylinder block.

- (c) Disconnect the starter connector.
- (d) Remove the nut, bolt and disconnect the starter wire.
- (e) Remove the bolt, and disconnect the engine wire protector from the starter.
- (f) Remove the starter.

DISASSEMBLY

1. REMOVE 2 DUST PROTECTORS

2. REMOVE FIELD FRAME AND ARMATURE

- (a) Remove the nut, and disconnect the lead wire from the magnetic switch terminal.

Torque: 5.9 N·m (60 kgf·cm, 52 in.-lbf)

- (b) Remove the 2 through bolts.

Torque:

1.4 kW type: 5.9 N·m (60 kgf·cm, 52 in.-lbf)

2.0 kW type: 9.3 N·m (95 kgf·cm, 82 in.-lbf)

- (c) Pull out the field frame together with the armature from the magnetic switch assembly.

NOTICE:

At the time of notice, please refer to the following items.

Align the protrusion of the field frame with the groove of the magnetic switch.

- (d) Remove the O-ring from the field frame.

HINT:

At the time of assembly, please refer to the following items.

Use a new O-ring.

3. REMOVE STARTER HOUSING, CLUTCH ASSEMBLY AND GEAR

- (a) 1.4 kW type:

Remove the 2 bolts.

Torque: 5.9 N·m (60 kgf·cm, 52 in.-lbf)

- (b) 2.0 kW type:

Remove the 2 screws.

Torque: 9.3 N·m (95 kgf·cm, 82 in.-lbf)

- (c) Remove the starter housing, return spring, idler gear, bearing and starter clutch assembly.

HINT:

At the time of assembly, please refer to the following item.

Apply grease to the return spring and insert the return spring into the clutch shaft hole.

4. REMOVE STEEL BALL

Using a magnetic finger, remove the steel ball from the clutch shaft hole.

HINT:

At the time of assembly, please refer to the following item.
Apply grease to the steel ball and insert the steel ball into the clutch shaft hole.

5. REMOVE BRUSH HOLDER

(a) Remove the 2 screws w/ O-ring and end cover from the field frame.

Torque:

1.4 kW type: 1.5 N·m (15 kgf·cm, 13 in.-lbf)

2.0 kW type: 3.8 N·m (39 kgf·cm, 34 in.-lbf)

(b) Remove the O-ring from the field frame.

HINT:

At the time of assembly, please refer to the following item.
Use a new O-ring.

(c) Using a screwdriver, hold the spring back and disconnect the brush from the brush holder. Disconnect the 4 brushes, and remove the brush holder.

NOTICE:

Check that the positive (+) lead wires are not grounded.

6. REMOVE ARMATURE FROM FIELD FRAME

INSPECTION

1. INSPECT COMMUTATOR FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segment, replace the armature.

2. INSPECT COMMUTATOR FOR GROUND

Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.

3. INSPECT COMMUTATOR FOR DIRTY AND BURNT SURFACE

If the surface is dirty or burnt, correct it with sandpaper (No.400) or on a lathe.

4. INSPECT COMMUTATOR CIRCLE RUNOUT

(a) Place the commutator on V-blocks.

(b) Using a dial indicator the circle runout.

Maximum circle runout: 0.05 mm (0.0020 in.)

If the circle runout is greater than maximum, correct it on a lathe.

5. INSPECT COMMUTATOR DIAMETER

Using vernier calipers, measure the commutator diameter.

Standard diameter:

1.4 kW type	30.0 mm (1.181 in.)
2.0 kW type	35.0 mm (1.378 in.)

Minimum diameter:

1.4 kW type	29.0 mm (1.142 in.)
2.0 kW type	34.0 mm (1.339 in.)

If the diameter is less than minimum, replace the armature.

6. INSPECT UNDERCUT DEPTH

Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.

Standard undercut depth:

1.4 kW type	0.6 mm (0.024 in.)
2.0 kW type	0.7 mm (0.028 in.)

Minimum undercut depth: 0.2 mm (0.008 in.)

If the undercut depth is less than minimum, correct it with a hacksaw blade.

7. INSPECT FIELD COIL FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.
If there is no continuity, replace the field frame.

8. INSPECT THAT FIELD COIL IS NOT GROUNDED

Using an ohmmeter, check that there is no continuity between the field coil end and field frame.
If there is continuity, repair or replace the field frame.

**9. 2.0 kW type:
INSPECT SHUNT COIL FOR OPEN CIRCUIT**

Using an ohmmeter, measure the resistance between shunt coil terminals (A) and (B).

Resistance: 1.5 to 1.9 Ω at 20°C (68°F)

If the resistance is not as specified, replace the field frame.

10. INSPECT BRUSH LENGTH

Using vernier calipers, measure the brush length.

Standard length:

1.4 kW type	15.5 mm (0.610 in.)
2.0 kW type	15.0 mm (0.591 in.)

Minimum length:

1.4 kW type	10.0 mm (0.394 in.)
2.0 kW type	9.0 mm (0.354 in.)

If the length is less than minimum, replace the brush holder and field frame.

11. INSPECT BRUSH SPRING LOAD

Take the pull scale reading the instant the brush spring separates from the brush.

Standard spring installed load:

1.4 kW type	17.6 to 23.5 N (1.8 to 2.4 kgf, 4.0 to 5.3 lbf)
2.0 kW type	21.5 to 27.5 N (2.2 to 2.8 kgf, 4.8 to 6.2 lbf)

Minimum spring installed load:

1.4 kW type	11.8 N (1.2 kgf, 2.7 lbf)
2.0 kW type	12.7 N (1.3 kgf, 2.9 lbf)

If the installed load is less than minimum, replace the brush springs.

12. INSPECT BRUSH HOLDER INSULATION

Using an ohmmeter, check that there is no continuity between the positive (+) and negative (-) brush holders. If there is continuity, repair or replace the brush holder.

13. INSPECT GEAR TEETH

Check the gear teeth on the pinion gear, idle gear and the clutch assembly for wear or damage.

If damaged, replace the gear or clutch assembly.

If damaged, also check the drive plate ring gear for wear or damage.

14. INSPECT CLUTCH PINION GEAR

Rotate the pinion gear clockwise, and check that it turns freely. Try to rotate the pinion gear counterclockwise and check that it locks.

If necessary, replace the clutch assembly.

15. INSPECT FRONT AND REAR BEARING

Turn the bearing by hand while applying inward force.

If resistance is felt or the bearing sticks, replace the bearing.

16. DO PULL-IN COIL OPEN CIRCUIT TEST

Using an ohmmeter, check that there is continuity between terminals 50 and C.

If there is no continuity, check and replace the magnetic switch.

**17. DO HOLD-IN COIL OPEN CIRCUIT TEST**

Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

If there is no continuity, replace the magnetic switch.

REPLACEMENT

1. REPLACE REAR BEARING

- (a) Using SST, remove the bearing.
SST 09286-46011

- (b) Using a press, press in a new bearing.

2. REPLACE FRONT BEARING

- (a) Using SST, remove the bearing.
SST 09286-46011

- (b) Using SST and a press, press in a new bearing.

NOTICE:

Be careful of the bearing installation direction.

SST 09820-00031

3. REPLACE MAGNETIC SWITCH TERMINAL KIT PARTS

- (a) Remove magnetic switch end cover.
Remove the 3 bolts, end cover, gasket and plunger.

- (b) Inspect contact plate for wear.
Using vernier calipers, measure the contact plate for depth of wear.

Maximum wear: 0.9 mm (0.035 in.)

If the depth of wear is greater than the maximum, replace the contact plate.

- (c) Remove terminal kit parts.
- (1) Using SST, loosen the terminal nuts.
SST 09810-38140
 - (2) Terminal C:
Remove the terminal nut, wave washer, terminal insulator (outside), O-ring, terminal bolt, contact plate and terminal insulator (inside).
 - (3) Terminal 30:
Remove the terminal nut, wave washer, terminal insulator (outside), O-ring, terminal bolt, contact plate, terminal insulator (inside) and insulation paper.

- (d) Install new terminal 30 kit parts.
- (1) Temporarily install a new terminal insulator (inside).
 - (2) Temporarily install a new contact plate.
 - (3) Temporarily install a new terminal bolt.
 - (4) Temporarily install a new O-ring.
 - (5) Temporarily install a new packing and new terminal insulator (outside).
Install a new packing to a new terminal insulator, and install them.

HINT:

Match the protrusion of the insulator with the indentation of the housing.

- (6) Temporarily install a new wave washer.
- (7) Temporarily install a new terminal nut.

NOTICE:

Be careful to install the terminal insulator (inside) and wave washer in the correct direction.

- (e) Install new terminal C kit parts.
 - (1) Temporarily install a new terminal insulator (inside).
 - (2) Temporarily install a new contact plate.
 - (3) Temporarily install a new terminal bolt.
 - (4) Temporarily install a new O-ring.
 - (5) Temporarily install a new terminal insulator (outside).
 - (6) Temporarily install a new wave washer.
 - (7) Temporarily install a new terminal nut.

NOTICE:

Be careful to install the terminal insulator (inside) and wave washer in the correct direction.

- (f) Temporarily tighten the terminal nuts.

- (g) Tighten terminal nuts.
 - (1) Put a wooden block on the contact plate and press it down with a hand press.

Dimensions of wooden block:

20 x 37 x 40 mm (0.79 x 1.46 x 1.57 in.)

Press force:

981 N (100 kgf, 221 lbf)

NOTICE:

- **Check the diameter of the hand press ram. Then calculate the gauge pressure of the press when 981 N (100 kgf, 221 lbf) of force is applied.**

Gauge pressure:

$$(\text{kgf/cm}^2) = \frac{100 \text{ kgf}}{\left(\frac{\text{Ram diameter (cm)}}{2}\right)^2 \times 3.14 (\pi)}$$

$$(\text{psi}) = \frac{221 \text{ lbf}}{\left(\frac{\text{Ram diameter (in.)}}{2}\right)^2 \times 3.14 (\pi)}$$

$$(\text{kPa}) = (\text{kgf/cm}^2) \times 98.1$$

$$(\text{kPa}) = (\text{psi}) \times 6.9$$

- **If the contact plate is not pressed down with the specified pressure, the contact plate may tilt due to coil deformation or the tightening of the nut.**

- (2) Using SST, tighten the nuts to the specified torque.
SST 09810-38140

Torque: 17 N·m (170 kgf·cm, 13 ft·lbf)

NOTICE:

If the nut is over tightened, it may cause cracks on the inside of the insulator.

- (h) Clean contact surfaces of contact plate and plunger. Clean the contact surfaces of the remaining contact plate and plunger with a dry shop rag.
- (i) Reinstall magnetic switch end cover. Install the plunger, new gasket, end cover and lead clamp with the 3 bolts.

Torque:

1.4 kW type: 2.5 N·m (25 kgf·cm, 22 in·lbf)

2.0 kW type: 3.6 N·m (37 kgf·cm, 32 in·lbf)

REASSEMBLY

Reassembly is in the reverse order of disassembly (See page [ST-7](#)).

HINT:

At the time of assembly, use high-temperature grease to lubricate the bearing and gears when assembling the starter.

TEST

NOTICE:

These tests must be done within 3 to 5 seconds to avoid burning out the coil.

1. DO PULL-IN TEST

- Disconnect the field coil lead wire from terminal C.
- Connect the battery to the magnetic switch as shown. Check that the pinion gear moves outward.

2. DO HOLD-IN TEST

While connected as above with the pinion gear out, disconnect the negative (-) lead from terminal C. Check that the pinion gear remains out.

3. INSPECT CLUTCH PINION GEAR RETURN

Disconnect the negative (-) lead from the starter body. Check that the pinion gear returns inward.

4. DO NO-LOAD PERFORMANCE TEST

- Connect the battery and ammeter to the starter as shown.
- Check that the starter rotates smoothly and steadily with the pinion gear moving out. Check that the ammeter shows the specified current.

Specified current:

1.4 kW type	90 A or less at 11.5 V
2.0 kW type	100 A or less at 11.5 V

INSTALLATION

1. INSTALL STARTER

- (a) Install the engine wire protector to the starter with the bolt.
Torque: 9.81 N·m (100 kgf·cm, 84 in.-lbf)
- (b) Connect the starter wire with the nut.
Torque: 9.81 N·m (100 kgf·cm, 84 in.-lbf)
- (c) Connect the starter connector.
- (d) Connect the starter to the cylinder block.
- (e) Connect the engine wire with the bolt.

- (f) Install the starter with the 2 bolts.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

2. **INSTALL AIR PUMP ASSEMBLY (See page [EC-27](#))**
3. **INSTALL INTAKE MANIFOLD ASSEMBLY (See page [EM-60](#))**
4. **CONNECT THROTTLE BODY ASSEMBLY TO INTAKE MANIFOLD (See page [SF-45](#))**
5. **INSTALL INTAKE AIR CONNECTOR**
6. **INSTALL THROTTLE BODY COVER**
7. **CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL**

STARTER RELAY INSPECTION

1. REMOVE RELAY BOX COVER
2. REMOVE STARTER RELAY (Marking: ST)

3. INSPECT STARTER RELAY

(a) Inspect the relay continuity.

- (1) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

- (2) Check that there is no continuity between terminals 3 and 5.

If there is continuity, replace the relay.

(b) Inspect the relay operation.

- (1) Apply battery voltage across terminals 1 and 2.
- (2) Using an ohmmeter, check that there is continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

4. REINSTALL RELAY BOX COVER
5. REINSTALL STARTER RELAY

ACC CUT RELAY INSPECTION

ST001-02

1. REMOVE ACC CUT RELAY

Remove the cowl side trim board LH and ACC cut relay.

2. INSPECT ACC CUT RELAY CONTINUITY

(a) Using an ohmmeter, check that there is continuity between terminals 1 and 2.

If there is no continuity, replace the relay.

(b) Check that there is no continuity between terminals 3 and 5.

If there is continuity, replace the relay.

(c) Check that there is continuity between terminals 3 and 4. If there is no continuity, replace the relay.

3. INSPECT ACC CUT RELAY OPERATION

(a) Apply battery positive voltage across terminals 1 and 2.

(b) Using an ohmmeter, check that there is no continuity between terminals 3 and 4.

If there is continuity, replace the relay.

(c) Using an ohmmeter, check that there is continuity between terminals 3 and 5.

If there is no continuity, replace the relay.

4. REINSTALL ACC CUT RELAY

CHARGING SYSTEM

ON-VEHICLE INSPECTION

CH0N5-01

CAUTION:

- Check that the battery cables are connected to the correct terminals.
- Disconnect the battery cables when the battery is given a quick charge.
- Do not perform tests with a high voltage insulation resistance tester.
- Never disconnect the battery while the engine is running.

1. CHECK BATTERY ELECTROLYTE LEVEL

- (a) Check the electrolyte quantity of each cell (Maintenance-Free Battery).

If under the lower level, replace the battery (or add distilled water if possible) and check the charging system.

- (b) Check the electrolyte quantity of each cell (Except Maintenance-Free Battery).

If under the lower level, add distilled water.

A01259

2. CHECK BATTERY SPECIFIC GRAVITY (Except Maintenance-Free Battery)

- (a) Check the specific gravity of each cell.

Standard specific gravity: 1.25 to 1.29 at 20°C (68°F)

HINT:

If the specific gravity is less than specification, charge the battery.

A01260

3. CHECK BATTERY VOLTAGE

- (a) After having driven the vehicle and in the case that 20 minutes have not passed after having stopped the engine, turn the ignition switch ON and turn on the electrical system (headlight, blower motor, rear defogger etc.) for 60 seconds to remove the surface charge.

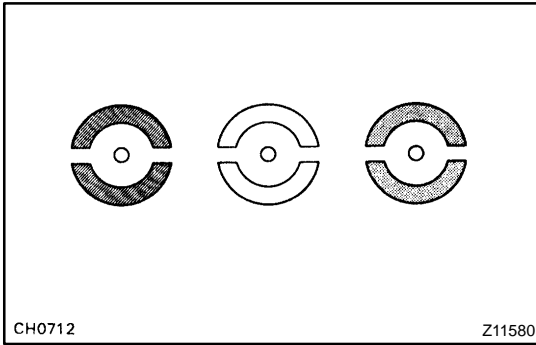

- (b) Turn the ignition switch OFF and turn off the electrical systems.

- (c) Measure the battery voltage between the negative (-) and positive (+) terminals of the battery.

Standard voltage: 12.5 to 12.9 V at 20°C (68°F)

HINT:

If the voltage is less than specification, charge the battery.

(d) Check the indicator as shown in the illustration.

HINT:

- Blue: OK
- White: Charging Necessary
- Red: Insufficient Water

4. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Check that the battery terminals are not loose or corroded.

(b) Check the fusible link, H-fuses and fuses for continuity.

5. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords etc.

HINT:

- If any defect has been found, replace the drive belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that it fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

6. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

7. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.

8. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch ON. Check that the charge warning light comes on.

(b) Start the engine. Check that the light goes off.

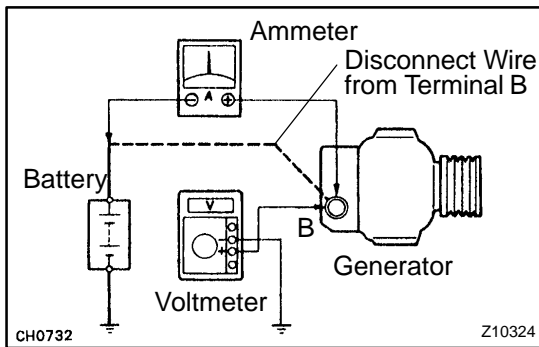

HINT:

If the light does not operate as specified, troubleshoot the charge warning light circuit.

9. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) If a battery/generator tester is available, connect the tester to the charging circuit as per manufacturer's instructions.

- (b) If a tester is not available, connect a voltmeter to the charging circuit as follows.
- (1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) lead of the ammeter.
 - (2) Connect the positive (+) lead of the ammeter to terminal B of the generator.
 - (3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.
 - (4) Ground the negative (-) lead of the voltmeter.
- (c) Check the charging circuit.
- (1) With the engine running from idle to 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 13.2 to 14.8 V

HINT:

- If the voltmeter reading is more than standard voltage, replace the voltage regulator.
- If the voltmeter reading is less than the standard voltage, check the voltage regulator and generator as follows:

10. INSPECT CHARGING CIRCUIT WITH LOAD

- (a) With the engine running at 2,000 rpm, turn on the high beam headlights and place the heater blower switch at "HI".
 - (b) Check the reading on the ammeter.
- Standard amperage: 30 A or more**

HINT:

- If the ammeter reading is less than standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than standard amperage.

GENERATOR COMPONENTS

CH0N6-01

CHARGING (1GR-FE) - GENERATOR

Y N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. REMOVE V-BANK COVER
2. REMOVE ENGINE UNDER COVER
Remove the 4 bolts and engine under cover.
3. REMOVE FAN AND GENERATOR V BELT
(See page [EM-62](#))
4. REMOVE BATTERY

5. REMOVE GENERATOR

- (a) Disconnect the wire harness.
 - (1) Remove the bolt and wire harness stay.
 - (2) Disconnect the connector from the generator.
 - (3) Remove the terminal cap and nut.
 - (4) Disconnect the wire harness from the terminal B.

- (b) Remove the 2 bolts and wire harness clamp bracket from the generator assy.

- (c) Remove the 2 bolts and generator.

DISASSEMBLY

1. REMOVE GENERATOR PULLEY

SST 09820-63011

- (a) Hold SST (A) with a torque wrench, and tighten SST (B) clockwise with the specified torque.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

NOTICE:

Check that SST is secured to the rotor shaft.

- (b) Mount SST 2 in a vise.

- (c) Insert SST (A) and (B) into SST (C), and attach the pulley nut to SST (C).

- (d) To loosen the pulley nut, turn SST (A) in the direction shown in the illustration.

NOTICE:

To prevent damage to the rotor shaft, do not loosen the pulley nut more than one-half turn.

- (e) Remove the generator from SST (C).

- (f) Turn SST (B), and remove SST (A) and (B).

- (g) Remove the pulley nut and pulley.

2. REMOVE GENERATOR REAR END COVER

- (a) Place the generator on the pulley.

- (b) Remove the 3 nuts and rear end cover.

3. REMOVE TERMINAL INSULATOR

4. REMOVE GENERATOR BRUSH HOLDER ASSY

- (a) Remove the plate seal.
- (b) Remove the 2 nuts and brush holder.
- (c) Remove the plate seal.

5. REMOVE GENERATOR COIL ASSY

- (a) Remove the 4 bolts.

- (b) Using SST, remove the coil.
 SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011)

6. REMOVE GENERATOR ROTOR ASSY

- (a) Remove the washer and rotor.

INSPECTION

1. INSPECT ROTOR

- (a) Check the rotor for open circuit.

Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance: 2.3 to 2.7 Ω at 20°C (68°F)

If there is no continuity, replace the rotor.

- (b) Check the rotor for ground.

Using an ohmmeter, check that there is no continuity between the slip ring and rotor.

If there is continuity, replace the rotor.

- (c) Check that the slip rings are not rough or scored.

If rough or scored, replace the rotor.

- (d) Using vernier calipers, measure the slip ring diameter.

Standard diameter: 14.2 to 14.4 mm (0.559 to 0.567 in.)

Minimum diameter: 14.0 mm (0.551 in.)

If the diameter is less than the minimum, replace the rotor.

2. INSPECT BRUSHES

Using vernier caliper, measure the exposed brush length.

Standard exposed length: 10.5 mm (0.413 in.)

Minimum exposed length: 4.5 mm (0.177 in.)

If the exposed length is less than the minimum, replace the brushes and the brush holder assembly.

3. INSPECT BEARING

Check the bearing is not rough or worn.

If necessary, replace the bearing (See page [CH-11](#)).

REPLACEMENT

1. INSPECT GENERATOR ROTOR BEARING

- (a) Check the bearing is not rough or worn.
If necessary, replace the bearing.

2. REMOVE GENERATOR ROTOR BEARING

SST 09820-00021

NOTICE:

Be careful not to damage the fan.

- (a) Remove the bearing cover (Inside).

3. INSTALL GENERATOR ROTOR BEARING

- (a) Place the rotor on the pulley.
- (b) Install the bearing cover (Inside).
- (c) Using SST and a press, press in a new bearing.
SST 09820-00031

- (d) Using SST, push in the bearing cover (outside).
SST 09285-76010

4. INSPECT GENERATOR DRIVE END FRAME BEARING

- (a) Check the bearing is not rough or worn.
If necessary, replace the bearing.

**5. REMOVE GENERATOR DRIVE END FRAME BEARING**

- (a) Remove the 4 screws and retainer plate.

- (b) Using SST, tap out the bearing.
SST 09950-60010 (09951-00250), 09950-70010
(09951-07100)

**6. INSTALL GENERATOR DRIVE END FRAME BEARING**

- (a) Using SST and a press, press in a new bearing.
SST 09950-60010 (09951-00470), 09950-70010
(09951-07100)
- (b) Install the retainer plate with the 4 screws.
Torque: 2.6 N·m (27 kgf·cm, 23 in.-lbf)

REASSEMBLY

1. INSTALL GENERATOR ROTOR ASSY

- (a) Place the drive end frame on the rotor.
- (b) Install the rotor and washer.

2. INSTALL GENERATOR COIL ASSY

- (a) Using SST and a press, press in the coil carefully.
SST 09285-76010
- (b) Install the 4 bolts.
Torque: 5.8 N·m (59 kgf·cm, 51 in.-lbf)

3. INSTALL GENERATOR BRUSH HOLDER ASSY

- (a) Install the plate seal (Inside).
- (b) Place the brush holder with the pin facing upward.

NOTICE:

Be careful of the brush holder installing direction.

- (c) Install the 2 screws.
Torque: 1.8 N·m (18 kgf·cm, 16 in.-lbf)
- (d) Align the pins of the brush holder with the holes of the plate seal (outside), and install the plate seal (outside).

4. INSTALL TERMINAL INSULATOR

5. INSTALL GENERATOR REAR END COVER

- (a) Install the rear end cover with the 3 nuts.
Torque: 4.6 N·m (47 kgf·cm, 41 in.-lbf)

6. INSTALL GENERATOR PULLEY

SST 09820-63011

- (a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.
- (b) Hold SST (A) with a torque wrench, and tighten SST (B) clockwise with the specified torque.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

NOTICE:

Check that SST is secured to the rotor shaft.

- (c) Mount SST (C) in a vise.
- (d) Insert SST (A) and (B) into SST (C), and attach the pulley nut to SST (C)

- (e) Tighten the pulley nut by turning SST (A) in the direction shown in the illustration.

Torque: 111 N·m (1,125 kgf·cm, 81 ft·lbf)

- (f) Remove the generator from SST (C).

- (g) Turn SST (B), and remove SST (A), (B).
- (h) Turn the pulley, and check that the pulley moves smoothly.

INSTALLATION

1. INSTALL GENERATOR

- (a) Install the generator with the 2 bolts.
Torque: 43 N·m (438 kgf·cm, 32 ft·lbf)

- (b) Install the wire harness clamp bracket with the 2 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

- (c) Connect the wire harness.
 (1) Connect the wire harness to the terminal B and install the nut.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)
 (2) Connect the connector to the generator assy.
 (3) Install the wire harness stay with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

2. INSTALL BATTERY

3. INSTALL FAN AND GENERATOR V BELT

(See page [EM-89](#))

4. INSTALL ENGINE UNDER COVER SUB-ASSY NO.1

Install the engine under cover sub-assy No. 1 with the 4 bolts.

Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)

5. INSTALL V-BANK COVER

Install the V-bank cover with the 2 nuts.

Torque: 9.8 N·m (100 kgf·cm, 87 in·lbf)

CHARGING SYSTEM

ON-VEHICLE INSPECTION

CH0J6-03

CAUTION:

- Check that the battery cables are connected to the correct terminals.
- Disconnect the battery cables when the battery is given a quick charge.
- Do not perform tests with a high voltage insulation resistance tester.
- Never disconnect the battery while the engine is running.

1. CHECK BATTERY ELECTROLYTE LEVEL

Check the electrolyte quantity of each cell.

Maintenance-Free Battery:

If under the lower level, replace the battery (or add distilled water if possible) and check the charging system.

Except Maintenance-Free Battery:

If under the lower level, add distilled water.

2. Except Maintenance-Free Battery: CHECK BATTERY SPECIFIC GRAVITY

Check the specific gravity of each cell.

Standard specific gravity: 1.25 to 1.29 at 20°C (68°F)

If the specific gravity is less than specification, charge the battery.

3. Maintenance-Free Battery: CHECK BATTERY VOLTAGE

- After having driven the vehicle and in the case that 20 minutes have not passed after having stopped the engine, turn the ignition switch ON and turn on the electrical system (headlight, blower motor, rear defogger etc.) for 60 seconds to remove the surface charge.
- Turn the ignition switch OFF and turn off the electrical systems.

- (c) Measure the battery voltage between the negative (-) and positive (+) terminals of the battery.
Standard voltage: 12.5 to 12.9 V at 20°C (68°F)
 If the voltage is less than specification, charge the battery.

HINT:
 Check the indicator as shown in the illustration.

4. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

- (a) Check that the battery terminals are not loose or corroded.
 (b) Check the fusible link and fuses for continuity.

5. INSPECT DRIVE BELT

HINT:
 A belt tensioner is used, so checking the belt tension is not necessary.

- (a) Visually check the drive belt for excessive wear, frayed cords etc.
 If necessary, replace the drive belt.

HINT:

- Cracks on the rib side of a drive belt are considered acceptable. If the drive belt has chunks missing from the ribs, it should be replaced.
- The drive belt tension can be released by turning the belt tensioner counterclockwise. The pulley bolt for the belt tensioner has a left-hand thread.

- (b) Check the belt tensioner operation.
- Check that the belt tensioner moves downward when the drive belt is pressed down at the points indicated in the illustration with approx. 98 N (10 kgf, 22.0 lbf) of force.
 - Check the alignment of the belt tensioner pulley to make sure the drive belt has not slipped off the pulley.

If necessary, replace the belt tensioner.

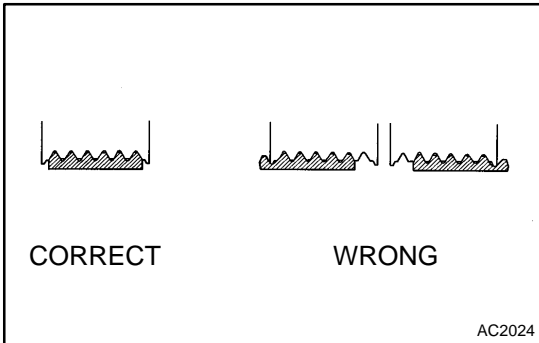

- Check that the arrow mark on the belt tensioner falls within area A of the scale.

If it is outside area A, replace the drive belt.

HINT:

- When a new belt is installed, it should lie within area B. If not, the drive belt is not correct.

- After installing a belt, check that it fits properly in the ribbed grooves.
- Check by hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

6. REMOVE ENGINE UNDER COVER

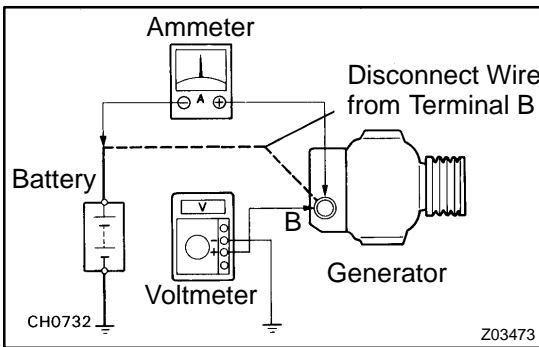

7. VISUALLY CHECK GENERATOR WIRING AND LISTEN FOR ABNORMAL NOISES

- Check that the wiring is in good condition.
- Check that there is no abnormal noise from the generator while the engine is running.

8. CHECK CHARGE WARNING LIGHT CIRCUIT

- Warm up the engine and then turn it off.
- Switch off all accessories.
- Turn the ignition switch ON, and check that the charge warning light is lit.
- Start the engine, and check that the light goes off.

If the light does not go off as specified, troubleshoot the charge light circuit.

9. INSPECT CHARGING CIRCUIT WITHOUT LOAD

HINT:

If a battery/generator tester is available, connect the tester to the charging circuit as per manufacturer's instructions.

- If a tester is not available, connect a voltmeter and ammeter to the charging circuit as follows:
 - Disconnect the wire from terminal B of the generator, and connect it to the negative (-) tester probe of the ammeter.
 - Connect the positive (+) tester probe of the ammeter to terminal B of the generator.
 - Connect the positive (+) tester probe of the voltmeter to terminal B of the generator.
 - Ground the negative (-) tester probe of the voltmeter.

- Check the charging circuit as follows: With the engine running from idling to 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 13.2 - 14.8 V

If the voltmeter reading is more than standard voltage, replace the voltage regulator.

If the voltmeter reading is less than standard voltage, check the voltage regulator and generator.

10. INSPECT CHARGING CIRCUIT WITH LOAD

- (a) With the engine running at 2,000 rpm, turn on the high beam headlights and place the heater blower switch at HI.
- (b) Check the reading on the ammeter.

Standard amperage: 30 A or more

If the ammeter reading is less than the standard amperage, repair the generator.

HINT:

If the battery is fully charged, the indication will sometimes be less than standard amperage.

11. REINSTALL ENGINE UNDER COVER

GENERATOR (Standard Spec.) COMPONENTS

CH0LL-02

N·m (kgf·cm, ft·lbf) : Specified torque

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. REMOVE THROTTLE BODY COVER
3. DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL
4. DISCONNECT INTAKE AIR CONNECTOR FROM THROTTLE BODY

5. REMOVE GENERATOR DRIVE BELT

Loosen the belt tension by turning the belt tensioner counter-clockwise, and remove the drive belt.

HINT:

The pulley bolt for the belt tensioner has a left hand thread.

6. REMOVE PS VANE PUMP FROM ENGINE (See page [SR-61](#))
7. REMOVE GENERATOR
 - (a) Disconnect the generator connector.
 - (b) Remove the terminal cap and nut, and disconnect the generator wire.
 - (c) Disconnect the wire clamp from the cord clip on the generator.
 - (d) Remove the bolt, nut and generator.

DISASSEMBLY

1. REMOVE REAR END COVER

- Remove the nut and terminal insulator.
- Remove the bolt 3 nuts, plate terminal and end cover.
- Remove the brush holder cover from the brush holder.

2. REMOVE BRUSH HOLDER

- Remove the 2 screws and brush holder.
- Remove the seal plate from the rectifier end frame.

3. REMOVE VOLTAGE REGULATOR AND RECTIFIER HOLDER

- Remove the 3 screws and voltage regulator.

- Remove the 4 screws and rectifier holder.
- Remove the 4 rubber insulators.

4. REMOVE PULLEY

- Hold SST (A) with a torque wrench, and tighten SST (B) clockwise to the specified torque.

SST 09820-63011

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

- Check that SST (A) is secured to the rotor shaft.

- (c) Mount SST (C) in a vise.
- (d) Insert SST (B) into SST (C), and attach the pulley nut to SST (C).

- (e) To loosen the pulley nut, turn SST (A) in the direction shown in the illustration.

NOTICE:

To prevent damage to the rotor shaft, do not loosen the pulley nut more than one-half of a turn.

- (f) Remove the generator from SST (C).

- (g) Turn SST (B), and remove SST (A and B).
- (h) Remove the pulley nut and pulley.

5. REMOVE RECTIFIER END FRAME

- (a) Remove the 4 nuts.

- (b) Using SST, remove the rectifier end frame.
SST 09286-46011
- (c) Remove the generator washer from the rectifier end frame.

6. REMOVE ROTOR FROM DRIVE END FRAME

INSPECTION

1. INSPECT VOLTAGE REGULATOR

- (a) Using an ohmmeter, check the continuity between terminals F and B.

Standard:

When the positive and negative poles between terminals F and B are exchanged, there is continuity in one way but no continuity in another way.

If the continuity is not as specified, replace the regulator.

- (b) Using an ohmmeter, check the continuity between terminals F and E.

Standard:

When the positive and negative poles between terminals F and E are exchanged, there is continuity in one way but no continuity in another way.

If the continuity is not as specified, replace the regulator.

2. INSPECT ROTOR FOR OPEN CIRCUIT

- (a) Check the rotor for open circuit.

Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance: 2.1 to 2.5 Ω at 20°C (68°F)

If there is no continuity, replace the rotor.

- (b) Check the rotor for ground.

Using an ohmmeter, check that there is no continuity between the slip ring and rotor.

If there is continuity, replace the rotor.

- (c) Check that the slip rings are not rough or scored.

If rough or scored, replace the rotor.

- (d) Using vernier calipers, measure the slip ring diameters.

Standard diameter: 14.2 to 14.4 mm (0.559 to 0.567 in.)

Minimum diameter: 12.8 mm (0.504 in.)

If the diameter is less than minimum, replace the rotor.

3. INSPECT STATOR FOR OPEN CIRCUIT

- (a) Check the stator for open circuit.
Using an ohmmeter, check that there is continuity between the coil leads.
If there is no continuity, replace the drive end frame assembly.

- (b) Check the stator for ground.
Using an ohmmeter, check that there is no continuity between the coil lead and drive end frame.
If there is continuity, replace the drive end frame assembly.

4. INSPECT POSITIVE RECTIFIER

- (a) Check the positive (+) rectifier.
- (1) Using an ohmmeter, connect one tester probe to the positive (+) terminal and the other to each rectifier terminal.
 - (2) Reverse the polarity of the tester probes and repeat step (a).
 - (3) Check that one shows continuity and the other shows no continuity.

If continuity is not as specified, replace the rectifier holder.

- (b) Check the negative (-) rectifier.
- (1) Using an ohmmeter, connect one tester probe to each negative (-) terminal and the other to each rectifier terminal.
 - (2) Reverse the polarity of the tester probes and repeat step (a).
 - (3) Check that one shows continuity and the other shows no continuity.

If continuity is not as specified, replace the rectifier holder.

5. INSPECT EXPOSED BRUSH LENGTH

Using vernier calipers, measure the exposed brush length.

Standard exposed length:

9.5 to 11.5 mm (0.374 to 0.453 in.)

Minimum exposed length: 1.5 mm (0.059 in.)

If the exposed length is less than minimum, replace the brush holder assembly.

6. INSPECT BEARING

Check that the bearing is not rough or worn.

If necessary, replace the drive end frame assembly (front bearing) or rotor assembly (rear bearing).

REASSEMBLY

1. PLACE RECTIFIER END FRAME ON PULLEY
2. INSTALL ROTOR TO DRIVE END FRAME

3. INSTALL RECTIFIER END FRAME
 - (a) Place the generator washer on the rotor.

- (b) Using a 29 mm socket wrench and press, slowly press in the rectifier end frame.

- (c) Install the 4 nuts.
Torque: 4.5 N·m (46 kgf·cm, 39 in.-lbf)

4. INSTALL PULLEY
 - (a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.
 - (b) Hold SST (A) with a torque wrench, and tighten SST (B) clockwise to the specified torque.
SST 09820-63011
Torque: 39 N·m (400 kgf·cm, 29 ft-lbf)
 - (c) Check that SST (A) is secured to the pulley shaft.

- (d) Mount SST (C) in a vise.
- (e) Insert SST (B) into SST (C), and attach the pulley nut to SST (C).

- (f) To torque the pulley nut, turn SST (A) in the direction shown in the illustration.
Torque: 110.5 N·m (1,125 kgf·cm, 81 ft·lbf)
- (g) Remove the generator from SST (C).

- (h) Turn SST (B), and remove SST (A and B).

5. INSTALL RECTIFIER HOLDER

- (a) Install the 4 rubber insulators on the lead wires.

NOTICE:

Be careful of the rubber insulators installation direction.

- (b) Install the rectifier while pushing it with the 4 screws.

Torque: 1.96 N·m (20 kgf·cm, 17 in.-lbf)

6. INSTALL BRUSH HOLDER AND VOLTAGE REGULATOR

- (a) Place the seal plate on the rectifier end frame.

- (b) Place the voltage regulator and brush holder on the rectifier end frame.

NOTICE:

Be careful of the brush holder installation direction.

- (c) Install the 5 screws.

Torque: 1.96 N·m (20 kgf·cm, 17 in.-lbf)

7. INSTALL REAR END COVER

- (a) Place the brush holder cover on the brush holder.

- (b) Install the end cover and plate terminal with the bolt and 3 nuts.

Torque:

Bolt: 3.85 N·m (39 kgf·cm, 34 in.-lbf)

Nut: 4.4 N·m (46 kgf·cm, 39 in.-lbf)

- (c) Install the terminal insulator with the nut.

Torque: 4.1 N·m (41.5 kgf·cm, 36 in.-lbf)

8. CHECK THAT ROTOR ROTATES SMOOTHLY

INSTALLATION

1. INSTALL GENERATOR

- (a) Install the generator with the bolt and nut.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

- (b) Connect the generator connector.
(c) Connect the generator wire with the nut and rubber.
(d) Install the terminal cap.
(e) Install the wire clamp to the cord clip on the generator.

2. INSTALL PS VANE PUMP (See page [SR-69](#))

3. INSTALL DRIVE BELT

Install the belt by turning the belt tensioner counterclockwise.

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

4. CONNECT INTAKE AIR CONNECTOR TO THROTTLE BODY

5. PERFORM ON-VEHICLE INSPECTION

(See page [CH-1](#))

6. INSTALL THROTTLE BODY COVER

7. INSTALL ENGINE UNDER COVER

8. CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL

GENERATOR (Towing Package Spec.) COMPONENTS

CH0LR-02

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

REMOVAL

1. REMOVE ENGINE UNDER COVER
2. REMOVE THROTTLE BODY COVER
3. DISCONNECT CABLE FROM NEGATIVE (-) BATTERY TERMINAL
4. DISCONNECT INTAKE AIR CONNECTOR FROM THROTTLE BODY

5. REMOVE GENERATOR DRIVE BELT

Loosen the belt tension by turning the belt tensioner counter-clockwise, and remove the drive belt.

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

6. REMOVE PS VANE PUMP FROM ENGINE

(See page [SR-61](#))

7. REMOVE GENERATOR

- (a) Disconnect the generator connector.
- (b) Remove the terminal cap and nut, and disconnect the generator wire.
- (c) Disconnect the wire clamp from the cord clip on the generator.
- (d) Remove the bolt, 2 nuts and generator.

DISASSEMBLY

1. REMOVE REAR END COVER

- (a) Remove the 3 nuts and end cover.
- (b) Remove the terminal insulator.

2. REMOVE BRUSH HOLDER

- (a) Remove the rear seal plate from the brush holder.
- (b) Remove the 2 screws and brush holder.
- (c) Remove the front seal plate from the coil assembly.

3. REMOVE PULLEY

- (a) Hold SST (A) with a torque wrench, and tighten SST (B) clockwise to the specified torque.

SST 09820-63011

Torque: 39 N·m (400 kgf-cm, 29 ft-lbf)

- (b) Check that SST (A) is secured to the rotor shaft.

- (c) Mount SST (C) in a vise.

- (d) Insert SST (B) into SST (C), and attach the pulley nut to SST (C).

- (e) To loosen the pulley nut, turn SST (A) in the direction shown in the illustration.

NOTICE:

To prevent damage to the rotor shaft, do not loosen the pulley nut more than one-half of a turn.

- (f) Remove the generator from SST (C).

- (g) Turn SST (B), and remove SST (A and B).
- (h) Remove the pulley nut and pulley.

4. REMOVE COIL ASSEMBLY

- (a) Remove the 4 bolts.

- (b) Using SST, remove the coil assembly.
 SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011)
- (c) Remove the generator washer.

5. REMOVE ROTOR FROM DRIVE END FRAME

INSPECTION

1. INSPECT ROTOR

- (a) Check the rotor for open circuit.

Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance: 2.3 to 2.7 Ω at 20°C (68°F)

If there is no continuity, replace the rotor.

- (b) Check the rotor for ground.

Using an ohmmeter, check that there is no continuity between the slip ring and rotor.

If there is continuity, replace the rotor.

- (c) Check that the slip rings are not rough or scored.

If rough or scored, replace the rotor.

- (d) Using vernier calipers, measure the slip ring diameter.

Standard diameter: 14.2 to 14.4 mm (0.559 to 0.567 in.)

Minimum diameter: 14.0 mm (0.551 in.)

If the diameter is less than minimum, replace the rotor.

2. INSPECT BRUSHES

Using vernier caliper, measure the exposed brush length.

Standard exposed length: 10.5 mm (0.413 in.)

Minimum exposed length: 4.5 mm (0.177 in.)

If the exposed length is less than minimum, replace the brushes and brush holder assembly.

3. INSPECT BEARING

Check the bearing is not rough or worn.

If necessary, replace the bearing (See page [CH-23](#)).

REPLACEMENT

1. REPLACE FRONT BEARING

- (a) Remove the 4 screws, bearing retainer and bearing.

- (b) Using SST and a hammer, tap out the bearing.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)

- (c) Using SST and a press, press in a new bearing.
SST 09950-60010 (09951-00470), 09950-70010 (09951-07100)

- (d) Install the bearing retainer with the 4 screws.
Torque: 2.6 N·m (27 kgf·cm, 23 in.-lbf)

2. REPLACE REAR BEARING

- (a) Using SST, remove the bearing cover (outside) and bearing.
SST 09820-00021

NOTICE:

Be careful not to damage the fan.

- (b) Remove the bearing cover (inside).

- (c) Place the bearing cover (inside) on the rotor.

- (d) Using SST and a press, press in a new bearing.
SST 09820-00031

- (e) Using SST, push in the bearing cover (outside).
SST 09285-76010

REASSEMBLY

1. INSTALL ROTOR TO DRIVE END FRAME

- (a) Place the drive end frame on the pulley.
- (b) Install the rotor to the drive end frame.

2. INSTALL COIL ASSEMBLY

- (a) Place the generator washer on the rotor.

- (b) Using SST and a press, slowly press in the coil assembly.
SST 09285-76010

- (c) Install the coil assembly with the 4 bolts.
Torque: 5.8 N·m (59 kgf·cm, 51 in.-lbf)

3. INSTALL PULLEY

- (a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.
- (b) Hold SST (A) with a torque wrench, and tighten SST (B) clockwise to the specified torque.
SST 09820-63011
Torque: 39 N·m (400 kgf·cm, 29 ft-lbf)
- (c) Check that SST (A) is secured to the pulley shaft.

- (d) Mount SST (C) in a vise.
- (e) Insert SST (B) into SST (C), and attach the pulley nut to SST (C).

- (f) To torque the pulley nut, turn SST (A) in the direction shown in the illustration.
Torque: 110.5 N·m (1,125 kgf·cm, 81 ft·lbf)
- (g) Remove the generator from SST (C).

- (h) Turn SST (B), and remove SST (A and B).

4. INSTALL BRUSH HOLDER

- (a) Place the front seal plate on the coil assembly.

- (b) Place the brush holder on the coil assembly with the pin facing upward.

NOTICE:

Be careful of the holder installation direction.

- (c) Install the 2 screws.
Torque: 1.8 N·m (18 kgf·cm, 16 in.-lbf)

- (d) Align the pins of the brush holder with the holes of the rear seal plate, and install the rear seal plate.

5. INSTALL REAR END COVER

- (a) Install the terminal insulator.

NOTICE:

Be careful of the terminal insulator installation direction.

- (b) Install the end cover with the 3 nuts.

Torque: 4.6 N·m (47 kgf·cm, 41 in.-lbf)

6. CHECK THAT ROTOR ROTATES SMOOTHLY

INSTALLATION

1. INSTALL GENERATOR

- (a) Install the generator with the bolt and 2 nuts.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

- (b) Connect the generator connector.
(c) Connect the generator wire with the nut.
(d) Install the terminal cap.
(e) Install the wire clamp to the cord clip on the generator.

2. INSTALL PS VANE PUMP (See page [SR-69](#))

3. INSTALL DRIVE BELT

Install the belt by turning the belt tensioner counterclockwise.

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

4. CONNECT INTAKE AIR CONNECTOR TO THROTTLE BODY

5. PERFORM ON-VEHICLE INSPECTION

(See page [CH-1](#))

6. INSTALL THROTTLE BODY COVER

7. INSTALL ENGINE UNDER COVER

8. CONNECT CABLE TO NEGATIVE (-) BATTERY TERMINAL

TROUBLESHOOTING

PROBLEM SYMPTOMS TABLE

CL026-03

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspected Area	See page
Clutch grabs/chatters	<ol style="list-style-type: none"> 1. Engine mounting (Loose) 2. Clutch disc (Runout is excessive) 3. Clutch disc (Oily) 4. Clutch disc (Worn out) 5. Clutch disc (Damaged torsion rubber) 6. Clutch disc (Glazed) 7. Diaphragm spring (Out of tip alignment) 	<p>–</p> <p>CL-17</p> <p>CL-15</p> <p>CL-15</p> <p>CL-17</p> <p>CL-15</p> <p>CL-18</p>

CLUTCH PEDAL INSPECTION

CLOER-01

1. CHECK THAT PEDAL HEIGHT IS CORRECT

Pedal height from dash panel:

170.2 to 180.2 mm (6.701 to 7.095 in.)

Pedal height from dash insulator:

157.7 to 167.7 mm (6.209 to 6.602 in.)

2. IF NECESSARY, ADJUST PEDAL HEIGHT

- (a) Loosen the lock nut and turn the stopper bolt or clutch start switch until the correct height is obtained.
- (b) Tighten the lock nut.

3. CHECK THAT PEDAL FREEPLAY AND PUSH ROD PLAY ARE CORRECT

- (a) Depress the pedal until clutch resistance begins to be felt.
Pedal freeplay: 5.0 to 15.0 mm (0.197 to 0.591 in.)
- (b) Gently push on the pedal until the resistance begins to increase a little.

Push rod play at pedal top:

1.0 to 5.0 mm (0.039 to 0.197 in.)

4. IF NECESSARY, ADJUST PEDAL FREEPLAY AND PUSH ROD PLAY

- (a) Remove the lower finish panel and disconnect the air duct.
- (b) Loosen the lock nut and turn the push rod until correct freeplay and push rod play are obtained.
- (c) Tighten the lock nut.
- (d) After adjusting the pedal freeplay, check the pedal height.
- (e) Connect the air duct and install the lower finish panel.

5. CHECK CLUTCH RELEASE POINT

- (a) Pull the parking brake lever and install wheel stoppers.
- (b) Start the engine and run at idle.
- (c) Without depressing the clutch pedal, slowly move the shift lever into the reverse position until the gears contact.

- (d) Gradually depress the clutch pedal and measure the stroke from where the gear noise stops (release point) up to the full stroke end position.

Standard distance:

25 mm (0.98 in.) or more

(From pedal stroke end position to release point)

If the distance is not as specified, perform the following operations.

- Check pedal height.
- Check push rod play and pedal freeplay.
- Bleed clutch line.
- Check clutch cover and disc.

6. CHECK CLUTCH START SYSTEM

- (a) Check that the engine does not start when the clutch pedal is released.
- (b) Check that the engine starts when the clutch pedal is fully depressed.

**7. CHECK CONTINUITY OF CLUTCH START SWITCH**

- (a) Disconnect the connector.
- (b) Remove the nut and clutch start switch from the clutch pedal bracket.
- (c) Measure the resistance between the terminals when the switch is ON and when it is OFF.

Standard:

Switch position	Condition
ON (pushed)	Below 1 Ω
OFF (free)	10 k Ω or higher

If the result is not as specified, replace the switch.

- (d) Install the clutch start switch to the clutch pedal bracket with the nut.
- (e) Connect the connector.

CLUTCH MASTER CYLINDER COMPONENTS

CL028-04

D04401

REMOVAL

1. REMOVE FILLER CAP AND FLOAT FROM RESERVOIR
2. DRAW OUT BRAKE FLUID WITH SYRINGE

NOTICE:

Do not let brake fluid remain on a painted surface. If brake fluid spill onto a painted surface, wash it off immediately.

3. DISCONNECT CLUTCH LINE FROM MASTER CYLINDER

Using SST, disconnect the clutch line. Use a container to catch the fluid.

SST 09023-00101

4. REMOVE CLIP AND CLEVIS PIN

- (a) Using needle-nose pliers, remove the clip.
- (b) Remove the clevis pin and wave washer.

5. REMOVE 2 MOUNTING NUTS AND PULL OUT MASTER CYLINDER
6. REMOVE GASKET

DISASSEMBLY

1. REMOVE RESERVOIR TANK

- (a) Using a pin punch and hammer, drive out the slotted spring pin.
- (b) Remove the reservoir and grommet.

2. REMOVE CLEVIS AND BOOT

- (a) Loosen the lock nut to remove the clevis and remove the lock nut.
- (b) Remove the boot.

3. REMOVE PUSH ROD

- (a) While pushing the push rod, remove the snap ring using snap ring pliers.
- (b) Remove the push rod and washer.

4. REMOVE PISTON WITH SPRING

REASSEMBLY

1. COAT PARTS WITH LITHIUM SOAP BASE GLYCOL GREASE, AS SHOWN
2. INSERT PISTON WITH SPRING INTO CYLINDER

3. INSTALL PUSH ROD AND BOOT

- (a) Install the washer to the push rod.
- (b) Push the push rod into the piston, and install the snap ring using snap ring pliers.
- (c) Install the boot.

4. TEMPORARILY INSTALL LOCK NUT AND CLEVIS

5. INSTALL RESERVOIR

- (a) Install the reservoir and a new grommet.
- (b) Using a pin punch and hammer, drive in the slotted spring pin.

INSTALLATION

1. INSTALL NEW GASKET

2. INSTALL MASTER CYLINDER WITH 2 MOUNTING NUTS

Torque: 14 N·m (143 kgf·cm, 10 ft·lbf)

3. CONNECT CLUTCH LINE TO MASTER CYLINDER

Using SST, connect the clutch line.

SST 09023-00101

Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

4. INSTALL CLEVIS PIN, WAVE WASHER AND CLIP
5. FILL CLUTCH RESERVOIR WITH BRAKE FLUID AND BLEED CLUTCH SYSTEM
6. ADJUST CLUTCH PEDAL (See page [CL-2](#))
7. CHECK FOR LEAKS

CLUTCH RELEASE CYLINDER COMPONENTS

CL02D-04

REMOVAL

1. REMOVE FILLER CAP AND FLOAT FROM RESERVOIR
2. DRAW OUT BRAKE FLUID WITH SYRINGE

NOTICE:

Do not let brake fluid remain on a painted surface. If brake fluid spill onto a painted surface, wash it off immediately.

3. REMOVE CLUTCH HOUSING COVER

Remove the 3 bolts and clutch housing cover.

4. REMOVE CLUTCH ACCUMULATOR

- (a) Remove the bolt and clamp.
- (b) Using SST, disconnect the clutch lines from the clutch accumulator and clutch release cylinder. Use a container to catch the fluid.

SST 09023-00101

- (c) Remove the 3 bolts and clutch accumulator.

5. REMOVE CLUTCH RELEASE CYLINDER

Remove the 2 bolts and clutch release cylinder.

DISASSEMBLY

1. **REMOVE BOOT AND PUSH ROD**
 - (a) Pull out the boot with the push rod.
 - (b) Remove the boot from the push rod.

2. **REMOVE PISTON AND SPRING**

Using compressed air, remove the piston with the spring from the cylinder.

NOTICE:

- **Blowing off the air may cause the piston to jump out. When removing the piston, hold it by hand using a waste.**
 - **Take care not to splash brake fluid when air-blowing.**
3. **REMOVE BLEEDER PLUG**

REASSEMBLY

1. **INSTALL BLEEDER PLUG**
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

CL0672

Z07291

2. **COAT PISTON WITH LITHIUM SOAP BASE GLYCOL GREASE, AS SHOWN**
3. **INSTALL PISTON AND SPRING INTO CYLINDER**
4. **INSTALL BOOT AND PUSH ROD**
 - (a) Install the push rod to the boot.
 - (b) Install the boot with the push rod to the cylinder.

INSTALLATION

1. INSTALL CLUTCH RELEASE CYLINDER

Install the clutch release cylinder with the 2 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

2. INSTALL CLUTCH ACCUMULATOR

(a) Install the clutch accumulator with the 3 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

(b) Using SST, connect the clutch lines to the clutch release cylinder and clutch accumulator.

SST 09023-00101

Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(c) Install the clamp with the bolt.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

3. INSTALL CLUTCH HOUSING COVER

Install the clutch housing cover with the 3 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

4. FILL CLUTCH RESERVOIR WITH BRAKE FLUID AND BLEED CLUTCH SYSTEM

5. CHECK FOR LEAKS

CLUTCH UNIT COMPONENTS

CL021-05

REMOVAL

1. **REMOVE TRANSMISSION FROM ENGINE**
(See page [MT-3](#))
2. **REMOVE CLUTCH COVER AND CLUTCH DISC**
 - (a) Put matchmarks on the flywheel and clutch cover.
 - (b) Loosen each set bolt one turn at a time until spring tension is released.
 - (c) Remove the set bolts, and pull off the clutch cover with the clutch disc.

NOTICE:

Do not drop the clutch disc.

3. **REMOVE BOOT, CLUTCH RELEASE BEARING AND CLUTCH RELEASE FORK FROM TRANSMISSION**
 - (a) Remove the boot and release bearing together with the fork.
 - (b) Remove the clip from the release bearing.

CL0239

INSPECTION

1. INSPECT CLUTCH DISC FOR WEAR OR DAMAGE

Using calipers, measure the rivet head depth.

Minimum rivet depth: 0.3 mm (0.012 in.)

If necessary, replace the clutch disc.

CL0373

2. INSPECT CLUTCH DISC RUNOUT

Using a dial indicator, check the disc runout.

Maximum runout: 0.7 mm (0.027 in.)

If necessary, replace the clutch disc.

Q07250

3. INSPECT FLYWHEEL RUNOUT

Using a dial indicator with a roller instrument, check the flywheel runout.

Maximum runout: 0.1 mm (0.004 in.)

If necessary, replace the flywheel.

Q02484

Z10062

4. INSPECT DIAPHRAGM SPRING FOR WEAR

Using calipers, measure the diaphragm spring for depth and width of wear.

Maximum

Depth A: 0.5 mm (0.020 in.)

Width B: 6.0 mm (0.236 in.)

If necessary, replace the clutch cover.

N

D13776

5. INSPECT CLUTCH RELEASE BEARING

Turn the bearing by hand while applying force in the axial direction.

HINT:

The bearing is permanently lubricated and requires no cleaning or lubrication.

If necessary, replace the release bearing.

INSTALLATION

1. INSTALL CLUTCH DISC AND CLUTCH COVER ON FLYWHEEL

- (a) Insert SST in the clutch disc, then insert them in the flywheel.

SST 09301-00110

HINT:

Take care not to insert the clutch disc in the wrong direction.

- (b) Align the matchmarks on the clutch cover and flywheel.
 (c) Following the order shown in the illustration, tighten the 6 bolts starting from the bolt located near the knock pin on the top.

Torque: 19 N·m (195 kgf-cm, 14 ft-lbf)

HINT:

- Following the order shown in the illustration, tighten the bolts at a time evenly.
- Check that the disc is in the center by lightly moving SST up and down, right and left, and tighten the bolts.

2. CHECK DIAPHRAGM SPRING TIP ALIGNMENT

Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.

Maximum non-alignment: 0.5 mm (0.020 in.)

If alignment is not as specified, adjust the diaphragm spring tip alignment using SST.

SST 09333-00013

3. APPLY RELEASE HUB GREASE

Apply release hub grease to the release fork and clutch release bearing contact, push rod contact and release fork pivot contact.

Sealant:

Part No. 08887-01806, RELEASE HUB GREASE or equivalent

4. APPLY CLUTCH SPRING GREASE

Apply clutch spline grease to the input shaft spline.

Sealant:

Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

5. INSTALL BOOT, CLUTCH RELEASE BEARING AND CLUTCH RELEASE FORK TO TRANSMISSION

- (a) Install the clip to the release bearing.
 (b) Install the boot and release bearing to the release fork, and then install them to the transmission.

6. **INSTALL TRANSMISSION TO ENGINE**
(See page [MT-3](#))

MANUAL TRANSMISSION SYSTEM

MTOHM-01

PRECAUTION

NOTICE:

When working with FIPG material, observe the following:

- Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces.
- Thoroughly clean all components to remove any loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Apply FIPG in a continuous line (width approximately 1 mm (0.04 in.)) along the sealing surface.
- Parts must be assembled within 10 minutes of FIPG application. Otherwise, the packing material must be removed and reapplied.

TROUBLESHOOTING

MTOHN-01

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. The numbers indicate the priority of the likely causes of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspected Area	See page
Noise	<ol style="list-style-type: none"> 1. Oil (Level low) 2. Oil (Wrong) 3. Gear (Worn or damaged) 4. Bearing (Worn or damaged) 	MT-7 MT-7 MT-10 MT-10
Oil leakage	<ol style="list-style-type: none"> 1. Oil (Level too high) 2. Gasket (Damaged) 3. Oil seal (Worn or damaged) 4. O-ring (Worn or damaged) 	MT-7 MT-10 MT-10 MT-10
Hard to shift or will not shift	<ol style="list-style-type: none"> 1. Synchronizer ring (Worn or damaged) 2. Shift key spring (Damaged) 	MT-34 MT-52 MT-34 MT-52
Jumps out of gear	<ol style="list-style-type: none"> 1. Locking ball spring (Damaged) 2. Shift fork (Worn) 3. Gear (Worn or damaged) 4. Bearing (Worn or damaged) 	MT-61 MT-34 MT-52 MT-10 MT-10

MANUAL TRANSMISSION UNIT COMPONENTS

MT0HO-01

REMOVAL

1. DISCONNECT BATTERY NEGATIVE TERMINAL

2. REMOVE TRANSMISSION SHIFT LEVER

- (a) Remove the transmission shift lever knob.
- (b) Remove the 4 bolts and shift lever boot retainer.
- (c) Remove the transmission shift lever boot.

- (d) Turn over the dust boot.
- (e) While pressing down on the shift lever cap, rotate it counterclockwise to remove.

3. RAISE VEHICLE AND DRAIN TRANSMISSION OIL

- (a) Remove the drain plug and gasket and drain the transmission oil.

- (b) Install a new gasket and the drain plug.

Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)

4. REMOVE LH AND RH FRONT EXHAUST PIPE

(See page [EM-126](#))

5. REMOVE PROPELLER SHAFT (See page [PR-3](#))

HINT:

Cover the transmission extension housing with a cloth to prevent any oil from leaking.

6. DISCONNECT VEHICLE SPEED SENSOR, BACK-UP LIGHT SWITCH CONNECTOR

7. REMOVE CLUTCH HOUSING COVER

- (a) Remove the 3 bolts and clutch housing cover.

8. REMOVE CLUTCH ACCUMULATOR

- (a) Remove the bolt and clamp.

- (b) Using SST, disconnect the clutch lines from the clutch accumulator and clutch release cylinder. Use a container to catch the fluid.

SST 09023-00101

(c) Remove the 3 bolts and clutch accumulator.

9. REMOVE CLUTCH RELEASE CYLINDER

Remove the 2 bolts and clutch release cylinder.

10. REMOVE STARTER

- (a) Disconnect the connector.
- (b) Remove the nut and disconnect the terminal.
- (c) Remove the 2 bolts and starter.

11. JACK UP TRANSMISSION

Using a transmission jack, support the transmission.

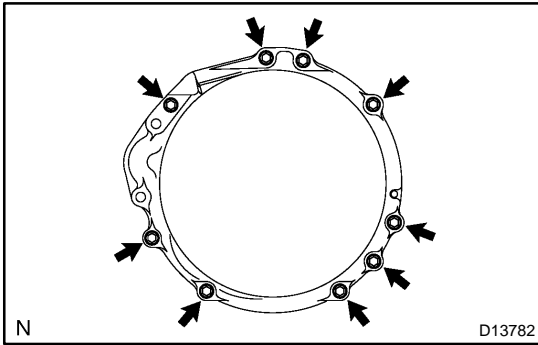

12. REMOVE CROSSMEMBER

- (a) Remove the 4 set bolts of the engine rear mounting on the crossmember.
- (b) Remove the 4 nuts, washers, bolts and crossmember.

13. REMOVE STABILIZER BAR BRACKET

Remove the 2 bolts, nuts and stabilizer bar brackets.

**14. REMOVE TRANSMISSION**

- (a) Remove the 9 transmission mounting bolts from the engine.
- (b) Separate the wire harness from the clamps of the transmission.
- (c) Pull out the transmission down and toward the rear.

NOTICE:

Be careful not to damage the PS tube.

15. REMOVE ENGINE REAR MOUNTING

Remove the 4 bolts and engine rear mounting.

16. REMOVE TRANSMISSION COVER

Remove the 5 bolts and transmission cover.

INSTALLATION

1. INSTALL TRANSMISSION COVER

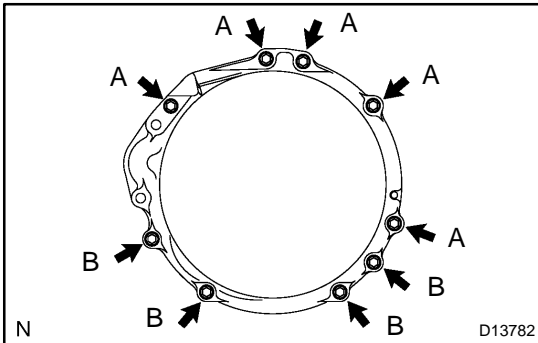

Install the transmission cover with the 5 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

2. INSTALL ENGINE REAR MOUNTING

Install the engine rear mounting with the 4 bolts.

Torque: 65 N·m (660 kgf·cm, 48 ft·lbf)

3. INSTALL TRANSMISSION

(a) Install the wire harness to the clamps of the transmission.

(b) Install the transmission to the engine with the 9 bolts.

Torque:

Bolt A: 72 N·m (730 kgf·cm, 53 ft·lbf)

Bolt B: 37 N·m (380 kgf·cm, 27 ft·lbf)

4. INSTALL CROSSMEMBER

(a) Install the crossmember with the 4 bolts, washers and nuts.

Torque: 72 N·m (734 kgf·cm, 53 ft·lbf)

(b) Install the 4 set bolts for the engine rear mounting.

Torque: 18 N·m (180 kgf·cm, 13 ft·lbf)

5. INSTALL STARTER

(a) Install the starter with the 2 bolts.

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

(b) Connect the terminal and install the nut.

Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

(c) Connect the connector.

6. INSTALL CLUTCH RELEASE CYLINDER

Install the clutch release cylinder with the 2 bolts.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

7. INSTALL CLUTCH ACCUMULATOR

(a) Install the clutch accumulator with the 3 bolts.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

(b) Using SST, connect the clutch lines to the clutch release cylinder and clutch accumulator.

SST 09023-00101

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

(c) Install the clamp with the bolt.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

8. INSTALL CLUTCH HOUSING COVER

Install the clutch housing cover with the 3 bolts.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

(a) Install the clutch accumulator with the 3 bolts.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

(b) Install the clutch housing cover with the 3 bolts.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

9. CONNECT VEHICLE SPEED SENSOR, BACK-UP LIGHT SWITCH CONNECTOR

10. INSTALL PROPELLER SHAFT (See page [PR-8](#))

11. INSTALL LH AND RH FRONT EXHAUST PIPE

(See page [EM-127](#))

12. INSTALL STABILIZER BAR BRACKET

Install the 2 stabilizer bar brackets with the 2 bolts and nuts.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

13. FILL WITH TRANSMISSION OIL

- (a) Remove the filler plug and gasket and fill with transmission oil.

Oil grade: API GL-4 or GL-5

Viscosity: SAE 75W-90

Capacity: 1.8 liters (1.9 US qts, 1.5 Imp. qts)

- (b) Install a new gasket and the filler plug.

Torque: 37 N·m (380 kgf-cm, 27 ft-lbf)

14. INSTALL TRANSMISSION SHIFT LEVER

- (a) Apply MP grease to the tip of the shift lever.
- (b) While pressing down on the shift lever cap, rotate it clockwise to install.
- (c) Install the dust cover.
- (d) Install the transmission shift lever boot.
- (e) Install the shift lever boot retainer with the 4 bolts.
- (f) Install the transmission shift lever knob.

15. CONNECT BATTERY NEGATIVE TERMINAL

16. DO ROAD TEST

MANUAL TRANSMISSION ASSEMBLY COMPONENTS

MT0HR-01

DISASSEMBLY

1. REMOVE BACK-UP LAMP SWITCH

Using SST, remove the back-up lamp switch.

SST 09817-16011

2. REMOVE SPEEDOMETER DRIVEN GEAR

(a) Remove the bolt and speedometer sensor.

(b) Remove the clip from the speedometer sensor.

(c) Remove the driven gear from the speedometer sensor.

(d) Remove the O-ring from the speedometer sensor.

(e) Check the teeth of the speedometer driven gear.

If the driven gear is damaged, replace it.

3. REMOVE EXTENSION HOUSING DEFLECTOR

Using a plastic hammer, remove the deflector.

4. REMOVE DRAIN PLUG

5. REMOVE FILLER PLUG

6. REMOVE PLUG

Remove the plug from the front case.

7. REMOVE RELEASE FORK SUPPORT

8. REMOVE CONTROL RETAINER

(a) Remove the 4 bolts from the control retainer.

(b) Using a plastic hammer, remove the control retainer.

9. REMOVE EXTENSION HOUSING

(a) Remove the bolt from the shift lever housing.

(b) Remove the 8 bolts and clamp.

(c) Using a plastic hammer, carefully tap out the extension housing.

HINT:

Place the brass bar against the rib portion of the case.

(d) Remove the shift lever housing.

10. REMOVE SPEEDOMETER DRIVE GEAR

- (a) Using a snap ring expander, remove the snap ring.

- (b) Remove the speedometer drive gear, ball and oil receiver pipe.

11. REMOVE OUTPUT SHAFT ADJUST NUT

- (a) Using a chisel and hammer, unstake the nut.

- (b) Shift to fifth gear, and then hold the input shaft with SST. SST 09556-16030
- (c) Using a belt and wooden block, fasten the transmission to the work bench.

- (d) Using SST, remove the nut from the output shaft. SST 09922-10010
- (e) Remove the belt and wooden block from the transmission.

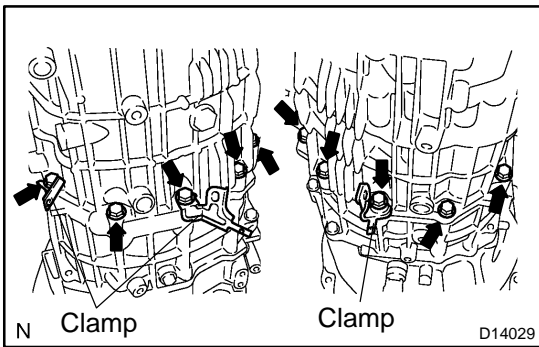

(f) Remove the taper roller bearing No.2 and spacer.

12. REMOVE REAR CASE

(a) Remove the plug, spring and lock ball pin.

(b) Remove the 10 bolts and 3 clamps.

(c) Using a plastic hammer, carefully tap out the rear case.

HINT:

Place the brass bar against the rib portion of the case.

13. REMOVE TRANSMISSION OIL SEPARATOR

Remove the 2 bolts and transmission oil separator.

14. REMOVE REVERSE IDLER GEAR SHAFT BOLT

Remove the reverse idler gear shaft bolt and gasket.

15. REMOVE MIDDLE CASE

(a) Remove the oil receiver pipe from the middle case.

(b) Remove the 11 bolts from the middle case.

(c) Using a plastic hammer, carefully tap out the middle case.

HINT:

Place the brass bar against the rib portion of the case.

16. REMOVE SHIFT & SELECT LEVER SHAFT

17. INSPECT REVERSE IDLER GEAR THRUST CLEARANCE

Using a feeler gauge, measure the thrust clearance.

Standard clearance:

0.10 to 0.55 mm (0.0039 to 0.0217 in.)

Maximum clearance:

0.55 to (0.0217 in.)

18. REMOVE REVERSE IDLER GEAR

Remove the reverse idle gear shaft, needle roller bearing and reverse idler gear.

19. INSPECT REVERSE IDLER GEAR RADIAL CLEARANCE

Using a dial indicator, measure the radial clearance.

Standard clearance:

0.015 to 0.050 mm (0.0006 to 0.0020 in.)

Maximum clearance:

0.050 mm (0.0020 in.)

If the clearance exceeds the maximum, replace the needle roller bearing.

20. REMOVE OUTPUT SHAFT, INPUT SHAFT, COUNTER GEAR SHAFT AND CONTROL SUB ASSEMBLY

(a) Remove the 4 bolts from the control sub assembly.

(b) Securely bind the output shaft, input shaft, counter gear shaft and control sub assembly together with a belt, etc.

- (c) While expanding the 2 snap rings, raise the output shaft, input shaft, counter gear shaft and control sub assembly.

- (d) While tapping on the front case with a plastic hammer, remove the output shaft, input shaft, counter gear shaft and control sub assembly as a unit.

NOTICE:

Do not strike the front case with excessive force. If the output shaft, input shaft, counter gear shaft and control sub assembly are subjected to a strong impact, the balls or springs may fly out of the clutch hubs.

- (e) Separate the output shaft, input shaft, counter gear shaft and control sub assembly.

21. DISASSEMBLE EXTENSION HOUSING

- (a) Using SST, remove the oil separator.
SST 09308-55010, 09520-00031

- (b) Remove the oil receiver pipe.

- (c) Using SST, remove the oil seal.
SST 09308-55010, 09520-00031

22. DISASSEMBLE REAR CASE

- (a) Remove the transmission oil separator seal from the rear case.
- (b) Remove the oil receiver pipe from the rear case.

- (c) Remove the bolt and bearing lock plate from the rear case.

- (d) Using SST, remove the counter gear rear bearing.
SST 09308-55010, 09520-00031

- (e) Using SST, remove the 2 bearing outer races.
SST 09308-55010, 09520-00031

23. DISASSEMBLE FRONT CASE

- (a) Using snap ring pliers, remove the 2 snap rings.

- (b) Using a screwdriver, remove the oil seal.
HINT:
Tape the screwdriver tip before use.

- (c) Remove the oil receiver pipe.

REASSEMBLY

1. REASSEMBLE FRONT CASE

- (a) Install the oil receiver pipe to the front case.

HINT:

Make sure that the protruding part on the oil receiver pipe is fitted into the notch on the front case.

- (b) Using snap ring pliers, install the 2 snap rings.

- (c) Using SST and a hammer, tap in a new oil seal to the clutch housing until dimension A falls within the specified range.

SST 09388-40010

Dimension A: 60.0 to 60.8 mm (2.362 to 2.394 in.)

- (d) Apply gear oil to the lip of the oil seal.

2. REASSEMBLE REAR CASE

- (a) Using SST and a press, press in 2 new bearing outer races.

SST 09950-60020 (09951-00790, 09951-00850)

09950-70010 (09951-07100, 09951-07360)

- (b) Using SST and a press, press in a new counter gear rear bearing.

SST 09950-60010 (09951-00650), 09950-70010 (09951-07360)

- (c) Install the bearing lock plate with the bolt.
Torque: 11 N·m (115 kgf·cm, 8 ft·lbf)

- (d) Install the oil receiver pipe to the rear case.
HINT:
 Make sure that the protruding part on the oil receiver pipe is fitted into the hole on the rear case.

- (e) Install the transmission oil separator seal to the rear case.
HINT:
 Make sure that the protruding part on the transmission oil separator seal is fitted into the notch on the rear case.

3. REASSEMBLE EXTENSION HOUSING

- (a) Using SST and a hammer, tap in a new oil seal to the extension housing until dimension A falls within the specified range.

SST 09950-60020 (09951-00640), 09950-70010 (09951-07100)

Dimension A: -0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

- (b) Apply gear oil to the lip of the oil seal.

- (c) Install the oil receiver pipe to the extension housing.
HINT:
 Make sure that the protruding parts on the oil receiver pipe is fitted into the holes on the extension housing.

- (d) Using SST and a hammer, install a new oil separator.
SST 09255-10012, 09950-70010 (09951-07100)

4. INSTALL OUTPUT SHAFT, INPUT SHAFT, COUNTER GEAR SHAFT AND CONTROL SUB ASSEMBLY

- (a) Apply gear oil to the sliding surfaces and gear teeth.
(b) Temporarily assembly the output shaft, input shaft, counter gear shaft and control sub assembly, and bind them together with a belt, etc.

- (c) While expanding the 2 snap rings with snap ring pliers, install the output shaft, input shaft, counter gear shaft and control sub assembly.

HINT:

Make sure that the snap rings are securely fitted into the grooves on the front bearings of the input shaft and counter gear shaft.

- (d) Remove the device binding the output shaft, input shaft, counter gear shaft and control sub assembly.

- (e) Install the 4 bolts to the control sub assembly.
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

5. INSTALL REVERSE IDLER GEAR

- (a) Install the reverse idler gear, needle roller bearing and reverse idler gear shaft.

HINT:

Make sure that the reverse idler gear is installed in the direction shown in the illustration.

NOTICE:

Make sure that the screw hole of the reverse idler shaft is positioned as shown in the illustration.

6. INSTALL SHIFT & SELECT LEVER SHAFT

Fit the notch of the shift & select cam to the reverse idler gear shaft, and the claw to the gap on the control shaft assembly to install the shift & select lever shaft.

7. INSTALL MIDDLE CASE

(a) Apply FIPG to the middle case as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

(b) Install the middle case to the front case with the 11 bolts.

Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

Bolt length:

Bolt A: 40 mm (1.57 in.)

Bolt B: 80 mm (3.15 in.)

(c) Install the oil receiver pipe to the middle case.

HINT:

Make sure that the protruding parts on the receiver pipe are fitted into the holes on the middle case.

- 8. INSTALL REVERSE IDLER GEAR SHAFT BOLT**
 Install a new gasket and the reverse idler gear shaft bolt.
Torque: 28 N·m (286 kgf·cm, 21 ft·lbf)

- 9. INSTALL TRANSMISSION OIL SEPARATOR**
 Install the transmission oil separator with the 2 bolts.
Torque: 8.5 N·m (87 kgf·cm, 75 in·lbf)

- 10. INSTALL REAR CASE**
 (a) Apply FIPG to the rear case as shown in the illustration.
FIPG:
Part No. 08826-00090, THREE BOND 1281 or equivalent

- (b) Install the rear case to the middle case with the 10 bolts and 3 clamps.
Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

- (c) Install the lock ball pin, spring and a new plug.
Torque: 24.5 N·m (250 kgf·cm, 18 ft·lbf)

11. INSTALL OUTPUT SHAFT ADJUST NUT

- (a) Using a belt and wooden block, fasten the transmission to the work bench.
- (b) Install a new spacer and the output shaft taper roller bearing No.2.

- (c) Using SST, temporarily tighten a new nut until the looseness in the output shaft is eliminated.

HINT:

Do not apply preload.

SST 09922-10010

- (d) Turn the output shaft 15 times to settle the bearing.

- (e) Shift to fifth gear, measure the starting torque and note it down.

- (f) Using SST, tighten the nut.

Torque:(Reference)

220 N·m (2,240 kgf·cm, 162 ft·lbf)

SST 09922-10010

- (g) Shift to fifth gear, measure the starting torque and note it down.

- (h) Make sure that the difference between the values measured at steps (e) and (g) is within the specified range.

Preload (at starting):

0.45 to 1.35 N·m

(4.59 to 13.77 kgf·cm, 3.98 to 11.95 in·lbf)

If the result is not as specified, tighten and adjust the output shaft adjust nut.

NOTICE:

Do not loosen or remove the output shaft adjust nut to adjust preload.

If the nut is loosened or removed, or if the preload exceeds the specified range, replace the spacer with a new one.

- (i) Using a chisel and hammer, stake the output shaft adjust nut.

12. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install the oil receiver pipe, ball and speedometer drive gear.

(b) Using a snap ring expander, install the snap ring.

13. INSTALL EXTENSION HOUSING

(a) Apply FIPG to the extension housing as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

(b) Install the extension housing and shift lever housing to the rear case with the 8 bolts and clamp.

Torque: 29 N·m (296 kgf-cm, 21 ft-lbf)

(c) Install the bolt to the shift lever housing.

Torque: 33 N·m (340 kgf-cm, 25 ft-lbf)

14. INSTALL CONTROL RETAINER

- (a) Apply FIPG to the control retainer as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

- (b) Install the control retainer to the extension housing with the 4 bolts.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

15. INSTALL PLUG

Install the plug to the clutch housing.

Torque: 39 N·m (397 kgf·cm, 29 ft·lbf)

16. INSTALL SPEEDOMETER DRIVEN GEAR

- (a) Install a new O-ring to the speedometer shaft sleeve.
 (b) Install the speedometer driven gear to the speedometer sensor with the clip.

NOTICE:

Make sure to install the clip in the direction shown in the illustration.

- (c) Install the speedometer sensor with the bolt.

Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

17. INSTALL EXTENSION HOUSING DEFLECTOR

Using a plastic hammer, install the deflector.

**18. INSTALL DRAIN PLUG**

Install a new gasket and the drain plug.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

19. INSTALL FILLER PLUG

Install a new gasket and the filler plug.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

**20. INSTALL RELEASE FORK SUPPORT**

Install the release fork support to the clutch housing.

Torque: 47 N·m (480 kgf-cm, 35 ft-lbf)

**21. INSTALL BACK-UP LAMP SWITCH**

Using SST, install the back-up lamp switch.

SST 09817-16011

Torque: 44 N·m (449 kgf-cm, 32 ft-lbf)

INPUT SHAFT COMPONENTS

MT0HU-01

N

← Apply gear oil

D14072

DISASSEMBLY

1. INSPECT EACH GEAR THRUST CLEARANCE

Using a feeler gauge, measure the clearance between the gear and the shaft.

Standard gear thrust clearance:

Gear	Thrust Clearance mm (in.)
3rd	0.09 to 0.52 (0.0035 to 0.0205)
4th	0.12 to 0.38 (0.0047 to 0.0150)
6th	0.20 to 0.49 (0.0079 to 0.0193)

2. INSPECT EACH GEAR RADIAL CLEARANCE

Using a dial indicator, measure the clearance between the gear and the shaft with the needle roller bearing installed.

Standard gear radial clearance:

Gear	Radial Clearance mm (in.)
3rd and 4th	0.015 to 0.067 (0.00059 to 0.00264)
6th	0.015 to 0.065 (0.00059 to 0.00256)

If necessary, replace the gear, needle roller bearing or shaft.

3. REMOVE 6TH GEAR

(a) Using 2 screwdrivers and a hammer, remove the snap ring.

(b) Using SST and a press, remove the clutch hub No.3, hub sleeve, synchronizer ring and 6th gear.

SST 09950-00020

(c) Remove the needle roller bearing and ring.

4. REMOVE 3RD GEAR

- (a) Using a snap ring expander, remove the snap ring.

- (b) Remove the 3rd gear thrust washer and pin.

- (c) Remove the 3rd gear, synchronizer ring set No.3, needle roller bearing and spacer.

5. REMOVE 4TH GEAR

- (a) Using a snap ring expander, remove the snap ring.

- (b) Using SST and a press, remove the clutch hub No.2, hub sleeve, synchronizer ring and 4th gear.
SST 09950-00020
- (c) Remove the needle roller bearing.

6. REMOVE INPUT SHAFT BEARING

- (a) Using 2 screwdrivers and a hammer, remove the snap ring.

- (b) Using SST and a press, remove the input shaft bearing.
SST 09950-00020

7. REMOVE CLUTCH HUB NO.2 AND NO.3

Remove the clutch hub, 3 synchromesh shifting keys, 3 balls and 3 springs from the hub sleeve.

HINT:

- Be careful not to scatter the balls or springs.
- Use the same procedures to remove the clutch hub No.2 and No.3.

INSPECTION

1. INSPECT SYNCHRONIZER RING SET NO.3

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring set No.3 and the 3rd gear.

Standard clearance:

Inner: 1.20 to 2.20 mm (0.0472 to 0.0866 in.)

Middle: 0.60 to 1.80 mm (0.0236 to 0.0709 in.)

Outer: 0.80 to 1.80 mm (0.0315 to 0.0709 in.)

Minimum clearance:

Inner: 1.20 mm (0.0472 in.)

Middle: 0.60 mm (0.0236 in.)

Outer: 0.80 mm (0.0315 in.)

If the clearance is less than the minimum, replace the synchronizer ring set No.3.

- (b) Coat the 3rd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the 3rd gear cone. Check that the ring locks.

2. INSPECT SYNCHRONIZER RING NO.3

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring No.3 and the 4th gear.

Standard clearance:

0.70 to 1.50 mm (0.0276 to 0.0591 in.)

Minimum clearance:

0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring No.3.

- (b) Coat the 4th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the 4th gear cone. Check that the ring locks.

3. INSPECT SYNCHRONIZER RING NO.3

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring No.3 and the 6th gear.

Standard clearance:

0.70 to 1.50 mm (0.0276 to 0.0591 in.)

Minimum clearance:

0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring No.3.

- (b) Coat the 6th gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the 6th gear cone. Check that the ring locks.

4. INSPECT HUB SLEEVE

- (a) Using a vernier caliper, measure the width of the groove of the hub sleeve (A) and thickness of both the gear shift forks No.2 and No.3 (B) as shown in the illustration.

Width of the groove of the hub sleeve (A):

10.5 to 10.6 mm (0.4134 to 0.4173 in.)

Thickness of the gear shift fork (B):

9.76 to 10.24 mm (0.3843 to 0.4031 in.)

- (b) Calculate the clearance using the formula below.

Formula:

Clearance = A - B

Standard: 0.26 to 0.84 mm (0.0102 to 0.0331 in.)

If the clearance is not as specified, replace the hub sleeve and gear shift fork.

- (c) Make sure that the hub sleeve and clutch hub slide smoothly. If the hub sleeve and clutch hub do not slide smoothly, replace them.

5. INSPECT INPUT SHAFT

(a) Using a dial indicator, measure the shaft runout.

Maximum runout: 0.03 mm (0.0012 in.)

If the runout exceeds the maximum, replace the input shaft.

(b) Using a micrometer, measure the outside diameter of the input shaft journal surface.

Standard:

Part	Outside diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	44.985 to 45.000 (1.7711 to 1.7717)
C	44.985 to 45.000 (1.7711 to 1.7717)
D	41.985 to 42.000 (1.6530 to 1.6535)
E	32.967 to 32.980 (1.2979 to 1.2984)

Minimum:

Part	Outside diameter mm (in.)
A	34.002 (1.3387)
B	44.985 (1.7711)
C	44.985 (1.7711)
D	41.985 (1.6530)
E	32.967 (1.2979)

If the diameter is less than the minimum, replace the input shaft.

6. INSPECT 3RD GEAR

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

51.015 to 51.040 mm (2.0085 to 2.0094 in.)

Maximum inside diameter:

51.040 mm (2.0094 in.)

If the inside diameter exceeds the maximum, replace the 3rd gear.

7. INSPECT 4TH GEAR

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

51.015 to 51.040 mm (2.0085 to 2.0094 in.)

Maximum inside diameter:

51.040 mm (2.0094 in.)

If the inside diameter exceeds the maximum, replace the 4th gear.

**8. INSPECT 6TH GEAR**

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

51.015 to 51.040 mm (2.0085 to 2.0094 in.)

Maximum inside diameter:

51.040 mm (2.0094 in.)

If the inside diameter exceeds the maximum, replace the 6th gear.

**9. INSPECT 3RD GEAR THRUST WASHER**

Using a micrometer, measure the thrust washer thickness.

Standard thickness:

7.12 to 7.18 mm (0.2803 to 0.2827 in.)

Minimum thickness:

7.12 mm (0.2803 in.)

If the thickness is less than the minimum, replace the 3rd gear thrust washer.

REASSEMBLY

1. INSTALL INPUT SHAFT BEARING

- (a) Using SST and a press, install the input shaft bearing to the input shaft.

SST 09950-00020

HINT:

Make sure that the bearing is installed in the direction shown in the illustration.

- (b) Select a snap ring that allows for the minimum amount of axial play.

Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.65 to 2.70 (0.1043 to 0.1063)
B	2.70 to 2.75 (0.1063 to 0.1083)
C	2.75 to 2.80 (0.1083 to 0.1102)
D	2.80 to 2.85 (0.1102 to 0.1122)
E	2.85 to 2.90 (0.1122 to 0.1142)
F	2.90 to 2.95 (0.1142 to 0.1161)

- (c) Using a brass bar and hammer, tap in the snap ring.

2. ASSEMBLE CLUTCH HUB NO.2

- (a) Apply gear oil to the clutch hub sleeve and clutch hub.
- (b) Install the clutch hub sleeve to the clutch hub No.2.
- (c) Install the 3 shifting keys to the clutch hub.
- (d) Install the 3 shifting key springs to the clutch hub.
- (e) Place the balls on the holes on the shifting keys, and install the hub sleeve while pushing down the balls.

NOTICE:

Be careful not to scatter the balls.

HINT:

Make sure that the clutch hub No.2 is installed in the direction shown in the illustration.

3. ASSEMBLE CLUTCH HUB NO.3

- (a) Apply gear oil to the clutch hub sleeve and clutch hub.
- (b) Install the clutch hub sleeve to the clutch hub No.3.
- (c) Install the 3 shifting keys to the clutch hub.
- (d) Install the 3 shifting key springs to the clutch hub.
- (e) Place the balls on the holes on the shifting keys, and install the hub sleeve while pushing down the balls.

NOTICE:

Be careful not to scatter the balls.

HINT:

Make sure that the clutch hub No.3 is installed in the direction shown in the illustration.

4. INSTALL 4TH GEAR

- (a) Apply gear oil to the needle roller bearing and 4th gear taper cone.
- (b) Install the needle roller bearing and 4th gear to the input shaft.
- (c) Install the synchronizer ring No.3 to the 4th gear.

- (d) Using SST and a press, install the clutch hub No.2 to the input shaft.
SST 09308-14010

HINT:

Make sure that the protruding part on the synchronizer ring is fitted into the notch or the clutch hub.

- (e) Make sure that the gear and synchronizer ring move smoothly.

- (f) Select a snap ring that allows for the minimum amount of axial play.

Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	1.77 to 1.82 (0.0697 to 0.0717)
B	1.82 to 1.87 (0.0717 to 0.0736)
C	1.87 to 1.92 (0.0726 to 0.0756)
D	1.92 to 1.97 (0.0756 to 0.0776)
E	1.97 to 2.02 (0.0776 to 0.0795)
F	2.02 to 2.07 (0.0795 to 0.0815)
G	2.07 to 2.12 (0.0815 to 0.0835)

- (g) Using a snap ring expander, install the snap ring.
- (h) Install the spacer to the input shaft.

5. INSTALL 3RD GEAR

- (a) Apply gear oil to the needle roller bearing and 3rd gear taper cone.
- (b) Install the synchronizer ring set No.3 to the clutch hub No.2.
- (c) Install the needle roller bearing and 3rd gear to the input shaft.

- (d) Install the pin and 3rd gear thrust washer to the input shaft.

- (e) Select a snap ring that allows for the minimum amount of axial play.

Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.07 to 2.12 (0.0815 to 0.0835)
B	2.12 to 2.17 (0.0835 to 0.0854)
C	2.17 to 2.22 (0.0854 to 0.0874)
D	2.22 to 2.27 (0.0874 to 0.0894)
E	2.27 to 2.32 (0.0894 to 0.0913)
F	2.32 to 2.37 (0.0913 to 0.0933)

- (f) Using a snap ring expander, install the snap ring.

6. INSTALL 6TH GEAR

- (a) Apply gear oil to the needle roller bearing and 6th gear taper cone.
- (b) Install the ring, needle roller bearing and 6th gear to the input shaft.
- (c) Install the synchronizer ring to the 6th gear.

- (d) Using SST and a press, install the clutch hub No.3 to the input shaft.
SST 09309-37010, 09950-00020
- (e) Make sure that the gear and synchronizer ring move smoothly.

- (f) Select a snap ring that allow for the minimum amount of axial play.
Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)

- (g) Using a brass bar and hammer, install the snap ring.

OUTPUT SHAFT COMPONENTS

MT0HY-01

D14074

DISASSEMBLY

1. REMOVE SYNCHRONIZER RING
2. REMOVE NEEDLE ROLLER BEARING

3. REMOVE OUTPUT SHAFT BEARING

Using SST and a press, remove the output shaft bearing.

SST 09950-00020

INSPECTION

1. INSPECT OUTPUT SHAFT

Using a cylinder gauge, measure the inside diameter of the output shaft.

Standard inside diameter:

45.009 to 45.025 mm (1.7720 to 1.7726 in.)

Maximum inside diameter:

45.025 mm (1.7726 in.)

If the diameter exceeds the maximum, replace the output shaft.

2. INSPECT SYNCHRONIZER RING

(a) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline.

Standard clearance:

0.70 to 1.50 mm (0.0276 to 0.0591 in.)

Minimum clearance:

0.70 mm (0.0276 in.)

If the clearance is less than the minimum, replace the synchronizer ring.

(b) Coat the output shaft and synchronizer ring cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the gear cone. Check that the ring locks.

REASSEMBLY

1. INSTALL OUTPUT SHAFT BEARING

- (a) Using SST and a press, install a new output shaft bearing to the output shaft.

SST 09710-20010 (09710-06060), 09950-60010
(09951-00650)

- (b) Apply grease to the output shaft bearing

2. INSTALL NEEDLE ROLLER BEARING

3. INSTALL SYNCHRONIZER RING

- (a) Apply gear oil to the synchronizer ring.

- (b) Install the synchronizer ring to the output shaft.

COUNTER GEAR COMPONENTS

MT012-01

N

D14073

DISASSEMBLY

1. INSPECT EACH GEAR THRUST CLEARANCE

Using a dial indicator, measure the clearance between the gear and the shaft.

Standard gear thrust clearance:

Gear	Thrust Clearance mm (in.)
1st and 2nd	0.10 to 0.43 (0.0039 to 0.0169)
Reverse	0.12 to 0.37 (0.0047 to 0.0146)

2. INSPECT EACH GEAR RADIAL CLEARANCE

Using a dial indicator, measure the clearance between the gear and the shaft with the needle roller bearing installed.

Standard gear radial clearance:

Gear	Radial Clearance mm (in.)
1st and 2nd	0.015 to 0.067 (0.00059 to 0.00264)
Reverse	0.015 to 0.065 (0.00059 to 0.00256)

If necessary, replace the gear, needle roller bearing or shaft.

3. REMOVE NEEDLE ROLLER BEARING INNER RACE

(a) Using a snap ring expander, remove the snap ring.

(b) Using SST and a press, remove the needle roller bearing inner race.

SST 09950-00020

4. REMOVE REVERSE GEAR

(a) Using a snap ring expander, remove the snap ring.

- (b) Using SST and a press, remove the counter gear shaft bearing, reverse gear bearing inner race, needle roller bearing and reverse gear.
SST 09950-00020

- (c) Remove the ball from the counter shaft.

5. REMOVE HUB SLEEVE

Remove the hub sleeve, 2 shifting keys, key spring and reverse synchronizer ring from the reverse gear spline.

6. REMOVE 1ST GEAR

- (a) Using SST and a press, remove the reverse gear spline and 1st gear.
SST 09950-00020
- (b) Remove the needle roller bearing.

(c) Remove the synchronizer ring set No.1.

7. REMOVE 2ND GEAR

(a) Using a snap ring expander, remove the snap ring.

(b) Using SST and a press, remove the clutch hub No.1 and 2nd gear.

SST 09950-00020

(c) Remove the needle roller bearing.

(d) Remove the synchronizer ring set No.1 from the 2nd gear.

8. DISASSEMBLE CLUTCH HUB NO.1

Remove the hub sleeve, 3 synchromesh shifting keys, 3 balls and 3 springs from the clutch hub No.1.

HINT:

Be careful not to scatter the balls or springs.

INSPECTION

1. INSPECT SYNCHRONIZER RING SET NO.1

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring set No.1 and the 1st gear.

Standard clearance:

Inner: 1.48 to 2.12 mm (0.0583 to 0.0835 in.)

Middle: 0.68 to 1.92 mm (0.0268 to 0.0756 in.)

Outer: 0.88 to 1.72 mm (0.0346 to 0.0677 in.)

Minimum clearance:

Inner: 1.48 mm (0.0583 in.)

Middle: 0.68 mm (0.0268 in.)

Outer: 0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring set No.1.

- (b) Coat the 1st gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the 1st gear cone. Check that the ring locks.

2. INSPECT SYNCHRONIZER RING SET NO.2

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring set No.1 and the 2nd gear.

Standard clearance:

Inner: 1.48 to 2.12 mm (0.0583 to 0.0835 in.)

Middle: 0.68 to 1.92 mm (0.0268 to 0.0756 in.)

Outer: 0.88 to 1.72 mm (0.0346 to 0.0677 in.)

Minimum clearance:

Inner: 1.48 mm (0.0583 in.)

Middle: 0.68 mm (0.0268 in.)

Outer: 0.88 mm (0.0346 in.)

If the clearance is less than the minimum, replace the synchronizer ring set No.2.

- (b) Coat the 2nd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the 2nd gear cone. Check that the ring locks.

3. INSPECT REVERSE SYNCHRONIZER RING

- (a) Using a feeler gauge, measure the clearance between the synchronizer ring and the reverse gear.

Standard clearance:

0.70 to 1.30 mm (0.0278 to 0.0512 in.)

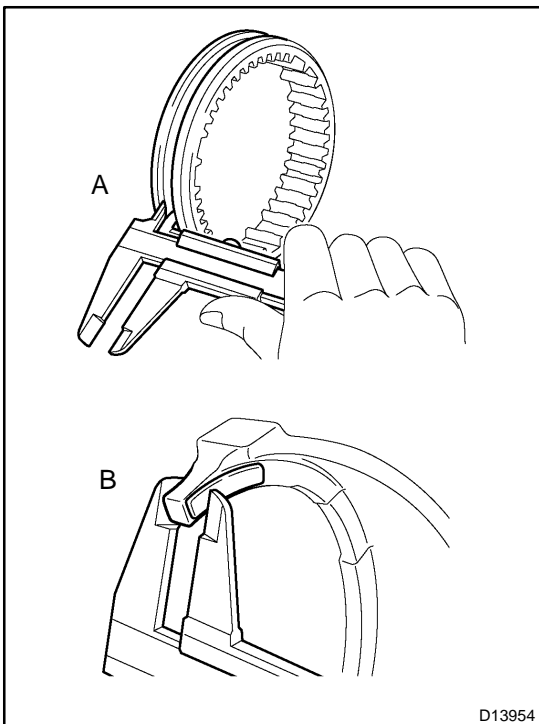

Minimum clearance:

0.70 mm (0.0278 in.)

If the clearance is less than the minimum, replace the synchronizer ring.

- (b) Coat the reverse gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it against the reverse gear cone. Check that the ring locks.

4. INSPECT HUB SLEEVE

- (a) Using a vernier caliper, measure the width of the groove of the hub sleeve (A) and thickness of both the gear shift forks No.1 and No.4 (B) as shown in the illustration.

Width of the groove of the hub sleeve (A):

No. 1: 11.95 to 12.05 mm (0.4705 to 0.4744 in.)

No. 4: 10.5 to 10.6 mm (0.4134 to 0.4173 in.)

Thickness of the gear shift fork (B):

No. 1: 11.7 to 11.8 mm (0.4606 to 0.4646 in.)

No. 4: 9.76 to 10.24 mm (0.3843 to 0.4031 in.)

- (b) Calculate the clearance using the formula below.

Formula:

Clearance = A – B

Standard:

No.1: 0.15 to 0.55 mm (0.0059 to 0.0217 in.)

No.4: 0.26 to 0.84 mm (0.0102 to 0.0331 in.)

If the clearance is not as specified, replace the hub sleeve and gear shift fork.

(c) Make sure that the hub sleeve and clutch hub slide smoothly.
If the hub sleeve and clutch hub do not slide smoothly, replace them.

5. INSPECT COUNTER GEAR SHAFT

(a) Using a dial indicator, measure the shaft runout.

Maximum runout: 0.03 mm (0.0012 in.)

If the runout exceeds the maximum, replace the counter gear shaft.

(b) Using a micrometer, measure the outside diameter of the counter gear shaft journal surface.

Standard:

Part	Outside diameter mm (in.)
A	34.002 to 34.015 (1.3387 to 1.3392)
B	36.985 to 37.000 (1.4561 to 1.4567)
C	47.985 to 48.000 (1.8892 to 1.8898)
D	53.985 to 54.000 (2.1254 to 2.1260)
E	34.002 to 34.015 (1.3387 to 1.3392)

Minimum:

Part	Outside diameter mm (in.)
A	34.002 (1.3387)
B	36.985 (1.4561)
C	47.985 (1.8892)
D	53.985 (2.1254)
E	34.002 (1.3387)

If the diameter is less than the minimum, replace the counter gear shaft.

6. INSPECT 1ST GEAR

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

54.015 to 54.040 mm (2.1266 to 2.1276 in.)

Maximum inside diameter:

54.040 mm (2.1276 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.

7. INSPECT 2ND GEAR

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

60.015 to 60.040 mm (2.3628 to 2.3638 in.)

Maximum inside diameter:

60.040 mm (2.3638 in.)

If the inside diameter exceeds the maximum, replace the 2nd gear.

8. INSPECT REVERSE GEAR

Using a cylinder gauge, measure the inside diameter of the gear.

Standard inside diameter:

51.015 to 51.040 mm (2.0085 to 2.0094 in.)

Maximum inside diameter:

51.040 mm (2.0094 in.)

If the inside diameter exceeds the maximum, replace the reverse gear.

REASSEMBLY

1. REASSEMBLE CLUTCH HUB NO.1

- (a) Apply gear oil to the clutch hub sleeve and clutch hub.
- (b) Install the clutch hub sleeve to the clutch hub.
- (c) Install the 3 shifting keys to the clutch hub.
- (d) Install the 3 shifting key springs to the clutch hub.
- (e) Place the balls on the holes on the shifting keys, and install the hub sleeve while pushing down the balls.

NOTICE:

Be careful not to scatter the balls.

2. INSTALL 2ND GEAR

- (a) Apply gear oil to the needle roller bearing and 2nd gear taper cone.
- (b) Install the needle roller bearing, 2nd gear and synchronizer ring set No.1 to the counter shaft.

- (c) Using SST and a press, install the clutch hub No.1.
SST 09308-14010

HINT:

Make sure that the protruding part on the synchronizer ring is fitted into the groove of the clutch hub.

- (d) Make sure that the gear and synchronizer ring move smoothly.

- (e) Select a snap ring that allows for the minimum amount of axial play.

Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.28 to 2.33 (0.0898 to 0.0917)
B	2.33 to 2.38 (0.917 to 0.0937)
C	2.38 to 2.43 (0.0937 to 0.0957)
D	2.43 to 2.48 (0.0957 to 0.0976)
E	2.48 to 2.53 (0.0976 to 0.0996)
F	2.53 to 2.58 (0.0996 to 0.1016)
G	2.58 to 2.63 (0.1016 to 0.1035)

- (f) Using a snap ring expander, install the snap ring.

3. INSTALL 1ST GEAR

- (a) Apply gear oil to the needle roller bearing and 1st gear taper cone.
 (b) Install the needle roller bearing, synchronizer ring set No.1 and 1st gear.

- (c) Using SST and a press, install the reverse gear spline.
SST 09309-37010

- (d) Install the reverse synchronizer ring to the reverse gear spline.

4. REASSEMBLE REVERSE GEAR

- (a) Install the key spring and 2 shifting keys to the reverse gear.

HINT:

- Face the grooves on the shifting keys towards the reverse gear.
- Face the claws on the key spring towards the reverse gear.
- Make sure that the key spring is positioned as shown in the illustration.

- (b) Install the hub sleeve to the reverse gear.

5. INSTALL REVERSE GEAR

- (a) Apply gear oil to the needle roller bearing and reverse gear bearing inner race.

- (b) Install the needle roller bearing and reverse gear bearing inner race to the reverse gear.

- (c) Install the ball to the counter shaft.
 - (d) Install the reverse gear to the counter shaft.
- HINT:
Make sure that the ball is fitted into the groove on the reverse gear bearing inner race.
- (e) Make sure that the gear and synchronizer ring move smoothly.

6. INSTALL COUNTER GEAR SHAFT BEARING

- (a) Using SST and a press, install a new counter gear shaft bearing to the counter shaft.

SST 09608-06041

HINT:
Make sure that the bearing is installed in the direction shown in the illustration.

- (b) Select a snap ring that allows for the minimum amount of axial play.

Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.35 to 2.40 (0.0925 to 0.0945)
B	2.40 to 2.45 (0.0945 to 0.0965)
C	2.45 to 2.50 (0.0965 to 0.0984)
D	2.50 to 2.55 (0.0984 to 0.1004)
E	2.55 to 2.60 (0.1004 to 0.1024)
F	2.60 to 2.65 (0.1024 to 0.1043)
G	2.65 to 2.70 (0.1043 to 0.1063)
H	2.70 to 2.75 (0.1063 to 0.1083)
J	2.75 to 2.80 (0.1083 to 0.1102)
K	2.80 to 2.85 (0.1102 to 0.1122)
L	2.85 to 2.90 (0.1122 to 0.1142)
M	2.90 to 2.95 (0.1142 to 0.1161)

- (c) Using a snap ring expander, install the snap ring.

- 7. INSTALL NEEDLE ROLLER BEARING INNER RACE**
- (a) Using SST and a press, install a new needle roller bearing inner race.
 SST 09608-03070, 09950-60010 (09951-00540)

- (b) Select a snap ring that allows for the minimum amount of axial play.
Standard clearance: 0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in.)
A	2.35 to 2.40 (0.0925 to 0.0945)
B	2.40 to 2.45 (0.0945 to 0.0965)
C	2.45 to 2.50 (0.0965 to 0.0984)
D	2.50 to 2.55 (0.0984 to 0.1004)
E	2.55 to 2.60 (0.1004 to 0.1024)
F	2.60 to 2.65 (0.1024 to 0.1043)
G	2.65 to 2.70 (0.1043 to 0.1063)
H	2.70 to 2.75 (0.1063 to 0.1083)
J	2.75 to 2.80 (0.1083 to 0.1102)
K	2.80 to 2.85 (0.1102 to 0.1122)
L	2.85 to 2.90 (0.1122 to 0.1142)
M	2.90 to 2.95 (0.1142 to 0.1161)

- (c) Using a snap ring expander, install the snap ring.

CONTROL SHAFT ASSEMBLY COMPONENTS

MT016-01

DISASSEMBLY

1. REMOVE SHIFT FORK NO.2 AND NO.3

Remove the 2 bolts and shift fork No.2 and No.3.

2. REMOVE SHIFT FORK SHAFT NO.3

Remove the shift fork shaft No.3, ball, spring, interlock pin No.2 and interlock pin No.3.

3. REMOVE SHIFT FORK SHAFT NO.2

Remove the shift fork shaft No.2, ball, spring, interlock pin No.2 and interlock pin No.3.

4. REMOVE SHIFT HEAD NO.1

(a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.

(b) Remove the shift fork shaft No.1, ball, spring, shift head No.1 and interlock pin No.1.

- 5. REMOVE SHIFT HEAD NO.2 AND SHIFT FORK NO.1**
 (a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.

- (b) Remove the shift head No.2 and shift fork No.1.

- 6. REMOVE SHIFT FORK NO.4**
 (a) Using a pin punch (5 mm (0.20 in.)) and hammer, tap out the slotted pin.
 (b) Remove the shift fork No.4.

- 7. REMOVE SHIFT FORK SHAFT NO.4**
 Remove the shift fork shaft No.4, ball and spring.

- 8. REMOVE SHIFT ARM**
 (a) Using a screwdriver, remove the E-ring.

(b) Remove the shift arm pivot and shift arm.

9. REMOVE SHIFT & SELECT LEVER

- (a) Remove the bolt from the shift & select lever.
- (b) Using a screwdriver, remove the E-ring.

(c) Remove the shift & select lever cam, shift & select lever, lock ball pin and spring from the shift & select shaft.

REASSEMBLY

1. INSTALL SHIFT & SELECT LEVER

- (a) Install the spring and lock ball pin to the shift & select lever.
- (b) Install the shift & select lever to the shift & select lever cam.
- (c) Install the shift & select lever shaft to the shift & select lever and shift & select lever cam.
- (d) Install a new E-ring to the shift & select lever shaft.
- (e) Install the bolt to the shift & select lever.

Torque: 33 N·m (340 kgf·cm, 25 ft·lbf)

2. INSTALL SHIFT ARM

- (a) Install the shift arm and shift arm pivot to the interlock bracket.

- (b) Install a new E-ring to the shift arm pivot.

3. INSTALL SHIFT FORK SHAFT NO.4

- (a) Install the spring and ball to the interlock bracket.
- (b) Install the shift fork shaft No.4.

**4. INSTALL SHIFT FORK NO.4**

- (a) Install the shift fork No.4 to the shift fork shaft No.4.
- (b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap in the slotted pin to the shaft fork No.4 and shift fork shaft No.4.

Drive in depth: 0 to 0.5 mm (0 to 0.0197 in.)

**5. INSTALL SHIFT HEAD NO.2 AND SHIFT FORK NO.1**

- (a) Install the shift fork No.1 and shift head No.2 to the shift fork shaft No.4.
- (b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap in the slotted pin to the shift head No.2 and shift fork shaft No.4.

Drive in depth: 0 to 0.5 mm (0 to 0.0197 in.)

**6. INSTALL SHIFT FORK SHAFT NO.1**

- (a) Apply MP grease to the interlock pin No.1, and install it to the interlock bracket.
- (b) Install the spring and ball to the interlock bracket.
- (c) Install the shift fork shaft No.1 to the interlock bracket.

HINT:

Make sure that the shift fork shaft No.4 is in the neutral position.

**7. INSTALL SHIFT HEAD NO.1**

- (a) Install the shift head No.1 to the shift fork shaft No.1.
- (b) Using a pin punch (5 mm (0.20 in.)) and hammer, tap in the slotted pin to the shift head No.1 and shift fork shaft No.1.

Drive in depth: 0 to 0.5 mm (0 to 0.0197 in.)

**8. INSTALL SHIFT FORK SHAFT NO.2**

- (a) Apply MP grease to the interlock pin No.2 and No.3, and install them to the interlock bracket.
- (b) Install the spring and ball to the the interlock bracket.
- (c) Install the shift fork shaft No.2 to the interlock bracket.

HINT:

Make sure that the shift fork shaft No.3 and No.4 are in the neutral position.

**9. INSTALL SHIFT FORK SHAFT NO.3**

- (a) Apply MP grease to the interlock pin No.2 and No.3, and install them to the interlock bracket.
- (b) Install the spring and ball to the interlock bracket.
- (c) Install the shift fork shaft No.1 to the interlock bracket.

HINT:

Make sure that the shift fork shaft No.1, No.2 and No.4 are in the neutral position.

**10. INSTALL SHIFT FORK NO.2 AND NO.3**

Install the shift fork No.2 and No.3 with 2 new bolts.

Torque: 19.5 N·m (200 kgf·cm, 14 ft·lbf)

AUTOMATIC TRANSMISSION SYSTEM

AT13J-01

PRECAUTION

If the vehicle is equipped with a mobile communication system, refer to the precautions in the IN section.

OPERATION

AUTOMATIC TRANSMISSION FLUID

AT145-01

ADJUSTMENT

1. BEFORE TRANSMISSION FILL

- This transmission requires Toyota Genuine ATF WS transmission fluid.
- After servicing the transmission, you must refill the transmission with the correct amount of fluid.
- Maintain the vehicle in a horizontal position while adjusting fluid level.
- On vehicles equipped with active suspension, turn the suspension control switch OFF if you jack up the vehicle while the engine is running.
- Proceed to step 2 if you replaced the entire transmission, transmission pan, drain plug, valve body and/or torque converter.
- Proceed to step 3 after removing the refill plug if you replaced the transmission hose and/or output shaft oil seal.

2. TRANSMISSION PAN FILL

- (a) Remove the refill plug and overflow plug.
- (b) Fill the transmission through the refill hole until fluid begins to trickle out of the overflow tube.
- (c) Reinstall the overflow plug.

3. TRANSMISSION FILL

- (a) Fill the transmission with the correct amount of fluid as listed in the table below.
- (b) Reinstall the refill plug to avoid fluid splash.

Repair	Fill Amount
Transmission hose and pipe removal	0.6 L (0.63 US qts, 0.53 Imp qts)
Output shaft oil seal replacement	0.4 L (0.42 US qts, 0.35 Imp qts)
Transmission pan and drain plug removal	1.3 L (1.37 US qts, 1.14 Imp qts)
Transmission valve body removal	3.9 L (4.12 US qts, 3.43 Imp qts)
Torque converter removal	5.3 L (5.60 US qts, 4.66 Imp qts)
Entire transmission assembly	7.2 L (7.61 US qts, 6.34 Imp qts)

HINT:

If you cannot add the listed amount of fluid, do the following:

- Install the refill plug.
- Allow the engine to idle with the air conditioning OFF.
- Move the shift lever through entire gear range to circulate fluid.
- Wait for 30 seconds with the engine idling.
- Stop the engine.
- Remove the refill plug and add fluid.
- Reinstall the refill plug.

4. FLUID CIRCULATION

- (a) Allow the engine to idle with the air conditioning OFF.
- (b) Move the shift lever through entire gear range to circulate fluid.

5. FLUID TEMPERATURE CHECK

- (a) With hand-held tester
 - (1) Connect the hand-held tester to the DLC3.
 - (2) Select the tester menus: OBD/MOBD, ENGINE, DATA LIST and A/T.
 - (3) Check A/T OIL TEMP.
 - (4) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

- (b) Without hand-held tester (Using A/T OIL TEMP indicator)
 - (1) Create a short circuit between CG (4) and TC (13) of the DLC3 terminals using SST.
- SST 09843-18040
- (2) Move the shift lever back and forth between N and D at 1.5 seconds interval for six seconds.
 - (3) The A/T OIL TEMP indicator comes on for two seconds when the combination meter starts to detect the fluid temperature.
 - (4) The A/T OIL TEMP indicator comes on again when the fluid temperature reaches 46°C (115°F) and blinks when it exceeds 56°C (130°F).
 - (5) Allow the engine to idle until the fluid temperature reaches 46°C (115°F).

HINT:

The fluid temperature should be less than 30°C (86°F) before check the fluid temperature.

6. FLUID LEVEL CHECK

NOTICE:

The fluid temperature must be between 46°C (115°F) and 56°C (130°F) to check the fluid level.

- (a) Remove the overflow plug with the engine idling.
- (b) Check that the fluid comes out of the overflow tube. If fluid does not come out, proceed to step 7. If fluid comes out, wait until the over-flow slows to a trickle and proceed to step 8.

7. TRANSMISSION REFILL

- (a) Install the overflow plug.
- (b) Stop the engine.
- (c) Remove the refill plug.
- (d) Add 0.4 liters (0.42 US qts, 0.35 Imp qts) of fluid.
- (e) Allow the engine to idle and wait for 10 seconds.
- (f) Proceed to step 6.

8. COMPLETE

- (a) Install the overflow plug with a new gasket.
Torque: 20 N·m (205 kgf·cm, 15 ft·lbf)
- (b) Stop the engine.
- (c) Install the refill plug with a new gasket.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

EXTENSION HOUSING OIL SEAL (A750E)

AT13L-01

ON-VEHICLE REPAIR

1. **DRAIN AUTOMATIC TRANSMISSION FLUID**
 - (a) Remove the drain plug and gasket, and drain the ATF.
 - (b) Install a new gasket and the drain plug.
Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)
2. **REMOVE PROPELLER SHAFT (See page PR-3)**

3. REMOVE REAR OIL SEAL

NOTICE:

Clean the extension housing before removing the oil seal.

Using SST, remove the oil seal.

SST 09308-10010

4. INSTALL OIL SEAL

- (a) Using SST and a hammer, carefully drive a new oil seal in until it stops.
SST 09325-40010
- (b) Coat the lip of the oil seal with MP grease.
5. **INSTALL PROPELLER SHAFT (See page PR-8)**
6. **FILL TRANSMISSION (See page AT-4)**

SPEED SENSOR ON-VEHICLE REPAIR

AT13M-01

1. **DISCONNECT SPEED SENSOR NT AND SP2 CONNECTOR**
2. **REMOVE SPEED SENSOR NT AND SP2**
 - (a) Remove the 2 bolts, speed sensors NT and SP2.

- (b) Remove the 2 O-rings from the speed sensors NT and SP2.
3. **INSTALL SPEED SENSOR NT AND SP2**
 - (a) Coat 2 new O-rings with ATF and install them to the speed sensors NT and SP2.

- (b) Install the speed sensors NT and SP2 with the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.-lbf)
4. **CONNECT SPEED SENSOR NT AND SP2 CONNECTOR**

ATF TEMPERATURE SENSOR ON-VEHICLE REPAIR

AT13N-01

1. DRAIN AUTOMATIC TRANSMISSION FLUID

- Remove the drain plug and gasket, and drain the ATF.
- Install a new gasket and the drain plug.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

2. REMOVE OIL PAN (See page AT-12)

3. REMOVE OIL STRAINER (See page AT-12)

4. REMOVE ATF TEMPERATURE SENSOR

- Disconnect the 7 solenoid valve connectors.
- Remove the 2 bolts, clamps and ATF temperature sensors.

- Disconnect the transmission wire connector.
- Remove the bolt and the transmission wire harness.

5. INSTALL ATF TEMPERATURE SENSOR

- Install the transmission wire harness.
- Install the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48 in.-lbf)

- Connect the transmission wire connector.

- Connect the 7 solenoid valve connectors.
- Install the 2 ATF temperature sensors and clamps to the valve body with the 2 bolts.

HINT:

In order to install the ATF temperature sensors properly, check the wire harness color prior to installation.

Torque:

A: 11 N·m (112 kgf·cm, 8 ft·lbf)

B: 10 N·m (100 kgf·cm, 7 ft·lbf)

Bolt length:

Bolt A: 36 mm (1.42 in.)

Bolt B: 12 mm (0.47 in.)

Sensor wire harness:

Wire harness	Color
for linear control	Orange
for oil temp. warning lamp	Blue

6. INSTALL OIL STRAINER (See page AT-12)

7. INSTALL OIL PAN

HINT:

Remove any packing material, and be careful not to spill oil on the contacting surfaces of the transmission case and the oil pan.

Using a new gasket, install the oil pan with the 20 bolts.

Torque: 4.4 N·m (45 kgf·cm, 39 in·lbf)

8. FILL TRANSMISSION (See page [AT-4](#))

PARK/NEUTRAL POSITION (PNP) SWITCH

AT130-01

ON-VEHICLE REPAIR

1. **DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**

2. **REMOVE PARK/NEUTRAL POSITION SWITCH**

- (a) Pry off the lock washer and remove the nut.
- (b) Remove the bolt and park/neutral position switch.

3. **INSTALL PARK/NEUTRAL POSITION SWITCH**

- (a) Install the park/neutral position switch with the bolt.

Torque: 13 N·m (130 kgf·cm, 10 ft·lbf)

- (b) Install a new lock washer and the nut.

Torque: 6.9 N·m (70 kgf·cm, 61 in.-lbf)

- (c) Bend the claws on the lock washer to stake the nut.

- (d) Adjust the park/neutral position switch

(See page [DI-952](#) or [DI-1117](#)).

4. **CONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR**

VALVE BODY ASSEMBLY ON-VEHICLE REPAIR

AT13P-01

1. DRAIN AUTOMATIC TRANSMISSION FLUID

- (a) Remove the drain plug and gasket, and drain the ATF.
- (b) Install a new gasket and the drain plug.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

2. REMOVE OIL PAN

NOTICE:

Some fluid will remain in the oil pan.

- (a) Remove the 20 bolts.
- (b) Remove the oil pan gasket.

3. EXAMINE PARTICLES IN PAN

Remove the magnets and use them to collect any steel particles. Carefully look at the foreign matter and particles in the pan and on the magnets to anticipate the type of wear you will find in the transmission.

Steel (magnetic) ... bearing, gear and clutch plate wear
Brass (non-magnetic) ... bushing wear

4. REMOVE OIL STRAINER

Remove the 4 bolts, the oil strainer and the O-ring.

NOTICE:

Be careful as some fluid will come out with the oil strainer.

5. REMOVE ATF TEMPERATURE SENSOR

- (a) Disconnect the 7 solenoid valve connectors.
- (b) Remove the 2 bolts, clamps and ATF temperature sensors.

6. REMOVE VALVE BODY

- (a) Remove the 19 bolts and the valve body.
- (b) Remove the 3 drum seal gaskets.

7. REMOVE SOLENOID VALVE

- (a) Remove the 2 bolts and the shift solenoid valve SR.
- (b) Remove the 3 bolts and the shift solenoid valves S1 and S2.
- (c) Remove the 2 bolts, 2 solenoid lock plates and the 4 straight pins.
- (d) Remove the shift solenoid valves SL2 and SLU.
- (e) Remove the shift solenoid valves SL1 and SLT.
- (f) Remove the O-ring from the solenoid valve S2.

8. INSTALL SOLENOID VALVE

- (a) Install a new O-ring to the shift solenoid valve S2.
- (b) Install the shift solenoid valves SL1 and SLT.
- (c) Install the shift solenoid valves SL2 and SLU.
- (d) Install the 4 straight pins and the 2 solenoid lock plates with the 2 bolts.

Torque: 6.4 N·m (65 kgf-cm, 57 in-lbf)

- (e) Install the shift solenoid valve S1 with the bolt.

Torque: 6.4 N·m (65 kgf-cm, 57 in-lbf)

- (f) Install the shift solenoid valve S2 with the bolt.

Torque: 10 N·m (102 kgf-cm, 7 ft-lbf)

- (g) Install the shift solenoid valve SR with the 2 bolts.

Torque: 6.4 N·m (65 kgf-cm, 57 in-lbf)

9. INSTALL VALVE BODY

HINT:

Align the groove of the manual valve with the pin of the lever.

- (a) Install 3 new drum seal gaskets to the transmission case.

- (b) Install the 19 bolts and the valve body.
Torque: 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 25 mm (0.98 in.)
Bolt B: 36 mm (1.42 in.)

10. INSTALL TEMPERATURE SENSOR

- (a) Connect the 7 solenoid valve connectors.
 (b) Install the 2 temperature sensors and clamps to the valve body with the 2 bolts.

HINT:

In order to install the ATF temperature sensors properly, check the wire harness color prior to installation.

Torque:

A: 11 N·m (112 kgf·cm, 8 ft·lbf)

B: 10 N·m (100 kgf·cm, 7 ft·lbf)

Bolt length:

Bolt A: 36 mm (1.42 in.)

Bolt B: 12 mm (0.47 in.)

Sensor wire harness:

Wire harness	Color
for linear control	Orange
for oil temp. warning lamp	Blue

11. INSTALL OIL STRAINER

- (a) Install a new O-ring.
 (b) Install the oil strainer with the 4 bolts.
Torque: 10 N·m (100 kgf·cm, 7 ft·lbf)

12. INSTALL OIL PAN

HINT:

Remove any packing material, and be careful not to spill oil on the contacting surfaces of the transmission case and the oil pan.

Using a new gasket, install the oil pan with the 20 bolts.

Torque: 4.4 N·m (45 kgf·cm, 39 in·lbf)

13. FILL TRANSMISSION (See page AT-4)

PARKING LOCK PAWL ON-VEHICLE REPAIR

AT13Q-01

1. REMOVE VALVE BODY (See page [AT-12](#))

2. REMOVE PARKING LOCK PAWL BRACKET
Remove the 3 bolts and parking lock pawl bracket.

3. REMOVE PARKING LOCK ROD

4. REMOVE SPRING FROM PARKING LOCK PAWL SHAFT
5. REMOVE PARKING LOCK PAWL AND SHAFT
6. INSTALL PARKING LOCK PAWL AND SHAFT
7. INSTALL SPRING TO PARKING LOCK PAWL SHAFT

8. INSTALL PARKING LOCK PAWL BRACKET
Install the parking lock pawl bracket with the 3 bolts.

HINT:

- Push the lock rod fully forward.
 - Check that the parking lock pawl operates smoothly.
- Torque: 7.4 N·m (75 kgf·cm, 65 in.-lbf)**
9. INSTALL VALVE BODY (See page [AT-12](#))

REMOVAL

1. REMOVE PIPE

Loosen the 2 clips and disconnect the 2 hoses.

2. REMOVE OIL COOLER

(a) Remove the 3 bolts and oil cooler.

Torque: 11 N·m (115 kgf·cm, 8 ft·lbf)

(b) Remove the bolt, transmission oil cooler bracket and grommet.

Torque: 4.9 N·m (50 kgf·cm, 43 in.-lbf)

(c) Remove the 2 grommets and condenser mounting insulators.

3. REMOVE OIL COOLER TUBE

(a) Loosen the 2 clips and disconnect the 2 hoses.

(b) Remove the bolt and oil cooler tube with the 2 hoses.

Torque: 5.0 N·m (50 kgf·cm, 48 in.-lbf)

(c) Loosen the 2 clips and disconnect the 2 hoses.

INSTALLATION

Installation is in the reverse order of removal (See page [AT-17](#)).

HINT:

After installation, check fluid level (See page [AT-4](#)).

COLUMN SHIFT ASSEMBLY COMPONENTS

AT13U-01

**Standard Cab, Access Cab:
Non-tilt steering column**

N·m (kgf·cm, ft·lbf) : Specified torque

**Standard Cab, Access Cab:
Tilt steering column**

N-m (kgf-cm, ft-lbf) : Specified torque

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

➔ MP grease

REMOVAL

1. **REMOVE STEERING COLUMN ASSEMBLY**
(See page [SR-18](#) or [SR-33](#))

2. **REMOVE PARKING LOCK CABLE ASSEMBLY**

- (a) Remove the screw and cable No. 2.
- (b) Using a torx® socket wrench, remove the 2 screws and cable No. 1.
- (c) Remove the spring.
- (d) Remove the 2 bolts and parking lock cable housing.

3. **REMOVE SHIFT LEVER**

- (a) Disconnect the connector.
- (b) Using a torx® socket wrench, remove the torx® screw and shift lever.

4. **REMOVE SHIFT LEVER HOUSING**

Using a torx® socket wrench, remove the 3 torx® screws and shift lever housing.

INSTALLATION

1. INSTALL SHIFT LEVER HOUSING

Using a torx® socket wrench, install the shift lever housing with the 3 new screws.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

2. INSTALL SHIFT LEVER

- (a) Install the upper No. 2 steering column cover.
- (b) Using a torx® socket wrench, install the shift lever with a new screw.

Torque: 18 N·m (180 kgf·cm, 13 ft·lbf)

- (c) Connect the connector.

3. INSTALL PARKING LOCK CABLE NO. 1 AND NO. 2

- (a) Apply MP grease on the lock pin and internal surface of shift lever housing.
- (b) Install the spring and parking lock cable No. 1 into the shift lever housing.

NOTICE:

Be careful not to bend or twist the cable abnormally.

- (c) Using a torx® socket wrench, install 2 new screws.

Torque: 2.9 N·m (29 kgf·cm, 25 in.-lbf)

- (d) Wire the cable No. 1 and No. 2, as shown in the illustration.
- (e) Temporarily install the cable housing to steering column assembly with 2 new bolts.

NOTICE:

Be careful not to bend or twist the cable abnormally.

- (f) After installation, confirm the following items.
 - (1) When the shift lever is in the P position and the pedal button is pushed in by 7 mm (0.28 in.), shift lever should be locked by lock pin.
 - (2) When the pedal button is released, the shift lever should be able to be shifted from P position to other positions.
 - (3) When the shift lever is in the N or D position and the pedal button is pushed in by 7 mm (0.28 in.), the shift lever should be able to be shifted.

- (g) Install the cable No. 2 to column upper bracket with the clip.
- (h) Install the cable end to the sliding block of the column upper bracket with the screw.
Torque: 2.2 N·m (23 kgf·cm, 19 in.-lbf)
- (i) After installation, check the following items.
 - (1) When the pedal button is pushed, shift lever should be locked.
 - (2) When the pedal button is released, shift lever should be unlocked.

4. INSTALL STEERING COLUMN ASSEMBLY

(See page [SR-28](#) or [SR-42](#))

5. ADJUST CABLE HOUSING

- (a) Shift the shift lever to the P position.
- (b) Turn the ignition key to the LOCK position.

- (c) Loosen the 2 bolts and adjust the cable housing.

HINT:

- Pedal button should touch the pedal plate cushion.
 - Brake pedal should not be moved by the pedal button.
 - Cable housing should not be touched the brake pedal and the brake pedal plate cushion.
- (d) Torque the 2 bolts.

Torque: 10.5 N·m (110 kgf·cm, 8 ft-lbf)

6. CONFIRM SHIFT LOCK SYSTEM OPERATION

- (a) Only when the brake pedal is engaged and the ignition key is not in the LOCK position, the shift lever can be shifted from the P position to other positions.
When the shift lever is in the P position and the brake pedal is released, the shift lever cannot be shifted from the P position to other positions.
- (b) When the shift lever is not in the P position, the ignition key cannot be turned to the LOCK position.
Only when the shift lever is in the P position, the ignition key can be removed.
- (c) Cable No. 1 and No. 2 should not be deformed by other parts located around the steering column.

AUTOMATIC TRANSMISSION UNIT (1GR-FE) COMPONENTS

AT13X-01

N

D14136

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. JACK UP VEHICLE
3. REMOVE NO. 1 ENGINE UNDER COVER

4. DRAIN AUTOMATIC TRANSMISSION FLUID
 - (a) Remove the drain plug and gasket, and drain the ATF.
 - (b) Install a new gasket and the drain plug.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)
5. REMOVE RH AND LH FRONT EXHAUST PIPE
(See page [EM-138](#))
6. REMOVE PROPELLER SHAFT (See page [PR-3](#))

7. DISCONNECT SPEED SENSOR NT AND SP2 CONNECTORS

8. DISCONNECT TRANSMISSION WIRE CONNECTOR

9. DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR

10. SEPARATE SHIFT CONTROL CABLE FROM TRANSMISSION

- (a) Remove the nut and disconnect the shift control cable.
Torque: 14.5 N·m (148 kgf-cm, 11 ft-lbf)
- (b) Remove the 2 bolts and shift control cable bracket from the transmission.
Torque: 19.5 N·m (199 kgf-cm, 14 ft-lbf)

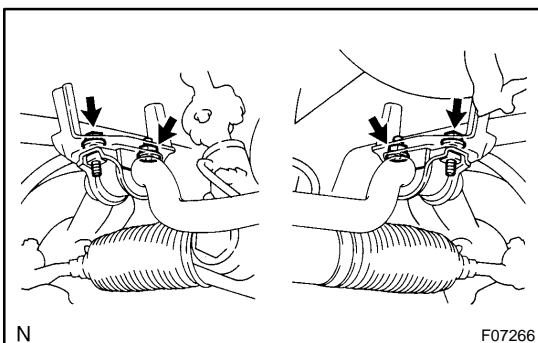

11. DISCONNECT OIL COOLER PIPE

- (a) Remove the bolt and clamp.
Torque: 12 N·m (122 kgf-cm, 9 ft-lbf)

- (b) Disconnect the 2 oil cooler pipes.
SST 09023-12701
Torque: 34 N·m (346 kgf-cm, 25 ft-lbf)

12. DISCONNECT STABILIZER BAR

- (a) Remove the 2 bolts, nuts and stabilizer bar with the bushings and brackets.
Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)
- (b) Disconnect the stabilizer bar.

13. REMOVE STARTER

- (a) Remove the nut and disconnect the starter wire and connector.
Torque: 9.8 N-m (100 kgf-cm, 7 ft-lbf)
- (b) Remove the 2 bolts and starter.
Torque: 37 N-m (377 kgf-cm, 27 ft-lbf)

14. REMOVE TORQUE CONVERTER CLUTCH MOUNTING BOLT

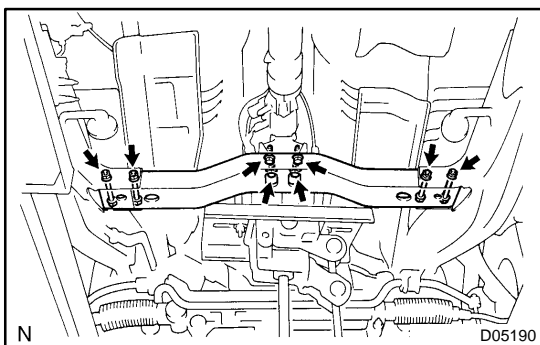

- (a) Remove the flywheel housing side cover.
- (b) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley set bolt with a wrench.
Torque: 48 N-m (490 kgf-cm, 35 ft-lbf)

HINT:

At the time of installation, refer to the following:
First install the green colored bolt and then the remaining 5 bolts.

15. JACK UP TRANSMISSION SLIGHTLY

Securely support the transmission on a transmission jack.
Lift the transmission slightly from the crossmember.

16. REMOVE CROSSMEMBER

- (a) Remove the 4 bolts of the engine rear mounting on the crossmember.
Torque: 18 N-m (185 kgf-cm, 13 ft-lbf)
- (b) Remove the 4 nuts, bolts, washers and crossmember.
Torque: 72 N-m (734 kgf-cm, 53 ft-lbf)

**17. REMOVE ENGINE REAR MOUNTING INSULATOR**

Remove the 4 bolts and engine rear mounting insulator from the transmission.

Torque: 65 N·m (660 kgf·cm, 48 ft·lbf)

**18. REMOVE TRANSMISSION**

- Separate the wire harness from the transmission.
- Lower the rear end of the transmission.
- Remove the 9 bolts and transmission.

Torque:

17 mm head: 71 N·m (724 kgf·cm, 52 ft·lbf)

14 mm head: 37 N·m (377 kgf·cm, 27 ft·lbf)

INSTALLATION

1. CHECK TORQUE CONVERTER INSTALLATION

- (a) Install the torque converter to the transmission housing.

- (b) Using vernier calipers and a straight edge, measure dimension A between the transmission fitting part and the converter fitting part of the drive plate.

- (c) Using vernier calipers and a straight edge, measure dimension B shown in the illustration and check that B is greater than A measured in step (b).

Standard distance: A + 1 mm (0.04 in.) or more

2. MEASURE DRIVE PLATE RUNOUT AND INSPECT RING GEAR (See page AT-39)

3. TRANSMISSION INSTALLATION

- (a) Installation is in the reverse order of removal (See page AT-27).
- (b) Adjust the shift lever position (See page DI-952).
- (c) Fill the transmission (See page AT-4).
- (d) Conduct the road test of the vehicle (See page DI-953).

AUTOMATIC TRANSMISSION UNIT (2UZ-FE) COMPONENTS

AT140-01

N

D14122

REMOVAL

1. JACK UP VEHICLE
2. REMOVE NO. 1 ENGINE UNDER COVER

3. DRAIN AUTOMATIC TRANSMISSION FLUID
 - (a) Remove the drain plug and gasket, and drain the ATF.
 - (b) Install a new gasket and the drain plug.

Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)

4. REMOVE RH AND LH FRONT EXHAUST PIPE
(See page [EM-125](#))

5. A750E:
REMOVE PROPELLER SHAFT (See page [PR-3](#))

6. A750F:
REMOVE HEAT INSULATOR

Remove the 2 bolts and heat insulator.

Torque: 16 N·m (164 kgf-cm, 12 ft-lbf)

7. A750F:
REMOVE FRONT AND REAR PROPELLER SHAFT
(See page [PR-10](#))

8. DISCONNECT SPEED SENSOR NT AND SP2 CONNECTORS

9. DISCONNECT TRANSMISSION WIRE CONNECTOR

10. DISCONNECT PARK/NEUTRAL POSITION SWITCH CONNECTOR

11. SEPARATE SHIFT CONTROL CABLE FROM TRANSMISSION

- (a) Remove the nut and disconnect the shift control cable.
Torque: 14.5 N·m (148 kgf-cm, 11 ft-lbf)
- (b) Remove the 2 bolts and shift control cable bracket from the transmission.
Torque: 19.5 N·m (199 kgf-cm, 14 ft-lbf)

12. DISCONNECT OIL COOLER PIPE

- (a) Remove the 3 bolts and clamps.
Torque: 12 N·m (122 kgf-cm, 9 ft-lbf)

- (b) Disconnect the 2 oil cooler pipes.
SST 09023-12701
Torque: 34 N·m (346 kgf-cm, 25 ft-lbf)

**13. DISCONNECT STABILIZER BAR**

- (a) Remove the 2 bolts, nuts and stabilizer bar with the bushings and brackets.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

- (b) Disconnect the stabilizer bar.

**14. REMOVE REAR END PLATE AND TORQUE CONVERTER CLUTCH MOUNTING BOLT**

- (a) Remove the bolt and rear end plate.

Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)

- (b) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley set bolt with a wrench.

Torque: 48 N·m (490 kgf-cm, 35 ft-lbf)

HINT:

At the time of installation, refer to the following:

First install the green colored bolt and then the remaining 5 bolts.

15. JACK UP TRANSMISSION SLIGHTLY

Securely support the transmission on a transmission jack.

Lift the transmission slightly from the crossmember.

**16. REMOVE CROSSMEMBER**

- (a) Remove the 4 bolts of the engine rear mounting insulator on the crossmember.

Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)

- (b) Remove the 4 nuts, bolts, washers and crossmember.

Torque: 72 N·m (734 kgf-cm, 53 ft-lbf)

17. REMOVE ENGINE REAR MOUNTING INSULATOR

Remove the 4 bolts and engine rear mounting insulator.

Torque: 65 N·m (660 kgf·cm, 48 ft·lbf)

18. REMOVE TRANSMISSION

- (a) A750E:
Separate the wire harness from the transmission.
- (b) A750F:
Separate the wire harness from the transmission and transfer.
- (c) Lower the rear end of the transmission.
- (d) Remove the 10 bolts and transmission.

Torque:

17 mm head: 71 N·m (724 kgf·cm, 52 ft·lbf)

14 mm head: 37 N·m (377 kgf·cm, 27 ft·lbf)

INSTALLATION

1. CHECK TORQUE CONVERTER INSTALLATION

- (a) Install the torque converter to the transmission housing.

- (b) Using vernier calipers and a straight edge, measure dimension A between the transmission fitting part and the converter fitting part of the drive plate.

- (c) Using vernier calipers and a straight edge, measure the dimension B shown in the illustration and check that B is greater than A measured in step (b).

Standard distance: A + 1 mm (0.04 in.) or more

2. MEASURE DRIVE PLATE RUNOUT AND INSPECT RING GEAR (See page AT-39)

3. TRANSMISSION INSTALLATION

- (a) Installation is in the reverse order of removal (See page AT-34).
- (b) Adjust the shift lever position (See page DI-1117).
- (c) Fill the transmission (See page AT-4).
- (d) Conduct the road test of the vehicle (See page DI-1118).

TORQUE CONVERTER CLUTCH AND DRIVE PLATE INSPECTION

AT143-01

1. INSPECT ONE-WAY CLUTCH

- (a) Install SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.
SST 09350-30020 (09351-32020)

- (b) Press on the serrations of the stator with a finger and rotate it.
- (c) Check if it rotates smoothly when turned clockwise and locks when turned counterclockwise.

If necessary, clean the converter clutch and retest the one-way clutch.

Replace the converter clutch if the clutch still fails the test.

2. MEASURE DRIVE PLATE RUNOUT AND INSPECT RING GEAR

- (a) Set up a dial indicator and measure the drive plate runout.
Maximum runout: 0.20 mm (0.0079 in.)
- (b) Check for damage to the ring gear.

If runout is not within the specification or if the ring gear is damaged, replace the drive plate. If installing a new drive plate, note the orientation of the spacers and tighten the bolts (See page [EM-108](#), [EM-83](#) or [EM-95](#)).

TRANSFER SYSTEM

TR00V-03

PRECAUTION

When working with FIPG material, you must observe the following:

- Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from gasket surfaces.
- Thoroughly clean all components to remove any loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Apply FIPG in approx. a 1 mm (0.04 in.) wide bead along the sealing surface.
- Parts must be assembled within 10 minutes of FIPG application. Otherwise, the packing material must be removed and reapplied.

TROUBLESHOOTING

PROBLEM SYMPTOMS TABLE

TR09F-03

Use the table below to help find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspected Area	See page
Noise	<ol style="list-style-type: none"> 1. Oil (Level low) 2. Oil (Wrong) 3. Transfer faulty 	TR-5 TR-5 TR-6
Oil leakage	<ol style="list-style-type: none"> 1. Oil (Level too high) 2. Gasket (Damaged) 3. Oil seal (Worn or damaged) 4. O-ring (Worn or damaged) 	TR-5 TR-6 TR-36 TR-6

TRANSFER UNIT COMPONENTS

TR09G-02

REMOVAL

HINT:

Be sure to switch the transfer to 2WD before performing procedures.

1. DISCONNECT BREATHER HOSE

Disconnect the breather hose from the transfer.

2. RAISE VEHICLE AND DRAIN TRANSFER OIL

3. REMOVE LH AND RH FRONT EXHAUST PIPES

(See page [EM-126](#))

4. REMOVE FRONT AND REAR PROPELLER SHAFTS

(See page [PR-10](#))

5. REMOVE CROSSMEMBER

(a) Remove the 2 bolts and heat insulator.

(b) Support the rear side of the transmission with a transmission jack.

(c) Remove the 4 bolts.

(d) Remove the 4 bolts, nuts and crossmember.

6. REMOVE ENGINE REAR MOUNTING

Remove the 4 bolts and engine rear mounting from the transfer adaptor.

7. DISCONNECT TRANSFER DETECTION SWITCHES AND MOTOR ACTUATOR CONNECTORS

(See page [TR-3](#))

8. REMOVE TRANSFER

(a) Support the transfer with another transmission jack.

(b) Remove the 8 transfer mounting bolts and clamps.

(c) Pull the transfer out from the transfer adaptor down and toward the rear.

INSTALLATION

1. RAISE VEHICLE
2. INSTALL TRANSFER

Raise the transfer and install it to the transfer adaptor with the 8 transfer mounting bolts and clamps.

Torque: 24 N·m (244 kgf·cm, 17 ft·lbf)

NOTICE:

Take care not to damage the lip of the transfer adaptor rear oil seal with the transfer input shaft.

3. CONNECT TRANSFER DETECTION SWITCHES AND MOTOR ACTUATOR CONNECTORS
(See page [TR-3](#))

4. INSTALL ENGINE REAR MOUNTING

Install the engine rear mounting to the transfer adaptor with the 4 bolts.

Torque: 65 N·m (664 kgf·cm, 48 ft·lbf)

5. INSTALL CROSSMEMBER

(a) Install the crossmember with the 4 bolts and nuts.

Torque: 72 N·m (740 kgf·cm, 53 ft·lbf)

(b) Install the 4 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

(c) Remove the transmission jacks.

(d) Install the heat insulator with the 2 bolts

Torque: 16 N·m (163 kgf·cm, 12 ft·lbf)

6. INSTALL FRONT AND REAR PROPELLER SHAFTS
(See page [PR-15](#))

7. INSTALL LH AND RH FRONT EXHAUST PIPES
(See page [EM-127](#))

8. FILL TRANSFER OIL

Oil grade: API GL-4 or GL-5

Viscosity: SAE 75W-90

Capacity: 1.0 liters (1.1 US qts, 0.9 Imp. qts)

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

9. CONNECT BREATHER HOSE

Connect the breather hose to the transfer.

Hose installation depth: 13 mm (0.51 in.) or more

10. DO ROAD TEST

Check for abnormal noises and smooth shifting.

DISASSEMBLY

1. REMOVE SPEEDOMETER DRIVEN GEAR HOLE COVER

- (a) Remove the bolt and speedometer driven gear hole cover.
- (b) Remove the O-ring from the speedometer driven gear hole cover.

2. REMOVE PROTECTOR

Remove the 4 bolts and protector.

3. REMOVE FRONT BEARING RETAINER

- (a) Remove the 5 bolts.
- (b) Using a plastic hammer, tap on the front bearing retainer and remove it.

4. REMOVE UPPER COVER AND OIL DEFLECTOR

Remove the 4 bolts, upper cover and oil deflector.

5. REMOVE FRONT COMPANION FLANGE

- (a) Using a chisel and hammer, loosen the staked part of the front companion flange lock nut.
- (b) Using SST, hold the front companion flange and remove the front companion flange lock nut.
SST 09330-00021

- (c) Using SST, remove the front companion flange.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04051, 09957-04010, 09958-04011)

6. REMOVE REAR COMPANION FLANGE

Remove the rear companion flange in the same way as the front companion flange.

7. REMOVE EXTENSION HOUSING

- (a) Remove the 5 bolts.
- (b) Using a plastic hammer, tap on the extension housing and remove it.

8. REMOVE VEHICLE SPEED SENSOR DRIVE GEAR

- (a) Remove the 2 output washers and vehicle speed sensor drive gear.
- (b) Using a magnetic finger, remove the ball from the rear output shaft.

9. SEPARATE FRONT CASE AND REAR CASE

- (a) Remove the 12 bolts and 2 clamps.
- (b) Using a plastic hammer, tap on the front case and rear case, and separate them.

10. REMOVE SHIFT FORK SHAFT

- (a) Using a hexagon wrench (6 mm), remove the 2 straight screw plugs, springs and balls from the front drive and high and low shift forks.

- (b) Using 2 screwdrivers and a hammer, tap out the 2 snap rings from the shift fork shaft.

- (c) Remove the bolt and shift fork shaft stopper.

- (d) To pull out the shift fork shaft, shift the front drive and high and low shift forks to the positions as shown in the illustration.
- (e) Pull out the shift fork shaft.

- (f) Using a magnetic finger, remove the 2 straight pins from the front drive and high and low shift forks.

11. REMOVE REAR OUTPUT SHAFT ASSEMBLY, DRIVEN SPROCKET ASSEMBLY, CHAIN AND FRONT DRIVE AND HIGH AND LOW SHIFT FORKS

- (a) Using 2 screwdrivers and a hammer, tap out the snap ring from the shift fork shaft of the actuator assembly.

HINT:
Remove only the snap ring on the front side of the shift fork shaft.

- (b) Using a snap ring expander, remove the snap ring.

- (c) Mount the rear case in a vise.
- (d) Using a plastic hammer, carefully tap the rear case, and remove the rear output shaft assembly, driven sprocket assembly, chain and front drive and high and low shift forks as an assembly.
- (e) Remove the driven sprocket assembly, chain and front drive and high and low shift forks from the rear output shaft assembly.

12. REMOVE ACTUATOR ASSEMBLY

- (a) Using 2 screwdrivers and a hammer, remove the snap ring.
- (b) Remove the 3 bolts and actuator assembly.

- (c) Remove the O-ring, transfer 4WD position switch, transfer L4 position switch and 2 gaskets from the actuator assembly.

13. REMOVE SEPARATOR WITH OIL STRAINER AND MAGNET

Remove the 3 bolts and separator with the oil strainer and magnet.

14. REMOVE OIL PUMP BODY ASSEMBLY

Remove the 3 bolts and oil pump body assembly.

15. REMOVE OIL PUMP DRIVE GEAR

**16. REMOVE PLANETARY GEAR ASSEMBLY WITH INPUT SHAFT ASSEMBLY**

- (a) Using a snap ring expander, remove the snap ring.

- (b) Pull out the planetary gear assembly with the input shaft assembly.

**17. REMOVE LOW GEAR SPLINE PIECE**

- (a) Using a screwdriver, remove the snap ring.

- (b) Remove the low gear spline piece.

**18. REMOVE NEEDLE ROLLER BEARING FROM INPUT SHAFT ASSEMBLY**

19. REMOVE INPUT GEAR STOPPER AND THRUST WASHER

(a) Using a snap ring expander, remove the snap ring.

(b) Remove the input gear stopper, ball and thrust washer.

20. REMOVE INPUT SHAFT ASSEMBLY, THRUST BEARING AND RACE

21. REMOVE PLANETARY RING GEAR

(a) Using a screwdriver, remove the snap ring.

(b) Remove the head screw plug, spring and pin.

(c) Remove the planetary ring gear.

INSPECTION

INSPECT SWITCH

Measure the resistance between the terminals as shown.

Standard:

Switch Condition	Specified Condition
Pushed	Below 1 Ω
Free	10 k Ω or higher

If the result is not as specified, replace the switch.

REASSEMBLY

HINT:

Coat all of the sliding and rotating surfaces with gear oil before reassembly.

1. INSTALL PLANETARY RING GEAR

- (a) Install the planetary ring gear.

NOTICE:

Make sure that the planetary ring gear is installed in the correct direction.

- (b) Install the pin and spring.
- (c) Apply sealant to the head screw plug threads.

Sealant:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

- (d) Install the head screw plug.

Torque: 19 N·m (190 kgf-cm, 14 ft-lbf)

- (e) Using a screwdriver, install the snap ring.

NOTICE:

Make sure the end gap of the snap ring is not aligned with the upper side of the case.

2. INSTALL INPUT SHAFT ASSEMBLY, THRUST BEARING AND RACE

3. INSTALL THRUST WASHER AND INPUT GEAR STOPPER

- (a) Install the thrust washer, ball and input gear stopper.

HINT:

Apply gear oil to the input gear stopper and thrust washer.

(b) Select a snap ring that allows for 0.05 to 0.15 mm (0.0020 to 0.0059 in.) axial play.

Mark	Thickness mm (in.)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)
H	2.45 to 2.50 (0.0965 to 0.0984)
J	2.50 to 2.55 (0.0984 to 0.1004)
K	2.55 to 2.60 (0.1004 to 0.1024)
L	2.60 to 2.65 (0.1024 to 0.1043)
M	2.65 to 2.70 (0.1043 to 0.1063)
N	2.70 to 2.75 (0.1063 to 0.1083)
P	2.75 to 2.80 (0.1083 to 0.1102)
Q	2.80 to 2.85 (0.1102 to 0.1122)
R	2.85 to 2.90 (0.1122 to 0.1142)
S	2.90 to 2.95 (0.1142 to 0.1161)
T	2.95 to 3.00 (0.1161 to 0.1181)
U	3.00 to 3.05 (0.1181 to 0.1201)

(c) Using a snap ring expander, install a snap ring.

4. INSTALL NEEDLE ROLLER BEARING TO INPUT SHAFT ASSEMBLY

HINT:

Apply gear oil to the needle roller bearing.

5. INSTALL LOW GEAR SPLINE PIECE

- (a) Install the low gear spline piece.

- (b) Using a screwdriver, install the snap ring.

NOTICE:

Make sure the end gap of the snap ring is not aligned with the cutout portion of the planetary carrier.

6. INSTALL PLANETARY GEAR ASSEMBLY WITH INPUT SHAFT ASSEMBLY

- (a) Install the planetary gear assembly with the input shaft assembly.

HINT:

If necessary, heat the front case to about 50 to 80 °C (122 to 176 °F).

- (b) Using a snap ring expander, install the snap ring.

HINT:

Check that the planetary gear and input shaft assembly turn slightly.

7. INSTALL OIL PUMP DRIVE GEAR

8. INSTALL OIL PUMP BODY ASSEMBLY

Install the oil pump body assembly with the 3 bolts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)

9. INSTALL MAGNET AND SEPARATOR WITH OIL STRAINER

- (a) Install the magnet to the front case.
- (b) Install the separator with oil strainer with the 3 bolts.

Torque: 7.5 N·m (76 kgf-cm, 66 in.-lbf)

10. INSTALL ACTUATOR ASSEMBLY

- (a) Install a new O-ring, 2 new gaskets, transfer 4WD position switch and transfer L4 position switch to the actuator assembly.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

HINT:

Coat a new O-ring with gear oil.

- (b) Install the actuator assembly with the 3 bolts.

Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)

- (c) Using a screwdriver and hammer, drive in the snap ring to the shift fork shaft of the actuator assembly.

HINT:

Install only the snap ring on the rear side of the shift fork shaft.

11. INSTALL REAR OUTPUT SHAFT ASSEMBLY, DRIVEN SPROCKET ASSEMBLY, CHAIN AND FRONT DRIVE AND HIGH AND LOW SHIFT FORKS

- (a) Install the driven sprocket assembly, chain and front drive and high and low shift forks to the rear output shaft assembly.

NOTICE:

Make sure that the front drive and high and low shift forks are installed in the correct direction.

- (b) Mount the rear case in a vise.

- (c) Install the rear output shaft assembly, driven sprocket assembly, chain and front drive and high and low shift forks to the rear case as an assembly.

NOTICE:

Do not drop the clutch sleeve or shifting key.

HINT:

If necessary, heat the rear case to about 50 to 80 °C (122 to 176 °F).

(d) Using a snap ring expander, install the snap ring.

(e) Using a screwdriver and hammer, drive in the snap ring to the shift fork shaft of the actuator assembly.

HINT:

Check that the rear output shaft assembly and driven sprocket assembly turn slightly.

12. INSTALL SHIFT FORK SHAFT

(a) Using a magnetic finger, install the 2 straight pins to the front drive and high and low shift forks.

(b) To push into the shift fork shaft, shift the front drive and high and low shift forks to the positions as shown in the illustration.

(c) Push into the shift fork shaft.

NOTICE:

Make sure that the shift fork shaft is installed in the correct direction.

- (d) Install the shift fork shaft stopper with the bolt.
Torque: 19 N·m (190 kgf-cm, 14 ft-lbf)

- (e) Using a screwdriver and hammer, drive in the 2 snap rings to the shift fork shaft.

- (f) Install the 2 balls and springs to the front drive and high and low shift forks.
(g) Apply sealant to the straight screw plug threads.
Sealant:
Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent
(h) Using a hexagon wrench (6 mm), install the 2 straight screw plugs to the front drive and high and low shift forks.
Torque: 19 N·m (190 kgf-cm, 14 ft-lbf)

13. REASSEMBLE FRONT AND REAR CASE

HINT:

Remove any FIPG material and be careful not to drop oil on the contacting surface of the rear case.

- (a) Apply FIPG to the rear case as shown in the illustration.
FIPG:
Part No. 08826-00090,
THREE BOND 1281 or equivalent

- (b) Install the 2 clamps and reassemble the front and rear case with the 12 bolts.
Torque: 28 N·m (285 kgf-cm, 21 ft-lbf)

14. INSTALL VEHICLE SPEED SENSOR DRIVE GEAR

- (a) Install the ball to the rear output shaft.
(b) Install the vehicle speed sensor drive gear and 2 output washers.

15. INSTALL EXTENSION HOUSING

HINT:

Remove any FIPG material and be careful not to drop oil on the contacting surface of the extension housing.

- (a) Apply FIPG to the extension housing as shown in the illustration.

FIPG:

**Part No. 08826-00090,
THREE BOND 1281 or equivalent**

- (b) Apply sealant to the bolt threads.

Sealant:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

- (c) Install the extension housing with the 5 bolts.

Torque: 12 N·m (122 kgf-cm, 9 ft-lbf)

16. INSTALL FRONT COMPANION FLANGE

- (a) Install the front companion flange to the input shaft.

- (b) Using SST, hold the front companion flange, and install a new front companion flange lock nut.

SST 09330-00021

Torque: 118 N·m (1,203 kgf-cm, 87 ft-lbf)

- (c) Stake the front companion flange lock nut.

17. INSTALL REAR COMPANION FLANGE

Install the rear companion flange in the same way as the front companion flange.

18. INSTALL OIL DEFLECTOR AND UPPER COVER

Install 2 new gaskets, oil deflector and upper cover with the 4 bolts.

Torque: 18 N·m (184 kgf-cm, 13 ft-lbf)

**19. INSTALL FRONT BEARING RETAINER****HINT:**

Remove any FIPG material and be careful not to drop oil on the contacting surface of the front bearing retainer.

- (a) Apply FIPG to the front bearing retainer as shown in the illustration.

FIPG:

**Part No. 08826-00090,
THREE BOND 1281 or equivalent**

- (b) Apply sealant to the bolt threads.

Sealant:

Part No. 08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

- (c) Install the front bearing retainer with the 5 bolts.

Torque: 11.5 N·m (117 kgf-cm, 8 ft-lbf)

20. INSTALL PROTECTOR

Install the protector with the 4 bolts.

Torque: 18 N·m (184 kgf-cm, 13 ft-lbf)

Torque: 37 N·m (380 kgf-cm, 27 ft-lbf)

21. INSTALL SPEEDOMETER DRIVEN GEAR HOLE COVER

- (a) Install a new O-ring to the speedometer driven gear hole cover.

HINT:

Coat a new O-ring with gear oil.

- (b) Install the speedometer driven gear hole cover with the bolt.

Torque: 11 N·m (112 kgf-cm, 8 ft-lbf)

DRIVEN SPROCKET COMPONENTS

TR00F-09

REPLACEMENT

1. REMOVE FRONT BEARING

Using a press, remove the front bearing.

2. REMOVE REAR BEARING

Using SST, a press and steel bar, remove the rear bearing.

SST 09555-55010

3. INSTALL REAR BEARING

Using a press, install a new rear bearing.

4. INSTALL FRONT BEARING

Using a press, install a new front bearing.

REAR OUTPUT SHAFT COMPONENTS

TR09M-02

DISASSEMBLY

1. **INSPECT DRIVE SPROCKET THRUST CLEARANCE**
Using a feeler gauge, measure the drive sprocket thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

Maximum clearance: 0.25 mm (0.0098 in.)

If the clearance exceeds the maximum, replace the drive sprocket.

2. **REMOVE HIGH AND LOW CLUTCH SLEEVE ASSEMBLY**

- (a) Remove the clutch sleeve.
- (b) Using a snap ring expander, remove the snap ring.

- (c) Using a press, remove the clutch hub.

3. **REMOVE BEARING, SPACER, DRIVE SPROCKET, SYNCHRONIZER OUTER, CENTER AND INNER RINGS AND FRONT DRIVE CLUTCH SLEEVE ASSEMBLY**

- (a) Using SST and a press, remove the bearing.
SST 09555-55010

- (b) Remove the spacer and ball.
- (c) Remove the drive sprocket, needle roller bearing, synchronizer outer, center and inner rings.
- (d) Remove the front drive clutch sleeve assembly.
4. **REMOVE 3 SHIFTING KEYS AND 2 KEY SPRINGS FROM FRONT DRIVE CLUTCH SLEEVE**

INSPECTION

1. INSPECT REAR OUTPUT SHAFT

Using a micrometer, measure the rear output shaft journal surface outer diameter.

Minimum diameter:

Part A: 27.98 mm (1.1016 in.)

Part B: 36.98 mm (1.4561 in.)

If the outer diameter is less than the minimum, replace the rear output shaft.

2. INSPECT DRIVE SPROCKET RADIAL CLEARANCE

Using a dial indicator, measure the radial clearance between the sprocket and shaft with the needle roller bearing installed.

Standard clearance:

0.010 to 0.055 mm (0.0004 to 0.0022 in.)

Maximum clearance: 0.055 mm (0.0022 in.)

If the clearance exceeds the maximum, replace the drive sprocket, rear output shaft or needle roller bearing.

3. INSPECT FRONT DRIVE SHIFT FORK AND CLUTCH SLEEVE CLEARANCE

Using a feeler gauge, measure the clearance between the front drive shift fork and clutch sleeve.

Maximum clearance: 1.0 mm (0.039 in.)

If the clearance exceeds the maximum, replace the shift fork or clutch sleeve.

4. INSPECT HIGH AND LOW SHIFT FORK AND CLUTCH SLEEVE CLEARANCE

Using a feeler gauge, measure the clearance between the high and low shift fork and clutch sleeve.

Maximum clearance: 1.0 mm (0.039 in.)

If the clearance exceeds the maximum, replace the shift fork or clutch sleeve.

REASSEMBLY

1. INSTALL FRONT DRIVE CLUTCH SLEEVE ONTO REAR OUTPUT SHAFT

- (a) Install the front drive clutch sleeve onto the rear output shaft.

NOTICE:

Make sure that the clutch sleeve is installed in the correct direction.

- (b) Install the 3 shifting keys and 2 springs.

NOTICE:

Install the key springs so that their end gaps are not in line.

2. INSTALL SYNCHRONIZER OUTER, CENTER AND INNER RINGS, DRIVE SPROCKET, SPACER AND BEARING

- (a) Apply gear oil to the rear output shaft and needle roller bearing.
- (b) Install the synchronizer outer ring to the rear output shaft.

NOTICE:

Align the slots of the synchronizer outer ring with the shifting keys.

- (c) Install the synchronizer center and inner rings to the rear output shaft.

NOTICE:

Align the slots of the synchronizer outer with those of inner rings.

- (d) Install the needle roller bearing to the rear output shaft.
 (e) Install the drive sprocket to the rear output shaft.

NOTICE:

Align the holes in the drive sprocket with the protrusions of the synchronizer center ring.

- (f) Install the spacer and align it with the ball.

- (g) Using SST and a press, install a new bearing with the spacer groove facing the drive sprocket.
 SST 09316-60011 (09316-00011, 09316-00071)

**3. INSPECT DRIVE SPROCKET THRUST CLEARANCE**

Using a feeler gauge, measure the drive sprocket thrust clearance.

Standard clearance:

0.10 to 0.25 mm (0.0039 to 0.0098 in.)

**4. INSERT HIGH AND LOW CLUTCH HUB ONTO CLUTCH SLEEVE****NOTICE:**

Make sure that the high and low clutch hub is installed in the correct direction.

5. INSTALL HIGH AND LOW CLUTCH HUB ASSEMBLY

Using a press, install the high and low clutch hub assembly.

6. INSTALL SNAP RING

Select a snap ring that allows for minimum axial play and install it to the shaft.

Mark	Thickness mm (in.)
K	2.00 to 2.05 (0.0787 to 0.0807)
L	2.05 to 2.10 (0.0807 to 0.0827)
A	2.10 to 2.15 (0.0827 to 0.0846)
B	2.15 to 2.20 (0.0846 to 0.0866)
C	2.20 to 2.25 (0.0866 to 0.0886)
D	2.25 to 2.30 (0.0886 to 0.0906)
E	2.30 to 2.35 (0.0906 to 0.0925)
F	2.35 to 2.40 (0.0925 to 0.0945)
G	2.40 to 2.45 (0.0945 to 0.0965)
H	2.45 to 2.50 (0.0965 to 0.0984)
J	2.50 to 2.55 (0.0984 to 0.1004)

INPUT SHAFT COMPONENTS

TR00L-07

F08802

INSPECTION

1. REMOVE OIL SEAL RING

Remove the 2 oil seal rings.

2. INSPECT INPUT SHAFT

- (a) Using a micrometer, measure the outer diameter of the input shaft journal surface.

Minimum diameter: 47.59 mm (1.8736 in.)

If the outer diameter is less than the minimum, replace the input shaft.

- (b) Using a dial indicator, measure the inside diameter of the input shaft bushing.

Maximum inside diameter: 39.14 mm (1.5409 in.)

If the inside diameter exceeds the maximum, replace the input shaft.

3. INSTALL OIL SEAL RING

Install the 2 oil seal rings.

HINT:

- Apply gear oil to the oil seal ring.
- Engage securely to eliminate clearance as shown in the illustration.

PLANETARY GEAR COMPONENTS

TR00N-09

Q07455

INSPECTION

1. INSPECT PINION GEAR THRUST CLEARANCE

Using a feeler gauge, measure the planetary pinion gear thrust clearance.

Standard clearance:

0.11 to 0.84 mm (0.0043 to 0.0331 in.)

Maximum clearance:

0.84 mm (0.0331 in.)

If the clearance exceeds the maximum, replace the planetary gear assembly.

2. INSPECT PLANETARY PINION GEAR RADIAL CLEARANCE

Using a dial indicator, measure the planetary pinion gear radial clearance.

Standard clearance:

0.009 to 0.038 mm (0.0004 to 0.0015 in.)

Maximum clearance:

0.038 mm (0.0015 in.)

If the clearance exceeds the maximum, replace the planetary gear assembly.

3. IF NECESSARY, REPLACE PLANETARY GEAR OUTER BEARING

(a) Using a snap ring expander, remove the snap ring.

(b) Using SST and a press, remove the bearing.

SST 09554-30011, 09555-55010

(c) Using SST and a press, install a new bearing so that the groove does not face the planetary gear assembly.

SST 09223-15020, 09515-30010, 09950-70010
(09951-07100)

(d) Select a snap ring that allows for minimum axial play.

Mark	Thickness mm (in.)
1	1.45 to 1.50 (0.0571 to 0.0591)
2	1.50 to 1.55 (0.0591 to 0.0610)
3	1.55 to 1.60 (0.0610 to 0.0630)
4	1.60 to 1.65 (0.0630 to 0.0650)
5	1.65 to 1.70 (0.0650 to 0.0669)

(e) Using a snap ring expander, install a snap ring.

4. IF NECESSARY, REPLACE PLANETARY GEAR INNER BEARING

(a) Using SST, remove the bearing.

SST 09612-65014 (09612-01030, 09612-01050)

NOTICE:

Engage the claws of the SST securely so that there is no clearance between the inner bearing and planetary gear.

(b) Using SST and a press, install a new bearing.

SST 09950-60010 (09951-00570), 09950-70010 (09951-07100)

**Bearing press in depth:
7.7 to 8.3 mm (0.303 to 0.327 in.)**

OIL SEAL COMPONENTS

N

F08795

REPLACEMENT

1. IF NECESSARY, REPLACE FRONT BEARING RETAINER OIL SEAL

- Using a screwdriver and hammer, drive out the oil seal.
- Using SST and a hammer, drive in a new oil seal until its surface is flush with the retainer upper surface.
SST 09950-60010 (09951-00590), 09950-70010 (09951-07100)
- Coat the lip of the oil seal with MP grease.

2. IF NECESSARY, REPLACE FRONT CASE OIL SEAL

- Using a screwdriver and hammer, drive out the oil seal.
- Using SST and a hammer, drive in a new oil seal until its surface is flush with the case upper surface.
SST 09316-60011 (09316-00011)
- Coat the lip of the oil seal with MP grease.

3. IF NECESSARY, REPLACE EXTENSION HOUSING OIL SEAL

- Using a screwdriver and hammer, drive out the oil seal.
- Using SST and a hammer, drive in a new oil seal until its surface is flush with the housing upper surface.
SST 09554-22010
- Coat the lip of the oil seal with MP grease.

4. IF NECESSARY, REPLACE FRONT AND REAR COMPANION FLANGE OIL SEALS

- Using a screwdriver and hammer, drive out the 2 oil seals from the 2 flanges.
- Using SST and a hammer, drive in 2 new oil seals.
SST 09950-60010 (09951-00220, 09951-00350, 09952-06010), 09950-70010 (09951-07100)
- Coat the lip of the oil seal with MP grease.

TOUCH SELECT 2-4 AND HIGH-LOW SYSTEM LOCATION

TR09S-02

INSPECTION

1. INSPECT 2WD ↔ 4HI SHIFT

- Turn the ignition switch to the ON position.
- Check that the 4HI indicator lights come on when the 2WD/4HI switch is in the ON position.
- Check that the 4HI indicator lights go off when the 2WD/4HI switch is in the OFF position.

HINT:

- If the light does not come on, even though the switch has been turned ON, the vehicle should be moved back and forth.
- If switching is not completed after 3 seconds of shift operation, the 4HI indicator light will flash.

2. INSPECT 4HI ↔ 4LO SHIFT

- Turn the ignition switch to the ON position.
- Shift the transmission shift lever in the N position.
- Turn the 2WD/4HI switch ON.

- Check that the 4LO indicator lights come on and the 4HI indicator lights go off when the 4LO switch is in the ON position.
- Check that the 4LO indicator lights go off and the 4HI indicator lights come on when pushing the 4LO switch once.

HINT:

- Inspection should be performed with the vehicle stopped, and transmission shift lever in the N position.
- If switching is not completed after 3 seconds of shift operation, the 4LO indicator light will flash.

- 3. INSPECT 2WD/4HI AND 4LO SWITCH CONTINUITY**
- (a) Remove the center integration panel assembly (See page BO-111).
 - (b) Measure the resistance between the terminals as shown.

2WD/4HI switch

Standard:

Switch position	Tester connection	Specified condition
OFF	1-5	10 kΩ or higher
ON	1-5	Below 1 Ω

4LO switch

Standard:

Switch position	Tester connection	Specified condition
OFF	1-4	10 kΩ or higher
ON	1-4	Below 1 Ω

If the result is not as specified, replace the center integration panel assembly (See page BO-111).

- 4. INSPECT ACTUATOR RESISTANCE**
- (a) Using an ohmmeter, measure the resistance between terminals 1 and 2.

Standard resistance: 0.3 to 100 Ω
 - (b) Using an ohmmeter, measure the resistance between terminals 1 or 2 and body ground.

Standard resistance: 0.5 MΩ or higher

If the result is not as specified, replace the actuator assembly.

- 5. INSPECT ACTUATOR OPERATION**
- (a) 2WD → 4HI shift:

Connect lines via a relay as shown in the illustration, then check that the actuator fork shaft moves from the 2WD to 4HI position.

Heater main relay:

*: Relay housing metallic parts

D04311

HINT:

When inspecting the operation described above, use a heater main relay.

NOTICE:

Be careful not to touch the neighboring terminals or metallic parts of the relay housing when connecting.

N

F08010

(b) 4HI → 2WD shift:

Connect lines via a relay as shown in the illustration, then check that the actuator fork shaft moves from the 4HI to 2WD position.

N

F07503

(c) 4HI → 4LO shift:

Connect lines via a relay as shown in the illustration, then check that the actuator fork shaft moves from the 4HI to 4LO position.

- (d) 4LO → 4HI shift:
Connect lines via a relay as shown in the illustration, then check that the actuator fork shaft moves from the 4LO to 4HI position.

6. INSPECT LIMIT SWITCH CONTINUITY

- (a) Start the engine and raise the vehicle.
- (b) With the actuator connector connected, shift the transfer shift lever and after checking the operating sound, disconnect the connector and measure the resistance between each terminal.

HINT:

When shifting the actuator fork shaft, connect the connectors.

Standard:

Shift position	Tester connection	Specified condition
2WD	3-4	10 kΩ or higher
	3-5	10 kΩ or higher
	3-6	10 kΩ or higher
	4-5	Below 1 Ω
	4-6	10 kΩ or higher
	5-6	10 kΩ or higher
4HI	3-4	10 kΩ or higher
	3-5	10 kΩ or higher
	3-6	10 kΩ or higher
	4-5	10 kΩ or higher
	4-6	Below 1 Ω
	5-6	10 kΩ or higher
4LO	3-4	Below 1 Ω
	3-5	10 kΩ or higher
	3-6	10 kΩ or higher
	4-5	10 kΩ or higher
	4-6	10 kΩ or higher
	5-6	10 kΩ or higher

7. INSPECT VEHICLE SPEED SENSOR

(See page [BE-86](#))

8. INSPECT 4HI AND 4LO INDICATOR LIGHT

Check the combination meter (See page [BE-86](#)).

9. INSPECT 4WD CONTROL ECU

Connect the wire harness side connector to the 4WD control ECU and inspect the wire harness side connector from the back, as shown.

P

TROUBLESHOOTING

PR01F-05

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of problems. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

2WD:

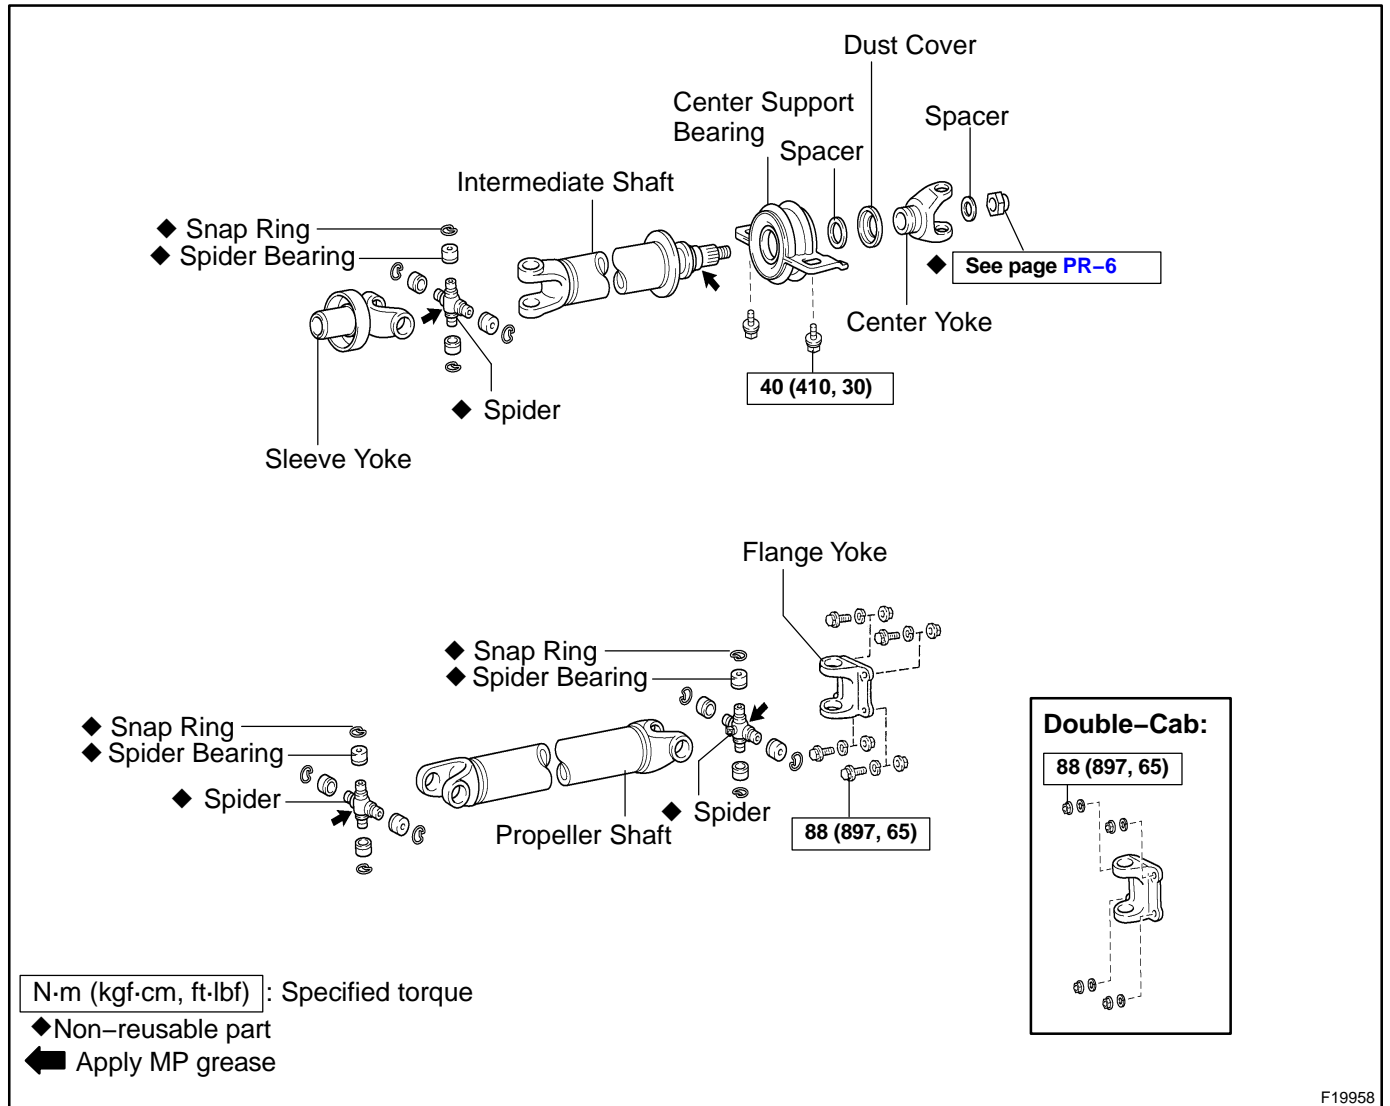

Symptom	Suspected Area	See page
Noise	<ol style="list-style-type: none"> 1. Center support bearing (Worn) 2. Sleeve yoke spline (Worn) 3. Spider bearing (Worn or stuck) 	PR-5 – PR-5
Vibration	<ol style="list-style-type: none"> 1. Transmission extension housing rear bushing (Runout) 2. Sleeve yoke spline (Stuck) 3. Propeller shaft (Runout) 4. Propeller shaft (Imbalance) 	– – PR-5 PR-5

4WD:

Symptom	Suspected Area	See page
Noise	<ol style="list-style-type: none"> 1. Center support bearing (Worn) 2. Sleeve yoke spline (Worn) 3. Spider bearing (Worn or stuck) 	PR-12 – PR-12
Vibration	<ol style="list-style-type: none"> 1. Transmission extension housing rear bushing (Runout) 2. Sleeve yoke spline (Stuck) 3. Propeller shaft (Runout) 4. Propeller shaft (Imbalance) 	– – PR-12 PR-12

PROPELLER SHAFT ASSEMBLY (2WD) COMPONENTS

PR01G-07

REMOVAL

REMOVE PROPELLER SHAFT

- Place matchmarks on the differential and propeller shaft flanges.
- Except Double-Cab model:
Remove the 4 bolts, washers and nuts.
- Double-Cab model:
Remove the 4 nuts and washers.
- Remove the 2 mounting bolts and center support bearing from the frame crossmember.
- Pull out the propeller shaft yoke from the transmission.

- Insert SST in the transmission to prevent oil leakage.
SST 09325-40010

DISASSEMBLY

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

1. SEPARATE PROPELLER SHAFT AND INTERMEDIATE SHAFT

- (a) Place matchmarks on the yoke and propeller shaft.
- (b) Disassemble the center yoke
(See SPIDER BEARING REPLACEMENT on page [PR-17](#)).

2. REMOVE CENTER SUPPORT BEARING FROM INTERMEDIATE SHAFT

- (a) Using a hammer and chisel, loosen the staked part of the nut.
- (b) Clamp the yoke in a vise and remove the spacer and nut.
- (c) Place matchmarks on the yoke and shaft.
- (d) Using a brass bar and hammer, remove the center yoke, dust cover, spacer and center support bearing from the intermediate shaft.

INSPECTION

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

1. INSPECT PROPELLER SHAFT AND INTERMEDIATE SHAFT FOR DAMAGE OR RUNOUT

Using a dial indicator, check the runout of each shaft.

Maximum runout: 0.8 mm (0.031 in.)

If shaft runout is greater than the maximum, replace it.

2. INSPECT SPIDER BEARING

(a) Inspect the spider bearing for wear or damage.

(b) Using a dial indicator, check the spider bearing axial play by turning the yoke of the flange while holding the shaft tightly.

Maximum bearing axial play: 0.05 mm (0.0020 in.)

If the spider bearing axial play exceeds the maximum, replace the spider bearing (See page [PR-17](#)).

3. INSPECT CENTER SUPPORT BEARING FOR WEAR OR DAMAGE

Check that the bearing turns freely.

If the bearing is damaged, worn, or does not turn freely, replace it.

REASSEMBLY

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

HINT:

When removing or installing any part, make sure that each joint is facing the correct direction, as shown in the illustration below.

1. INSTALL CENTER SUPPORT BEARING ON INTERMEDIATE SHAFT

HINT:

Install the center support bearing in the direction shown.

2. INSTALL CENTER YOKE ON INTERMEDIATE SHAFT

- (a) Coat the splines of the intermediate shaft with MP grease.
- (b) Install the spacer and dust cover.

- (c) Place the center yoke on the shaft and align the matchmarks.

HINT:

If replacing either the center yoke or intermediate shaft, reassemble them so that the front side yoke of the intermediate shaft and the center yoke are facing the same direction.

- (d) Install the spacer.
- (e) Clamp the yoke in a vise, and press in the bearing by tightening with a new nut.

Torque: 181 N·m (1,845 kgf·cm, 133 ft·lbf)

- (f) Loosen the nut.
- (g) Torque the nut again.

Torque: 82 N·m (835 kgf·cm, 60 ft·lbf)

- (h) Using a hammer and punch, stake the nut.

3. CONNECT PROPELLER SHAFT AND INTERMEDIATE SHAFT

Assemble the center yoke aligning matchmarks (See SPIDER BEARING REPLACEMENT on page [PR-17](#)).

INSTALLATION

1. INSTALL PROPELLER SHAFT

- (a) Remove SST from the transmission.
SST 09325-40010
- (b) Insert the yoke into the transmission.

- (c) Temporarily install the center support bearing with the 2 mounting bolts.

HINT:

Make sure the bearing is installed with the drain hole facing downwards.

- (d) Except Double-Cab model:
Align the matchmarks on the flanges and connect the flanges with the 4 bolts, washers and nuts.
- (e) Torque the 4 bolts.
Torque: 88 N·m (897 kgf-cm, 65 ft-lbf)
- (f) Double-Cab model:
Align the matchmarks on the flanges and connect the flanges with the 4 washers and nuts.
- (g) Torque the 4 nuts.
Torque: 88 N·m (897 kgf-cm, 65 ft-lbf)

2. ADJUST CENTER SUPPORT BEARING

HINT:

- With the vehicle unloaded, adjust the center support bearing to keep the angles, as shown.
- Under the same conditions, check the center line in the axial direction. Adjust the bearing if necessary.

- The center bearing center line and center bearing housing center line must be adjusted to within 6.0 ± 1.0 mm (0.236 ± 0.039 in.) of each other in the vehicle's longitudinal direction with the vehicle unloaded.

Torque the 2 bolts.

Torque: 40 N·m (410 kgf-cm, 30 ft-lbf)

PROPELLER SHAFT ASSEMBLY (4WD) COMPONENTS

PR01M-06

Front propeller shaft:

Rear propeller shaft:

N-m (kgf-cm, ft-lbf) : Specified torque

- ◆ Non-reusable part
- ➡ Apply MP grease

N

F19352

REMOVAL

1. REMOVE FRONT PROPELLER SHAFT

- (a) Place matchmarks on the differential and propeller shaft flange.
- (b) Remove the 4 bolts, washers and nuts, and disconnect the propeller shaft from the differential.
- (c) Use a rope to suspend the front edge of the propeller shaft.
- (d) Place matchmarks on the transfer and propeller shaft flanges.
- (e) Remove the 4 nuts and washers.
- (f) Remove the propeller shaft from the transfer flange.

2. REMOVE REAR PROPELLER SHAFT

- (a) Place matchmarks on the transfer and propeller shaft flanges.
- (b) Remove the 4 nuts and washers, and disconnect the propeller shaft from the transfer flange.
- (c) Use a rope to suspend the front edge of the propeller shaft.
- (d) Remove the 2 mounting bolts and center support bearing.
- (e) Place matchmarks on the differential and propeller shaft flanges.
- (f) Remove the 4 bolts, washers and nuts.
- (g) Remove the propeller shaft from the differential.

DISASSEMBLY

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

1. Rear propeller shaft: SEPARATE PROPELLER SHAFT AND INTERMEDIATE SHAFT

- (a) Place matchmarks on the flanges.
- (b) Remove the 4 nuts, bolts and washers.

2. Rear propeller shaft: REMOVE CENTER SUPPORT BEARING FROM INTERMEDIATE SHAFT

- (a) Using a hammer and chisel, loosen the staked part of the nut.
- (b) Using SST to hold the flange, remove the nut and spacer. SST 09330-00021
- (c) Place matchmarks on the flange and shaft.

- (d) Using SST, remove the flange from the intermediate shaft. SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)
- (e) Remove the spacer and center support bearing from the intermediate shaft.

INSPECTION

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

1. INSPECT PROPELLER SHAFT AND INTERMEDIATE SHAFT FOR DAMAGE OR RUNOUT

Using a dial indicator, check the runout of each shaft.

Maximum runout: 0.8 mm (0.031 in.)

If shaft runout is greater than the maximum, replace it.

2. INSPECT SPIDER BEARING

(a) Inspect the spider bearing for wear or damage.

(b) Using a dial indicator, check the spider bearing axial play by turning the yoke of the flange while holding the shaft tightly.

Maximum bearing axial play:

Front propeller shaft: 0.05 mm (0.0020 in.)

Rear propeller shaft: 0 mm (0 in.)

If the spider bearing axial play exceeds the maximum, replace it (See page [PR-17](#)).

3. Rear propeller shaft:

INSPECT CENTER SUPPORT BEARING FOR WEAR OR DAMAGE

Check that the bearing turns freely.

If the bearing is damaged, worn, or does not turn freely, replace it.

4. Rear propeller shaft:

INSPECT DOUBLE CARDAN JOINT PROPELLER SHAFT

(a) Inspect the shaft for wear or damage.

(b) Inspect the double cardan joint for wear or damage.

If any problem is found, replace the propeller shaft assembly.

HINT:

A double cardan joint is used on the rear propeller shaft.

REASSEMBLY

NOTICE:

Be careful not to grip the propeller shaft tube too tightly in a vise as this will cause deformation.

HINT:

When removing or installing any part, make sure that each joint is facing the correct direction, as shown in the illustration below.

1. **Rear propeller shaft:**
INSTALL CENTER SUPPORT BEARING ON INTER-MEDIATE SHAFT

HINT:

Install the center support bearing in the direction shown.

2. **Rear propeller shaft:**
INSTALL FLANGE ON INTERMEDIATE SHAFT

- (a) Coat the splines of the intermediate shaft with MP grease.
- (b) Install the spacer.
- (c) Place the flange on the shaft and align the matchmarks.

HINT:

If replacing either the center flange or intermediate shaft, reassemble it so that the front side flange yoke of the intermediate shaft and the rear side flange yoke of the propeller shaft are facing in the same direction.

- (d) Install the spacer.
- (e) Using SST to hold the flange, press in the bearing by tightening with a new nut.
SST 09330-00021
Torque: 181 N·m (1,845 kgf-cm, 133 ft-lbf)
- (f) Loosen the nut.
- (g) Torque the nut again.
Torque: 82 N·m (835 kgf-cm, 60 ft-lbf)
- (h) Using a hammer and punch, stake the nut.

3. Rear propeller shaft:

INSTALL PROPELLER SHAFT

- (a) Align the matchmarks on the flanges and connect the flanges with the 4 bolts, washers and nuts.

HINT:

If replacing either the center flange or intermediate shaft, reassembly it so that the front side flange yoke of the intermediate shaft and the rear side flange yoke of the propeller shaft are facing in the same direction.

- (b) Torque the bolts.
Torque: 74 N·m (754 kgf-cm, 54 ft-lbf)

INSTALLATION

1. INSTALL FRONT PROPELLER SHAFT

- (a) Align the matchmarks on the propeller shaft and differential flanges, and connect the flanges with the 4 bolts, nuts and washers.
- (b) Torque the 4 bolts.
Torque: 74 N·m (754 kgf-cm, 54 ft-lbf)
- (c) Align the matchmarks on the propeller shaft and transfer flanges, and connect the flanges with the 4 nuts and washers.
- (d) Torque the 4 nuts.
Torque: 88 N·m (897 kgf-cm, 65 ft-lbf)

2. INSTALL REAR PROPELLER SHAFT

- (a) Align the matchmarks on the propeller shaft and differential flanges, and connect the flanges with the 4 bolts, washers and nuts.
- (b) Torque the 4 bolts.
Torque: 88 N·m (897 kgf-cm, 65 ft-lbf)
- (c) Temporarily install the center support bearing with the 2 mounting bolts.

HINT:

Make sure the bearing is installed with the drain hole facing downwards.

- (d) Align the matchmarks on the propeller shaft and transfer flanges, and connect the flanges with the 4 nuts and washers.
- (e) Torque the 4 nuts.
Torque: 88 N·m (897 kgf-cm, 65 ft-lbf)

3. ADJUST CENTER SUPPORT BEARING

HINT:

- With the vehicle unloaded, adjust the center support bearing to keep the angles, as shown.
- Under the same conditions, check the center line in the axial direction. Adjust the bearing if necessary.

- The center bearing center line and center bearing housing center line must be adjusted to within 0 ± 1.0 mm of each other in the vehicle's longitudinal direction with the vehicle unloaded.

Torque the 2 bolts.

Torque: 40 N·m (410 kgf·cm, 30 ft·lbf)

SPIDER BEARING REPLACEMENT

PR08F-01

1. PLACE MATCHMARKS ON SHAFT AND YOKE

2. REMOVE SNAP RING

- (a) Using a brass bar and hammer, slightly tap in the bearing outer race.
- (b) 4WD rear propeller shaft:
Using 2 screwdrivers, remove the 4 snap rings from the grooves.
- (c) 2WD and 4WD front propeller shaft:
Using needle nose pliers, remove the 4 snap rings from the grooves.

3. REMOVE SPIDER BEARING

- (a) Using SST, push out the bearing from the flange yoke.
SST 09332-25010

HINT:

Sufficiently raise the part indicated by "A" so that it does not come into contact with the bearing.

- (b) Clamp the bearing outer race in a vise and tap off the flange with a hammer.

HINT:

Remove the bearing on the opposite side using the same procedure.

- (c) Install the 2 removed bearing outer races to the spider, and clamp them in a vise.
- (d) Using SST, push out the bearing from the sleeve yoke.
SST 09332-25010
- (e) Clamp the outer bearing race in a vise and tap off the yoke with a hammer.

HINT:

Remove the bearing on the opposite side using the same procedure.

4. INSTALL SPIDER BEARING

- (a) Apply MP grease to a new spider and bearings.

HINT:

Be careful not to apply too much grease.

- (b) Align the matchmarks on the yoke and shaft.
 (c) Fit the spider to the yoke.

- (d) Using SST, install the bearing to the spider.
 SST 09332-25010

- (e) Using SST, adjust both bearings so that the snap ring grooves are at maximum and are equal in width.

PROPELLER SHAFT - SPIDER BEARING

**5. INSTALL SNAP RINGS**

- (a) Install 2 new snap rings of equal thickness which will allow for 0 to 0.05 mm (0 to 0.0020 in.) axial play.

HINT:

Do not reuse the snap rings.

4WD rear propeller shaft:

Color	Mark	Thickness mm (in.)
-	九	2.44 to 2.46 (0.0961 to 0.0969)
-	10	2.46 to 2.48 (0.0969 to 0.0976)
-	1	2.28 to 2.30 (0.0898 to 0.0906)
-	2	2.30 to 2.32 (0.0906 to 0.0913)
-	None	2.32 to 2.34 (0.0913 to 0.0921)
Brown	-	2.34 to 2.36 (0.0921 to 0.0929)
Blue	-	2.36 to 2.38 (0.0929 to 0.0937)
-	6	2.38 to 2.40 (0.0937 to 0.0945)
-	7	2.40 to 2.42 (0.0945 to 0.0953)
-	8	2.42 to 2.44 (0.0953 to 0.0961)
-	J	2.18 to 2.20 (0.0858 to 0.0866)
-	K	2.20 to 2.22 (0.0866 to 0.0874)
-	F	2.22 to 2.24 (0.0874 to 0.0882)
-	G	2.24 to 2.26 (0.0882 to 0.0890)
-	H	2.26 to 2.28 (0.0890 to 0.0898)
-	A	2.48 to 2.50 (0.0976 to 0.0984)
-	B	2.50 to 2.52 (0.0984 to 0.0992)
-	C	2.52 to 2.54 (0.0992 to 0.1000)
-	D	2.54 to 2.56 (0.1000 to 0.1008)
-	E	2.56 to 2.58 (0.1008 to 0.1016)

**2WD and 4WD front propeller shaft:**

Color	Thickness mm (in.)
Blue	1.638 (0.0645)
Yellow	1.588 (0.0625)
Silver	1.537 (0.0605)
Copper	1.511 (0.0595)
Black	1.486 (0.0585)
Red	1.435 (0.0565)
Green	1.384 (0.0545)

- (b) Using a hammer, tap the yoke until there is no clearance between the bearing outer race and snap ring.

**6. CHECK SPIDER BEARING**

- (a) Check that the spider bearing moves smoothly.
 (b) Check the spider bearing axial play.

Maximum bearing axial play:**4WD rear propeller shaft: 0 mm (0 in.)****2WD and 4WD front propeller shaft:****0.05 mm (0.0020 in.)****HINT:**

- Install new spider bearings on the flange side using the procedure described above.

- When replacing the rear propeller shaft spider on 4WD vehicles, be sure that the grease fitting assembly holes are facing in the direction shown in the illustration below.

SPIDER GREASE FITTING ASSEMBLY DIRECTION FOR 4WD REAR PROPELLER SHAFT

TROUBLESHOOTING

PROBLEM SYMPTOMS TABLE

SA090-11

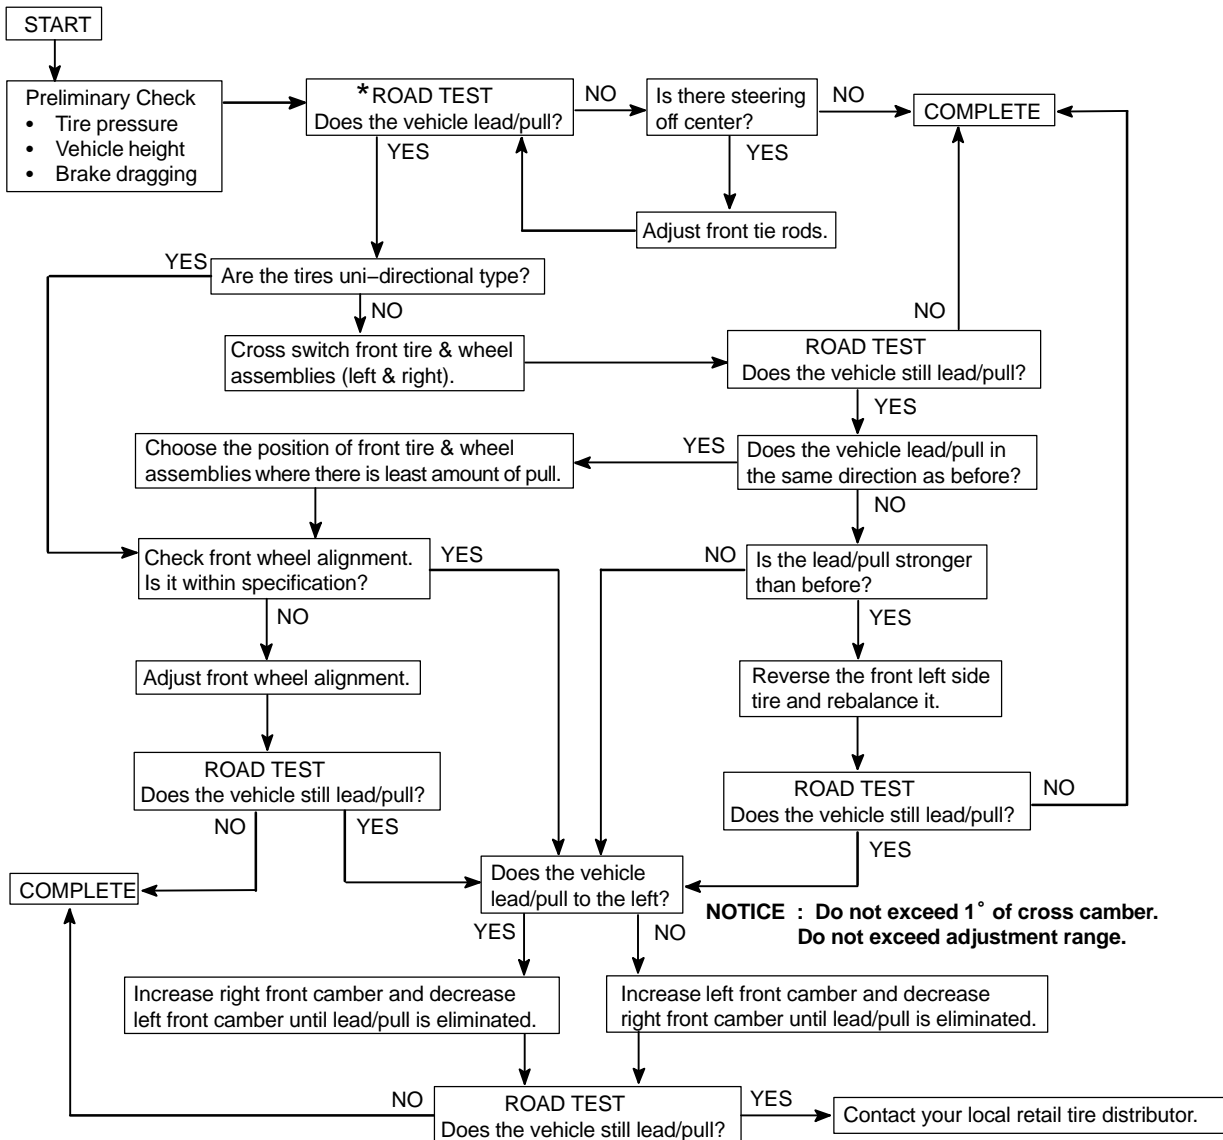

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspect Area	See page
Bottoming	<ol style="list-style-type: none"> 1. Vehicle (Overloaded) 2. Spring (Weak) 3. Shock absorber (Worn) 	<p>–</p> <p>SA-62</p> <p>SA-154</p> <p>SA-65</p> <p>SA-150</p>

REPAIR PROCEDURES

HINT:

This is a flow chart for vehicle pull.

* Select a flat road where the vehicle can be driven in a straight line for 100 meters at a constant speed of 35mph. Please confirm safety and set the steering wheel to its straight position. Drive the vehicle in a straight line for 100 meters at a constant speed of 35mph without holding the steering wheel.

- (1) The vehicle can keep straight but the steering wheel has some angle.
 - STEERING OFF CENTER (See page [SR-10](#))
- (2) The vehicle cannot keep straight.
 - STEERING PULL

TIRE AND WHEEL INSPECTION

SA1KL-05

1. INSPECT TIRE

(a) Check the tires for wear and proper inflation pressure.

B, C-cab Type

Cold tire inflation pressure:

Tire size	Front kPa (kgf/cm ² , psi)	Rear kPa (kgf/cm ² , psi)
P245/70R16	200 (2.0, 29)	240 (2.4, 35)
P265/70R16	180 (1.8, 26) *1 200 (2.0, 29) *2	200 (2.0, 29) *1 210 (2.1, 30) *2
P265/65R17	200 (2.0, 29)	220 (2.2, 32)

D-cab Type

Cold tire inflation pressure:

Tire size	Front kPa (kgf/cm ² , psi)	Rear kPa (kgf/cm ² , psi)
P245/70R16	220 (2.2, 32)	240 (2.4, 35)
P265/70R16 *1	200 (2.0, 29) *1 220 (2.2, 32) *2	220 (2.2, 32) *1 230 (2.3, 33) *2
P265/65R17	200 (2.0, 29)	220 (2.2, 32)

*1: Vehicle without off-road package

*2: Vehicle with off-road package

(b) Using a dial indicator, check the tire runout.

Tire runout: 3.0 mm (0.118 in.) or less

2. ROTATING TIRE

HINT:

- Rotate tires as shown in the illustration.
- Rotate as shown in (B) if the spare tire is included in the rotation.

**3. INSPECT WHEEL BALANCE**

- (a) Check and adjust the Off-the-car balance.
- (b) If necessary, check and adjust the On-the-car balance.

Imbalance after adjustment: 14.0 g (0.031 lb) or less

4. CHECK FRONT SUSPENSION FOR LOOSENESS**5. CHECK STEERING LINKAGE FOR LOOSENESS****6. CHECK BALL JOINT FOR LOOSENESS****7. CHECK SHOCK ABSORBER WORKS PROPERLY**

- Check if oil leaks.
- Check the mounting bushings for wear.
- Bounce front and rear of the vehicle.

FRONT WHEEL ALIGNMENT INSPECTION

SA1FZ-06

1. MEASURE VEHICLE HEIGHT (See page SS-59)

Measuring points:

- A: Ground clearance of the front drive shaft center
- B: Ground clearance of the front adjusting cam bolt center
- C: Ground clearance of the rear axle shaft center
- D: Ground clearance of the leaf spring front side bushing center

Vehicle height:

Front: A - B

Rear: C - D

NOTICE:

Before inspecting the wheel alignment, adjust the vehicle height to the specified value.

If the vehicle height is not the specified value, try to adjust it by pushing down on or lifting the body.

2. INSTALL CAMBER-CASTER-KINGPIN GAUGE OR POSITION VEHICLE ON WHEEL ALIGNMENT TESTER

Follow the specific instructions of the equipment manufacturer.

3. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION (See page SS-59)

If the steering axis inclination is not within the specified value, after the camber and caster have been correctly adjusted, recheck the steering knuckle and front wheel for bearing or looseness.

4. ADJUST CAMBER AND CASTER

- (a) Loosen the front and/or rear adjusting cam set bolts.
- (b) Adjust the camber and caster by front and/or rear adjusting cams (See adjustment chart).

HINT:

Try to adjust the camber and caster to the center of the specified values.

Example

- = Standard value point
- = Measured value point

——— Camber
 - - - - - Caster

Front Cam

⊖ Direction
 (Shorter)

Rear Cam

⊖ Direction
 (Shorter)

N

F17149

- (c) How to read adjustment chart (Example).
- (1) Find the applicable wheel alignment standard value for the particular model.
 - (2) Mark the selected standard value on the adjustment chart.

Example:

Camber: 0°16' (0.26°)

Caster: 1°17' (1.28°)

- (3) Measure the present wheel alignment value with the vehicle in non-loaded condition.
- (4) Mark the measured present value on the adjustment chart.

Example:

Camber: 0°50' (0.83°)

Caster: 1°18' (1.30°)

- (5) As shown in the example chart, read the distance from the measured value to the standard value, and adjust the front and/or rear adjusting cams accordingly.

Amount to turn adjusting cams (by graduation):

Example:

Front cam: 1.4 ⊕ Direction

Rear cam: 1.5 ⊕ Direction

SUSPENSION AND AXLE - FRONT WHEEL ALIGNMENT

- (d) Torque the front and/or rear adjusting cam set bolts.
Torque: 130 N·m (1,325 kgf·cm, 96 ft·lbf)

5. INSPECT TOE-IN (See page SS-59)

If the toe-in is not within the specified value, adjust the rack ends.

6. ADJUST TOE-IN AND WHEEL ANGLE

(a) Remove the 2 clips.

(b) Loosen the tie rod end lock nuts.

(c) Turn the right and left rack ends by an equal amount to adjust the toe-in.

HINT:

Try to adjust the toe-in to the center of the specified value.

(d) Make sure that the lengths of the right and left rack ends are the same.

Rack end length difference: 1.5 mm (0.059 in.) or less

(e) Tighten the tie rod end lock nuts.

Torque: 55 N·m (560 kgf·cm, 41 ft·lbf)

(f) Place the boots on the seats and install the clips.

HINT:

Make sure that the boots are not twisted.

(g) Inspect the wheel angle See page SS-59.

Turn the steering wheel fully and measure the turning angle.

Wheel turning angle:

If the right and left wheel turning angles differ from the specified value, readjust the toe-in and wheel angle within the specified value. At this time, make sure that the lengths of the right and left rack ends are the same.

Rack end length difference: 1.5 mm (0.059 in.) or less

WHEEL AND TIRE SYSTEM

SA2D7-01

PRECAUTION

1. REMOVAL AND INSTALLATION OF TIRE PRESSURE MONITOR VALVE SUB-ASSY

- (a) When installing a tire, make sure that the tire pressure monitor valve does not interfere with the tire bead in order to prevent damage to the sensor.
- (b) After completing the operation, remove the valve core to rapidly release air and check that the warning light comes on. If not, the system may have a defect.
- (c) If there is air leakage, tighten the nut with a force of 4.0 N·m (41 kgf·cm, 35 in.·lbf) and push the valve core 2 or 3 times to remove any dirt attached to the valve core.
If there is still air leakage, replace the grommet, the washer and the nut all together.
- (d) When installing the tire pressure monitor valve, check whether the rim, grommet, washer and nut are clean. Use a manufacturer-specified cap.
- (e) When putting air into the tire, first install the tire pressure valve straight onto the stem of the tire pressure monitor valve.

2. TIRE AND WHEEL REPLACEMENT OR TIRE ROTATION

- (a) When replacing tires, be sure to check if the grommet of the tire valve is damaged. If so, replace the grommet together with the washer and nut.
- (b) When tires and wheels are replaced, make sure to register the transmitter ID.

TIRE PRESSURE MONITOR RECEIVER COMPONENTS

SA2D8-01

REPLACEMENT

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ROOF HEADLINING**
(See page [BO-126](#) or [BO-133](#))

3. **REMOVE TIRE PRESSURE MONITOR RECEIVER**
 - (a) Disconnect the connector.
 - (b) Remove the nut.
 - (c) Remove the EA RIB LH.
 - (d) Remove the tire pressure monitor receiver from the EA RIB LH.

4. **INSTALL TIRE PRESSURE MONITOR RECEIVER**
 - (a) Install the tire pressure monitor receiver to the EA RIB LH.
 - (b) Connect the connector.
 - (c) Install the EA RIB LH to the body.
 - (d) Install the nut.
Torque: 7.5 N·m (76 kgf·cm, 66 in.-lbf)
5. **INSTALL ROOF HEADLINING**
(See page [BO-130](#) or [BO-138](#))
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

TIRE PRESSURE MONITOR VALVE COMPONENTS

SAZDA-01

Tire Pressure Monitor Valve

N·m (kgf·cm, ft·lbf) : Specified torque

DISPOSAL

HINT:

The tire pressure monitor valve sub-assy is powered by a lithium battery. When disposing of the tire pressure monitor valve sub-assy, remove the battery and dispose of it correctly.

DISPOSE OF TIRE PRESSURE MONITOR VALVE

- (a) Insert the tip of a screwdriver into the clearance and pry off the cover. Remove the back cover.

- (b) The battery and base board covered with silicone resin are exposed. While taking out the battery, cut off the 2 terminals which connect the battery and base board.

REPLACEMENT

1. REMOVE FRONT TIRE
2. REMOVE REAR TIRE
3. REMOVE TIRE PRESSURE MONITOR VALVE
 - (a) Remove the valve core and cap, and release air from the tire.
 - (b) After ensuring that air is sufficiently released, remove the nut and washer that are used to fix the tire pressure monitor valve sub-assy and drop the sensor inside the tire.

HINT:

Keep the removed cap, valve core, nut and washer.

- (c) After dropping the tire pressure monitor valve sub-assy into the tire, disengage the bead using the shoe of the tire remover.

NOTICE:

Be careful not to damage the tire pressure monitor valve because of interference between the sensor and tire bead.

- (d) Remove the bead on the upper side.
- (e) Take out the sensor from the tire and remove the bead on the lower side.
- (f) Remove the inner grommet from the tire pressure monitor valve sub-assy.

HINT:

Check that there are no cracks or damage to the grommet. If any damage is found, replace the grommet together with the washer and nut.

4. INSTALL TIRE PRESSURE MONITOR VALVE

- (a) Insert the tire pressure monitor valve into the valve installation hole. Insert from the inside of the rim so that the print surface can be seen.

NOTICE:

- Check that there is no visible deformation, damage or other abnormalities on the transmitter.
- Check that there is no foreign matter on the inner grommet and around the rim hole.

- If installed in the reverse direction, the tire pressure monitor valve may be damaged or fail to transmit signals when running at high speed.
- If installing a new tire pressure monitor valve, write down the ID number before installation.
- It is necessary to register an ID in the ECU after installation (See page [DI-1290](#)).

- (b) Install the washer on the tire pressure monitor valve from the rim side and tighten with a nut.

Torque: 4.0 N·m (41 kgf·cm, 35 in.-lbf)

NOTICE:

- Check that there is no foreign matter on the washer and nut.
 - If the tire pressure monitor valve is removed when the tire is removed for replacement, check that there is no damage or cuts, and no foreign matter such as mud, dirt or sand attached to the grommet. Replace the grommet with a new one if any of the defects mentioned above are found.
 - Check that there is no oil, water or lubricant around the rim hole, tire pressure monitor valve, washer and nut. Failing to do so may result in improper installation.
- (c) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque and then check for air leaks with soapy water.

Torque: 4.0 N·m (41 kgf·cm, 35 in.-lbf)

- (d) Set the wheel disc to the mounting machine and install the lower tire bead. Position the main body of the sensor as in the shaded area shown in the illustration.

NOTICE:

If the sensor is positioned outside this area, it generates interference with the tire bead, causing possible damage to the sensor.

- (e) Install the upper bead.

NOTICE:

Make sure that the tire bead and tool do not interfere with the main body of the sensor and that the sensor is not clamped by the bead.

5. **INSTALL FRONT WHEEL**
Torque: 103 N·m (1,050 kgf·cm, 76 ft-lbf)
6. **INSTALL REAR WHEEL**
Torque: 103 N·m (1,050 kgf·cm, 76 ft-lbf)
7. **INSPECT TIRE** (See page [SA-3](#))
8. **REGISTRATION OF TRANSMITTED ID**
(See page [DI-1290](#))

9. **INSPECT TIRE PRESSURE WARNING SYSTEM**
(See page [DI-1287](#))
SST 09843-18040

TIRE PRESSURE MONITOR ECU COMPONENTS

SA2D5-01

Tire Pressure Monitor ECU

REPLACEMENT

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE INTEGRATION CONTROL PANEL
(See page [BO-111](#))
3. REMOVE GLOVE COMPARTMENT
(See page [BO-111](#))

4. REMOVE TIRE PRESSURE MONITOR ECU
 - (a) Disconnect the connector.
 - (b) Remove the nut and tire pressure monitor ECU.

5. INSTALL TIRE PRESSURE MONITOR ECU
 - (a) Install the tire pressure monitor ECU with the nut.
 - (b) Connect the connector.
6. INSTALL GLOVE COMPARTMENT
(See page [BO-120](#))
7. INSTALL INTEGRATION CONTROL PANEL
(See page [BO-120](#))
8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
9. REGISTRATION OF TRANSMITTED ID
(See page [DI-1290](#))
10. INSPECT TIRE PRESSURE WARNING SYSTEM
(See page [DI-1287](#))

SST 09843-18040

FRONT AXLE HUB COMPONENTS

SA1JY-03

N

F10562

REMOVAL

1. REMOVE FRONT WHEEL
2. REMOVE GREASE CAP

Using a screwdriver and hammer, remove the grease cap.

3. INSPECT FRONT AXLE HUB BEARING

- (a) Remove the front disc brake caliper.
- (b) Remove the front disc.
- (c) Inspect the axle hub backlash.
 - (1) Using a dial indicator, check the backlash near the center of the axle hub.

Maximum: 0.05 mm (0.0020 in.)

If the backlash exceeds the maximum, replace the bearing.

- (d) Inspect the axle hub deviation.
 - (1) Using a dial indicator, check the deviation at the surface of the axle hub.

Maximum: 0.05 mm (0.0020 in.)

If the deviation exceeds the maximum, replace the bearing.

- (e) Install the front disc.
 - (f) Install the front disc brake caliper.
 - (1) Install the brake caliper and 2 bolts.
- Torque: 123 N·m (1,250 kgf·cm, 90 ft·lbf)**

4. 4WD:

DISCONNECT DRIVE SHAFT

- (a) Remove the cotter pin and lock cap.
- (b) While applying the brakes, remove the lock nut.

5. w/ ABS:

DISCONNECT ABS SPEED SENSOR AND WIRE HARNESS CLAMP FROM STEERING KNUCKLE

Remove the 2 bolts and disconnect the ABS speed sensor and wire harness clamp from the steering knuckle.

**6. REMOVE BRAKE CALIPER AND DISC**

- (a) Remove the bolt and brake line clamp from the steering knuckle.
- (b) Remove the 2 bolts, brake caliper and disc.

NOTICE:

Do not damage the brake tube.

- (c) Support the brake caliper securely.

7. REMOVE SHOCK ABSORBER (See page SA-63)**8. DISCONNECT LOWER BALL JOINT WITH LOWER BALL JOINT DUST COVER PROTECTOR**

Remove the 4 bolts and disconnect the lower ball joint with lower ball joint dust cover protector.

9. REMOVE STEERING KNUCKLE

- (a) Remove the cotter pin and loosen the nut.

- (b) Using SST, disconnect the steering knuckle.

SST 09950-40011 (09951-04010, 09952-04010, 09553-04020, 09554-04010, 09955-04031, 09958-04011)

- (c) Remove the nut and steering knuckle.

NOTICE:**4WD:**

Be careful not to damage the oil seal and drive shaft boot.

HINT:**4WD:**

When it is difficult to disconnect the drive shaft, tap the tip of the drive shaft with a plastic hammer.

DISASSEMBLY

1. 2WD:

REMOVE GREASE CAP

- (a) Mount the axle hub in a soft jaw vise.

HINT:

Close the vise until it holds the hub bolts. Do not tighten further.

- (b) Using a screwdriver, remove the grease cap.

2. 4WD:

REMOVE OIL SEAL (INSIDE)

- (a) Mount the axle hub in a soft jaw vise.

HINT:

Close the vise until it holds the hub bolts. Do not tighten further.

- (b) Using a screwdriver, remove the oil seal (inside).

3. 2WD:

REMOVE LOCK NUT AND ABS SPEED SENSOR ROTOR/SPACER

- (a) Using a chisel and hammer, loosen the staked part of the lock nut.

NOTICE:

Be careful not to damage the bushing.

- (b) Using SST, remove the lock nut.

SST 09318-12010

- (c) Remove the ABS speed sensor rotor/spacer.

NOTICE:

Take care not to scratch the serration of the speed sensor rotor.

4. REMOVE AXLE HUB FROM STEERING KNUCKLE

- (a) Remove the 4 bolts and shift the dust cover towards the hub side (outside).

- (b) Using SST, remove the axle hub from the steering knuckle.

SST 09710-30021 (09710-03051),
09950-40011 (09951-04020, 09952-04010,
09953-04020, 09954-04010, 09955-04031,
09957-04010, 09958-04011)

- (c) Remove the dust cover from the steering knuckle.

- (d) 4WD:

Remove the bearing spacer and ABS speed sensor rotor (w/ ABS)/spacer (w/o ABS).

NOTICE:

Take care not to scratch the serration of the speed sensor rotor.

5. REMOVE OIL SEAL (OUTSIDE)

Using a screwdriver, remove the oil seal (outside) from the steering knuckle.

6. REMOVE BEARING FROM STEERING KNUCKLE

(a) Using snap ring pliers, remove the snap ring.

(b) Using SST and a press, remove the bearing from the steering knuckle.

SST 09950-60020 (09951-00810),
09950-70010 (09951-07150)

REASSEMBLY

1. INSTALL NEW BEARING

- (a) Using SST and a press, install a new bearing to the steering knuckle.
SST 09527-17011, 09950-60020 (09951-00910)
- (b) Using snap ring pliers, install a new snap ring.

2. INSTALL NEW OIL SEAL (OUTSIDE)

- (a) Using SST and a plastic hammer, install a new oil seal (outside).
SST 09223-15030, 09527-17011
- (b) Coat MP grease to the oil seal lip.

3. INSTALL AXLE HUB TO STEERING KNUCKLE

- (a) Install the dust cover to the steering knuckle with the 4 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

- (b) Using SST and a press, install the axle hub to the steering knuckle.

SST 09649-17010

4. INSTALL ABS SPEED SENSOR ROTOR (w/ ABS)/ SPACER (w/o ABS)

NOTICE:

Do not scratch the serration of the speed sensor rotor.

5. 2WD:

INSTALL NEW LOCK NUT

- (a) Using SST, install and torque a new lock nut to the axle hub.

SST 09318-12010

Torque: 274 N·m (2,800 kgf·cm, 203 ft·lbf)

- (b) Using a chisel and hammer, stake the lock nut.

6. 4WD:

INSTALL BEARING SPACER

Using SST and a press, install the bearing spacer.

SST 09950-60010 (09951-00650),

09950-70010 (09951-07150)

7. 2WD:

INSTALL GREASE CAP

**8. 4WD:****INSTALL NEW OIL SEAL (INSIDE)**

- (a) Using SST and a plastic hammer, install a new oil seal (inside).

SST 09527-17011

HINT:

Lightly strike the SST on its circumference evenly.

- (b) Coat MP grease to the oil seal lip.

INSTALLATION

1. INSTALL STEERING KNUCKLE

(a) 4WD:

Insert the drive shaft into the axle hub and temporarily tighten the nut.

NOTICE:

Be careful not to damage the oil seal and drive shaft boot.

(b) Connect the steering knuckle to the upper suspension arm.

(c) Install the nut and a new cotter pin.

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

Torque: 105 N·m (1,100 kgf·cm, 77 ft·lbf)

2. CONNECT LOWER BALL JOINT WITH LOWER BALL JOINT DUST COVER PROTECTOR

Connect the lower ball joint with lower ball joint dust cover protector to the steering knuckle with the 4 bolts.

Torque: 65 N·m (662 kgf·cm, 48 ft·lbf)

3. INSTALL SHOCK ABSORBER (See page SA-68)

4. INSTALL BRAKE CALIPER

(a) Install the disc, brake caliper and 2 bolts.

Torque: 123 N·m (1,250 kgf·cm, 90 ft·lbf)

(b) Install the brake line clamp to the steering knuckle with the bolt.

Torque: 28 N·m (285 kgf·cm, 21 ft·lbf)

5. w/ ABS:

CONNECT ABS SPEED SENSOR AND WIRE HARNESS CLAMP

Connect the ABS speed sensor and wire harness clamp to the steering knuckle with the 2 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71 ft·lbf)

6. 4WD:

INSTALL DRIVE SHAFT LOCK NUT

(a) While applying the brakes, tighten the nut.

Torque: 235 N·m (2,400 kgf·cm, 173 ft·lbf)

(b) Install the lock cap and a new cotter pin.

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

7. INSTALL GREASE CAP

8. INSTALL FRONT WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

9. DEPRESS BRAKE PEDAL SEVERAL TIMES

10. CHECK FRONT WHEEL ALIGNMENT (See page SA-5)

11. CHECK ABS SPEED SENSOR SIGNAL (See page DI-1387 or DI-1478)

FRONT WHEEL HUB BOLT REPLACEMENT

SA1K2-02

1. REMOVE FRONT WHEEL

2. REMOVE BRAKE CALIPER AND DISC

- Remove the bolt and brake line clamp from the steering knuckle.
- Remove the 2 bolts, brake caliper and disc.
- Support the brake caliper securely.

3. REMOVE HUB BOLT

Using SST and a screwdriver or an equivalent, remove the hub bolt.

SST 09650-17011

4. INSTALL HUB BOLT

- Install a washer and nut to a new hub bolt as shown in the illustration.
- Using a screwdriver or an equivalent to hold, install the hub bolt by torquing the nut.
- Remove the nut and washer.

5. INSTALL BRAKE DISC AND CALIPER

- Install the brake disc, caliper and 2 bolts.
Torque: 123 N·m (1,250 kgf·cm, 90 ft·lbf)
- Install the brake line clamp to the steering knuckle with the bolt.
Torque: 28 N·m (285 kgf·cm, 21 ft·lbf)

6. INSTALL FRONT WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

7. DEPRESS BRAKE PEDAL SEVERAL TIMES

FRONT DRIVE SHAFT COMPONENTS

SA09G-07

REMOVAL

1. REMOVE FRONT WHEEL
2. REMOVE ENGINE UNDER COVER
3. DRAIN DIFFERENTIAL OIL
4. REMOVE DRIVE SHAFT LOCK NUT
 - (a) Using a screwdriver and hammer, remove the grease cap.

- (b) Remove the cotter pin and lock cap.
 - (c) While applying the brakes, remove the lock nut.
5. **DISCONNECT LOWER SUSPENSION ARM FROM LOWER BALL JOINT**

- (a) Remove the cotter pin and nut.

- (b) Using SST, disconnect the lower suspension arm from the lower ball joint.
- SST 09628-62011

6. DISCONNECT DRIVE SHAFT FROM STEERING KNUCKLE

- (a) Using a plastic hammer, disengage the drive shaft from the axle hub.

- (b) Push the steering knuckle outward and disconnect the drive shaft from the steering knuckle.

NOTICE:

Be careful not to damage the oil seal, boots and dust seal.

7. LH drive shaft:
REMOVE LH SHOCK ABSORBER (See page SA-63)

**8. REMOVE DRIVE SHAFT**

- (a) RH drive shaft:
Using a brass bar and hammer, remove the RH drive shaft.

NOTICE:

Be careful not to damage the dust cover and oil seal.

- (b) LH drive shaft:
Using SST, remove the LH drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)

NOTICE:

Be careful not to damage the dust cover and oil seal.

- (c) Using a screwdriver, remove the snap ring from the in-board joint shaft.

DISASSEMBLY

1. CHECK DRIVE SHAFT

- Check to see that there is no remarkable play in the outboard joint.
- Check to see that the inboard joint slides smoothly in the thrust direction.
- Check to see that there is no remarkable play in the radial direction of the inboard joint.
- Check the boots for damage.

2. REMOVE INBOARD AND OUTBOARD JOINT BOOT CLAMPS

- Using pliers, pinch the claws to compress the large inboard joint boot clamp and remove it.
- Using a side cutter, cut the small inboard joint boot clamp and remove it.
- Using a side cutter, cut the 2 outboard joint boot clamps and remove them.

3. REMOVE INBOARD JOINT SHAFT FROM OUTBOARD JOINT SHAFT

- Place matchmarks on the inboard and outboard joint shafts.

NOTICE:

Do not punch the marks.

- Using a snap ring expander, pull out the outboard joint shaft while expanding the snap ring.

4. REMOVE INBOARD AND OUTBOARD JOINT BOOTS

5. REMOVE DUST SEAL

Using SST and a press, remove the dust seal.

SST 09950-00020

6. REMOVE DUST COVER

Using SST and a press, remove the dust cover.

SST 09950-00020

REASSEMBLY

1. INSTALL DUST COVER

Using a screwdriver and hammer, install a new dust cover.

2. INSTALL DUST SEAL

Using a screwdriver and hammer, install a new dust seal.

3. TEMPORARILY INSTALL OUTBOARD AND INBOARD JOINT BOOTS AND NEW BOOT CLAMPS

HINT:

- Before installing the boots, wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.
- Before installing the boots, place 3 new clamps to the small boot ends and large boot end (outboard joint side).

4. INSTALL INBOARD JOINT SHAFT TO OUTBOARD JOINT SHAFT

Align the matchmarks placed before disassembly, and using a snap ring expander, put in the inboard joint shaft while expanding the snap ring.

5. INSTALL BOOT TO OUTBOARD JOINT

Before assembling the boot, pack the outboard joint and boot with grease in the boot kit.

Grease capacity (Color = Black):

205 – 225 g (7.23 – 7.94 oz.)

6. INSTALL BOOT TO INBOARD JOINT SHAFT

(a) Pack the inboard joint and boot with grease in the boot kit.

Grease capacity (Color = Black):

190 – 210 g (6.70 – 7.41 oz.)

(b) Temporarily install the boot to the inboard joint shaft.

7. CHECK DRIVE SHAFT LENGTH

- Make sure that the 2 boots are on the shaft groove.
- Make sure that the 2 boots are not stretched or contracted when the drive shaft is at standard length.

Drive shaft standard length:

523.5 ± 2.0 mm (20.610 ± 0.079 in.)

8. INSTALL LARGE INBOARD JOINT BOOT CLAMP TO INBOARD JOINT SHAFT BOOT

- Place the large inboard joint boot clamp.

- (b) Using pliers, compress the clamp and attach the claws.

9. INSTALL OTHER BOOT CLAMPS TO BOTH BOOTS

- (a) Secure the clamp onto the boot.
 (b) Place SST onto the clamp.
 SST 09521-24010
 (c) Tighten the SST so that the clamp is pinched.

NOTICE:

Do not overtighten the SST.

- (d) Using SST, adjust the clearance of the clamp.
 SST 09240-00020

Clearance: 1.0 – 1.5 mm (0.039 – 0.059 in.)

10. CHECK DRIVE SHAFT (See page SA-31)

INSTALLATION

1. INSTALL DRIVE SHAFT TO DIFFERENTIAL

- (a) Install a new snap ring to the inboard joint shaft.
- (b) Apply the gear oil to the inboard joint shaft and differential case sliding surface.
- (c) Set the snap ring with the opening side facing downward.
- (d) Using a brass bar and hammer, install the drive shaft.

NOTICE:

Be careful not to damage the dust cover and oil seal.

HINT:

Whether the inboard joint shaft is in contact with the pinion shaft or not can be known from the sound or feeling when driving it in.

- (e) Check that there is 2 – 3 mm (0.08 – 0.12 in.) of play in the axial direction.
- (f) Check that the drive shaft cannot be removed by hand.

2. LH drive shaft:

INSTALL LH SHOCK ABSORBER (See page SA-68)

3. CONNECT DRIVE SHAFT TO STEERING KNUCKLE

NOTICE:

Be careful not to damage the oil seal, boots and dust seal.

4. CONNECT LOWER SUSPENSION ARM TO LOWER BALL JOINT

- (a) Connect the lower suspension arm to the lower ball joint.
- (b) Install the nut and a new cotter pin.

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

HINT:

Face the hole for the cotter pin forward.

Torque: 140 N·m (1,450 kgf·cm, 103 ft·lbf)

5. INSTALL DRIVE SHAFT LOCK NUT

- (a) While applying brakes, install the nut.

Torque: 235 N·m (2,400 kgf·cm, 173 ft·lbf)

- (b) Install the lock cap and a new cotter pin.

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

6. FILL DIFFERENTIAL WITH HYPOID GEAR OIL (See page SA-36)

7. INSTALL ENGINE UNDER COVER

8. INSTALL FRONT WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

FRONT DIFFERENTIAL REAR OIL SEAL COMPONENTS

SA09L-06

REPLACEMENT

1. REMOVE ENGINE UNDER COVER
2. DRAIN DIFFERENTIAL OIL
3. REMOVE FRONT PROPELLER SHAFT
(See page [PR-10](#))

4. REMOVE COMPANION FLANGE

- (a) Using a chisel and hammer, loosen the staked part of the nut.
- (b) Using SST to hold the flange, remove the nut.
SST 09330-00021

- (c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

5. REMOVE OIL SEAL AND OIL SLINGER

- (a) Using SST, remove the oil seal.
SST 09308-10010
- (b) Remove the oil slinger.

6. REMOVE REAR BEARING AND BEARING SPACER
 - (a) Using SST, remove the rear bearing from the drive pinion.
SST 09556-22010
 - (b) Remove the bearing spacer.
7. INSTALL BEARING SPACER, REAR BEARING AND OIL SLINGER
 - (a) Install a new bearing spacer and place the rear bearing and oil slinger.

- (b) Using SST and the companion flange, install the rear bearing, then remove the companion flange.
 SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

8. INSTALL OIL SEAL

- (a) Coat a new oil seal lip with MP grease.
 (b) Using SST and a hammer, install the oil seal.
 SST 09554-22010

Oil seal drive in depth: 4.5 ± 0.3 mm (0.177 ± 0.012 in.)

9. INSTALL COMPANION FLANGE

- (a) Place the companion flange on the drive pinion.
 (b) Coat the threads of a new nut with hypoid gear oil.

- (c) Using SST to hold the flange, torque the nut.
 SST 09330-00021
Torque: 108 N·m (1,100 kgf·cm, 80 ft·lbf)

10. ADJUST DRIVE PINION PRELOAD (See page SA-48)

11. STAKE DRIVE PINION NUT

12. INSTALL FRONT PROPELLER SHAFT (See page PR-15)

13. FILL DIFFERENTIAL WITH HYPOID GEAR OIL

Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

Oil type: Hypoid gear oil API GL-5

Recommended oil viscosity: SAE 75W-90

Capacity: 1.15 liters (1.22 US qts, 1.01 Imp. qts)

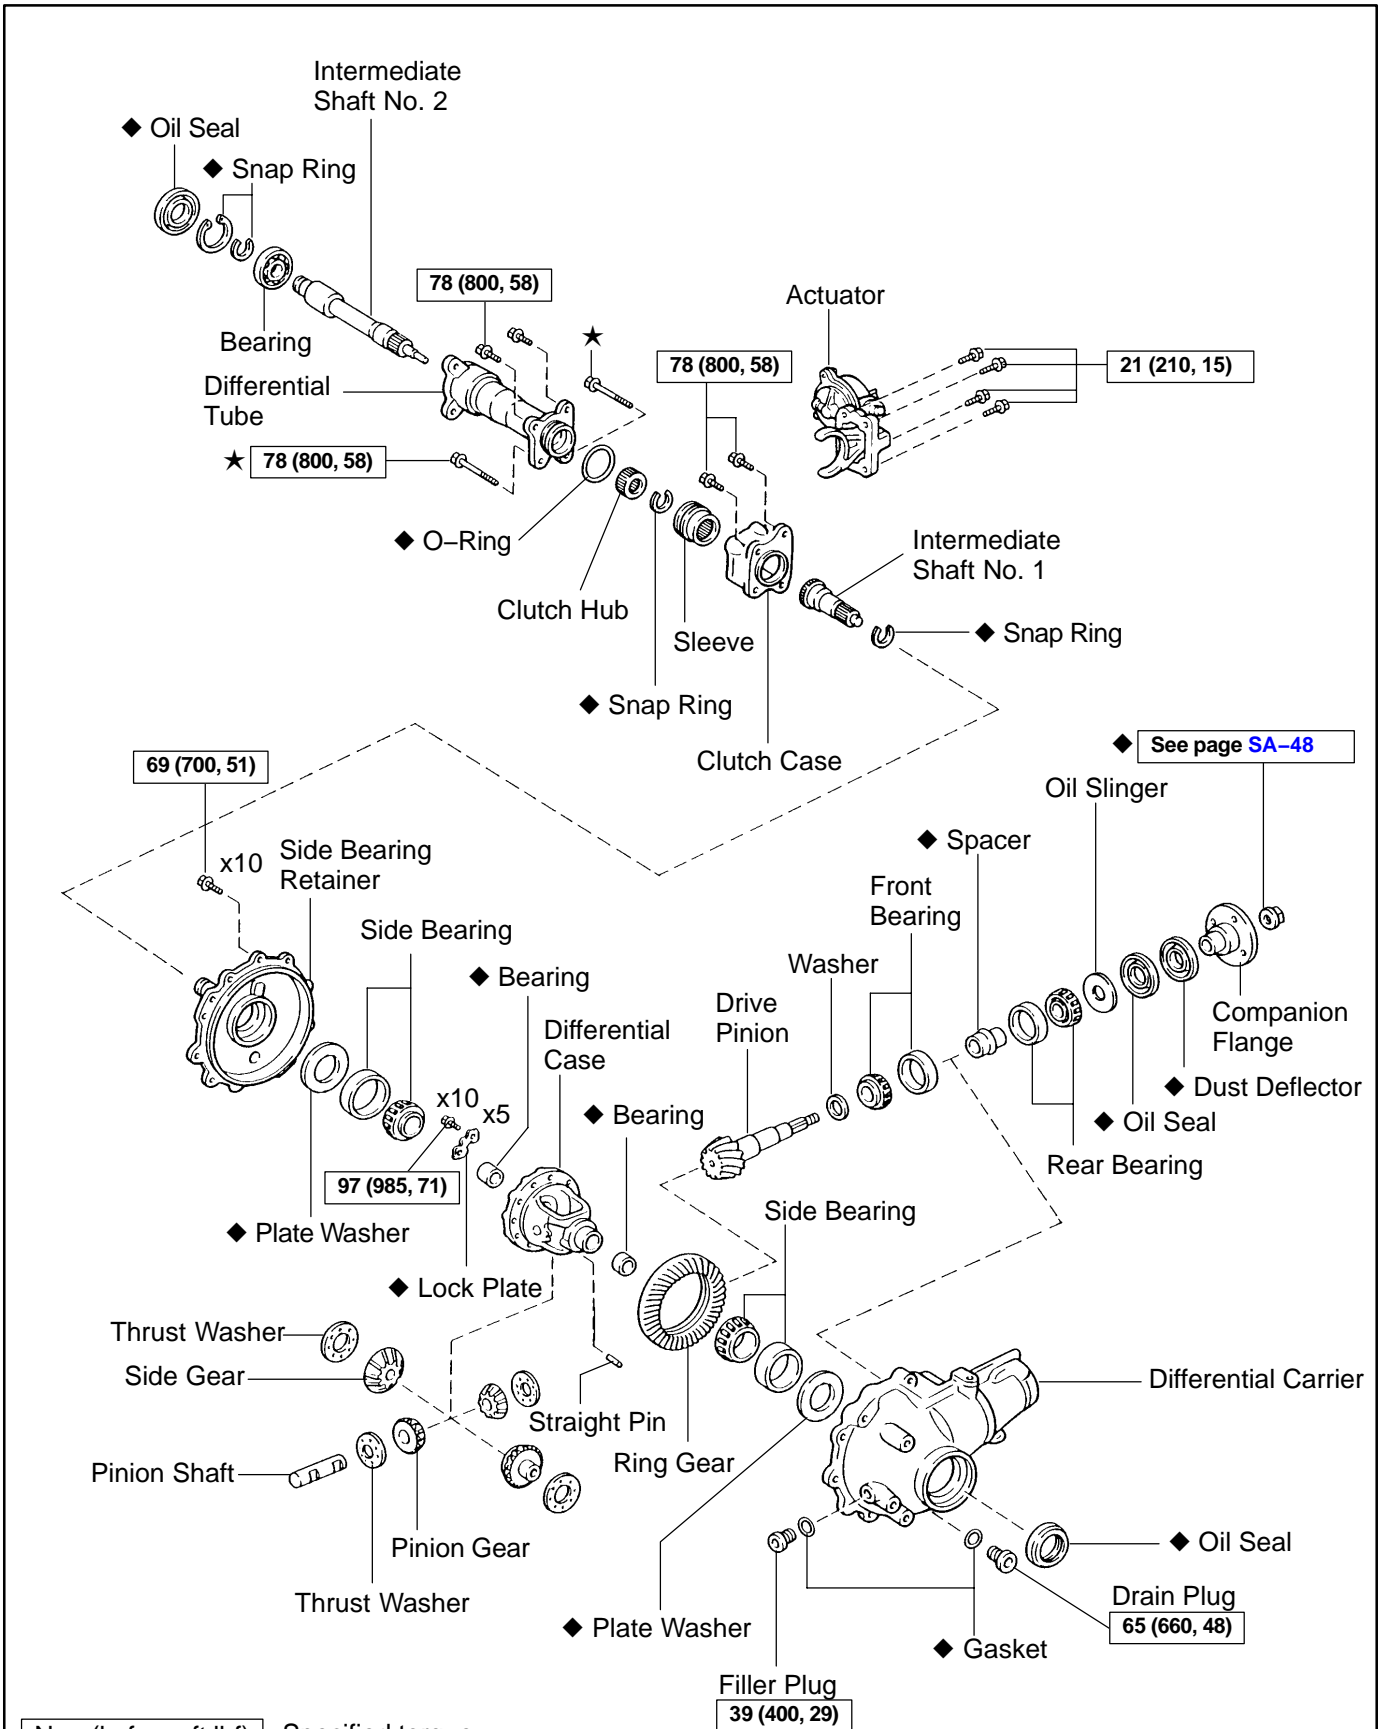

14. INSTALL ENGINE UNDER COVER

FRONT DIFFERENTIAL CARRIER COMPONENTS

SA09N-06

SUSPENSION AND AXLE - FRONT DIFFERENTIAL CARRIER

N-m (kgf-cm, ft-lbf) : Specified torque

- ◆ Non-reusable part
- ★ Precoated part

REMOVAL

1. DRAIN DIFFERENTIAL OIL
2. REMOVE DRIVE SHAFTS (See page SA-29)
3. DISCONNECT FRONT PROPELLER SHAFT
(See page PR-10)

HINT:

Support the front propeller shaft securely.

4. REMOVE TUBE WITH WIRE HARNESS ASSEMBLY
 - (a) Disconnect the breather hose, vacuum hose and actuator connector.
 - (b) Remove the bolt and tube with wire harness assembly.
5. REMOVE FRONT DIFFERENTIAL CARRIER
 - (a) Support the front differential with a jack.

- (b) Using a hexagon (12 mm) wrench, remove the rear mounting nut.
- (c) Remove the 2 front mounting bolts.
- (d) Lower the jack and remove the front differential carrier.
6. REMOVE DIFFERENTIAL MOUNTING CUSHIONS
 - (a) Remove the 2 bolts and rear mounting cushion.
 - (b) Remove the 5 bolts and 2 front mounting cushions.

DISASSEMBLY

1. CHECK COMPANION FLANGE RUNOUT

Using a dial indicator, measure the vertical and lateral runout of the companion flange.

Maximum runout: 0.10 mm (0.0039 in.)

If the runout exceeds the maximum, replace the companion flange.

2. CHECK RING GEAR BACKLASH

Using SST and a dial indicator, measure the ring gear backlash.

SST 09564-32011

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

HINT:

Measure at 3 or more points on the circumference of the ring gear.

If the backlash is not within the specified value, adjust the side bearing preload or repair as necessary.

3. MEASURE DRIVE PINION PRELOAD

Using a torque wrench, measure the preload using the backlash between the drive pinion and ring gear.

Preload (at starting):

0.6 – 1.0 N·m (6 – 10 kgf·cm, 5.2 – 8.7 in.-lbf)

4. CHECK TOTAL PRELOAD

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

If necessary, disassemble and inspect the differential.

5. REMOVE A.D.D. ACTUATOR

- (a) Remove the 4 bolts.
- (b) Using a hammer handle, remove the actuator.

**6. REMOVE DIFFERENTIAL TUBE**

- (a) Using a torx® socket (E14), remove the 4 torx® bolts.
- (b) Using a plastic hammer, tap on the differential tube to remove it.
- (c) Remove the sleeve.
- (d) Remove the O-ring from the differential tube.

7. REMOVE CLUTCH CASE

- (a) Using a torx® socket (E14), remove the 2 torx® bolts.
- (b) Using a plastic hammer, tap on the clutch case to remove it.

**8. REMOVE SIDE OIL SEAL**

Using SST, remove the side oil seal.

SST 09308-00010

**9. REMOVE INTERMEDIATE SHAFT NO. 1**

- (a) Using SST, remove the intermediate shaft No. 1.
SST 09350-20015 (09369-20040), 09950-40011
(09951-04010, 09952-04010, 09953-04020,
09954-04010, 09955-04011, 09957-04010,
09958-04011)
- (b) Remove the snap ring.

10. REMOVE COMPANION FLANGE

- (a) Using a chisel and hammer, unstake the nut.
- (b) Using SST to hold the flange, remove the nut.
SST 09330-00021

- (c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010,
09954-03010, 09955-03030, 09956-03020)

**11. REMOVE OIL SEAL AND OIL SLINGER**

- (a) Using SST, remove the oil seal.
SST 09308-10010
- (b) Remove the oil slinger.

**12. REMOVE REAR BEARING AND BEARING SPACER**

- (a) Using SST, remove the rear bearing from the drive pinion.
SST 09556-22010
- (b) Remove the bearing spacer.

**13. REMOVE SIDE BEARING RETAINER**

Remove the 10 bolts and tap out the retainer with a plastic hammer.

14. REMOVE DIFFERENTIAL CASE ASSEMBLY**15. REMOVE DRIVE PINION FROM DIFFERENTIAL CARRIER****16. REMOVE DRIVE PINION FRONT BEARING**

Using SST and a press, remove the bearing and washer from the drive pinion.

SST 09950-00020

HINT:

If the drive pinion or ring gear is damaged, replace them as a set.

**17. REMOVE DRIVE PINION BEARING OUTER RACES**

- (a) Using a brass bar and hammer, remove the front bearing outer race.

- (b) Using SST, remove the rear bearing outer race.
SST 09502-12010, 09612-65014 (09612-01020, 09612-01050)

18. REMOVE SIDE BEARING OUTER RACES

HINT:

- Measure the plate washer thickness and note it down.
- Tag the bearing outer races to show the location for reassembling.

- (a) Using SST and a press, remove the plate washer and outer race from the bearing retainer.

SST 09950-60010 (09951-00540),
09950-70010 (09951-07150)

- (b) Using SST and a press, remove the plate washer and outer race from the differential carrier.

SST 09950-60010 (09951-00650),
09950-70010 (09951-07150)

19. REMOVE RING GEAR

- (a) Place matchmarks on the ring gear and differential case.
(b) Using a screwdriver and hammer, unstick the 5 lock plates.
(c) Remove the 10 bolts and 5 lock plates.
(d) Using a plastic hammer, tap on the ring gear to separate it from the differential case.

20. REMOVE SIDE BEARINGS

Using SST, remove the 2 side bearings from the differential case.

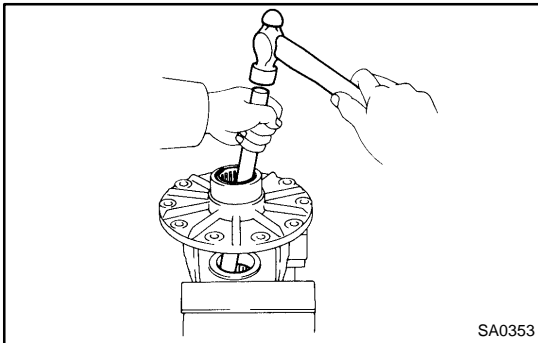

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011),
09950-60010 (09951-00480)

HINT:

Fix the claws of SST to the notch in the differential case.

- 21. DISASSEMBLE DIFFERENTIAL CASE ASSEMBLY**
- (a) Using a pin punch and hammer, remove the straight pin.
 - (b) Remove the pinion shaft, 2 pinion gears, pinion gear thrust washers, side gears and side gear thrust washers from the differential case.

- 22. REMOVE BEARINGS**
- Using a brass bar and hammer, remove the 2 bearings.

REPLACEMENT

1. REPLACE COMPANION FLANGE DUST DEFLECTOR, IF NECESSARY

- (a) Using SST, a socket wrench and a press, remove the dust deflector.

SST 09950-00020

- (b) Using SST and a press, install a new dust deflector.

SST 09636-20010

2. REPLACE INTERMEDIATE SHAFT NO. 2, IF NECESSARY

- (a) Remove the clutch hub.

- (1) Using a snap ring expander, remove the snap ring.
- (2) Remove the clutch hub from the intermediate shaft No. 2.

- (b) Remove the oil seal.

Using SST, remove the oil seal from the tube.

SST 09308-00010

- (c) Remove the intermediate shaft No. 2 from the tube.

- (1) Using needle nose pliers, remove the snap ring.
- (2) Remove the shaft from the tube.

- (d) Remove the intermediate shaft No. 2 bearing.

- (1) Using a snap ring expander, remove the snap ring.

SUSPENSION AND AXLE - FRONT DIFFERENTIAL CARRIER

- (2) Using SST, a brass bar and press, remove the bearing.

SST 09950-00020

- (e) Install a new intermediate shaft No. 2 bearing.

(1) Using SST and a press, install a new bearing.

SST 09309-37010

(2) Using a snap ring expander, install a new snap ring.

- (f) Install the intermediate shaft No. 2 to the tube.

(1) Install the shaft into the tube.

(2) Using needle nose pliers, install a new snap ring.

- (g) Install a new oil seal.

(1) Using SST and a plastic hammer, install a new oil seal.

SST 09223-15020

Oil seal drive in depth: 5.5 ± 0.3 mm (0.217 ± 0.012 in.)

(2) Coat the oil seal lip with MP grease.

- (h) Install the clutch hub.

(1) Install the clutch hub to the shaft.

(2) Using a snap ring expander, install a new snap ring.

REASSEMBLY

1. INSTALL NEW BEARINGS

Using SST and a press, install 2 new bearings.

SST 09950-60010 (09951-00380)

Bearing press in depth:

0.3 ± 0.3 mm (0.012 ± 0.012 in.)

2. ASSEMBLE DIFFERENTIAL CASE

(a) Install the 2 thrust washers on the side gears.

(b) Install the 2 side gears, pinion gears, pinion gear thrust washers and pinion shaft in the differential case.

HINT:

Align the holes for the straight pin in the differential case and pinion shaft.

(c) Using a dial indicator, measure the side gear backlash while holding one pinion gear toward the differential case.

Backlash: 0 - 0.20 mm (0 - 0.0079 in.)

If the backlash is not within the specified value, replace the side gear thrust washer with an appropriate thickness.

HINT:

Refer to the following table to select thrust washers which will ensure that the backlash is within the specified value.

Washer thickness:

Thickness mm (in.)	Thickness mm (in.)
0.96 - 1.04 (0.0378 - 0.0409)	1.16 - 1.24 (0.0457 - 0.0488)
1.06 - 1.14 (0.0417 - 0.0449)	1.26 - 1.34 (0.0496 - 0.0528)

3. INSTALL STRAIGHT PIN AND STAKE DIFFERENTIAL CASE

(a) Using a pin punch and hammer, install the straight pin through the differential case and hole in the pinion shaft.

(b) Stake the differential case.

4. INSTALL RING GEAR ON DIFFERENTIAL CASE

(a) Clean the contact surfaces of the differential case and ring gear.

- (b) Heat the ring gear to about 100°C (212°F) in boiling water.
- (c) Carefully take the ring gear out of the boiling water.
- (d) After the moisture on the ring gear has completely evaporated, quickly install the ring gear to the differential case.

HINT:

Align the matchmarks on the ring gear and differential case.

- (e) Temporarily install 5 new lock plates and 10 bolts so that the bolt holes in the ring gear and differential case are aligned.
- (f) After the ring gear has cooled sufficiently, torque the ring gear set bolts.

Torque: 97 N·m (985 kgf·cm, 71 ft·lbf)

- (g) Using a chisel and hammer, stake the 5 lock plates.

HINT:

Stake the claws of the lock plates to fix the bolts. For the claw contacting the protruding portion of the bolt, stake only the half of it along the tightening direction.

**5. INSTALL SIDE BEARINGS**

Using SST and a press, install the bearings into the differential case.

SST 09226-10010

6. INSTALL SIDE BEARING OUTER RACES

If replacing the side bearings, fit the thinnest new plate washers to each bearing outer race.

If reusing the bearings, fit the new washers with the same thickness as removed.

- (a) Install a new plate washer to the side bearing retainer.
- (b) Using SST and a press, install the bearing outer race.
SST 09950-60020 (09951-00790),
09950-70010 (09951-07150)
- (c) Install a new plate washer to the differential carrier.

- (d) Using SST and a press, install the bearing outer race.
 SST 09950-60020 (09951-00790),
 09950-70010 (09951-07150)

7. INSTALL DRIVE PINION FRONT AND REAR BEARING OUTER RACES

Using SST, install the 2 outer races.

SST 09570-22011

8. INSTALL DRIVE PINION FRONT BEARING

- (a) Install the washer on the drive pinion.

HINT:

First fit a washer with the same thickness as the washer which was removed, then after checking the tooth contact pattern, replace the washer with one of a different thickness if necessary.

- (b) Using SST and a press, install the front bearing onto the drive pinion.

SST 09506-30012

9. TEMPORARILY ADJUST DRIVE PINION PRELOAD

- (a) Install the drive pinion, rear bearing and oil slinger.

HINT:

After adjusting the ring gear tooth contact pattern, assemble the spacer and oil seal.

- (b) Using SST, install the companion flange.
 SST 09950-30012 (09951-03010, 09953-03010,
 09954-03010, 09955-03030, 09956-03020)
- (c) Coat the threads of the nut with hypoid gear oil.

(d) Using SST to hold the flange, tighten the nut.

HINT:

Adjust the drive pinion preload by tightening the companion flange nut.

SST 09330-00021

NOTICE:

As there is no spacer, tighten the nut a little at a time and be careful not to overtighten it.

(e) Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):

New bearing

1.2 – 1.9 N·m (12 – 19 kgf·cm, 10.4 – 16.5 in.-lbf)

Reused bearing

0.6 – 1.0 N·m (6 – 10 kgf·cm, 5.2 – 8.7 in.-lbf)

10. INSTALL DIFFERENTIAL CASE IN DIFFERENTIAL CARRIER

11. ADJUST RING GEAR BACKLASH

(a) Install the side bearing retainer with the 10 bolts.

Torque: 69 N·m (700 kgf·cm, 51 ft-lbf)

(b) Using SST and a dial indicator, measure the ring gear backlash.

SST 09564-32011

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of plate washers on both sides by an equal amount.

HINT:

There should be no clearance between the plate washer and case. Ensure that there is ring gear backlash.

Washer thickness:

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
2.00 – 2.02 (0.0787 – 0.0795)	2.27 – 2.29 (0.0894 – 0.0902)	2.54 – 2.56 (0.1000 – 0.1008)
2.03 – 2.05 (0.0799 – 0.0807)	2.30 – 2.32 (0.0906 – 0.0913)	2.57 – 2.59 (0.1012 – 0.1020)
2.06 – 2.08 (0.0811 – 0.0819)	2.33 – 2.35 (0.0917 – 0.0925)	2.60 – 2.62 (0.1024 – 0.1031)
2.09 – 2.11 (0.0823 – 0.0831)	2.36 – 2.38 (0.0929 – 0.0937)	2.63 – 2.65 (0.1035 – 0.1043)
2.12 – 2.14 (0.0835 – 0.0843)	2.39 – 2.41 (0.0941 – 0.0949)	2.66 – 2.68 (0.1047 – 0.1055)
2.15 – 2.17 (0.0846 – 0.0854)	2.42 – 2.44 (0.0953 – 0.0961)	2.69 – 2.71 (0.1059 – 0.1067)
2.18 – 2.20 (0.0858 – 0.0866)	2.45 – 2.47 (0.0965 – 0.0972)	2.72 – 2.74 (0.1071 – 0.1079)
2.21 – 2.23 (0.0870 – 0.0878)	2.48 – 2.50 (0.0976 – 0.0984)	2.75 – 2.77 (0.1083 – 0.1091)
2.24 – 2.26 (0.0882 – 0.0890)	2.51 – 2.53 (0.0988 – 0.0996)	2.78 – 2.80 (0.1094 – 0.1102)

12. MEASURE TOTAL PRELOAD

Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

13. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

- (a) Remove the 10 bolts, side bearing retainer and differential case.

- (b) Coat 3 or 4 teeth at three different positions on the ring gear with red lead primer.
- (c) Install the differential case and side bearing retainer with the 10 bolts.
- Torque: 69 N·m (700 kgf·cm, 51 ft-lbf)**
- (d) Hold the companion flange firmly and rotate the ring gear in both directions.
- (e) Remove the 10 bolts, side bearing retainer and differential case.
- (f) Inspect the tooth contact pattern.

If the teeth are not contacting properly, use the following table to select a proper washer for correction.

Washer thickness:

Thickness mm (in.)	Thickness mm (in.)	Thickness mm (in.)
1.69 - 1.71 (0.0665 - 0.0673)	1.93 - 1.95 (0.0760 - 0.0768)	2.17 - 2.19 (0.0854 - 0.0862)
1.72 - 1.74 (0.0677 - 0.0685)	1.96 - 1.98 (0.0772 - 0.0780)	2.20 - 2.22 (0.0866 - 0.0874)
1.75 - 1.77 (0.0689 - 0.0697)	1.99 - 2.01 (0.0783 - 0.0791)	2.23 - 2.25 (0.0878 - 0.0886)
1.78 - 1.80 (0.0701 - 0.0709)	2.02 - 2.04 (0.0795 - 0.0803)	2.26 - 2.28 (0.0890 - 0.0898)
1.81 - 1.83 (0.0713 - 0.0720)	2.05 - 2.07 (0.0807 - 0.0815)	2.29 - 2.31 (0.0902 - 0.0909)
1.84 - 1.86 (0.0724 - 0.0732)	2.08 - 2.10 (0.0819 - 0.0827)	2.32 - 2.34 (0.0913 - 0.0921)
1.87 - 1.89 (0.0736 - 0.0744)	2.11 - 2.13 (0.0831 - 0.0839)	-
1.90 - 1.92 (0.0748 - 0.0756)	2.14 - 2.16 (0.0843 - 0.0850)	-

14. REMOVE COMPANION FLANGE AND OIL SLINGER (See page SA-41)
15. REMOVE REAR BEARING (See page SA-41)
16. INSTALL NEW BEARING SPACER, REAR BEARING AND OIL SLINGER
 - (a) Install a new bearing spacer and place the rear bearing and oil slinger.

- (b) Using SST and the companion flange, install the rear bearing, then remove the companion flange.
 SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03020)

17. INSTALL OIL SEAL

- (a) Using SST and a hammer, install a new oil seal.

SST 09554-22010

Oil seal drive in depth: 4.5 ± 0.3 mm (0.177 ± 0.012 in.)

- (b) Coat the oil seal lip with MP grease.

18. INSTALL COMPANION FLANGE

- (a) Place the companion flange on the drive pinion.

- (b) Coat the threads of a new nut with hypoid gear oil.

- (c) Using SST to hold the flange, torque the nut.

SST 09330-00021

Torque: 108 N·m (1,100 kgf·cm, 80 ft·lbf)

19. ADJUST DRIVE PINION PRELOAD

Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and the ring gear.

Preload (at starting):

New bearing

1.2 – 1.9 N·m (12 – 19 kgf·cm, 10.4 – 16.5 in.-lbf)

Reused bearing

0.6 – 1.0 N·m (6 – 10 kgf·cm, 5.2 – 8.7 in.-lbf)

If the preload is greater than the specified value, replace the bearing spacer.

If the preload is less than the specified value, retighten the nut with 13 N·m (130 kgf·cm, 9 ft·lbf) of torque until the specified preload is reached.

Torque: 223 N·m (2,275 kgf·cm, 165 ft·lbf) or less

If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repeat the preload adjusting procedure. Do not loosen the nut to reduce the preload.

20. INSTALL DIFFERENTIAL CASE**21. INSTALL SIDE BEARING RETAINER**

- (a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the differential carrier and side bearing retainer.
- (b) Clean both installation surfaces of loose FIPG and oil material with gasoline or alcohol.

- (c) Apply FIPG to the side bearing retainer, as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

HINT:

Install the side bearing retainer within 10 minutes after applying FIPG.

- (d) Install the side bearing retainer with the 10 bolts.

Torque: 69 N·m (700 kgf·cm, 51 ft·lbf)

22. CHECK TOTAL PRELOAD (See step 12.)**23. RECHECK RING GEAR BACKLASH**

(See page [SA-41](#))

24. RECHECK TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION (See step 13.)**25. CHECK COMPANION FLANGE RUNOUT (See page [SA-41](#))****26. STAKE DRIVE PINION NUT****27. INSTALL SIDE OIL SEAL**

- (a) Using SST and a plastic hammer, install a new oil seal until its surface is flush with the differential carrier end.

SST 09608-32010

- (b) Coat the oil seal lip with MP grease.

28. INSTALL INTERMEDIATE SHAFT NO. 1

- (a) Install a new snap ring to the shaft.

- (b) Using a plastic hammer, install the shaft to the differential case.

- (c) Check that there is 2 – 3 mm (0.08 – 0.12 in.) of play in the axial direction.

- (d) Check that the intermediate shaft will not come out by trying to pull it completely out by hand.

**29. INSTALL CLUTCH CASE TO DIFFERENTIAL TUBE**

- (a) Install a new O-ring to the tube.
- (b) Coat the O-ring with MP grease.
- (c) Install the clutch case to the tube.
- (d) Using a torx® socket (E14), torque the 2 torx® bolts.
Torque: 78 N·m (800 kgf·cm, 58 ft·lbf)

30. INSTALL CLUTCH SLEEVE**31. INSTALL DIFFERENTIAL TUBE TO DIFFERENTIAL**

- (a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the differential and clutch case.
- (b) Clean both installation surfaces of loose FIPG and oil material with gasoline or alcohol.

- (c) Apply FIPG to the differential, as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

HINT:

Install the differential tube within 10 minutes after applying FIPG.

- (d) Install the differential tube to the differential.
- (e) Clean the threads of the 2 long torx® bolts and retainer bolt holes with toluene or trichlorethylene.
- (f) Apply adhesive to 2 or 3 threads of the long bolts end.

Adhesive:

Part No. 08833-00070, THREE BOND 1324 or equivalent

- (g) Using torx® socket (E14), torque the 4 torx® bolts.

Torque: 78 N·m (800 kgf·cm, 58 ft·lbf)

32. INSTALL A.D.D. ACTUATOR

- (a) Remove any old FIPG material and be careful not to drop oil on the contact surfaces of the actuator and clutch case.
- (b) Clean both installation surfaces of loose FIPG and oil material with gasoline or alcohol.

- (c) Apply FIPG to the clutch case, as shown in the illustration.

FIPG:

Part No. 08826-00090, THREE BOND 1281 or equivalent

HINT:

Install the actuator within 10 minutes after applying FIPG.

- (d) Install the A.D.D. actuator with the 4 bolts.

Torque: 21 N·m (210 kgf-cm, 15 ft·lbf)

INSTALLATION

1. INSTALL DIFFERENTIAL MOUNTING CUSHIONS

- (a) Install the 2 front mounting cushions with the 5 bolts.

Torque: 157 N·m (1,600 kgf·cm, 116 ft·lbf)

- (b) Install the rear mounting cushion with the 2 bolts.

Torque: 108 N·m (1,100 kgf·cm, 80 ft·lbf)

2. INSTALL FRONT DIFFERENTIAL CARRIER

- (a) Jack up the front differential.

- (b) Install the 2 front mounting bolts.

Torque: 137 N·m (1,400 kgf·cm, 101 ft·lbf)

- (c) Using a hexagon (12 mm) wrench, install the rear mounting nut.

Torque: 87 N·m (890 kgf·cm, 64 ft·lbf)

- (d) Remove the jack.

3. INSTALL TUBE WITH WIRE HARNESS ASSEMBLY

- (a) Install the tube with wire harness assembly with the bolt.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (b) Connect the actuator connector, vacuum hose and breather hose.

4. CONNECT FRONT PROPELLER SHAFT (See page [PR-15](#))

5. INSTALL DRIVE SHAFTS (See page [SA-34](#))

6. FILL DIFFERENTIAL WITH HYPOID GEAR OIL (See page [SA-36](#))

A.D.D. CONTROL SYSTEM LOCATION

SA0BF-07

INSPECTION

1. INSPECT A.D.D. ACTUATOR

- (a) Disconnect the actuator connector.

- (b) Measure the resistance between terminals 2 and 6.
Standard resistance: 0.3 – 100 Ω
- (c) Measure the resistance between terminal 2 or 6 and body ground.
Standard resistance: More than 0.5 MΩ

If the resistance value is not as specified, replace the actuator assembly.

2. INSPECT A.D.D. ACTUATOR OPERATION

Apply battery positive voltage between terminals 2 and 6, and check the actuator operation by sound, A.D.D. status and continuity between terminals 3 and 4.

Battery voltage applied terminal	3 – 4 terminals continuity	A.D.D. status
2 (+) – 6 (-)	Continuity	Connected
2 (-) – 6 (+)	No continuity	Disconnected

If the operation is not as specified, replace the actuator assembly.

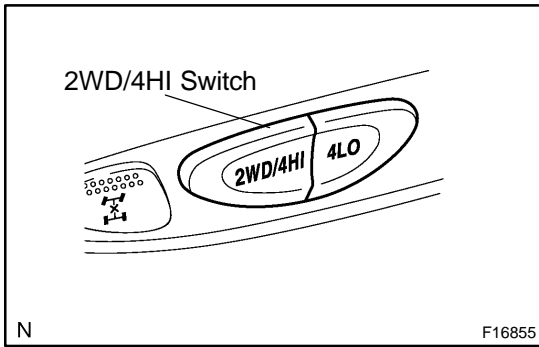

3. INSPECT LIMIT SWITCH CONTINUITY

- (a) Connect the actuator connector.
- (b) Push the 2WD/4HI switch and check that the 4WD indicator light comes on after it is blinking.
- (c) Check the A.D.D. actuator operation by sound.
- (d) Disconnect the actuator connector.
- (e) Check the continuity between each terminal, as shown in the chart.

Tester connected terminal number	Specified condition
1 – 3	No continuity
1 – 4	No continuity
3 – 5	Continuity
4 – 5	No continuity

- (f) Connect the actuator connector.

- (g) Push the 2WD/4HI switch and check that the 4WD indicator light goes off after it is blinking.
- (h) Check the A.D.D. actuator operation by sound.
- (i) Disconnect the actuator connector.
- (j) Check the continuity between each terminal, as shown in the chart.

Tester connected terminal number	Specified condition
1 - 3	Continuity
1 - 4	No continuity
3 - 5	No continuity
4 - 5	No continuity

- (k) Connect the actuator connector.

4. INSPECT TRANSFER 4WD POSITION SWITCH
(See page [TR-14](#))

5. REMOVE A.D.D. ACTUATOR (See page [SA-41](#))

6. INSPECT CLUTCH HUB AND CLUTCH SLEEVE

- (a) Check the clutch hub and clutch sleeve for wear and damage.

If necessary, replace them.

- (b) Check that clutch sleeve slides smoothly on the clutch hub.

7. MEASURE SLEEVE FORK AND CLUTCH SLEEVE CLEARANCE

Using a feeler gauge, measure the clearance between the sleeve fork and clutch sleeve.

Maximum clearance: 0.35 mm (0.0138 in.)

If the clearance exceeds the maximum, replace the fork or sleeve.

FRONT SHOCK ABSORBER COMPONENTS

SA09Z-07

REMOVAL

1. REMOVE FRONT WHEEL

2. DISCONNECT SHOCK ABSORBER FROM LOWER SUSPENSION ARM

- (a) Remove the shock absorber lower side set nut and washer.

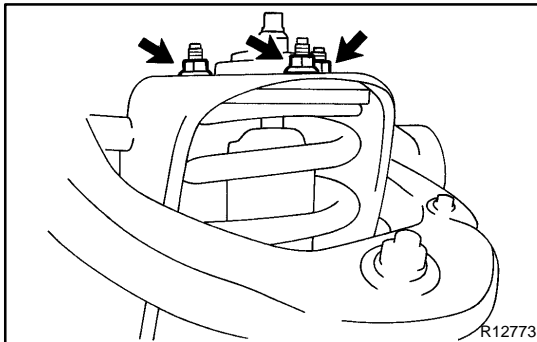

NOTICE:

Do not remove the bolt.

- (b) Wrap the bolt's head with vinyl tape to prevent the drive shaft boot from being damaged.
- (c) Pry down the lower suspension arm to remove the bolt and disconnect the shock absorber.

3. REMOVE SHOCK ABSORBER WITH COIL SPRING

Remove the 3 nuts and shock absorber with the coil spring.

DISASSEMBLY

REMOVE SUSPENSION SUPPORT AND COIL SPRING

- (a) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021,
09727-00031)

NOTICE:

- **Make sure that the suspension support is free from the coil spring.**
 - **Do not compress the coil spring more than necessary.**
 - **Do not use an impact wrench. It will damage the SST.**
 - **Do not place yourself over the top of the shock absorber.**
- (b) Remove the suspension support center nut.
(c) Remove the 2 retainers, cushion, suspension support and coil spring.

INSPECTION

INSPECT SHOCK ABSORBER

Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual operation sounds. If there is any abnormality, replace the shock absorber with a new one.

NOTICE:

When discarding the shock absorber, see **DISPOSAL** on page [SA-66](#).

DISPOSAL

1. FULLY EXTEND SHOCK ABSORBER ROD

2. DRILL HOLE TO DISCHARGE GAS FROM CYLINDER

Using a drill, make a hole in the cylinder as shown in the illustration to discharge the gas inside.

CAUTION:

The discharged gas is harmless, but be careful of chips which may fly out when drilling.

REASSEMBLY

1. INSTALL COIL SPRING TO SHOCK ABSORBER

- (a) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

- Do not compress the coil spring more than necessary.
- Do not use an impact wrench. It will damage the SST.

- (b) Install the coil spring to the shock absorber.

HINT:

Fit the lower end of the coil spring into the gap of the spring seat of the shock absorber.

2. INSTALL SUSPENSION SUPPORT

- (a) Install the cushion, 2 retainers and suspension support to the piston rod.
(b) Temporarily tighten a new suspension support center nut.

- (c) Position the suspension support as shown in the illustration.

- (d) Remove the SST.

SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not place yourself over the top of the shock absorber.

HINT:

After removing the SST, recheck the direction of the suspension support.

- (e) Torque the suspension center nut.

Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

INSTALLATION

1. INSTALL SHOCK ABSORBER WITH COIL SPRING

- (a) Install the upper side of the shock absorber to the chassis frame with the 3 nuts.

Torque: 64 N·m (650 kgf·cm, 47 ft·lbf)

- (b) Connect the lower side of the shock absorber to the lower suspension arm with the bolt, washer and nut.

Torque: 135 N·m (1,400 kgf·cm, 100 ft·lbf)

2. INSTALL FRONT WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

FRONT UPPER SUSPENSION ARM COMPONENTS

SA0AC-08

REMOVAL

1. REMOVE SHOCK ABSORBER WITH COIL SPRING
(See page SA-63)
2. w/ ABS:
DISCONNECT ABS SPEED SENSOR WIRE HARNESS
CLAMPS

Remove the 2 bolts and ABS speed sensor wire harness clamps from the steering knuckle and upper suspension arm.

3. DISCONNECT UPPER BALL JOINT

(a) Remove the cotter pin and loosen the nut.

(b) Using SST, disconnect the upper ball joint.
SST 09950-40011 (09951-04010, 09952-04010,
09953-04020, 09954-04010, 09955-04031,
09958-04011)

(c) Support the steering knuckle securely.
(d) Remove the nut.

4. REMOVE REAR FENDER APRON SEAL

Remove the 4 clips and rear fender apron seal.

5. REMOVE BRAKE AND FUEL LINE CLAMP

Disengage the 2 brake lines and fuel line, and remove the nut and brake line clamp.

6. REMOVE UPPER SUSPENSION ARM

Remove the nut, bolt, 2 washers and upper suspension arm.

REPLACEMENT

1. REMOVE BUSHING

- (a) Using a chisel and hammer, pry up the flange of the bushing.

- (b) Using SST and a press, remove the bushing.
SST 09613-26010, 09631-20060, 09950-00020

2. INSTALL NEW BUSHING

- Using SST, a press and steel plate, install a new bushing.
SST 09631-12090, 09710-30021 (09710-03051)

INSTALLATION

1. INSTALL UPPER SUSPENSION ARM

Install the upper suspension arm with the 2 washers, bolt and nut.

Torque: 98 N·m (1,000 kgf·cm, 72 ft·lbf)

HINT:

After stabilizing the suspension, torque the nut.

2. INSTALL BRAKE AND FUEL LINE CLAMP

Torque: 5.5 N·m (56 kgf·cm, 49 in·lbf)

3. INSTALL REAR FENDER APRON SEAL

4. CONNECT UPPER BALL JOINT

(a) Connect the upper ball joint to the upper suspension arm.

(b) Install the nut and a new cotter pin.

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

Torque: 105 N·m (1,100 kgf·cm, 77 ft·lbf)

5. w/ ABS:

CONNECT ABS SPEED SENSOR WIRE HARNESS CLAMPS

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

6. INSTALL SHOCK ABSORBER WITH COIL SPRING (See page [SA-68](#))

7. CHECK FRONT WHEEL ALIGNMENT (See page [SA-5](#))

REMOVAL

1. REMOVE RH AND LH FRONT WHEELS
2. DISCONNECT RH AND LH TIE ROD ENDS

(a) Remove the cotter pin and nut.

(b) Using SST, disconnect the tie rod end from the lower ball joint.

SST 09610-20012

(c) Use the same procedures described above to the other side.

3. REMOVE POWER STEERING GEAR SET BOLTS AND NUTS

4. DISCONNECT STABILIZER BAR LINK FROM LOWER SUSPENSION ARM

Remove the nut and disconnect the stabilizer bar link from the lower suspension arm.

HINT:

If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

5. DISCONNECT SHOCK ABSORBER FROM LOWER SUSPENSION ARM

(a) Remove the shock absorber lower side set nut and washer.

NOTICE:

Do not remove the bolt.

(b) Wrap the bolt's head with vinyl tape to prevent the drive shaft boot from being damaged.

(c) Pry down the lower suspension arm to remove the bolt and disconnect the shock absorber.

6. DISCONNECT LOWER BALL JOINT FROM LOWER SUSPENSION ARM

- (a) Remove the cotter pin and nut.

- (b) Using SST, disconnect the lower ball joint from the lower suspension arm.

SST 09628-62011

7. REMOVE LOWER SUSPENSION ARM

- (a) Place matchmarks on the front and rear cam plates and chassis frame.
- (b) Remove the 2 cam plates, bolts, cams and lower suspension arm while slightly shifting the power steering gear rearward.

NOTICE:

Do not damage the power steering gear tubes.

REPLACEMENT

1. REPLACE BUSHING

- (a) Using a chisel and hammer, pry up the flange of the bushing.

- (b) Using SST and a press, remove the bushing.
SST 09613-26010, 09632-36010, 09950-00020

- (c) Using SST, a press and steel plate, install a new No. 1 bushing.

SST 09502-12010, 09631-12090

HINT:

Before installing the bushing, set it in the correct direction, as shown in the illustration.

- (d) Using SST, a press and steel plate, install a new No. 2 bushing.

SST 09631-12090, 09950-60020 (09951-00680)

HINT:

Before installing the bushing, set it in the correct direction, as shown in the illustration.

2. REPLACE NO. 1 AND NO. 2 SPRING BUMPERS ON-VEHICLE

- (a) Remove the front wheel.

- (b) Using SST, replace the No. 1 spring bumper.

SST 09922-10010

HINT:

At the time of installation, use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

- (c) Replace the No. 2 spring bumper.
 - (1) Remove the stabilizer bar (See page [SA-89](#)).
 - (2) Using SST, replace the No. 2 spring bumper.
SST 09922-10010

HINT:

At the time of installation, use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

- (3) Install the stabilizer bar (See page [SA-91](#)).
- (d) Install the front wheel.
Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

INSTALLATION

1. INSTALL LOWER SUSPENSION ARM TO CHASSIS FRAME

Install the lower suspension arm with the 2 cams, bolts and cam plates while slightly shifting the power steering gear rearward.

Torque: 130 N·m (1,325 kgf·cm, 96 ft·lbf)

NOTICE:

Do not damage the power steering gear tubes.

HINT:

After stabilizing the suspension, align the matchmarks on the front and rear cam plates and chassis frame, and torque the bolts.

2. CONNECT LOWER BALL JOINT TO LOWER SUSPENSION ARM

Connect the lower ball joint and install the nut and a new cotter pin.

Torque: 140 N·m (1,450 kgf·cm, 103 ft·lbf)

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

3. CONNECT SHOCK ABSORBER TO LOWER SUSPENSION ARM

Torque: 135 N·m (1,400 kgf·cm, 100 ft·lbf)

4. CONNECT STABILIZER BAR LINK TO LOWER SUSPENSION ARM

Torque: 69 N·m (700 kgf·cm, 51 ft·lbf)

HINT:

If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

5. INSTALL POWER STEERING GEAR

Torque:

A bolt: 165 N·m (1,700 kgf·cm, 122 ft·lbf)

B nut: 130 N·m (1,350 kgf·cm, 96 ft·lbf)

C bolt and nut: 165 N·m (1,700 kgf·cm, 122 ft·lbf)

6. CONNECT RH AND LH TIE ROD ENDS

Connect the RH and LH tie rod ends to the lower ball joints with the nuts and new cotter pins.

Torque: 91 N·m (930 kgf·cm, 67 ft·lbf)

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

7. INSTALL RH AND LH FRONT WHEELS

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

8. CHECK FRONT WHEEL ALIGNMENT (See page SA-5)

FRONT UPPER BALL JOINT COMPONENTS

SA1K7-03

REMOVAL

1. REMOVE STEERING KNUCKLE WITH AXLE HUB
(See page SA-20)
2. REMOVE UPPER BALL JOINT
 - (a) Remove the wire and boot.
 - (b) Using a snap ring expander, remove the snap ring.

- (c) Using SST and a deep socket wrench, remove the upper ball joint.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04031, 09957-04010, 09958-04011)

INSPECTION

1. INSPECT UPPER BALL JOINT BOOT FOR DAMAGE

2. INSPECT UPPER BALL JOINT FOR ROTATION CONDITION

- (a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.
- (b) Using a torque wrench, turn the nut continuously 1 turn per 2 – 4 seconds and take the torque reading on the 5th turn.

Turning torque:

0.7 – 4.4 N·m (7 – 45 kgf·cm, 6 – 39 in.-lbf)

INSTALLATION

1. INSTALL UPPER BALL JOINT

- (a) Using SST and a socket wrench, install a new ball joint.
SST 09309-37010
- (b) Using a snap ring expander, install a new snap ring.
- (c) Install a new boot and fix it with a new wire.

HINT:

Use the grease supplied in the kit.

2. INSTALL STEERING KNUCKLE WITH AXLE HUB (See page [SA-26](#))

FRONT LOWER BALL JOINT ON-VEHICLE INSPECTION

SA0AW-05

INSPECT LOWER BALL JOINT EXCESSIVE PLAY ON-VEHICLE

- (a) Remove the front wheel and install the hub nuts to the disc.

- (b) Using a dial indicator, check the lower ball joint for excessive play when you push the hub nuts up and down with a force of 294 N (30 kgf, 66 lbf).

Maximum: 0.5 mm (0.020 in.)

COMPONENTS

REMOVAL

1. REMOVE FRONT WHEEL

2. LOOSEN 4 LOWER BALL JOINT SET BOLTS

HINT:

Do not remove the bolts.

3. DISCONNECT TIE ROD END

- (a) Remove the cotter pin and nut from the tie rod end.

- (b) Using SST, disconnect the tie rod end from the lower ball joint.

SST 09610-20012

4. REMOVE LOWER BALL JOINT WITH LOWER BALL JOINT DUST COVER PROTECTOR

- (a) Remove the cotter pin and nut from the lower ball joint.

- (b) Using SST, disconnect the lower ball joint from the lower suspension arm.

SST 09628-62011

- (c) Remove the 4 lower ball joint set bolts.
 (d) Remove the lower ball joint dust cover protector.
 (e) While lifting the upper suspension arm and steering knuckle, remove the lower ball joint.
 (f) Support the upper suspension arm and steering knuckle securely.

INSPECTION

1. INSPECT LOWER BALL JOINT BOOT FOR DAMAGE

2. INSPECT LOWER BALL JOINT FOR ROTATION CONDITION

- (a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.
- (b) Using a torque wrench, turn the nut continuously 1 turn per 2 – 4 seconds and take the torque reading on the 5th turn.

Turning torque:

0.1 – 2.5 N·m (1 – 25 kgf·cm, 1 – 22 in.-lbf)

INSTALLATION

1. INSTALL LOWER BALL JOINT WITH LOWER BALL JOINT DUST COVER PROTECTOR

- (a) While lifting the upper suspension arm and steering knuckle, install the lower ball joint.
- (b) Install the lower ball joint dust cover protector.
- (c) Temporarily install the 4 bolts to the lower ball joint.
- (d) Install the set nut to hold the lower ball joint to the lower suspension arm and a new cotter pin.

Torque: 159 N·m (1,620 kgf·cm, 117 ft·lbf)

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

2. CONNECT TIE ROD END

Connect the tie rod end to the lower ball joint with the nut and a new cotter pin.

Torque: 91 N·m (930 kgf·cm, 67 ft·lbf)

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

3. TIGHTEN LOWER BALL JOINT SET 4 BOLTS

Torque: 65 N·m (662 kgf·cm, 48 ft·lbf)

4. INSTALL FRONT WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

5. CHECK FRONT WHEEL ALIGNMENT (See page [SA-5](#))

FRONT STABILIZER BAR COMPONENTS

SA0B4-06

W01737

REMOVAL

1. DISCONNECT STABILIZER BAR LINKS

Remove the 2 nuts and disconnect the stabilizer bar links from the lower suspension arms.

HINT:

If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

2. REMOVE STABILIZER BAR

- (a) Remove the 2 bolts, nuts and stabilizer bar with the cushions and brackets.
- (b) Remove the 2 brackets and cushions from the stabilizer bar.

3. REMOVE STABILIZER BAR LINKS

- (a) Hold the stabilizer bar link, and remove the nut.
- (b) Remove the stabilizer bar link, 2 retainers and bushings from the stabilizer bar.
- (c) Use the same procedures described above to the other side.

INSPECTION

1. **INSPECT STABILIZER BAR LINK BALL JOINT BOOT FOR DAMAGE**

2. **INSPECT STABILIZER BAR LINK BALL JOINT FOR ROTATION CONDITION**

- (a) As shown in the illustration, flip the ball joint stud back and forth 5 times before installing the nut.
- (b) Using a torque wrench, turn the nut continuously 1 turn per 2 – 4 seconds and take the torque reading on the 5th turn.

Turning torque:

0.05 – 2.0 N·m (0.5 – 20 kgf·cm, 0.4 – 17 in.-lbf)

INSTALLATION

1. INSTALL STABILIZER BAR LINKS

- (a) Install the 2 bushings, retainers and stabilizer bar link to the stabilizer bar.
- (b) Hold the stabilizer bar link, and install the nut.
Torque: 19 N·m (190 kgf-cm, 14 ft-lbf)
- (c) Use the same procedures described above to the other side.

2. INSTALL STABILIZER BAR

- (a) Install the 2 bushings with their cutouts facing to the rearward to the stabilizer bar.
- (b) Install the stabilizer bar and 2 brackets with the nut and bolts.

Torque: 37 N·m (375 kgf-cm, 27 ft-lbf)

3. CONNECT STABILIZER BAR LINKS TO LOWER SUSPENSION ARM

Torque: 69 N·m (700 kgf-cm, 51 ft-lbf)

HINT:

If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the nut.

REAR AXLE SHAFT COMPONENTS

SA1KB-03

REMOVAL

1. REMOVE REAR WHEEL
2. REMOVE BRAKE DRUM AND GASKET

3. CHECK BEARING BACKLASH AND AXLE SHAFT DEVIATION

- (a) Using a dial indicator, check the backlash in the bearing shaft direction.

Maximum: 0.7 mm (0.028 in.)

If the backlash exceeds the maximum, replace the bearing.

- (b) Using a dial indicator, check the deviation at the surface of the axle shaft outside the hub bolt.

Maximum: 0.1 mm (0.004 in.)

If the deviation exceeds the maximum, replace the axle shaft.

4. w/ ABS:

REMOVE ABS SPEED SENSOR FROM REAR AXLE HOUSING

Remove the bolt and ABS speed sensor.

5. REMOVE REAR BRAKE ASSEMBLY (See page [BR-48](#))

6. DISCONNECT BRAKE LINE AND PARKING BRAKE CABLE

- (a) Using SST, disconnect the brake line from the wheel cylinder.

SST 09023-00101

- (b) Remove the clip and pin, and disconnect the parking brake cable.

7. REMOVE REAR AXLE SHAFT ASSEMBLY

- (a) Remove the 4 backing plate mounting nuts.
- (b) Pull out the rear axle shaft assembly from the rear axle housing.

NOTICE:

Be careful not to damage the oil seal.

8. REMOVE O-RING FROM REAR AXLE HOUSING

INSPECTION

1. w/ ABS:

REMOVE BEARING RETAINER (DIFFERENTIAL SIDE) AND ABS SPEED SENSOR ROTOR

- (a) Attach the 4 nuts to the serration bolts, and using a hammer, remove the serration bolts from the backing plate.

NOTICE:

At the time of installation, do not reuse the nuts.

- (b) Grind the retainer and sensor rotor surfaces, then chisel them out.
 (c) Attach the washers and nuts to the serration bolts, then torque the nuts to install the serration bolts to the backing plate.
 (d) Remove the 4 nuts and washers from the serration bolts.

2. REMOVE SNAP RING FROM AXLE SHAFT

Using a snap ring expander, remove the snap ring.

3. REMOVE REAR AXLE SHAFT FROM BACKING PLATE

- (a) Position SST on the backing plate with the 4 nuts.
 SST 09521-25011, 09521-25022

- (b) Using a press, remove the rear axle shaft and bearing retainer from the backing plate.
 (c) Remove the SST.
 SST 09521-25011, 09521-25022

4. INSPECT AXLE SHAFT

Using a dial indicator, measure the runout of the shaft and flange.

Maximum shaft runout: 2.0 mm (0.079 in.)

Maximum flange runout: 0.1 mm (0.004 in.)

If the rear axle shaft or flange are damaged or worn, or if runout is greater than the maximum, replace the rear axle shaft.

5. INSPECT OIL SEAL (OUTER SIDE)

- (a) Check for damage.
 (b) Check the oil seal lip for wear or damage.

**6. REMOVE OIL SEAL (OUTER SIDE)**

Using SST, remove the oil seal.

SST 09308-00010

7. INSPECT REAR AXLE BEARING

Check for wear or damage.

**8. REPLACE REAR AXLE BEARING**

(a) Using SST and a press, remove the bearing.

SST 09223-56010, 09950-60010 (09951-00560)

(b) Using SST and a press, install a new bearing.

SST 09515-30010, 09950-60020 (09951-00890)

**9. INSTALL NEW OIL SEAL (OUTER SIDE)**

Using SST and a hammer, install a new oil seal.

SST 09950-60010 (09951-00610),
09950-70010 (09951-07150)

10. INSPECT BEARING CASE

Check for wear or damage.

11. REPLACE BEARING CASE

- (a) Remove the outer side oil seal (See step 5.).
- (b) Remove the bearing (See step 6.).
- (c) Remove the serration bolts (See step 1.).
- (d) Remove the bearing case.

- (e) Position the backing plate on a new bearing case and using 2 socket wrenches and a press, install the serration bolts.
- (f) Install a new bearing (See step 6.).
- (g) Install a new outer side oil seal (See step 7.).

12. REPLACE OIL DEFLECTOR

- (a) Using a brass bar and hammer, remove the hub bolts, oil deflector and gasket.
- (b) Position a new gasket and oil deflector on the axle shaft and install a washer and nut to the hub bolt and install the hub bolt by torquing the nut.
- (c) Remove the nut and washer.

13. INSTALL REAR AXLE SHAFT IN BACKING PLATE

- (a) Coat the new outer side oil seal lip with MP grease.
- (b) Install the backing plate and bearing retainer on the rear axle shaft.
- (c) Using SST and a press, install the rear axle shaft into the backing plate.
SST 09316-60011 (09316-00051)
- (d) Using a snap ring expander, install a new snap ring.

14. w/ ABS:

INSTALL ABS SPEED SENSOR ROTOR AND BEARING RETAINER (DIFFERENTIAL SIDE)

Using SST and a press, install a new sensor rotor and new bearing retainer to the axle shaft.

SST 09316-60011 (09316-00051)

Standard length: 122.2 ± 1.0 mm (4.811 ± 0.039 in.)

15. REPLACE OIL SEAL (INNER SIDE)

- (a) Using SST, remove the oil seal.
SST 09308-00010

SUSPENSION AND AXLE - REAR AXLE SHAFT

- (b) Using SST and a hammer, install a new oil seal.
SST 09950-60020 (09951-00710),
09950-70010 (09951-07150)
- (c) Coat a new oil seal lip with MP grease.

INSTALLATION

1. **INSTALL NEW O-RING TO REAR AXLE HOUSING**
 2. **INSTALL REAR AXLE SHAFT ASSEMBLY**
Torque: 69 N·m (700 kgf·cm, 51 ft·lbf)
 3. **CONNECT BRAKE LINE AND PARKING BRAKE CABLE**
- (a) Connect the parking brake cable with the pin and clip.

- (b) Using SST, connect the brake line to the wheel cylinder.
SST 09023-00101
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)
4. **INSTALL REAR BRAKE ASSEMBLY (See page [BR-52](#))**
 5. **w/ ABS:**
INSTALL ABS SPEED SENSOR
Torque: 8.0 N·m (82 kgf·cm, 71 ft·lbf)
 6. **CHECK BEARING BACKLASH AND AXLE SHAFT DEVIATION (See page [SA-93](#))**
 7. **INSTALL NEW GASKET AND BRAKE DRUM**
 8. **INSTALL REAR WHEEL**
Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)
 9. **BLEED BRAKE SYSTEM (See page [BR-4](#))**
 10. **w/ ABS:**
CHECK ABS SPEED SENSOR SIGNAL (See page [DI-1387](#) or [DI-1478](#))

REAR WHEEL HUB BOLT REPLACEMENT

SA0BC-05

1. REMOVE REAR WHEEL
2. REMOVE BRAKE DRUM AND GASKET

3. REMOVE REAR HUB BOLT

Using SST and a brass bar or an equivalent, remove the hub bolt.

SST 09650-17011

4. INSTALL HUB BOLT

- (a) Install a washer and nut to a new hub bolt as shown in the illustration.
- (b) Using a brass bar or an equivalent to hold, install the hub bolt by torquing the nut.
- (c) Remove the nut and washer.

5. INSTALL NEW GASKET AND BRAKE DRUM

6. INSTALL REAR WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

REAR DIFFERENTIAL FRONT OIL SEAL COMPONENTS

SA0BD-08

REPLACEMENT

1. DRAIN DIFFERENTIAL OIL
2. DISCONNECT REAR PROPELLER SHAFT
2WD: See page [PR-3](#)
4WD: See page [PR-10](#)

3. REMOVE COMPANION FLANGE

- (a) Using a chisel and hammer, loosen the staked part of the nut.
- (b) Using SST to hold the flange, remove the nut.
SST 09330-00021

- (c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

4. REMOVE OIL SEAL

- Using SST, remove the oil seal.
SST 09308-10010

5. REMOVE FRONT BEARING

- Using SST, remove the front bearing from the drive pinion.
SST 09556-22010

6. REMOVE BEARING SPACER

- (a) Remove the 2 washers.
- (b) Remove the bearing spacer.

7. INSTALL NEW BEARING SPACER

- (a) Install a new bearing spacer.
- (b) Install the 2 washers.

8. INSTALL FRONT BEARING

- (a) Place the front bearing.

- (b) Using SST and the companion flange, install the front bearing then remove the companion flange.

SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

9. INSTALL NEW OIL SEAL

- (a) Coat a new oil seal lip with MP grease.

- (b) Using SST and a plastic hammer, install the oil seal until its surface is flush with the differential carrier end.

SST 09316-12010, 09649-17010

HINT:

Connect the 2 SST with vinyl tape.

10. INSTALL COMPANION FLANGE

- (a) Place the companion flange on the drive pinion.
 (b) Coat the threads of a new nut with hypoid gear oil.

- (c) Using SST to hold the flange, torque the nut.

SST 09330-00021

Torque: 147 N·m (1,500 kgf·cm, 109 ft·lbf)

**11. ADJUST DRIVE PINION PRELOAD**

w/o LSD: See page [SA-112](#)

w/ LSD: See page [SA-133](#)

12. STAKE DRIVE PINION NUT**13. CONNECT REAR PROPELLER SHAFT**

2WD: See page [PR-8](#)

4WD: See page [PR-15](#)

**14. FILL DIFFERENTIAL WITH HYPOID GEAR OIL****Torque: 49 N·m (500 kgf-cm, 39 ft-lbf)****Oil type:**

w/o LSD	Hypoid gear oil API GL-5
w/ LSD	Hypoid gear oil for LSD API GL-5

Recommended oil viscosity:

Standard type	SAE 75W - 140
LSD type	Above - 18 °C (0 °F) SAE 90
	Below - 18 °C (0 °F) SAE 80W or 80W - 90

Capacity:

Differential type	Capacity
Standard type	
2WD	
Standard Cab and Access Cab:	3.80 liters (4.02 US qts., 3.34 Imp. qts.)
Double Cab	4.00 liters (4.23 US qts., 3.52 Imp. qts.)
4WD	
Standard Cab and Access Cab:	3.50 liters (3.70 US qts., 3.08 Imp. qts.)
Double Cab	4.00 liters (4.23 US qts., 3.52 Imp. qts.)
LSD type	
2WD	
Standard Cab and Access Cab:	3.15 liters (3.33 US qts., 2.77 Imp. qts.)
Double Cab	3.35 liters (3.54 US qts., 2.95 Imp. qts.)
4WD	
Standard Cab and Access Cab:	2.85 liters (3.01 US qts., 2.51 Imp. qts.)
Double Cab	3.35 liters (3.54 US qts., 2.95 Imp. qts.)

REAR DIFFERENTIAL CARRIER COMPONENTS

SA0BN-06

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

★ Precoated part

REMOVAL

1. DRAIN HYPOID GEAR OIL
2. REMOVE REAR AXLE SHAFTS (See page [SA-93](#))
3. DISCONNECT REAR PROPELLER SHAFT
2WD: See page [PR-3](#)
4WD: See page [PR-10](#)

4. REMOVE DIFFERENTIAL CARRIER ASSEMBLY
 - (a) Remove the 10 nuts, washers and differential carrier assembly.

NOTICE:

Be careful not to damage the installation surface.

- (b) Remove the gasket.

DISASSEMBLY

1. CHECK COMPANION FLANGE RUNOUT

Using a dial indicator, measure the vertical and lateral runout of the companion flange.

Maximum: runout: 0.09 mm (0.0035 in.)

If the runout exceeds the maximum, replace the companion flange.

2. CHECK RING GEAR RUNOUT

Using a dial indicator, measure the ring gear runout.

Maximum runout: 0.05 mm (0.0020 in.)

If the runout exceeds the maximum, replace the ring gear.

3. CHECK RING GEAR BACKLASH

Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

HINT:

Measure at 3 or more positions around the circumference of the ring gear.

If the backlash is not within the specified value, adjust the side bearing preload or repair as necessary.

4. CHECK TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION (See page SA-112)

5. CHECK SIDE GEAR BACKLASH

Using a dial indicator, measure the side gear backlash while holding one pinion gear toward the case.

Backlash: 0.05 – 0.20 mm (0.0020 – 0.0079 in.)

If the backlash is not within the specified value, replace the side gear thrust washer with the different thickness (See page SA-112).

6. MEASURE DRIVE PINION PRELOAD

Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):

0.5 – 0.8 N·m (5 – 8 kgf·cm, 4.3 – 6.9 in.-lbf)

7. CHECK TOTAL PRELOAD

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

If necessary, disassemble and inspect the differential.

8. REMOVE COMPANION FLANGE

- (a) Using a chisel and hammer, unstake the staked part of the nut.

- (b) Using SST to hold the flange, remove the nut.
SST 09330-00021

- (c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

9. REMOVE FRONT OIL SEAL

Using SST, remove the oil seal from the differential carrier.
SST 09308-10010

**10. REMOVE FRONT BEARING AND BEARING SPACER**

- (a) Using SST, remove the bearing from the drive pinion.
SST 09556-22010

If the front bearing is damaged or worn, replace the front bearing.

- (b) Remove the 2 washers and bearing spacer.

**11. REMOVE DIFFERENTIAL CASE**

- (a) Place matchmarks on the bearing cap and differential carrier.

- (b) Remove the 4 bolts and bearing cap.

- (c) Using SST and a plastic hammer, remove the 2 side bearing plate washers.

SST 09504-22012

HINT:

Measure the plate washer thickness and note it down.

- (d) Remove the differential case with the bearing outer races from the carrier.

HINT:

Tag the bearing outer races to show the location for reassembling.

12. REMOVE DRIVE PINION FROM DIFFERENTIAL CARRIER

Remove the drive pinion with the rear bearing.

**13. REMOVE DRIVE PINION REAR BEARING**

Using SST and a press, remove the bearing from the drive pinion.

SST 09950-00020

HINT:

If the drive pinion or ring gear is damaged, replace them as a set.

14. REMOVE FRONT AND REAR BEARING OUTER RACES AND ADJUSTING WASHER

NOTICE:

Do not remove the outer races except when replacing the bearings.

Using a brass bar and hammer, remove the outer races and adjusting washer from the carrier.

HINT:

Measure the adjusting washer thickness and note it down.

15. REMOVE RING GEAR

- Place matchmarks on the ring gear and differential case.
- Remove the 12 ring gear set bolts.
- Using a plastic hammer, tap on the ring gear to separate it from the differential case.

16. CHECK DIFFERENTIAL CASE RUNOUT

- Install the differential case in the differential carrier (See page [SA-112](#)).
- Using a dial indicator, measure the differential case runout.
Maximum case runout: 0.04 mm (0.0016 in.)
- Remove the differential case.

17. REMOVE SIDE BEARINGS

Using SST, remove the 2 side bearings from the differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00480)

HINT:

Fix the claws of SST to the notch in the differential case.

18. DISASSEMBLE DIFFERENTIAL CASE ASSEMBLY

- Using a pin punch and hammer, remove the straight pin.
- Remove the pinion shaft, 2 pinion gears, pinion gear thrust washers, side gears and side gear thrust washers from the differential case.

REPLACEMENT

REPLACE COMPANION FLANGE DUST DEFLECTOR

- (a) Using SST, a socket wrench and a press, remove the dust deflector.

SST 09950-00020

- (b) Using SST, a press and steel plate, install a new dust deflector.

SST 09523-36010

REASSEMBLY

1. ASSEMBLE DIFFERENTIAL CASE

- (a) Install the 2 thrust washers to the side gears.
- (b) Install the 2 side gears with the thrust washers, 2 pinion gears, 2 pinion gear thrust washers and pinion shaft.

HINT:

Align the holes for the straight pin in the differential case and pinion shaft.

- (c) Using a dial indicator, measure the side gear backlash while holding one pinion gear toward the differential case.

Backlash: 0.05 – 0.20 mm (0.0020 – 0.0079 in.)

If the backlash is not within the specified value, replace the side gear thrust washer with an appropriate thickness.

HINT:

Refer to the following table to select thrust washers which will ensure that the backlash is within the specified value.

Washer thickness:

Thickness mm (in.)	Thickness mm (in.)
1.50 (0.0590)	1.75 (0.0689)
1.55 (0.0610)	1.80 (0.0709)
1.60 (0.0630)	1.85 (0.0728)
1.65 (0.0650)	1.90 (0.0748)
1.70 (0.0669)	-

- (d) Using a pin punch and hammer, install the straight pin through the holes in the differential case and pinion shaft.
- (e) Using a chisel and hammer, stake the outside of the differential case pin hole.

2. INSTALL SIDE BEARINGS

Using SST and a press, install the 2 side bearings into the differential case.

SST 09950-60010 (09951-00480, 09951-00640)
09950-70010 (09951-07150)

3. INSTALL RING GEAR ON DIFFERENTIAL CASE

- (a) Clean the contact surfaces of the differential case and ring gear.

- (b) Heat the ring gear to about 100°C (212°F) in boiling water.
- (c) Carefully take the ring gear out of the boiling water.

- (d) After the moisture on the ring gear has completely evaporated, quickly install the ring gear to the differential case.

HINT:

Align the matchmarks on the ring gear and differential case.

- (e) After the ring gear has cooled sufficiently, torque the set bolts to which thread lock has been applied.

Thread lock:

Part No. 08833-00100, THREE BOND 1360K or equivalent.

Torque: 125 N·m (1,270 kgf·cm, 92 ft·lbf)

4. INSPECT RING GEAR RUNOUT

- (a) Install the differential case into the carrier and install the plate washers to where there is no play in the bearing (See step 8.).
- (b) Install the bearing cap (See step 11.).

- (c) Using a dial indicator, measure the runout of the ring gear.
 - (d) Remove the bearing caps and differential case.
- Maximum runout: 0.05 mm (0.0020 in.)**

**5. INSTALL DRIVE PINION BEARING OUTER RACES AND ADJUSTING WASHER**

- (a) Using SST and a press, install a new front bearing outer race to the carrier.
SST 09950-60020 (09951-00710),
09950-70010 (09951-07150)
- (b) Using SST and a press, install a new adjusting washer and a new rear bearing outer race to the carrier.
SST 09950-60020 (09951-00910),
09950-70010 (09951-07150)

HINT:

First fit a washer with the same thickness as the washer which was removed, then after checking the tooth contact pattern, replace the washer with a different thickness if necessary.

**6. INSTALL DRIVE PINION REAR BEARING**

Using SST and a press, install the rear bearing onto the drive pinion.

SST 09506-35010

7. TEMPORARILY ADJUST DRIVE PINION PRELOAD

(a) Install the drive pinion and front bearing.

HINT:

After adjusting the ring gear tooth contact pattern, assemble the spacer, washers and oil seal.

(b) Using SST, install the companion flange.

SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

(c) Coat the threads of the nut with hypoid gear oil.

(d) Adjust the drive pinion preload by tightening the companion flange nut.

HINT:

Using SST to hold the flange, torque the nut.

SST 09330-00021

NOTICE:

As there is no spacer, tighten the nut a little at a time and be careful not to overtighten it.

(e) Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):**New bearing**

1.3 - 1.9 N·m (13 - 19 kgf·cm, 11.4 - 16.7 in.-lbf)

Reused bearing

0.5 - 0.8 N·m (5 - 8 kgf·cm, 4.3 - 6.9 in.-lbf)

8. INSTALL DIFFERENTIAL CASE IN CARRIER

- (a) Place the 2 bearing outer races on their respective bearings. Make sure the right and left races are not interchanged.
- (b) Install the differential case in the carrier.

**9. ADJUST RING GEAR BACKLASH**

- (a) Install the plate washer on the ring gear back side.

HINT:

Make sure that the ring gear has backlash.

- (b) Tap on the ring gear with a plastic hammer so that the washer fits to the bearing.

- (c) Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash (reference):

0.13 – 0.18 mm (0.0051 – 0.0071 in.)

- (d) Select a plate washer for back side ring gear using the backlash as a reference.

- (e) Select a ring gear teeth side plate washer so that there is no clearance between the outer race and case.
- (f) Remove the 2 plate washers and differential case.
- (g) Install the plate washer into the ring gear back side of the carrier.

- (h) Place the other plate washer onto the differential case together with the outer race, and install the differential case with the outer race into the carrier.
- (i) Tap on the ring gear with a plastic hammer so that the washers fit to the bearing.

- (j) Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of the washers on both sides by an equal amount.

HINT:

There should be no clearance between the plate washer and the case.

Make sure that there is a ring gear backlash.

10. ADJUST SIDE BEARING PRELOAD

- (a) Remove the ring gear teeth side plate washer and using a micrometer, measure the thickness.
- (b) Using the backlash as a reference, install a new washer that is 0.06 – 0.09 mm (0.0024 – 0.0035 in.) thicker than the washer removed.

HINT:

Select a washer which can be pressed in 2/3 of the way with your finger.

- (c) Using a plastic hammer, install the plate washer.
- (d) Recheck the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of washers on both sides by equal amount.

HINT:

The backlash will change by about 0.02 mm (0.0008 in.) corresponding to 0.03 mm (0.0012 in.) change in the plate washer.

Washer thickness:

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
58	2.58 (0.1015)	90	2.90 (0.1142)	22	3.22 (0.1268)
60	2.60 (0.1024)	92	2.92 (0.1150)	24	3.24 (0.1276)
62	2.62 (0.1031)	94	2.94 (0.1157)	26	3.26 (0.1283)
64	2.64 (0.1039)	96	2.96 (0.1165)	28	3.28 (0.1291)
66	2.66 (0.1047)	98	2.98 (0.1173)	30	3.30 (0.1299)
68	2.68 (0.1055)	00	3.00 (0.1181)	32	3.32 (0.1307)
70	2.70 (0.1063)	02	3.02 (0.1189)	34	3.34 (0.1315)
72	2.72 (0.1071)	04	3.04 (0.1197)	36	3.36 (0.1323)
74	2.74 (0.1079)	06	3.06 (0.1205)	38	3.38 (0.1331)
76	2.76 (0.1087)	08	3.08 (0.1213)	40	3.40 (0.1339)
78	2.78 (0.1094)	10	3.10 (0.1220)	42	3.42 (0.1346)
80	2.80 (0.1102)	12	3.12 (0.1228)	44	3.44 (0.1354)
82	2.82 (0.1110)	14	3.14 (0.1236)	46	3.46 (0.1362)
84	2.84 (0.1118)	16	3.16 (0.1244)	48	3.48 (0.1370)
86	2.86 (0.1126)	18	3.18 (0.1252)		–
88	2.88 (0.1134)	20	3.20 (0.1260)		–

11. INSTALL BEARING CAP

- (a) Align the matchmarks on the cap and carrier.
- (b) Install and torque the 4 bolts.

Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)

**12. MEASURE TOTAL PRELOAD**

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in·lbf)

**13. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION**

- (a) Coat 3 or 4 teeth at three different positions on the ring gear with red lead primer.
- (b) Hold the companion flange firmly and rotate the ring gear in both directions.
- (c) Inspect the teeth pattern.

Z00699

R04554

If the teeth are not contacting properly, use the following table to select a proper washer for correction.

Washer thickness:

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
87	1.87 (0.0736)	01	2.01 (0.0791)	15	2.15 (0.0846)
88	1.88 (0.0740)	02	2.02 (0.0795)	16	2.16 (0.0850)
89	1.89 (0.0744)	03	2.03 (0.0799)	17	2.17 (0.0854)
90	1.90 (0.0748)	04	2.04 (0.0803)	18	2.18 (0.0858)
91	1.91 (0.0752)	05	2.05 (0.0807)	19	2.19 (0.0862)
92	1.92 (0.0756)	06	2.06 (0.0811)	20	2.20 (0.0866)
93	1.93 (0.0760)	07	2.07 (0.0815)	21	2.21 (0.0870)
94	1.94 (0.0764)	08	2.08 (0.0819)	22	2.22 (0.0874)
95	1.95 (0.0768)	09	2.09 (0.0823)	23	2.23 (0.0878)
96	1.96 (0.0772)	10	2.10 (0.0827)	24	2.24 (0.0882)
97	1.97 (0.0776)	11	2.11 (0.0831)	25	2.25 (0.0886)
98	1.98 (0.0780)	12	2.12 (0.0835)	26	2.26 (0.0890)
99	1.99 (0.0783)	13	2.13 (0.0839)	27	2.27 (0.0894)
00	2.00 (0.0787)	14	2.14 (0.0843)	28	2.28 (0.0898)

14. REMOVE COMPANION FLANGE (See page SA-107)
15. REMOVE FRONT BEARING (See page SA-107)
16. INSTALL NEW BEARING SPACER, 2 WASHERS AND FRONT BEARING

- (a) Install a new bearing spacer and 2 washers, and place the front bearing.

- (b) Using SST and the companion flange, install the front bearing then remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

17. INSTALL NEW OIL SEAL

- (a) Coat a new oil seal lip with MP grease.

- (b) Using SST and a plastic hammer, install the oil seal until its surface is flush with the differential carrier end.
SST 09316-12010, 09649-17010

HINT:

Connect 2 SST with vinyl tape.

18. INSTALL COMPANION FLANGE

- (a) Place the companion flange.
- (b) Coat the threads of a new nut with hypoid gear oil.

- (c) Using SST to hold the flange, torque the nut.
SST 09330-00021
Torque: 147 N·m (1,500 kgf·cm, 109 ft·lbf)

19. ADJUST DRIVE PINION PRELOAD

Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):

New bearing

1.3 – 1.9 N·m (13 – 19 kgf·cm, 11.4 – 16.7 in.-lbf)

Reused bearing

0.5 – 0.8 N·m (5 – 8 kgf·cm, 4.3 – 6.9 in.-lbf)

If the preload is greater than the specified value, replace the bearing spacer.

If the preload is less than the specified value, retighten the nut with a force of 13 N·m (130 kgf·cm, 9 ft·lbf) until the specified preload is reached.

Torque: 451 N·m (4,600 kgf·cm, 333 ft·lbf) or less

If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repeat the preload procedure. Do not loosen the pinion nut to reduce the preload.

20. CHECK TOTAL PRELOAD

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

21. CHECK RING GEAR BACKLASH

Using a dial indicator, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

22. RECHECK TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION (See step 13.)

23. CHECK COMPANION FLANGE RUNOUT

(See page [SA-107](#))

24. STAKE DRIVE PINION NUT

INSTALLATION

1. INSTALL DIFFERENTIAL CARRIER ASSEMBLY

- (a) Install a new gasket.
- (b) Install the differential carrier assembly with the 10 washers and nuts.

NOTICE:

Be careful not to damage the installation surface.

Torque: 73 N·m (740 kgf·cm, 54 ft·lbf)

2. CONNECT REAR PROPELLER SHAFT

2WD: See page [PR-8](#)

4WD: See page [PR-15](#)

3. INSTALL REAR AXLE SHAFTS (See page [SA-98](#))

4. FILL DIFFERENTIAL WITH HYPOID GEAR OIL (See page [SA-101](#))

REAR DIFFERENTIAL CARRIER (w/ LSD) COMPONENTS

SA28M-02

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

★ Precoated part

#: If the side gear backlash has been adjusted by TOYOTA dealer, adjusting shims are installed between the side gear thrust washer and the differential case.

N·m (kgf·cm, ft·lbf) : Specified torque

★ Precoated part

REMOVAL

1. DRAIN HYPOID GEAR OIL
2. REMOVE REAR AXLE SHAFTS (See page [SA-93](#))
3. DISCONNECT REAR PROPELLER SHAFT
2WD: See page [PR-3](#)
4WD: See page [PR-10](#)

4. REMOVE DIFFERENTIAL CARRIER ASSEMBLY
 - (a) Remove the 10 nuts, washers and differential carrier assembly.

NOTICE:

Be careful not to damage the installation surface.

- (b) Remove the gasket.

DISASSEMBLY

1. CHECK RUNOUT OF COMPANION FLANGE

Using a dial indicator, measure the vertical and lateral runout of the companion flange.

Maximum runout: 0.09 mm (0.0035 in.)

If the runout is not within the specification, replace the companion flange.

2. CHECK RING GEAR RUNOUT

Using a dial indicator, measure the ring gear runout.

Maximum runout: 0.05 mm (0.0020 in.)

If the runout is not within the specification, replace the ring gear.

3. CHECK RING GEAR BACKLASH

Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

HINT:

Measure at 3 or more positions around the circumference of the ring gear.

If the backlash is not within the specification, adjust the side bearing preload or repair if necessary.

4. CHECK TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION (See page [SA-133](#))

5. MEASURE DRIVE PINION PRELOAD

Using a torque wrench, measure the drive pinion preload using the backlash of the drive pinion and ring gear.

Preload (at starting):

0.6 – 0.9 N·m (6.1 – 9.2 kgf·cm, 5.3 – 8.0 in.-lbf)

6. CHECK TOTAL PRELOAD

Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):**Drive pinion preload plus****0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)**

If necessary, disassemble and inspect the differential.

7. REMOVE COMPANION FLANGE

- (a) Using a chisel and a hammer, unstake the nut.

- (b) Using SST to hold the flange, remove the nut.
SST 09330-00021

- (c) Using SST, remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010,
09954-03010, 09955-03030, 09956-03030)

**8. REMOVE FRONT OIL SEAL**

Using SST, remove the oil seal from the differential carrier.

SST 09308-10010

**9. REMOVE FRONT BEARING AND BEARING SPACER**

- (a) Using SST, remove the bearing from the drive pinion.
SST 09556-22010

If the front bearing is damaged or worn, replace the front bearing.

- (b) Remove the 2 washers and bearing spacer.

**10. REMOVE DIFFERENTIAL CASE**

- (a) Place matchmarks on the bearing cap and differential carrier.
- (b) Remove the 4 bolts and bearing cap.

- (c) Using SST and a plastic hammer, remove the 2 side bearing plate washers.

SST 09504-22012

HINT:

Measure the plate washer thickness and note it down.

- (d) Remove the differential case with the bearing outer races from the carrier.

HINT:

Tag the disassembled parts to show the location for reassembling.

11. REMOVE DRIVE PINION FROM DIFFERENTIAL CARRIER

Remove the drive pinion with the rear bearing.

**12. REMOVE DRIVE PINION REAR BEARING**

Using SST and a press, remove the bearing from the drive pinion.

SST 09950-00020

HINT:

If the drive pinion or ring gear is damaged, replace them as a set.

**13. REMOVE FRONT AND REAR BEARING OUTER RACES AND ADJUST WASHER****NOTICE:**

Do not remove the outer races except when replacing the bearings.

Using a brass bar and hammer, remove the outer races and adjusting washer from the carrier.

HINT:

Measure the adjusting washer thickness and note it down.

**14. REMOVE RING GEAR**

- (a) Place matchmarks on the ring gear and differential case.
- (b) Remove the 12 ring gear set bolts.
- (c) Using a plastic hammer, tap on the ring gear to separate it from the differential case.

15. CHECK DIFFERENTIAL CASE RUNOUT

- (a) Install the differential case in the differential carrier (See page SA-133).

- (b) Using a dial indicator, measure the differential case runout.

Maximum case runout: 0.04 mm (0.0016 in.)

- (c) Remove the differential case.

**16. REMOVE SIDE BEARINGS**

Using SST, remove the 2 side bearings from the differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00480)

HINT:

Fix the claws of SST to the notch in the differential case.

**17. DISASSEMBLE DIFFERENTIAL CASE**

- (a) Place matchmarks on the LH and RH cases.
- (b) Remove the 8 bolts uniformly, a little at a time.
- (c) Using a plastic hammer, separate the LH and RH cases.

**18. REMOVE THESE PARTS FROM DIFFERENTIAL LH AND RH CASES:****HINT:**

Keep the disassembled parts in order.

- (a) Remove these parts from the LH case.
 - (1) Remove the side gear.
 - (2) Remove the 4 side gear thrust washers.
 - (3) Remove the 3 clutch plates.

HINT:

Face the rough side of the thrust washer marked by "#" to the differential case.

- (b) Remove these parts from the RH case.
- (1) Remove the spring LH retainer.
 - (2) Remove the compression spring.
 - (3) Remove the spider with the pinion gear.
 - (4) Remove the spring RH retainer.
 - (5) Remove the side gear.
 - (6) Remove the 5 side gear thrust washers.
 - (7) Remove the 4 clutch plates.

HINT:

Face the rough side of the thrust washer marked by "#" to the differential case.

INSPECTION

1. REPLACE PARTS THAT ARE DAMAGED OR WORN

HINT:

If replacing the side gear, also replace the thrust washer that contacts with it.

2. INSPECT SIDE GEAR THRUST WASHERS FOR WEAR OR DAMAGE

Using a micrometer, measure that the contact surface of the thrust washer is even and check that no bare metal is showing.

Thickness (For reference):

1.77 – 2.49 mm (0.0697 – 0.0980 in.)

If necessary, replace the thrust washers.

HINT:

If replacing the thrust washer, also replace the clutch plate that contacts with it.

3. INSPECT CLUTCH PLATE FOR WEAR OR DAMAGE

Using a micrometer, measure the contact surface of the clutch plate and check that there is no abnormal wear.

Thickness (For reference):

1.57 – 1.63 mm (0.0618 – 0.0642 in.)

If necessary, replace the clutch plate.

4. INSPECT COMPRESSION SPRING FREE LENGTH

Using vernier calipers, measure the free length of the spring.

Length (For reference): 26.4 mm (1.039 in.)

REPLACEMENT

REPLACE COMPANION FLANGE DUST DEFLECTOR

- (a) Using SST, a socket wrench and a press, remove the dust deflector.

SST 09950-00020

- (b) Using SST, a press and steel plate, install a new dust deflector.

SST 09523-36010

REASSEMBLY

HINT:

- When reusing the side gear, thrust washers and clutch plates, skip the STEP 1.
- Using a shop rag, clean off any foreign object from the parts.
- Apply all of the sliding and rotating surfaces with LSD oil.

1. LH side: SELECT ADJUSTING SHIM(S)

- Measure the differential case dimension "A1", as shown in the illustration.
- Install the thrust washers (face their fine side to the side gear) and clutch plates on the side gear.

HINT:

Install the new thrust washer (Mark N) instead of the thrust washers (Mark A - M) to the differential case side.

- Using SST to press down the thrust washers and clutch plates with about pressure of 10 kgf (22 lbf), measure dimension "B1", as shown in the illustration.

SST 09649-17010

- Referring to the following selection table on the next page, select the proper adjusting shim(s).

**Adjusting shim thickness =
A1 - B1 - 16.175 mm (0.63681 in.)**

LH Side

A1mm \ B1mm	41.48	41.50	41.52	41.54	41.56	41.58	41.60	41.62	41.64	41.66	41.68	41.70	41.72
24.66													
24.68											C+C+E		
24.70													
24.72											C+C+D

25.14									B				
25.16													
25.18									A				
25.20													
25.22	#												
25.24													

Reassemble another type shim or check the backlash after assembling A shim.

HINT:

Three or two adjusting shims can be used together if the total of their thickness meets one of the above combinations, even if the combination does not exist in the above table.

	Adjusting shim mark and thickness mm (in.)
A	0.15 (0.0059)
B	0.20 (0.0079)
C	0.25 (0.0098)
D	0.30 (0.0118)
E	0.35 (0.0138)

2. RH side:

SELECT ADJUSTING SHIM(S)

- Measure the differential case dimension "A2", as shown in the illustration.
- Install the thrust washers (face their fine side to the side gear) and clutch plates on the side gear.

HINT:

Install the new thrust washer (Mark N) instead of the thrust washers (Mark A - M) to the differential case side.

- Using SST to press down the thrust washers and clutch plates with about pressure of 10 kgf (22 lbf), measure dimension "B2", as shown in the illustration.
SST 09649-17010
- Referring to the following selection table on the next page, select the proper adjusting shim(s).

Adjusting shim thickness =

$$A2 - B2 - 16.175 \text{ mm (0.63681 in.)}$$

RH Side

A2mm \ B2mm	44.88	44.90	44.92	44.94	44.96	44.98	45.00	45.02	45.04	45.06	45.08	45.10	45.12
28.00											D+D+D

28.72	Less												

Reassemble another type shim or check the backlash after assembling A shim.

HINT:

Three or two adjusting shims can be used together if the total of their thickness meets one of the above combinations, even if the combination does not exist in the above table.

	Adjusting shim mark and thickness mm (in.)
A	0.15 (0.0059)
B	0.20 (0.0079)
C	0.25 (0.0098)
D	0.30 (0.0118)
E	0.35 (0.0138)

3. CHECK SIDE GEAR BACKLASH

- (a) Install the clutch plates, thrust washers and side gear to the LH and RH differential cases.

HINT:

If necessary, install the adjusting shim(s).

- (b) Install the 4 pinion gears and thrust washers to the spider.

- (c) Align the spring LH retainer holes with the spider knock pins and install the LH retainer.

- (d) Install the pinion gear and spider to the differential LH case.

HINT:

Install the spider to the LH case tightly and do not move the spring retainer.

- (e) Using a dial indicator, check the side gear backlash while holding the side gear and spider.

Backlash: 0.05 – 0.20 mm (0.0019 – 0.0079 in.)

HINT:

- Measure at all 4 locations.
- Measure the backlash at the LH case and at the RH case.

If the backlash is not within the specification, select the adjusting shim(s).

**4. ASSEMBLE DIFFERENTIAL CASE**

- (a) Reinstall the spider and spring LH retainer to the differential LH case.

HINT:

Install the spider to the LH case tightly and do not move the spring retainer.

- (b) Install the compression spring and spring RH retainer.
 (c) Install the side gear, thrust washers and clutch plates.
 (d) Align the matchmarks and assemble the RH and LH cases.

HINT:

Be careful not to drop the side gear and check the pinion and side gear alignment.

- (e) Tighten the 8 bolts uniformly, a little at a time.

Torque: 47 N·m (480 kgf·cm, 35 ft·lbf)

5. MEASURE ROTATION TORQUE OF DIFFERENTIAL CASE

While holding one of the side gears, measure the rotation torque of the other gear.

Rotation torque (standard):

27.5 – 43.0 N·m (281 – 439 kgf·cm, 20 – 32 ft·lbf)

6. INSTALL SIDE BEARINGS

Using SST and a press, install the 2 side bearings into the differential case.

SST 09950-60010 (09951-00480, 09951-00640)
09950-70010 (09951-07150)

7. INSTALL RING GEAR ON DIFFERENTIAL CASE

- (a) Clean the contact surfaces of the differential case and ring gear.
(b) Heat the ring gear to about 100°C (212°F) in boiling water.
(c) Carefully take the ring gear out of the boiling water.

- (d) After the moisture on the ring gear has completely evaporated, quickly install the ring gear to the differential case.

HINT:

Align the matchmarks on the ring gear and differential case.

- (e) After the ring gear has cooled sufficiently, torque the set bolts to which thread lock has been applied.

Thread lock:

Part No. 08833-00100, THREE BOND 1360K or equivalent.

Torque: 125 N·m (1,270 kgf·cm, 92 ft·lbf)

8. INSPECT RING GEAR RUNOUT

- (a) Install the differential case into the carrier and install the plate washers to where there is no play in the bearing (See step 12.).
- (b) Install the bearing cap (See step 15.).

- (c) Using a dial indicator, measure the runout of the ring gear.
- (d) Remove the bearing caps and differential case.
Maximum runout: 0.05 mm (0.0020 in.)

**9. INSTALL DRIVE PINION BEARING OUTER RACES AND ADJUSTING WASHER**

- (a) Using SST and a press, install a new front bearing outer race to the carrier.
SST 09950-60020 (09951-00710),
09950-70010 (09951-07150)
- (b) Using SST and a press, install a new adjusting washer and a new rear bearing outer race to the carrier.
SST 09950-60020 (09951-00910),
09950-70010 (09951-07150)

HINT:

First fit a washer with the same thickness as the washer which was removed, then after checking the tooth contact pattern, replace the washer with a different thickness if necessary.

**10. INSTALL DRIVE PINION REAR BEARING**

Using SST and a press, install the rear bearing onto the drive pinion.

SST 09506-35010

11. TEMPORARILY ADJUST DRIVE PINION PRELOAD

- (a) Install the drive pinion and front bearing.

HINT:

After adjusting the ring gear tooth contact pattern, assemble the spacer, washers and oil seal.

- (b) Using SST, install the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)
- (c) Coat the threads of the nut with hypoid gear oil.

- (d) Adjust the drive pinion preload by tightening the companion flange nut.

HINT:

Using SST to hold the flange, torque the nut.

SST 09330-00021

NOTICE:

As there is no spacer, tighten the nut a little at a time and be careful not to overtighten it.

- (e) Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):**New bearing**

1.3 – 1.9 N·m (13 – 19 kgf·cm, 11.4 – 16.7 in.-lbf)

Reused bearing

0.6 – 0.9 N·m (6.1 – 9.2 kgf·cm, 5.3 – 8.0 in.-lbf)

12. INSTALL DIFFERENTIAL CASE IN CARRIER

- (a) Place the 2 bearing outer races on their respective bearings. Make sure the right and left races are not interchanged.
- (b) Install the differential case in the carrier.

**13. ADJUST RING GEAR BACKLASH**

- (a) Install the plate washer on the ring gear back side.

HINT:

Make sure that the ring gear has backlash.

SUSPENSION AND AXLE - REAR DIFFERENTIAL CARRIER (w/ LSD)

- (b) Tap on the ring gear with a plastic hammer so that the washer fits to the bearing.

- (c) Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash (reference):

0.13 – 0.18 mm (0.0051 – 0.0071 in.)

- (d) Select a plate washer for back side ring gear using the backlash as a reference.

- (e) Select a ring gear teeth side plate washer so that there is no clearance between the outer race and case.
 (f) Remove the 2 plate washers and differential case.
 (g) Install the plate washer into the ring gear back side of the carrier.

- (h) Place the other plate washer onto the differential case together with the outer race, and install the differential case with the outer race into the carrier.
 (i) Tap on the ring gear with a plastic hammer so that the washers fit to the bearing.

- (j) Using a dial indicator, while holding the companion flange, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of washers on both sides by an equal amount.

HINT:

There should be no clearance between the plate washer and the case.

Make sure that there is a ring gear backlash.

14. ADJUST SIDE BEARING PRELOAD

- (a) Remove the ring gear teeth side plate washer and using a micrometer, measure the thickness.
- (b) Using the backlash as a reference, install a new washer that is 0.06 – 0.09 mm (0.0024 – 0.0035 in.) thicker than the washer removed.

HINT:

Select a washer which can be pressed in 2/3 of the way with your finger.

- (c) Using a plastic hammer, install the plate washer.

- (d) Recheck the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

If the backlash is not within the specified value, adjust it by either increasing or decreasing the thickness of washers on both sides by an equal amount.

HINT:

The backlash will change by about 0.02 mm (0.0008 in.) corresponding to 0.03 mm (0.0012 in.) change in the plate washer.

Washer thickness:

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
58	2.58 (0.1015)	90	2.90 (0.1142)	22	3.22 (0.1268)
60	2.60 (0.1024)	92	2.92 (0.1150)	24	3.24 (0.1276)
62	2.62 (0.1031)	94	2.94 (0.1157)	26	3.26 (0.1283)
64	2.64 (0.1039)	96	2.96 (0.1165)	28	3.28 (0.1291)
66	2.66 (0.1047)	98	2.98 (0.1173)	30	3.30 (0.1299)
68	2.68 (0.1055)	00	3.00 (0.1181)	32	3.32 (0.1307)
70	2.70 (0.1063)	02	3.02 (0.1189)	34	3.34 (0.1315)
72	2.72 (0.1071)	04	3.04 (0.1197)	36	3.36 (0.1323)
74	2.74 (0.1079)	06	3.06 (0.1205)	38	3.38 (0.1331)
76	2.76 (0.1087)	08	3.08 (0.1213)	40	3.40 (0.1339)
78	2.78 (0.1094)	10	3.10 (0.1220)	42	3.42 (0.1346)
80	2.80 (0.1102)	12	3.12 (0.1228)	44	3.44 (0.1354)
82	2.82 (0.1110)	14	3.14 (0.1236)	46	3.46 (0.1362)
84	2.84 (0.1118)	16	3.16 (0.1244)	48	3.48 (0.1370)
86	2.86 (0.1126)	18	3.18 (0.1252)		–
88	2.88 (0.1134)	20	3.20 (0.1260)		–

15. INSTALL BEARING CAP

- (a) Align the matchmarks on the cap and carrier.
- (b) Install and torque the 4 bolts.

Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)

SA2352

16. MEASURE TOTAL PRELOAD

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

T

F16273

17. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

- (a) Coat 3 or 4 teeth at three different positions on the ring gear with red lead primer.
- (b) Hold the companion flange firmly and rotate the ring gear in both directions.
- (c) Inspect the teeth pattern.

Z00699

If the teeth are not contacting properly, use the following table to select a proper washer for correction.

Washer thickness:

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
87	1.87 (0.0736)	01	2.01 (0.0791)	15	2.15 (0.0846)
88	1.88 (0.0740)	02	2.02 (0.0795)	16	2.16 (0.0850)
89	1.89 (0.0744)	03	2.03 (0.0799)	17	2.17 (0.0854)
90	1.90 (0.0748)	04	2.04 (0.0803)	18	2.18 (0.0858)
91	1.91 (0.0752)	05	2.05 (0.0807)	19	2.19 (0.0862)
92	1.92 (0.0756)	06	2.06 (0.0811)	20	2.20 (0.0866)
93	1.93 (0.0760)	07	2.07 (0.0815)	21	2.21 (0.0870)
94	1.94 (0.0764)	08	2.08 (0.0819)	22	2.22 (0.0874)
95	1.95 (0.0768)	09	2.09 (0.0823)	23	2.23 (0.0878)
96	1.96 (0.0772)	10	2.10 (0.0827)	24	2.24 (0.0882)
97	1.97 (0.0776)	11	2.11 (0.0831)	25	2.25 (0.0886)
98	1.98 (0.0780)	12	2.12 (0.0835)	26	2.26 (0.0890)
99	1.99 (0.0783)	13	2.13 (0.0839)	27	2.27 (0.0894)
00	2.00 (0.0787)	14	2.14 (0.0843)	28	2.28 (0.0898)

18. REMOVE COMPANION FLANGE (See page SA-126)
19. REMOVE FRONT BEARING (See page SA-126)
20. INSTALL NEW BEARING SPACER, 2 WASHERS AND FRONT BEARING

(a) Install a new bearing spacer and 2 washers, and place the front bearing.

(b) Using SST and the companion flange, install the front bearing then remove the companion flange.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03050)

21. INSTALL NEW OIL SEAL

(a) Coat a new oil seal lip with MP grease.

- (b) Using SST and a plastic hammer, install the oil seal until its surface is flush with the differential carrier end.
SST 09316-12010, 09649-17010

HINT:

Connect 2 SST with vinyl tape.

22. INSTALL COMPANION FLANGE

- (a) Place the companion flange.
(b) Coat the threads of a new nut with hypoid gear oil.

- (c) Using SST to hold the flange, torque the nut.
SST 09330-00021
Torque: 147 N·m (1,500 kgf·cm, 109 ft·lbf)

23. ADJUST DRIVE PINION PRELOAD

Using a torque wrench, measure the preload of the drive pinion using the backlash between the drive pinion and ring gear.

Preload (at starting):

New bearing

1.3 – 1.9 N·m (13 – 19 kgf·cm, 11.4 – 16.7 in.-lbf)

Reused bearing

0.6 – 0.9 N·m (6.1 – 9.2 kgf·cm, 5.3 – 8.0 in.-lbf)

If the preload is greater than the specified value, replace the bearing spacer.

If the preload is less than the specified value, retighten the nut with a force of 13 N·m (130 kgf·cm, 9 ft·lbf) until the specified preload is reached.

Torque: 451 N·m (4,600 kgf·cm, 333 ft·lbf) or less

If the maximum torque is exceeded while retightening the nut, replace the bearing spacer and repeat the preload procedure. Do not loosen the pinion nut to reduce the preload.

24. CHECK TOTAL PRELOAD

Using a torque wrench, measure the total preload with the teeth of the drive pinion and ring gear in contact.

Total preload (at starting):

Drive pinion preload plus 0.4 – 0.6 N·m (4 – 6 kgf·cm, 3.5 – 5.2 in.-lbf)

25. CHECK RING GEAR BACKLASH

Using a dial indicator, measure the ring gear backlash.

Backlash: 0.13 – 0.18 mm (0.0051 – 0.0071 in.)

26. RECHECK TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION (See step 17.)
27. CHECK COMPANION FLANGE RUNOUT (See page [SA-126](#))
28. STAKE DRIVE PINION NUT

INSTALLATION

1. INSTALL DIFFERENTIAL CARRIER ASSEMBLY

- (a) Install a new gasket.
- (b) Install the differential carrier assembly with the 10 washers and nuts.

NOTICE:

Be careful not to damage the installation surface.

Torque: 73 N·m (740 kgf·cm, 54 ft·lbf)

2. CONNECT REAR PROPELLER SHAFT

2WD: See page [PR-8](#)

4WD: See page [PR-15](#)

3. INSTALL REAR AXLE SHAFTS (See page [SA-98](#))

4. FILL DIFFERENTIAL WITH HYPOID GEAR OIL (See page [SA-101](#))

REAR SHOCK ABSORBER COMPONENTS

SAOBX-10

F14447

REMOVAL

1. SUPPORT BODY WITH SAFETY STANDS

- (a) Jack up and support the body on safety stands.
- (b) Lower the axle housing until the leaf spring tension is free, and keep it at this position.

2. REMOVE REAR WHEEL

3. REMOVE REAR SHOCK ABSORBER

- (a) Remove the bolt and nut on the lower side of the shock absorber.
- (b) While holding the piston rod, remove the nut, retainer, cushion and shock absorber.
- (c) Remove the 2 retainers and cushion from the shock absorber.

INSPECTION

INSPECT SHOCK ABSORBER

Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual operation sounds. If there is any abnormality, replace the shock absorber with a new one.

NOTICE:

When disposing of the shock absorber, see **DISPOSAL** on page [SA-151](#).

DISPOSAL

1. FULLY EXTEND SHOCK ABSORBER ROD

2. DRILL HOLE TO REMOVE GAS FROM CYLINDER

Using a drill, make a hole in the cylinder, as shown in the illustration to discharge the gas inside.

CAUTION:

The discharged gas is harmless, but be careful of chips which may fly out when drilling.

REPLACEMENT

REPLACE BUSHING

- (a) Using SST, 19 mm deep socket wrench and a press, remove the bushing.

SST 09632-36010

- (b) Using SST and a press, install a new bushing.

SST 09630-24014 (09620-24041), 09632-36010

INSTALLATION

1. INSTALL REAR SHOCK ABSORBER

- (a) Install the 2 retainers and cushion to the shock absorber.
- (b) Install the shock absorber, cushion and retainer with the nut.

Torque: 20 N·m (200 kgf·cm, 15 ft·lbf)

- (c) Install the lower side of the shock absorber with the bolt and nut.

Torque: 87 N·m (890 kgf·cm, 64 ft·lbf)

2. INSTALL REAR WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

3. REMOVE SAFETY STANDS

REAR LEAF SPRING COMPONENTS

SA0C2-08

REMOVAL

1. SUPPORT BODY WITH SAFETY STANDS

- (a) Jack up and support the body on safety stands.
- (b) Lower the axle housing until the leaf spring tension is free, and keep it at this position.

2. REMOVE REAR WHEEL

3. REMOVE U-BOLTS

- (a) Remove the 4 U-bolt mounting nuts and washers.
- (b) Remove the spring seat and 2 U-bolts.
- (c) Remove the spring bumper.

4. REMOVE LEAF SPRING

- (a) Remove the nut, washer and bolt.

- (b) Remove the 2 nuts, washers, bolts, shackle and leaf spring.

REPLACEMENT

1. REPLACE BUSHINGS

- (a) Using a saw, cut the both bushing tabs as shown in the illustration.

- (b) Using SST and a press, press out the both inner tubes and rubber parts of the bushings.

SST 09950-60010 (09951-00350)
09950-70010 (09951-07150)

- (c) Using a chisel and hammer, tap out the outer tubes.

- (d) Using SST and a press, install 2 new bushings.

SST 09710-28012 (09710-07062),
09710-30041 (09710-03211)

2. REPLACE LEAF SPRING

- (a) Bend to open the spring clips.
Using a chisel and hammer, pry up the 2 spring clips.
- (b) Remove the center bolt and nut.
Hold the spring near the spring center bolt in a vise and remove the center bolt and nut.

SUSPENSION AND AXLE - REAR LEAF SPRING

- (c) Replace the spring clip.
- (1) Drill off the head of the rivet and drive it out.
 - (2) Install a new rivet into the holes of the leaf spring and clip. Then rivet with a press.
- (d) Install the spring center bolt and nut.
- (1) Align the leaf spring holes and secure the leaves with a vise.
 - (2) Install the spring center bolt and nut.

Torque: 44 N·m (450 kgf-cm, 33 ft-lbf)

- (e) Bend the spring clips.
- Using a hammer, bend the spring clips into the position.

INSTALLATION

1. INSTALL LEAF SPRING

Install the shackle and leaf spring with the 3 bolts, washers and nuts.

Torque: 170 N·m (1,735 kgf·cm, 125 ft·lbf)

HINT:

After stabilizing the suspension, torque the nuts.

2. INSTALL U-BOLTS

Install the spring bumper, spring seat and 2 U-bolts with the 4 washers and nuts.

Torque: 133 N·m (1,350 kgf·cm, 98 ft·lbf)

HINT:

Tighten the U-bolts so that the lengths of all the U-bolts under the spring seat are the same.

3. INSTALL REAR WHEEL

Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)

4. REMOVE SAFETY STANDS

REAR STABILIZER BAR (Sport Suspension Package) COMPONENTS

SA2BC-02

REMOVAL

1. **REMOVE REAR WHEELS**
Torque: 110 N·m (1,150 kgf·cm, 83 ft·lbf)
2. **SUPPORT REAR AXLE HOUSING WITH JACK**

3. **REMOVE STABILIZER BAR LINKS**
 - (a) Remove the 2 nuts and stabilizer bar link.
Torque: 69 N·m (704 kgf·cm, 51 ft·lbf)

HINT:

If the ball joint stud turns together with the nut, use a hexagon wrench to hold the stud.

- (b) Use the same procedure described above to the other side.

4. **REMOVE STABILIZER BAR FROM REAR AXLE HOUSING**
 - (a) Remove the 4 bolts and stabilizer bar with the bushings and brackets.
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)
 - (b) Remove the 2 brackets and 2 bushings from the stabilizer bar.

INSPECTION

INSPECT STABILIZER BAR LINK

Rotate the ball joint stud in all directions.

If it does not move smoothly and freely, replace the stabilizer link.

INSTALLATION

Installation is in the reverse order of removal (See page [SA-160](#)).

BRAKE SYSTEM

BR0A9-05

PRECAUTION

- Care must be taken to replace each part properly as it could affect the performance of the brake system and result in a driving hazard. Replace the parts with parts having the same part number or equivalent.
- It is very important to keep parts and the area clean when repairing the brake system.
- If the vehicle is equipped with a mobile communication system, refer to the precautions in the IN section.

TROUBLESHOOTING

PROBLEM SYMPTOMS TABLE

BR08P-08

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspected Area	See page
Low pedal or spongy pedal	<ol style="list-style-type: none"> 1. Fluid leak in brake system 2. Air in brake system 3. Piston seals (Worn or damaged) 4. Rear brake shoe clearance (Out of adjustment) 5. Master cylinder (Faulty) 6. Booster push rod (Out of adjustment) 	DI-1455 BR-4 BR-41 BR-51 BR-22 BR-28 BR-34 BR-38
Brake drag	<ol style="list-style-type: none"> 1. Brake pedal freeplay (Minimum) 2. Parking brake lever travel (Out of adjustment) 3. Parking brake pedal travel (Out of adjustment) 4. Parking brake wire (Sticking) 5. Rear brake shoe clearance (Out of adjustment) 6. Pad or lining (Cracked or distorted) 7. Piston (Stuck) 8. Piston (Frozen) 9. Anchor or return spring (Faulty) 10. Booster push rod (Out of adjustment) 11. Vacuum leak in booster system 12. Master cylinder (Faulty) 	BR-10 BR-18 BR-14 BR-52 BR-39 BR-47 BR-41 BR-41 BR-47 BR-34 BR-38 BR-31 BR-35 BR-22 BR-28

BRAKE FLUID BLEEDING

BR1XV-01

1. BLEED BRAKE LINE (W/O VSC, STANDARD CAB/ACCESS CAB)

HINT:

If any work is done on the brake system or if air is suspected in the brake lines, bleed the air from the system.

NOTICE:

Do not let brake fluid remain on a painted surface. Wash it off immediately.

- (a) Fill reservoir with brake fluid.

Check the fluid level in the reservoir after bleeding each wheel. Add fluid, if necessary.

Fluid: SAE J1703 or FMVSS No. 116 DOT3

- (b) Bleed master cylinder.

HINT:

If the master cylinder was disassembled or if the reservoir becomes empty, bleed the air from the master cylinder.

- (1) Disconnect the brake lines from the master cylinder.
SST 09023-00101
- (2) Slowly depress the brake pedal and hold it.

- (3) Block off the outlet plug with your finger, and release the brake pedal.
- (4) Repeat (2) and (3) 3 or 4 times.

- (c) Bleed brake line.

- (1) Connect the vinyl tube to the caliper.
- (2) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down.
- (3) At the point when fluid stops coming out, tighten the bleeder plug, then release the brake pedal.
- (4) Repeat (2) and (3) until all the air in the fluid has been bled out.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

- (5) Repeat the above procedure for each wheel to bleed the air out of the brake line.
- (d) Check fluid level in reservoir.
Check the fluid level and add fluid if necessary.

Fluid: SAE J1703 or FMVSS No. 116 DOT3

2. BLEED BRAKE LINE (W/O VSC, DOUBLE CAB)

HINT:

If any work is done on the brake system or if air is suspected in the brake lines, bleed the air from the system.

NOTICE:

- **Bleed air from the chassis, 3rd chamber, and chassis in order.**
- **When the air is bled from the 3rd chamber, be sure to run the engine.**
- **If the brake fluid attaches to any painted surfaces, wash it off immediately.**

- (a) Fill reservoir with brake fluid.
Check the fluid level in the reservoir after bleeding each wheel. Add fluid, if necessary.

Fluid: SAE J1703 or FMVSS No. 116 DOT3

- (b) Bleed brake line.
 - (1) Connect the vinyl tube to the brake caliper bleeder plug.
 - (2) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down.
 - (3) At the point when the fluid stops coming out, tighten the bleeder plug, then release the brake pedal.
 - (4) Repeat (2) and (3) until all the air in the fluid has been bled out.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

- (5) Repeat the above procedures for each wheel to bleed the air out of the brake line.

(c) Bleed master cylinder.

NOTICE:

When the air is bled from the master cylinder (3rd chamber), be sure to run the engine.

HINT:

After disassembling the master cylinder, or if the reservoir becomes empty, bleed the air from the master cylinder.

- (1) Run the engine at idle.
- (2) Connect the vinyl tube to the master cylinder and the brake caliper or wheel cylinder bleeder plug.
- (3) Open the brake caliper bleed plug or wheel cylinder bleeder plug.
- (4) Depress the brake pedal several times, then loosen the master cylinder (3rd chamber) bleeder plug with the pedal held down.
- (5) When the fluid stops coming out, tighten the master cylinder (3rd chamber) bleeder plug, then release the brake pedal.
- (6) Repeat (4) and (5) until all the air in the fluid has been bled out.
- (7) Tighten the master cylinder (3rd chamber) bleeder plug.

Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

- (8) Tighten the brake caliper bleeder plug or wheel cylinder bleeder plug.

Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

- (9) Stop the engine.

(d) Bleed brake line.

- (1) Connect the vinyl tube to the brake caliper.
- (2) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down.
- (3) When the fluid stops coming out, tighten the bleeder plug, then release the brake pedal.
- (4) Repeat (2) and (3) until all the air in the fluid has been bled out.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

- (5) Repeat the above procedures for each wheel to bleed the air out of the brake line.

- (e) Check fluid level in reservoir.
Check the fluid level and add fluid if necessary.
Fluid: SAE J1703 or FMVSS No. 116 DOT3

3. BLEED BRAKE LINE (W/VSC)

- (a) Fill reservoir with brake fluid.
Check the fluid level in the reservoir after bleeding each wheel. Add fluid, if necessary.
Fluid: SAE J1703 or FMVSS No.116 DOT3
- (b) Bleed hydraulic brake booster.
- (1) Turn the ignition switch to the ON position and wait until the pump motor has stopped.

HINT:

Pump operating sound can be heard.

- (2) Turn the ignition switch off and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator is released, reaction force becomes light and stroke becomes longer.

- (3) Repeat (1) and (2) 5 times.
- (4) Make sure that the interval between pump start and pump stop is 8 to 14 seconds.

If it takes 14 seconds or more, repeat (3).

- (c) Bleed front brake line.
- (1) Turn the ignition switch to the ON position and wait until the pump motor has stopped.

HINT:

Pump operating sound can be heard.

- (2) Connect the vinyl tube to the brake caliper.
- (3) Depress the brake pedal several times, then loosen the bleeder plug with the pedal held down.
- (4) When the fluid stops coming out, tighten the bleeder plug, then release the brake pedal.
- (5) Repeat (3) and (4) until all the air in the fluid has been bled out.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

- (6) Repeat the above procedures for each wheel to bleed the air out of the brake line.

(d) Bleed rear brake line.

- (1) Turn the ignition switch to the ON position and wait until the pump motor has stopped.

HINT:

Pump operating sound can be heard.

- (2) Connect the vinyl tube to the wheel cylinder.
- (3) Depress the brake pedal, hold it, and then loosen the bleeder plug.

HINT:

Brake fluid is pumped out automatically.

NOTICE:

Keep brake fluid in the reservoir tank above the MIN line during the above procedures.

- (4) When air does not come out with brake fluid anymore, tighten the bleeder plug and release the brake pedal.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

- (5) Repeat the above procedures for each wheel to bleed the air out of the brake line .

(e) Hydraulic brake booster disassembly:

Bleed hydraulic brake booster.

NOTICE:

When disassembling the hydraulic brake booster, bleed the air from the hydraulic brake booster by following the procedures below.

- (1) Connect the hand-held tester to the DLC3.
- (2) Turn the ignition switch to the ON position.

HINT:

- Pump operating sound can be heard.
- Please refer to the hand-held tester operator's manual for further details.
- (3) Select "ACTIVE TEST" mode on the hand-held tester.

- (4) Connect the vinyl tube to the rear wheel cylinder.
- (5) Loosen the bleeder plug
- (6) Select "SRMF & SRMR" on the "ACTIVE TEST" of the hand-held tester to drive solenoids.

NOTICE:

- **Do not depress the brake pedal.**
- **Keep brake fluid in the reservoir tank above the MIN line during the above procedures.**

HINT:

- Pump operating sound can be heard.
- Brake fluid is pumped out automatically.
- To protect the solenoids, the hand-held tester turns OFF automatically 2 sec. after every solenoid has been turned ON.

(7) Repeat (6) until the air is completely bled out of brake fluid.

(8) When air does not come out with brake fluid, tighten the bleeder plug.

Torque: (Bleeder plug) 11 N·m (110 kgf·cm, 8 ft·lbf)

(9) Repeat the above procedures for each wheel to bleed the air out of the brake line .

(10) Turn the ignition switch off.

(11) Turn the ignition switch on again.

(12) Clear DTCs (see page [DI-1397](#) or [DI-1497](#)).

(f) Check fluid level in reservoir.

(1) Turn the ignition switch off and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator is released, reaction force becomes light and stroke becomes longer.

(2) Add brake fluid up to the MAX line of the reservoir tank.

Fluid: SAE J1703 or FMVSS No.116 DOT3

HINT:

When the ignition switch is turned to the ON position, brake fluid is sent to the accumulator. The brake fluid level drops by 5 mm when the ignition switch is off, which is normal.

BRAKE PEDAL ON-VEHICLE INSPECTION

BR1WB-02

1. CHECK PEDAL HEIGHT (W/O VSC)

Pedal height from dash panel:

Standard, access cab:

163.6 to 173.6 mm (6.44 to 6.83 in.)

Double cab:

151.1 to 165.1 mm (5.95 to 6.50 in.)

NOTICE:

Do not adjust the pedal height. Doing so by changing the push rod length will structurally change the pedal ratio.

2. CHECK AND ADJUST STOP LIGHT SWITCH

- Disconnect the connector from the stop light switch.
- Turn the stop light switch until it lightly contacts the pedal stopper.
- Connect the connector to the stop light switch.
- Push in the brake pedal 5 to 15 mm (0.20 to 0.59 in), turn the stop light switch to lock the nut in the position where the stop light goes off.
- After installation, push in the brake pedal 5 to 15 mm (0.20 to 0.59 in.) and check that the stop light lights up.
- After adjusting the stop light switch, check the pedal height and the pedal free play.

3. CHECK PEDAL FREE PLAY (W/O VSC)

- Stop the engine and depress the brake pedal several times until there is no more vacuum left in the booster.
- Push in the pedal by hand until the second point of resistance begins to be felt, then measure the distance as shown in the illustration.

Pedal free play: 1 to 6 mm (0.04 to 0.24 in.)

If incorrect, check the stop light switch clearance. If the clearance is OK, then troubleshoot the brake system.

Stop light switch clearance:

0.5 to 2.4 mm (0.020 to 0.094 in.)

HINT:

The free play to the first point of resistance is due to the play between the clevis and pin. It is 1 to 3 mm (0.04 to 0.12 in.) at the pedal.

4. CHECK PEDAL RESERVE DISTANCE (W/O VSC)

Release the parking brake.

With the engine running, depress the pedal and measure the pedal reserve distance, as shown in the illustration.

Pedal reserve distance from asphalt sheet at 490 N (50 kgf, 110.2 lbf): More than 95 mm (3.74 in.)

If the reserve distance is incorrect, troubleshoot the brake system.

5. CHECK PEDAL HEIGHT (w/ VSC)

Pedal height from dash panel:

Standard, access cab:

164.0 to 174.0 mm (6.46 to 6.85 in.)

Double cab:

151.1 to 165.1 mm (5.95 to 6.50 in.)

6. IF NECESSARY, ADJUST PEDAL HEIGHT (w/ VSC)

(a) Remove the scuff plate LH, cowl side trim LH, lower finish panel and No. 2 heater to register duct (see page [BO-111](#)).

(b) Disconnect the connector from the stop light switch.

(c) Loosen the stop light switch lock nut and remove the stop light switch.

(d) Loosen the push rod lock nut.

(e) Adjust the pedal height by turning the pedal push rod.

(f) Tighten the clevis lock nut.

Torque: 25.5 N-m (260 kgf-cm, 19 ft-lbf)

(g) Install the stop light switch and turn it until it lightly contacts the pedal stopper.

(h) Connect the connector to the stop light switch.

(i) Push in the brake pedal 5 to 15 mm (0.20 to 0.59 in), turn the stop light switch to lock the nut in the position where the stop light goes off.

(j) After installation, push in the brake pedal 5 to 15 mm (0.20 to 0.59 in.) and check that the stop light lights up.

(k) After adjusting the pedal height, check the pedal free play.

(l) Install the No. 2 heater to register duct, lower finish panel, cowl side trim LH and scuff plate LH.

7. CHECK PEDAL FREE PLAY (w/ VSC)

(a) Stop the engine and depress the brake pedal several times until there is no more vacuum left in the booster.

(b) Push in the pedal by hand until the second point of resistance begins to be felt, then measure the distance as shown in the illustration.

Pedal free play: 1 to 6 mm (0.04 to 0.24 in.)

If incorrect, check the stop light switch clearance. If the clearance is OK, then troubleshoot the brake system.

**Stop light switch clearance:
0.5 to 2.4 mm (0.020 to 0.094 in.)**

HINT:

The free play to the first point of resistance is due to the play between the clevis and pin. It is 1 to 3 mm (0.04 to 0.12 in.) at the pedal.

8. CHECK PEDAL RESERVE DISTANCE (w/ VSC)

Release the parking brake.

With the engine running, depress the pedal and measure the pedal reserve distance, as shown in the illustration.

**Pedal reserve distance from asphalt sheet at 490 N
(50 kgf, 110.2 lbf): More than 95 mm (3.74 in.)**

If the reserve distance is incorrect, troubleshoot the brake system.

PARKING BRAKE PEDAL ON-VEHICLE INSPECTION

BR109-05

1. CHECK PARKING BRAKE PEDAL TRAVEL

Depress the parking brake pedal all the way and count the number of clicks.

**Parking brake pedal travel at 294 N (30 kgf, 66 lbf):
8 to 10 clicks**

If incorrect, adjust the parking brake.

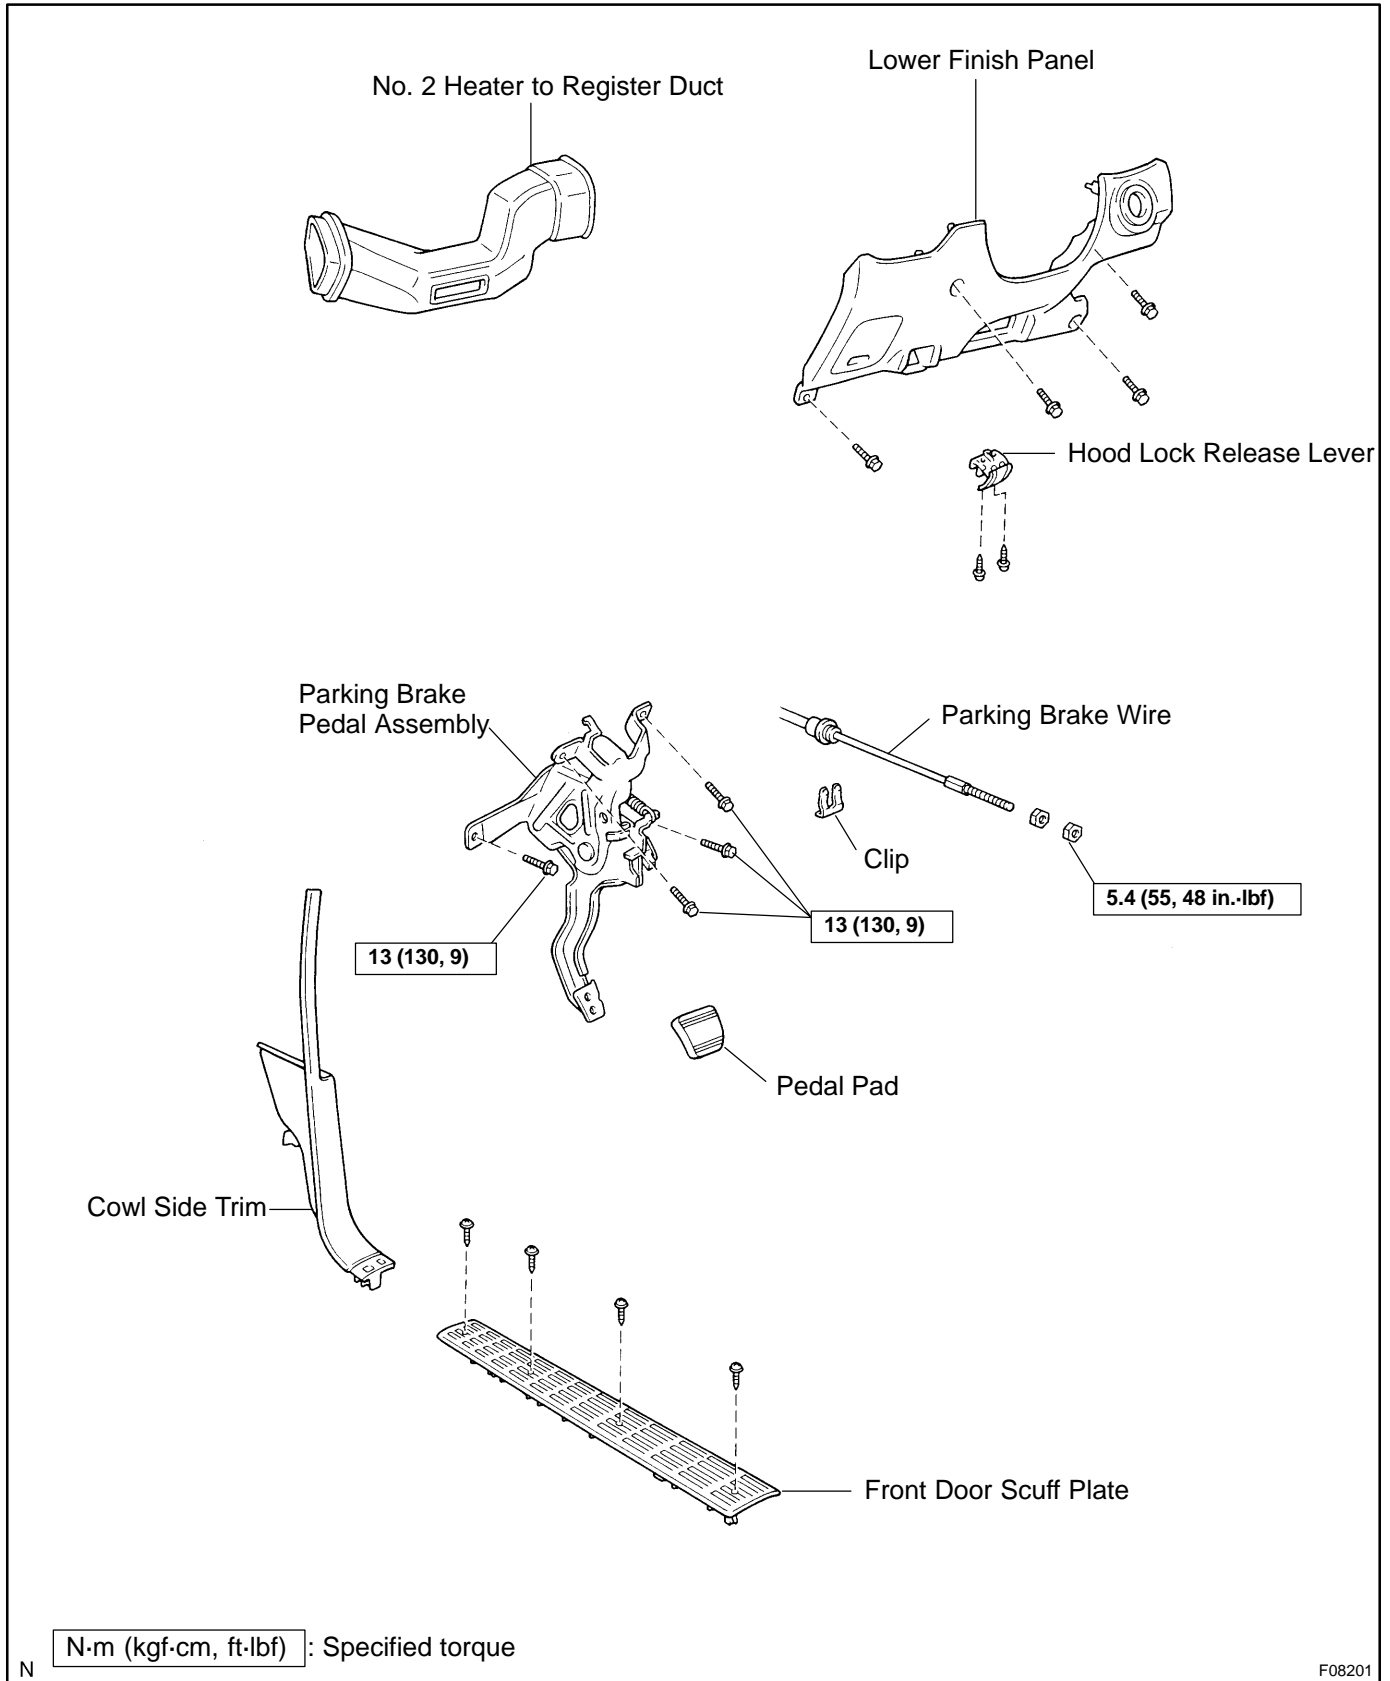

2. IF NECESSARY, ADJUST PARKING BRAKE PEDAL TRAVEL

HINT:

Before adjusting the parking brake, make sure that the rear brake shoe clearance has been adjusted. For shoe clearance adjustment, see step 3 on page [BR-52](#).

- (a) Remove the scuff plate LH.
- (b) Remove the cowl side trim LH.
- (c) Remove the lower finish panel.
- (d) Remove the No. 2 heater to register duct.
- (e) Loosen the lock nut and turn the adjusting nut until the pedal travel is correct.
- (f) Tighten the lock nut.
Torque: 5.4 N·m (55 kgf·cm, 48 in.-lbf)
- (g) Install the removed parts.

COMPONENTS

REMOVAL

1. REMOVE SCUFF PLATE LH, COWL SIDE TRIM LH, LOWER FINISH PANEL AND NO. 2 HEATER TO REGISTER DUCT
2. REMOVE PARKING BRAKE PEDAL ASSEMBLY
 - (a) Disconnect the parking brake switch connector.
 - (b) Remove the lock nut and adjusting nut from the parking brake wire.
 - (c) Remove the clip and parking brake wire.
 - (d) Remove the 4 bolts and parking brake pedal assembly.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

INSTALLATION

Installation is in the reverse order of removal (See page [BR-16](#)).

HINT:

After installation, check and adjust the parking brake pedal travel (see page [BR-14](#)).

PARKING BRAKE LEVER ON-VEHICLE INSPECTION

BR10D-02

1. CHECK PARKING BRAKE LEVER TRAVEL

Pull the parking brake lever all the way up, and count the number of clicks.

**Parking brake lever travel at 196 N (20 kgf, 44 lbf):
19 to 25 clicks**

If incorrect, adjust the parking brake.

2. IF NECESSARY, ADJUST PARKING BRAKE

HINT:

Before adjusting the parking brake, make sure that the rear brake shoe clearance has been adjusted. For shoe clearance adjustment, see step 3 on page [BR-52](#).

- (a) Tighten one of the adjusting nuts of the intermediate lever while loosening the other one until the travel is correct. Tighten the 2 adjusting nuts.
- (b) After adjusting the parking brake, confirm that the bell-crank stopper screw comes into contact with the backing plate (See page [BR-52](#)).

For shoe clearance adjustment, see step 3 on page [BR-52](#).

BRAKE MASTER CYLINDER (Standard Cab, Access Cab) COMPONENTS

BR1XW-01

w/o VSC:

N

- N·m (kgf·cm, ft·lbf) : Specified torque
- ◆ Non-reusable part
- ➔ Lithium soap base glycol grease
- ◆ Gasket
- ◆ Piston Stopper Bolt
- 10 (100, 7)

F08197
F08196

F18914

REMOVAL

1. DISCONNECT LEVEL WARNING SWITCH CONNECTOR
2. TAKE OUT FLUID WITH SYRINGE

NOTICE:

Do not let brake fluid remain on a painted surface. Wash it off immediately.

3. DISCONNECT BRAKE LINES

Using SST, disconnect the 5 brake lines from the master cylinder and 3-way.

SST 09023-00101

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

4. REMOVE MASTER CYLINDER

(a) Remove the 2 nuts, wire harness bracket, 3-way and check valve bracket.

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

(b) Pull out the master cylinder from the brake booster.

DISASSEMBLY

1. REMOVE RESERVOIR

- (a) Remove the set screw and pull out the reservoir.

Torque: 1.8 N·m (18 kgf·cm, 16 in.-lbf)

- (b) Remove the cap and strainer from the reservoir.

2. REMOVE 2 GROMMETS

3. PLACE CYLINDER IN VISE

4. REMOVE PISTON STOPPER BOLT

Using a screwdriver, push the pistons in all the way and remove the piston stopper bolt and gasket.

HINT:

Tape the screwdriver tip before use.

Torque: 10 N·m (100 kgf·cm, 7 ft-lbf)

5. REMOVE 2 PISTONS AND SPRINGS

- (a) Push in the piston with a screwdriver and remove the snap ring with snap ring pliers.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the No. 1 piston and spring by hand, pulling them straight out, not at an angle.

NOTICE:

- If pulled out and installed at an angle, there is a possibility that the cylinder bore could be damaged.
- At the time of reassembly, be careful not to damage the rubber lips on the pistons.

- (c) Place a rag and 2 wooden blocks on the work table, and lightly tap the cylinder flange against the block edges until the No. 2 piston and spring drop out of the cylinder.

HINT:

Make sure the distance (A) from the rag to the top of the blocks is at least 100 mm (3.94 in.).

INSPECTION

HINT:

Clean the disassembled parts with compressed air.

1. INSPECT CYLINDER BORE FOR RUST OR SCORING

If necessary, clean or replace the cylinder.

2. INSPECT CYLINDER FOR WEAR OR DAMAGE

If necessary, clean or replace the cylinder.

REASSEMBLY

Reassembly is in the reverse order of disassembly (See page [BR-21](#)).

NOTICE:

Apply lithium soap base glycol grease to the rubber parts indicated by the arrows (See page [BR-19](#)).

INSTALLATION

Installation is in the reverse order of removal (See page [BR-20](#)).

HINT:

- Before installation, adjust length of the brake booster push rod (see page [BR-34](#)).
- After installation, fill the brake reservoir with brake fluid and bleed the brake system (see page [BR-4](#)).
- Check for leaks, check and adjust the brake pedal (see page [BR-10](#)).
- Check brake pedal height (see page [BR-10](#)).
- Check the brake actuator with the hand-held tester (see page [BR-62](#)).

BRAKE MASTER CYLINDER (Double Cab) COMPONENTS

BR1X8-02

w/o VSC:

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non-reusable part

N → Lithium soap base glycol grease

REMOVAL

1. **DISCONNECT LEVEL WARNING SWITCH CONNECTOR**

NOTICE:

- Do not adjust the brake booster push rod.
- Do not change the combination of the diameter converting unit and brake.

2. **TAKE OUT FLUID WITH SYRINGE**

NOTICE:

Do not let brake fluid remain on a painted surface. Wash it off immediately.

3. **DISCONNECT BRAKE LINES**

- (a) Using SST, disconnect the 5 brake lines from the master cylinder and 3-way.

SST 09023-00101

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

- (b) Remove the front brake tube No. 1 from the master cylinder and 3-way.

4. **REMOVE BRAKE MASTER CYLINDER**

Remove the 2 nuts, 3-way and brake master cylinder.

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

DISASSEMBLY

1. REMOVE RESERVOIR TANK

- (a) Remove the brake master cylinder reservoir tank stopper pin and pull out the reservoir.
- (b) Remove the cap and strainer from the reservoir.

2. REMOVE 2 GROMMETS

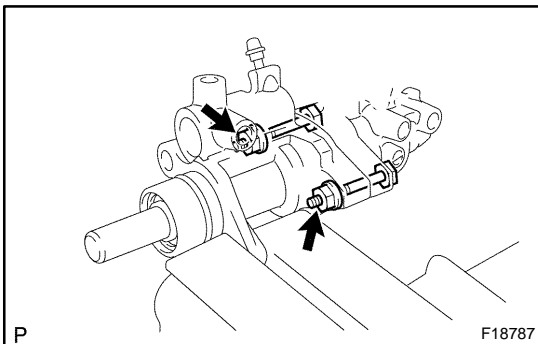

3. REMOVE BRAKE MASTER CYLINDER SUB-ASSY

- (a) Hold the brake master cylinder in a vise with aluminum plates in between.
- (b) Using a screwdriver, remove the O-ring.
- (c) Using SST, remove the brake tube from the brake master cylinder.

SST 09023-00101

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

- (d) Remove the 2 nuts, 2 bolts and brake master cylinder sub-assy.

Torque: 25 N·m (255 kgf-cm, 18 ft-lbf)

NOTICE:

Pay due attention so as not to drop the No. 1 piston from the plunger master cylinder. (If the No. 1 piston is dropped, it cannot be reused.)

- (e) Remove the master cylinder body and master cylinder No. 1 piston from the brake master cylinder sub-assy.

- (f) Using a screwdriver, remove the 2 O-rings.
- (g) Remove the bleeder plug from the brake master cylinder sub-assy.

Torque: 11 N·m (110 kgf-cm, 8 ft-lbf)

- (h) Remove the bleeder plug cap.

INSPECTION

HINT:

Clean the disassembled parts with compressed air.

1. INSPECT CYLINDER BORE FOR RUST OR SCORING

If necessary, clean or replace the cylinder.

2. INSPECT CYLINDER FOR WEAR OR DAMAGE

If necessary, clean or replace the cylinder.

REASSEMBLY

Reassembly is in the reverse order of disassembly (See page [BR-27](#)).

NOTICE:

Apply lithium soap base glycol grease to the rubber parts indicated by the arrows (See page [BR-25](#)).

INSTALLATION

Installation is in the reverse order of removal (See page [BR-26](#)).

HINT:

- After installation, fill the brake reservoir with brake fluid and bleed the brake system (see page [BR-4](#)).
- Check for leaks, check and adjust the brake pedal (see page [BR-10](#)).
- Check brake pedal height (see page [BR-10](#)).
- Check the brake actuator with the hand-held tester (see page [BR-67](#)).

BRAKE BOOSTER ASSEMBLY (Standard Cab, Access Cab) ON-VEHICLE INSPECTION

BR1Y3-01

1. OPERATING CHECK

- (a) Depress the brake pedal several times with the engine off and check that there is no change in the pedal reserve distance.
- (b) Depress the brake pedal and start the engine. If the pedal goes down slightly, operation is normal.

2. AIR TIGHTNESS CHECK

- (a) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.

If the pedal goes down farthest the 1st time, but gradually rises after the 2nd or 3rd time, the booster is air tight.

- (b) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed. If there is no change in the pedal reserve travel after holding down the pedal for 30 seconds, the booster is air tight.

COMPONENTS

w/o VSC:

N N·m (kgf·cm, ft·lbf) : Specified torque
 ◆ Non-reusable part

REMOVAL

1. REMOVE MASTER CYLINDER (See page [BR-20](#))
2. DISCONNECT VACUUM HOSE FROM BRAKE BOOSTER
3. REMOVE SCUFF PLATE LH, COWL SIDE TRIM LH, LOWER FINISH PANEL AND NO. 2 HEATER TO REGISTER DUCT (See page [BO-111](#))
4. REMOVE PEDAL RETURN SPRING
5. REMOVE CLIP AND CLEVIS PIN
6. REMOVE BRAKE BOOSTER
 - (a) Remove the 4 nuts and clevis.
 - (b) Pull out the brake booster and gasket.
 - (c) Remove the 2 stopper rings, brake booster bracket and gasket from the brake booster.

INSTALLATION

1. INSTALL BRAKE BOOSTER

- (a) Install a new gasket to the brake booster.
- (b) Install the brake booster bracket and 2 stopper rings to the brake booster.
- (c) Install the booster and a new gasket.
- (d) Install the clevis to the operating rod.
- (e) Install and torque the booster installation nuts.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (f) Install the clevis pin into the clevis and brake pedal, and install the clip to the clevis pin.
- (g) Connect the vacuum hose to the brake booster.

2. INSTALL NO. 2 HEATER TO REGISTER DUCT, LOWER FINISH PANEL, COWL SIDE TRIM LH AND SCUFF PLATE (See page [BO-120](#))

3. ADJUST LENGTH OF BOOSTER PUSH ROD

- (a) Set the SST on the master cylinder, and lower the pin until its tip slightly touches the piston.

SST 09737-00011

- (b) Turn the SST upside down, and set it on the booster.
- (c) Measure the clearance between the booster push rod and pin head (SST).

Clearance: 0 mm (0 in.)

- (d) Using SST, adjust the booster push rod length until the push rod lightly touches the pin head.

SST 09737-00020

4. **INSTALL MASTER CYLINDER (See page [BR-24](#))**
5. **FILL BRAKE RESERVOIR WITH BRAKE FLUID AND BLEED BRAKE SYSTEM (See page [BR-4](#))**
6. **CHECK FOR FLUID LEAKAGE**
7. **CHECK AND ADJUST BRAKE PEDAL (See page [BR-10](#))**
8. **DO OPERATIONAL CHECK (See page [BR-31](#))**

BRAKE BOOSTER ASSEMBLY (Double Cab)

BR1XE-02

ON-VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER

- (a) Air tightness check.
 - (1) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.

HINT:

If the pedal goes down farthest the 1st time, and gradually rises at the 2nd or 3rd time, the booster is airtight.

- (2) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed.

HINT:

- If there is no change in the pedal reserve distance after holding the pedal for 30 seconds, the booster is airtight.
- If not, replace the brake booster.

- (b) Operating check.

- (1) Depress the brake pedal several times with the ignition switch OFF and check that there is no change in the pedal reserve distance.
- (2) Depress the brake pedal and start the engine.

HINT:

- If the pedal goes down slightly, the operation is normal.
- If not, replace the brake booster.

- (c) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.

If the pedal goes down farthest the 1st time, but gradually rises after the 2nd or 3rd time, the booster is air tight.

2. INSPECT VACUUM CHECK VALVE

- (a) Check the vacuum check valve.
 - (1) Slide the clip and disconnect the vacuum hose.
 - (2) Remove the vacuum check valve.
- (3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.
- (4) If any fault is found, replace the vacuum check valve.

P

F18755

COMPONENTS

REMOVAL

NOTICE:

- Do not adjust the brake booster push rod.
- Do not change the combination of the diameter converting unit and brake.

1. REMOVE MASTER CYLINDER (See page [BR-26](#))
2. DISCONNECT VACUUM HOSE FROM BRAKE BOOSTER
3. REMOVE SCUFF PLATE LH, COWL SIDE TRIM LH, LOWER FINISH PANEL AND NO. 2 HEATER TO REGISTER DUCT (See page [BO-111](#))
4. REMOVE PEDAL RETURN SPRING
5. REMOVE CLIP AND CLEVIS PIN

6. REMOVE BRAKE BOOSTER

- (a) Remove the 4 nuts and clevis.
- (b) Pull out the brake booster and gasket.
- (c) Remove the 2 stopper rings, brake booster bracket and gasket from the brake booster.

INSTALLATION

1. INSTALL BRAKE BOOSTER

- (a) Install a new gasket to the brake booster.
- (b) Install the brake booster bracket and 2 stopper rings to the brake booster.
- (c) Install the booster and a new gasket.
- (d) Install the clevis to the operating rod.
- (e) Install and torque the booster installation nuts.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (f) Install the clevis pin into the clevis and brake pedal, and install the clip to the clevis pin.
- (g) Connect the vacuum hose to the brake booster.

2. INSTALL NO. 2 HEATER TO REGISTER DUCT, LOWER FINISH PANEL, COWL SIDE TRIM LH AND SCUFF PLATE (See page [BO-120](#))

NOTICE:

- Do not adjust the brake booster push rod.
 - Do not change the combination of the diameter converting unit and brake.
3. INSTALL MASTER CYLINDER (See page [BR-30](#))
 4. FILL BRAKE RESERVOIR WITH BRAKE FLUID AND BLEED BRAKE SYSTEM (See page [BR-4](#))
 5. CHECK FOR FLUID LEAKAGE
 6. CHECK AND ADJUST BRAKE PEDAL (See page [BR-10](#))
 7. DO OPERATIONAL CHECK (See page [BR-35](#))

FRONT BRAKE PAD COMPONENTS

BR10J-05

REPLACEMENT

1. REMOVE FRONT WHEEL
2. INSPECT PAD LINING THICKNESS

Check the pad thickness and replace pads if not within specification.

Minimum thickness: 1.0 mm (0.039 in.)

3. REMOVE CLIP, 2 PINS AND ANTI-RATTLE SPRING
4. REMOVE 2 PADS AND 4 ANTI-SQUEAL SHIMS

NOTICE:

The anti-rattle spring and clip can be used again provided that they have sufficient rebound, no deformation, cracks or wear, and have had all rust, dirt and foreign particles cleaned off.

5. CHECK DISC THICKNESS AND RUNOUT
(See page [BR-44](#))

6. INSTALL NEW PADS

NOTICE:

When replacing worn pads, the anti-squeal shims must be replaced together with the pads.

- (a) Draw out a small amount of brake fluid from the reservoir.
- (b) Press in the pistons with a monkey wrench handle or equivalent.

HINT:

- Tape the monkey wrench handle before use.
- Always change the pads on one wheel at a time as there is a possibility of the opposite piston flying out.
- If the piston is difficult to push in, loosen the bleeder plug and push in the piston while letting some brake fluid escape.

- (c) Install the anti-squeal shims to new pads.

HINT:

Apply disc brake grease to both sides of the inner anti-squeal shims (See page [BR-39](#)).

- (d) Install new pads.

NOTICE:

Do not allow oil or grease to come in contact with the rubbing face.

7. INSTALL ANTI-RATTLE SPRING AND 2 PINS
8. INSTALL CLIP
9. INSTALL FRONT WHEEL
Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)
10. DEPRESS BRAKE PEDAL SEVERAL TIMES
11. CHECK THAT FLUID LEVEL IS AT MAX LINE

FRONT BRAKE CALIPER COMPONENTS

BR10L-04

N

F07751

REMOVAL

1. REMOVE FRONT WHEEL

Remove the wheel and temporarily fasten the disc with hub nuts.

Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)

2. DISCONNECT BRAKE LINE

Using SST, disconnect the brake line. Use a container to catch brake fluid.

SST 09023-00101

Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

3. REMOVE CALIPER

Remove the 2 mounting bolts and caliper.

Torque: 123 N·m (1,250 kgf·cm, 90 ft·lbf)

4. REMOVE CLIP, 2 PINS AND ANTI-RATTLE SPRING

5. REMOVE 2 PADS AND 4 ANTI-SQUEAL SHIMS

NOTICE:

The anti-rattle spring and clip can be used again provided that they have sufficient rebound, no deformation, cracks or wear, and have had all rust, dirt and foreign particles cleaned off.

DISASSEMBLY

1. REMOVE CYLINDER BOOT SET RINGS AND BOOTS

Using a screwdriver, remove the 4 cylinder boot set rings and boots.

2. REMOVE PISTONS FROM CYLINDER

(a) Prepare a wooden plate to hold the pistons.

(b) Place the plate between the pistons and insert a pad at one side.

(c) Use compressed air to remove the pistons alternately from the cylinder.

CAUTION:

Do not place your fingers in front of the pistons when using compressed air.

3. REMOVE PISTON SEALS

Using a screwdriver, remove the 4 piston seals from the cylinder.

INSPECTION

1. MEASURE PAD LINING THICKNESS

Using a ruler, measure the pad lining thickness.

Standard thickness: 11.5 mm (0.453 in.)

Minimum thickness: 1.0 mm (0.039 in.)

Replace the pad if the thickness is less than the minimum (the 1.0 mm slit is no longer visible), or if it shows signs of uneven wear.

2. MEASURE DISC THICKNESS

Using a micrometer, measure the disc thickness.

Standard thickness: 28.0 mm (1.102 in.)

Minimum thickness: 26.0 mm (1.024 in.)

Replace the disc if the thickness of the disc is at the minimum or less. Replace the disc or grind it on a lathe if it is scored or worn unevenly.

3. MEASURE DISC RUNOUT

Using a dial indicator, measure the disc runout at a position 10 mm (0.39 in.) from the outside edge.

Maximum disc runout: 0.07 mm (0.0028 in.)

If the runout is greater than the maximum, replace the disc or grind it on an "On-Car" brake lathe.

HINT:

Before measuring the runout, confirm that the front hub bearing play is within specifications (see page SA-20).

4. IF NECESSARY, ADJUST DISC RUNOUT

(a) Remove the hub nuts and disc. Reinstall the disc 1/6 of a turn round from its original position on the hub. Install and torque the hub nuts.

Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)

(b) Remeasure the disc runout. Make a note of the runout and the disc's position on the hub.

(c) Repeat (a) and (b) until the disc has been installed on the 4 remaining hub positions.

If the minimum runout recorded in (a) to (c) is less than the maximum disc runout, install the disc in that position.

If the minimum runout recorded in (a) to (c) is greater than the maximum disc runout, replace the disc and repeat step 3.

REASSEMBLY

Reassembly is in the reverse order of disassembly (See page [BR-43](#)).

NOTICE:

Apply lithium soap base glycol grease and disc brake grease to the parts indicated by the arrows (See page [BR-41](#)).

INSTALLATION

Installation is in the reverse order of removal (See page [BR-42](#)).

HINT:

- After installation, fill the brake reservoir with brake fluid and bleed the brake system (See page [BR-4](#)).
- Check for leaks.

REMOVAL

1. INSPECT SHOE LINING THICKNESS

Remove the inspection hole plug, and check the shoe lining thickness through the hole.

If less than the minimum, replace the shoes.

Minimum thickness: 1.0 mm (0.039 in.)

2. REMOVE REAR WHEEL

Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)

3. REMOVE BRAKE DRUM

- (a) Release the parking brake lever or pedal and remove the brake drum.

HINT:

If the brake drum cannot be removed easily, do the following steps.

- (b) Remove the adjusting hole plug from the backing plate.
 (c) Insert a screwdriver through the hole in the backing plate, and hold the automatic adjusting lever away from the adjusting bolt.
 (d) Using another screwdriver, reduce the brake shoe adjustment by turning the adjusting bolt.

4. REMOVE REAR SHOE

- (a) Using SST, disconnect the return spring from the rear shoe.

SST 09703-30010

- (b) Remove the return spring from the front shoe.

- (c) Using SST, remove the shoe hold-down spring, 2 cups and pin.

SST 09718-00010

- (d) Disconnect the anchor spring from the rear shoe and remove the rear shoe.

- (e) Remove the anchor spring from the front shoe.

**5. REMOVE FRONT SHOE**

- (a) Using SST, remove the shoe hold-down spring, 2 cups and pin.
SST 09718-00010
- (b) Disconnect the parking brake cable No. 1 from the parking brake bellcrank.
- (c) Remove the front shoe with adjuster.
- (d) Disconnect the parking brake cable No. 1 from the front shoe.

6. REMOVE ADJUSTER FROM FRONT SHOE

- (a) Remove the adjusting lever spring.
- (b) Remove the adjuster.

**7. REMOVE AUTOMATIC ADJUSTING LEVER AND PARKING BRAKE LEVER**

- (a) Remove the E-ring.
- (b) Remove the automatic adjusting lever.
- (c) Remove the C-washer.
- (d) Remove the parking brake lever.

**8. REMOVE AND DISASSEMBLE PARKING BRAKE BELLCRANK**

- (a) Remove the clip and pin and disconnect the parking brake cable.
- (b) Remove the 2 tension springs.
- (c) Remove the 2 bolts and bellcrank.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (d) Turn over the bellcrank boot and remove the C-washer and pin.
- (e) Remove the bellcrank bracket and bellcrank boot from the parking brake bellcrank.

**9. REMOVE WHEEL CYLINDER**

- (a) Using SST, disconnect the brake line. Use a container to catch brake fluid.

SST 09023-00101

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

- (b) Remove the 2 bolts and the wheel cylinder.

Torque: 10 N·m (100 kgf-cm, 7 ft-lbf)

10. DISASSEMBLE WHEEL CYLINDER

- (a) Remove the 2 boots, 2 pistons and spring.
(b) Remove the 2 piston cups from each piston.

INSPECTION

1. INSPECT DISASSEMBLED PARTS

Inspect the disassembled parts for wear, rust or damage.

2. MEASURE BRAKE DRUM INSIDE DIAMETER

Using a brake drum gauge or equivalent, measure the inside diameter of the drum.

Standard inside diameter: 295.0 mm (11.614 in.)

Maximum inside diameter: 297.0 mm (11.693 in.)

If the drum is scored or worn, the brake drum may be lathed to the maximum inside diameter.

3. MEASURE BRAKE SHOE LINING THICKNESS

Using a ruler, measure the shoe lining thickness.

Standard thickness: 6.0 mm (0.236 in.)

Minimum thickness: 1.0 mm (0.039 in.)

If the shoe lining is less than the minimum, or shows signs of uneven wear, replace the brake shoes.

HINT:

If any of the brake shoes have to be replaced, replace all of the brake shoes in order to maintain even braking.

4. INSPECT BRAKE LINING AND DRUM FOR PROPER CONTACT

Apply chalk to the inside surface of the drum, then grind down the brake shoe lining to fit.

If the contact between the brake lining and drum is improper, repair the lining with a brake shoe grinder, or replace the brake shoe assembly.

INSTALLATION

Installation is in the reverse order of removal (See page [BR-48](#)).

NOTICE:

Apply lithium soap base glycol grease and high temperature grease to the parts indicated by the arrows (See page [BR-47](#)).

1. ADJUST BELLCRANK

- Lightly pull the bellcrank in direction A until there is no slack at part B.
- In this condition, turn the adjusting bolt so that dimension C will be 0.4 to 0.8 mm (0.016 to 0.031 in.).
- Lock the adjusting bolt with the lock nut.
- Connect the parking brake cable to the parking brake bellcrank and install the pin and clip.
- Install the 2 tension springs.

2. CHECK OPERATION OF AUTOMATIC ADJUSTING MECHANISM

- Move the parking brake lever of the front shoe back and forth. Check that the adjuster turns.

If the adjuster does not turn, check for incorrect installation of the rear brakes.

- Adjust the adjuster length as short as possible.
- Install the brake drum.

- Pull the parking brake lever all the way up or depress the parking brake pedal all the way until a clicking sound can no longer be heard.

3. CHECK CLEARANCE BETWEEN BRAKE SHOES AND DRUM

- (a) Remove the drum.
- (b) Measure the brake drum inside diameter and diameter of the brake shoes. Check that the difference between the diameters is the correct shoe clearance.

Shoe clearance: 0.5 mm (0.020 in.)

If it is incorrect, check the parking brake system.

- 4. FILL BRAKE RESERVOIR WITH BRAKE FLUID**
- 5. BLEED BRAKE SYSTEM (See page [BR-4](#))**
- 6. CHECK FOR LEAKS**

N

F07765

LOAD SENSING PROPORTIONING AND BY-PASS VALVE (LSP & BV) ON-VEHICLE INSPECTION

BR09R-13

1. SET REAR AXLE LOAD

Rear axle load (includes vehicle weight):

Standard cab: 950 kg (2,094 lb)

Access cab:

1GR-FT engine: 1,000 kg (2,205 lb)

2UZ-FE engine: 1,050 kg (2,315 lb)

2. INSTALL LSPV GAUGE (SST) AND BLEED AIR

SST 09709-29018

3. RAISE FRONT BRAKE PRESSURE TO 7,845 kPa (80 kgf/cm², 1,138 psi) AND CHECK REAR BRAKE PRESSURE

Rear brake pressure:

5,110 ± 490 kPa (52.1 ± 5 kgf/cm², 741 ± 71 psi)

HINT:

The brake pedal should not be depressed twice and/or returned while setting to the specified pressure. Read the value of rear brake pressure after holding the specified fluid pressure for 2 seconds. If the brake pressure is incorrect, adjust the fluid pressure.

4. IF NECESSARY, ADJUST FLUID PRESSURE

- (a) Loosen the lock nut.
- (b) Adjust the length of shackle No. 2.

Low pressure: Lengthen A

High pressure: Shorten A

Initial set: 120 mm (4.72 in.)

Adjustment range: 112 to 128 mm (4.41 to 5.04 in.)

HINT:

One turn of the nut changes the fluid pressure as shown in the following specification.

7.4 kPa (0.76 kgf/cm² 11 psi)

- (c) Torque the lock nut.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (d) If the pressure cannot be adjusted by shackle No. 2, raise or lower the valve body.

Low pressure: Lower the body

High pressure: Raise the body

- (e) Torque the nuts.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

- (f) Adjust the length of shackle No. 2 again.

If it cannot be adjusted, inspect the valve body.

5. IF NECESSARY, CHECK VALVE BODY

- (a) Assemble the valve body in the uppermost position.

HINT:

When the brakes are applied, the piston will move down about 0.8 mm (0.03 in.). In this situation, do not move the piston or make it come into contact with the load sensing spring.

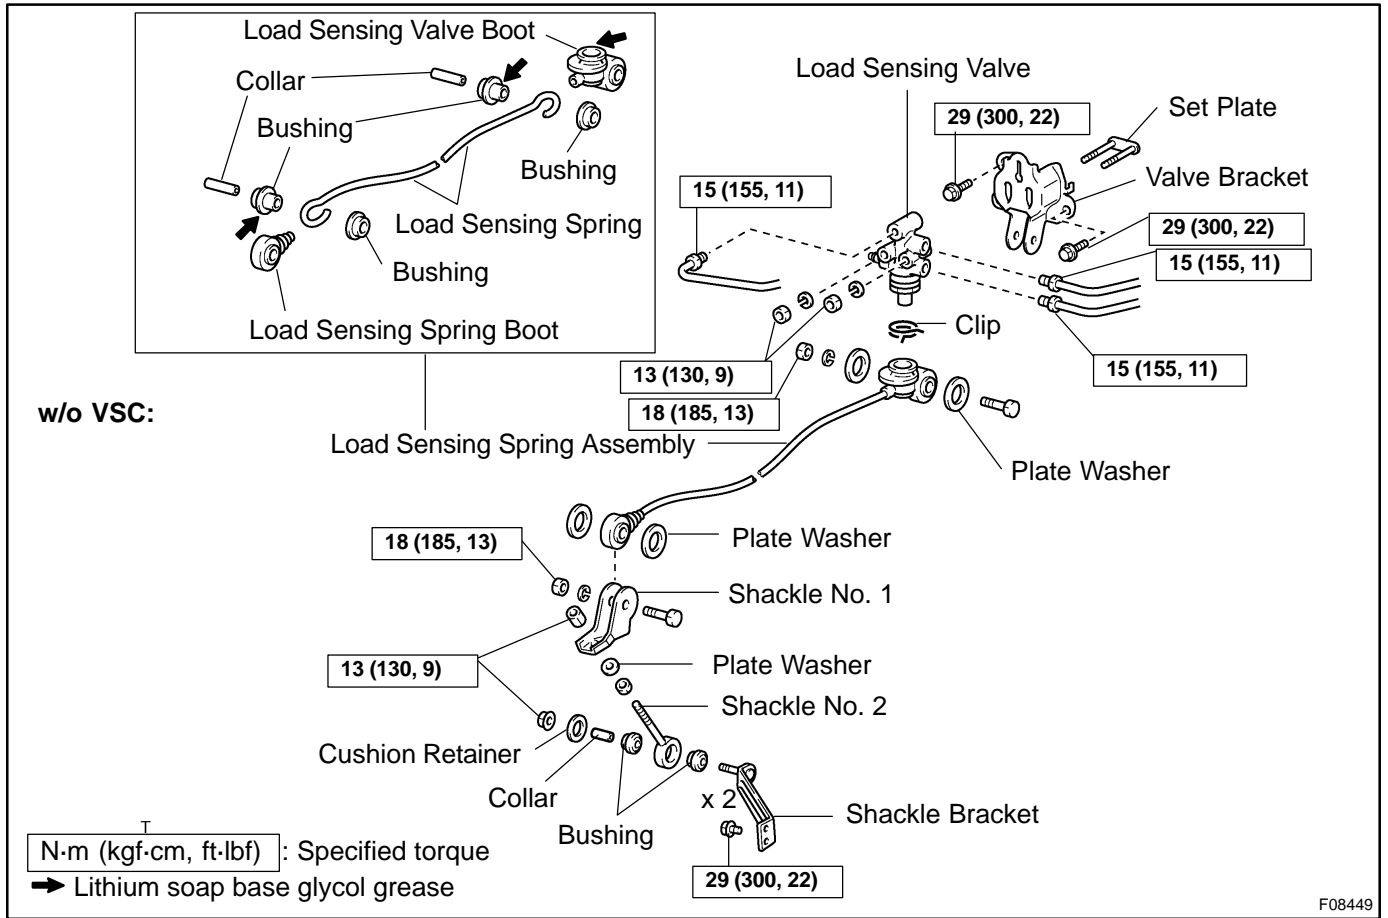

- (b) In this position, check the rear brake pressure.

Front brake pressure kPa (kgf/cm ² , psi)	Rear brake pressure kPa (kgf/cm ² , psi)
1,470 (15, 213)	1,470 (15, 213)
3,922 (40, 569)	2,210 ± 390 (22.5 ± 4, 320 ± 57)
13,720 (140, 1,990)	5,150 ± 590 (52.5 ± 6, 767 ± 85)

If the measured value is not within the standard, replace the valve body.

COMPONENTS

F08449

F18915

REMOVAL

1. w/ LOAD SENSING VALVE

DISCONNECT SHACKLE NO. 2 FROM BRACKET

- (a) Remove the nut and cushion retainer, and disconnect shackle No. 2.
- (b) Remove the 2 bushings and collar.
- (c) Remove the 2 bolts and shackle bracket.

2. REMOVE LSP & BV ASSEMBLY

- (a) Using SST, disconnect the 3 brake lines from the valve body.
SST 09751-36011
- (b) Remove the 2 valve bracket mounting bolts and the LSP & BV assembly.

3. w/ BLEND PROPORTIONING VALVE

REMOVE BLEND PROPORTIONING VALVE ASSEMBLY

- (a) Disconnect the 4 brake lines.
- (b) Remove the 3 bolts and blend valve.

Torque: 29 N-m (296 kgf-cm, 21 ft-lbf)

DISASSEMBLY

1. REMOVE VALVE BRACKET

- (a) Remove the nut, washer, bolt and 2 plate washers.
- (b) Remove the 2 nuts, 2 washers, set plate and valve bracket from the valve body.

2. DISCONNECT SPRING FROM VALVE

Using pliers, remove the clip, and remove the spring from the valve.

3. REMOVE SHACKLES NO. 1 AND NO. 2

- (a) Remove the nut washer and bolt, and remove the load sensing spring and 2 plate washers.
- (b) Loosen the 2 nuts and plate washer plate, and remove shackle No. 1 from shackle No. 2.

4. DISASSEMBLE LOAD SENSING SPRING

- (a) Remove the 4 bushings and 2 collars.
- (b) Remove the load sensing valve boot and load sensing spring boot.

INSPECTION

INSPECT VALVE PISTON PIN AND LOAD SENSING CONTACT SURFACE FOR WEAR

Wear limit: 0.7 mm (0.028 in.)

REASSEMBLY

1. ASSEMBLE LOAD SENSING SPRING

- (a) Install the load sensing valve boot and load sensing spring boot.
- (b) Install the 2 collars and 4 bushings.

HINT:

- Apply lithium soap-base glycol grease to all rubbing areas.

- Do not mistake the valve side for the shackle side of the load sensing spring.

2. INSTALL SHACKLE NO. 1 AND NO. 2

Install the lock nut, plate washer and shackle No. 1 to shackle No. 2, then install the upper nut.

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

3. INSTALL LOAD SENSING SPRING TO SHACKLE NO. 1

- (a) Install the load sensing spring and 2 plate washers to shackle No. 1.
- (b) Install the bolt, washer and nut.

Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)

4. INSTALL LOAD SENSING SPRING TO VALVE BODY

Install the load sensing spring to the load sensing valve with the clip.

5. INSTALL VALVE BRACKET

- (a) Install the set plate to the load sensing valve through the valve bracket and temporarily tighten the 2 washers and 2 nuts.
- (b) Install the load sensing spring assembly, 2 plate washers, bolt, washer and nut.

Torque: 18 N·m (185 kgf-cm, 13 ft-lbf)

INSTALLATION

1. INSTALL LSP & BV ASSEMBLY TO FRAME

Install the LSP & BV assembly and 2 valve bracket mounting bolts.

Torque: 29 N·m (300 kgf-cm, 22 ft-lbf)

2. CONNECT BRAKE LINE

Using SST, connect the 3 brake lines.

Torque: 15 N·m (155 kgf-cm, 11 ft-lbf)

SST 09751-36011

3. CONNECT SHACKLE NO. 2 BRACKET

(a) Set dimension A and torque the lock nut.

Initial set: 120 mm (4.72 in.)

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

(b) Install the shackle bracket and 2 bolts.

Torque: 29 N·m (300 kgf-cm, 22 ft-lbf)

(c) Connect the 2 bushings, collar and shackle No. 2 to the shackle bracket.

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

(d) Install the cushion retainer and nut.

4. SET REAR AXLE LOAD (See page BR-54)

5. SET VALVE BODY

(a) When pulling down the load sensing spring, check that the valve piston moves down smoothly.

(b) Position the valve body so that the valve piston lightly contacts the load sensing spring.

(c) Tighten the 2 valve body mounting nuts.

Torque: 13 N·m (130 kgf-cm, 9 ft-lbf)

6. BLEED BRAKE LINE (See page BR-4)

7. CHECK AND ADJUST LSP & BV FLUID PRESSURE (See page BR-54)

ABS ACTUATOR ON-VEHICLE INSPECTION

BR10Z-02

1. CONNECT HAND-HELD TESTER

- (a) Connect the hand-held tester to the DLC3.
- (b) Start the engine and run it at idle.
- (c) Select ACTIVE TEST mode on the hand-held tester.

HINT:

Please refer to the hand-held tester operator's manual for further details.

2. INSPECT ABS ACTUATOR MOTOR OPERATION

- (a) Select the "ABS MOT RELAY" on the hand-held tester display, then operate the ABS actuator motor.
- (b) Check that the operation sound of the ABS motor can be heard when the ABS actuator relay is turned ON by the hand-held tester.

NOTICE:

Do not keep the motor relay ON for more than 5 seconds continuously. When operating it continuously, set the interval of more than 20 seconds.

If the operation sound cannot be heard, replace the ABS actuator because motor operation is in failure.

- (c) Turn the motor relay OFF.

3. INSPECT RIGHT FRONT WHEEL SOLENOID

- (a) Depress the brake pedal and hold it for about 15 seconds, and then check that the brake pedal does not go down further.

If the brake pedal goes down, replace the ABS actuator because the sealing condition of the reduction solenoid valve is abnormal.

- (b) Select the "ABS MOT RELAY" on the hand-held tester display, then operate the ABS actuator motor.
- (c) Check that the brake pedal does not pulsate when the motor relay is turned ON by the hand-held tester.

NOTICE:

Do not keep the motor relay ON for more than 5 seconds continuously. When operating it continuously, set the interval of more than 20 seconds.

If there is pulsation in the brake pedal, replace the ABS actuator because the sealing condition of the reduction solenoid valve is abnormal.

- (d) Turn the ABS actuator motor OFF.
- (e) Depress the brake pedal and hold it until step (j) is completed.
- (f) Select the "SFRH" on the hand-held tester display, then operate the solenoid.
- (g) Check that the brake pedal does not go down further when the SFRH solenoid is turned ON by the hand-held tester.

NOTICE:

Do not keep the solenoid ON for more than 2 seconds continuously. When operating it continuously, set the interval of more than 20 seconds.

If the brake pedal goes down, replace the ABS actuator because holding solenoid valve operation is abnormal.

HINT:

To protect the solenoid, the hand-held tester turns OFF automatically 2 seconds after the solenoid has been turned ON.

- (h) Select the "SFRR" on the hand-held tester display, then operate the solenoid.
- (i) Check that the brake pedal goes down further when the SFRR solenoid is turned ON by the hand-held tester.

If the brake pedal does not go down, replace the ABS actuator because reduction solenoid valve operation is abnormal.

- (j) Check that the brake pedal returns when the motor relay is turned ON by the hand-held tester.

NOTICE:

Do not keep the motor relay ON for more than 5 seconds continuously. When operating it continuously, set the interval of more than 20 seconds.

If the brake pedal does not return, replace the ABS actuator because motor operation is in failure.

- (k) Turn the motor relay OFF and release the brake pedal.

4. INSPECT OTHER WHEEL SOLENOIDS OPERATION

Check the solenoids of the other wheels by following the same inspection procedures as for the right front wheel solenoids.

HINT:

Left front wheel: "SFLH" and "SFLR"

Right rear wheel: "SRRH" and "SRRR"

Right front wheel: "SFRR" and "SFRH"

NOTICE:

Never depress the brake pedal when the reduction solenoid alone is turned ON and the ABS ECU is reset.

5. CLEAR DTC (See page [DI-1397](#))

COMPONENTS

REMOVAL

1. REMOVE BRAKE LINE COVER

2. DISCONNECT CONNECTOR

Pull out the release bar, and disconnect the ABS ECU connector.

3. DISCONNECT BRAKE LINES

Using SST, disconnect the 5 brake lines from the ABS actuator.

SST 09023-00101

Torque: 15.2 N·m (155 kgf·cm, 11.2 ft·lbf)

HINT:

- When disconnecting the brake line, use tags or make a memo to identify the place to reconnect (see page [BR-64](#)).
- At the time of installation, connect each brake line to the correct position (see page [BR-64](#)).

4. REMOVE ABS ACTUATOR ASSEMBLY

Remove the 3 nuts and ABS actuator assembly.

Torque: 11.2 N·m (114 kgf·cm, 8 ft·lbf)

5. REMOVE ABS ACTUATOR

(a) Remove the 2 nuts and ABS actuator from the actuator bracket.

Torque: 5.4 N·m (55 kgf·cm, 48 in.-lbf)

INSTALLATION

Installation is in the reverse order of removal (See page [BR-65](#)).

HINT:

- After installation, fill the brake reservoir with brake fluid and bleed the brake system (See page [BR-4](#)).
- Check for leaks.

HYDRAULIC BRAKE BOOSTER (w/ VSC)

BR1Y8-01

ON-VEHICLE INSPECTION

1. CHECK HYDRAULIC BRAKE BOOSTER FLUID PRESSURE CHANGE

- (a) Inspect the battery voltage.
Battery voltage: 10 to 14 V
- (b) Turn the ignition switch off, and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator power supply system is released, reaction force becomes light and stroke becomes longer.

- (c) Install the brake pedal effort gauge (SST), and bleed air.
SST 09709-29018
- (d) When booster does not operate:
Depress the brake pedal and check fluid pressure.

At 245 N (25 kgf, 55 lbf):

Front brake pressure	Rear brake pressure
2,050 to 3650 kPa (20.9 to 37.2 kgf/cm ² , 297 to 529 psi)	0 kPa (0 kgf/cm ² , 0 psi)

At 343 N (35 kgf, 77 lbf):

Front brake pressure	Rear brake pressure
3,270 to 4870 kPa (33.3 to 50 kgf/cm ² , 474 to 711 psi)	0 kPa (0 kgf/cm ² , 0 psi)

- (e) When booster operates:
 - (1) Turn the ignition switch on and wait until the pump motor has stopped.

HINT:

Pump operating sound can be heard.

- (2) Turn the ignition switch off, and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator is released, reaction force becomes light and stroke becomes longer.

- (3) Repeat (1) and (2) 5 times.
- (4) Make sure that the interval between pump start and pump stop is 8 to 14 seconds.

If it takes 14 seconds or more, repeat (3).

(5) Depress the brake pedal and check fluid pressure.

At 49 N (5 kgf, 11 lbf):

Front brake pressure	Rear brake pressure
933 to 2,533 kPa (9.5 to 25.8 kgf/cm ² , 135 to 367 psi)	993 to 1,888 kPa (10.1 to 19.3 kgf/cm ² , 144 to 274 psi)

At 98 N (10 kgf, 22 lbf):

Front brake pressure	Rear brake pressure
3,109 to 4,709 kPa (31.7 to 48.0 kgf/cm ² , 451 to 683 psi)	2,087 to 3,181 kPa (21.3 to 32.4 kgf/cm ² , 303 to 461 psi)

At 147 N (15 kgf, 33 lbf):

Front brake pressure	Rear brake pressure
5,284 to 6,884 kPa (53.9 to 70.2 kgf/cm ² , 766 to 998 psi)	3,713 to 5,311 kPa (37.9 to 54.2 kgf/cm ² , 539 to 770 psi)

At 196 N (20 kgf, 44 lbf):

Front brake pressure	Rear brake pressure
7,460 to 9,060 kPa (76.1 to 92.4 kgf/cm ² , 1,082 to 1,314 psi)	5,843 to 7,441 kPa (59.6 to 75.9 kgf/cm ² , 848 to 1,079 psi)

2. INSPECT HYDRAULIC BRAKE BOOSTER OPERATION

(a) Inspect the battery voltage.

Battery voltage: 10 to 14 V

(b) Turn the ignition switch off, and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator power supply system is released, reaction force becomes light and stroke becomes longer.

(c) Check that the brake pedal becomes light to depress. If the pedal does not become light to depress, check and replace the brake line and hydraulic brake booster.

(d) Turn the ignition switch on, and check the pump motor operation noise.

If the pump motor does not operate, check and replace the wire harness and pump motor (See page [BR-90](#)).

(e) Connect the hand-held tester.

(1) Connect the hand-held tester to the DLC3.

(2) Turn the ignition switch on.

(3) Select "ACTIVE TEST" mode on the hand-held tester.

HINT:

- Please refer to the hand-held tester operator's manual for further details.
- To protect solenoids, hand-held tester turns off automatically 2 sec. after every solenoid has been turned on.

3. INSPECTION PROCEDURE

P

F19911

Inspection order (step)	SOL selected by active test	SOL to be activated
(a)	SRCF (SA1)	SMCF
(c)	SRCF (SA1) and SRCR (SA2)	SREA and SMCF
(d)	SFRH	SFRH
(e)	SFLH	SFLH
(f)	SFRR & SFRH	SFRR and SFRH
(g)	SFLR & SFLH	SFLR and SFLH
(h)	SRMF (SMCF, SA3)	SREC
(i)	SRMF (SMCF, SA3) and SRMR (SMCR, STR)	STR and SREC
(j)	SRRH	SRRH
(k)	SRLH	SRLH
(l)	SRH & SRR	SRRR and SRRH
(m)	SRLR & SRLH	SRLR and SRLH

(a) Inspect front VSC solenoid (SMCF) operation.

HINT:

- ON: Activate SMCF and check that the brake pedal cannot be depressed (the pedal feels tight).
- OFF: Deactivate SMCF and check that the brake pedal can be depressed.
 - (1) Select "SRCF (SA1)" on the hand-held tester.
 - (2) Turn the "SRCF (SA1)" on by the hand-held tester, then depress the brake pedal with stable force and check that the pedal cannot be depressed.

If the pedal can be depressed, replace the hydraulic brake booster.

HINT:

To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

- (3) Release the brake pedal.
- (4) When the solenoid is off, depress the brake pedal again and check that the brake pedal can be depressed.

If the pedal can be depressed, replace the hydraulic brake booster.

(b) PREPARE THE VEHICLE

- (1) Jack up and support the vehicle.
- (2) Release the parking brake lever.
- (3) Shift the transfer shift lever to the "N" position and check the rear wheels by rotating them by hand.

(c) Inspect front VSC solenoid (SREA) operation.

HINT:

- ON: Activate SREA and SMCF, depress the brake pedal, and then check that the front wheels do not rotate.
- OFF: Deactivate SREA and SMCF. Reactivate SMCF, depress the brake pedal, and then check that the front wheels rotate.
 - (1) Select "SRCR (SA2)" and "SRCF (SMCF)" on the hand-held tester.
 - (2) Turn the "SRCR (SA2)" and "SRCF (SMCF)" on simultaneously by the hand-held tester, then depress the brake pedal with stable force.
 - (3) When the solenoids are on, check that the front wheels do not rotate by hand.

If the front wheels rotate, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheels as slowly as possible.
 - (4) When the solenoids are off, turn the "SRCF (SMCF)" on again, then depress the brake pedal and check the front wheels by rotating them by hand.

If front wheels stop, replace the hydraulic brake booster.

- (5) When the "SRCF (SMCF)" is off, depress the brake pedal again and check that the brake pedal can be depressed.

If the pedal can be depressed, replace the hydraulic brake booster.

(d) Inspect front ABS solenoid (SFRH) operation.

HINT:

- ON: Activate SFRH, depress the brake pedal, and then check that the right front wheel rotates.
- OFF: Deactivate SFRH, depress the brake pedal, and then check that the front right wheel does not rotate.
 - (1) Select "SFRH" on the hand-held tester.
 - (2) Turn the "SFRH" on by the hand-held tester, then depress the brake pedal with stable force.
 - (3) When the solenoid is on, check the right front wheel by rotating it by hand.

If the right front wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly.

So rotate the wheel as slowly as possible.

 - (4) When the solenoid is off, depress the brake pedal again and check that the right front wheel does not rotate by hand.

If the right front wheel rotates, replace the hydraulic brake booster.

(e) Inspect front ABS solenoid (SFLH) operation.

HINT:

- ON: Activate SFLH, depress the brake pedal, and then check that the left front wheel rotates.
- OFF: Deactivate SFLH, depress the brake pedal, and then check that the front left wheel does not rotate.
 - (1) Select "SFLH" on the hand-held tester.
 - (2) Turn the "SFLH" on by the hand-held tester, then depress the brake pedal with stable force.
 - (3) When the solenoid is on, check the left front wheel by rotating it by hand.

If the left front wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.
 - (4) When the solenoid is off, depress the brake pedal again and check that the left front wheel does not rotate by hand.

If the left front wheel rotates, replace the hydraulic brake booster.

(f) Inspect front ABS solenoid (SFRR) operation.

HINT:

- ON: Depress the brake pedal, activate SFRR and SFRH, and then check that the right front wheel rotates.
- OFF: Deactivate SFRR and SFRH, depress the brake pedal, and then check that the right front wheel does not rotate.
 - (1) Select "SFRR & SFRH" on the hand-held tester.
 - (2) Depress the brake pedal with stable force, then turn the "SFRR & SFRH" on simultaneously by the hand-held tester.
 - (3) When the solenoids are on, check the right front wheel by rotating it by hand.

If the right front wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly.
So rotate the wheel as slowly as possible.
 - (4) When the solenoids are off, depress the brake pedal again and check that the right front wheel does not rotate by hand.

If the right front wheel rotates, replace the hydraulic brake booster.

(g) Inspect front ABS solenoid (SFLR) operation.

HINT:

- ON: Depress the brake pedal, activate SFLR and SFLH, and then check that the left front wheel rotates.
- OFF: Deactivate SFLR and SFLH, depress the brake pedal, and then check that the left front wheel does not rotate.
 - (1) Select "SFLR & SFLH" on the hand-held tester.
 - (2) Depress the brake pedal with stable force, then turn the "SFLR & SFLH" on simultaneously by the hand-held tester.
 - (3) When the solenoids are on, check the left front wheel by rotating it by hand.

If the left front wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.
 - (4) When the solenoids are off, depress the brake pedal again and check that the left front wheel does not rotate by hand.

If the left front wheel rotates, replace the hydraulic brake booster.

(h) Inspect rear VSC solenoid (SREC) operation.

HINT:

- ON: Depress the brake pedal and activate SREC. Release the brake pedal and check that the rear wheels do not rotate.
- OFF: Deactivate SREC and check that the rear wheels rotate.
 - (1) Select "SRMF (SMCF, SA3)" on the hand-held tester.
 - (2) Depress the brake pedal with stable force, then turn the "SRMF (SMCF, SA3)" on by the hand-held tester.
 - (3) Release the brake pedal when the solenoid is on, and check that the rear wheels do not rotate by hand.

If the rear wheels rotate, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheels as slowly as possible.
 - (4) When the solenoid is off, check the rear wheels by rotating them by hand.

If the rear wheels stop, replace the hydraulic brake booster.

(i) Inspect rear VSC solenoid (STR) operation.

HINT:

- ON: Activate STR and SREC, then check that the rear wheels do not rotate.
- OFF: Deactivate STR and SREC. Reactivate SREC and check that the rear wheels rotate.
 - (1) Select "SRMR (SMCR, STR)" on the hand-held tester.
 - (2) Turn the "SRMR (SMCR, STR)" on simultaneously by the hand-held tester.
 - (3) When the solenoids are on, check that the rear wheels do not rotate by hand.

If the rear wheels rotate, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheels fast, the fail-safe function is activated and judgement cannot be made properly.
So rotate the wheels as slowly as possible.
 - (4) When the solenoids are off, check the rear wheels by rotating them by hand.

If the rear wheels stop, replace the hydraulic brake booster.

- (5) When the "SRMF (SREC)" is off, depress the brake pedal again and check that the rear wheels do not rotate by hand.

If the rear wheels rotate, replace the hydraulic brake booster.

(j) Inspect rear ABS solenoid (SRRH) operation.

HINT:

- ON: Activate SRRH, depress the brake pedal, and then check that the right rear wheel rotates.
- OFF: Deactivate SRRH, depress the brake pedal, and then check that the right rear wheel does not rotate.
 - (1) Select "SRRH" on the hand-held tester.
 - (2) Turn the "SRRH" on by the hand-held tester, then depress the brake pedal with stable force.
 - (3) When the solenoid is on, check the right rear wheel by rotating it by hand.

If the right rear wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly.
So rotate the wheel as slowly as possible.
 - (4) When the solenoid is off, depress the brake pedal again and check that the right rear wheel does not rotate by hand.

If the right rear wheel rotates, replace the hydraulic brake booster.

(k) Inspect rear ABS solenoid (SRLH) operation.

HINT:

- ON: Activate SRLH, depress the brake pedal, and then check that the left rear wheel rotates.
- OFF: Deactivate SRLH, depress the brake pedal, and then check that the left rear wheel does not rotate.
 - (1) Select "SRLH" on the hand-held tester.
 - (2) Turn the "SRLH" on by the hand-held tester, then depress the brake pedal with stable force.
 - (3) When the solenoids is on, check the left rear wheel by rotating it by hand.

If the left rear wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.
 - (4) When the solenoid is off, depress the brake pedal again and check that the left rear wheel does not rotate by hand.

If the left rear wheel rotates, replace the hydraulic brake booster.

(I) Inspect rear ABS solenoid (SRRR) operation.

HINT:

- ON: Depress the brake pedal, activate SRRR and SRRH, and then check that the right rear wheel rotates.
- OFF: Deactivate SRRR and SRRH, depress the brake pedal, and then check that the right rear wheel does not rotate.
 - (1) Select "SRH & SRR" on the hand-held tester.
 - (2) Depress the brake pedal with stable force, then turn the "SRH & SRR" on simultaneously by the hand-held tester.
 - (3) When the solenoids are on, check the right rear wheel by rotating it by hand.

If the right rear wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly. So rotate the wheel as slowly as possible.
 - (4) When the solenoids are off, depress the brake pedal again and check that the right rear wheel does not rotate by hand.

If the right rear wheel rotates, replace the hydraulic brake booster.

(m) Inspect rear ABS solenoid (SRLR) operation.

HINT:

- ON: Depress the brake pedal, activate SRLR and SRLH, and then check that the left rear wheel rotates.
- OFF: Deactivate SRLR and SRLH, depress the brake pedal, and then check that the left rear wheel does not rotate.
 - (1) Select "SRLR & SRLH" on the hand-held tester.
 - (2) Depress the brake pedal with stable force, then turn the "SRLR & SRLH" on simultaneously by the hand-held tester.
 - (3) When the solenoids are on, check the left rear wheel by rotating it by hand.

If the left rear wheel stops, replace the hydraulic brake booster.

NOTICE:

When operating it continuously, set the interval of more than 20 seconds.

HINT:

- To protect the solenoids, the hand-held tester turns off automatically 2 seconds after every solenoid has been turned on.
- When rotating the wheel fast, the fail-safe function is activated and judgement cannot be made properly.
So rotate the wheel as slowly as possible.
 - (4) When the solenoids are off, depress the brake pedal again and check that the left rear wheel does not rotate by hand.

If the left rear wheel rotates, replace the hydraulic brake booster.

COMPONENTS

BRAKE - HYDRAULIC BRAKE BOOSTER (w/ VSC)

REMOVAL

NOTICE:

Before starting work, make sure that the ignition switch is OFF and depress the brake pedal more than 20 times.

HINT:

When pressure in the accumulator power supply system is released, reaction force becomes light and stroke becomes longer.

NOTICE:

- As high pressure is applied to the brake actuator tube No. 1, do not deform it.
- Do not turn the ignition switch ON until work is over.

1. DRAW OUT FLUID WITH SYRINGE

NOTICE:

Do not let brake fluid remain on a painted surface. Wash it off immediately.

2. REMOVE FRONT DOOR SCUFF PLATE, COWL SIDE TRIM BOARD, SIDE PANEL, LOWER FINISH PANEL AND NO. 2 HEATER TO REGISTER DUCT
(See page [BO-111](#))

3. DISCONNECT 3 CONNECTORS

Disconnect the 2 actuator connectors and fluid level warning switch connector.

4. DISCONNECT BRAKE LINES

Using SST, disconnect the 4 brake lines.

SST 09023-00101

Torque: 15.2 N·m (155 kgf·cm, 11.2 ft·lbf)

HINT:

- When disconnecting the brake lines, use tags or make a memo to identify the place to reconnect (see page [BR-82](#)).
- At the time of installation, connect each brake line to the correct position (see page [BR-82](#)).

5. REMOVE CLIP AND CLEVIS PIN**6. REMOVE HYDRAULIC BRAKE BOOSTER ASSEMBLY**

- (a) Remove the 4 booster installation nuts.
Torque: 14.2 N·m (145 kgf·cm, 10 ft·lbf)
- (b) Remove the hydraulic brake booster assembly and gasket.

DISASSEMBLY

NOTICE:

As high pressure is applied to the brake actuator tube No. 1, do not deform it.

1. REMOVE BRAKE ACTUATOR BRACKET NO. 1

- (a) Using a hexagon wrench (5 mm), remove the screw and brake actuator bracket No. 1 from the hydraulic brake booster assembly.

Torque: 7.8 N·m (80 kgf·cm, 69 in.-lbf)

- (b) Using a screwdriver, remove the fluid level warning switch connector from the brake actuator bracket No. 1.

2. REMOVE MASTER CYLINDER RESERVOIR ASSEMBLY

- (a) Remove the screw from the master cylinder reservoir assembly.

Torque: 1.7 N·m (17 kgf·cm, 15 in.-lbf)

- (b) Using a pin punch and hammer, remove the pin from the master cylinder reservoir assembly.

- (c) Pull out the master cylinder reservoir assembly from the hydraulic brake booster assembly.

- (d) Remove the 3 grommets from the master cylinder reservoir assembly.

- (e) Remove the cap from the master cylinder reservoir assembly.

3. REMOVE BRAKE ACTUATOR HOSE

- (a) Using needle nose pliers, slide the 2 clips.

- (b) Remove the brake actuator hose from the hydraulic brake booster assembly.

4. REMOVE BRAKE ACTUATOR TUBE NO. 1

- (a) Using SST, remove the brake actuator tube No. 1 from the hydraulic brake booster assembly.

Torque: 15.2 N·m (155 kgf·cm, 11.2 ft·lbf)

5. REMOVE BRAKE BOOSTER W/ ACCUMULATOR

- (a) Using a screwdriver, remove the 2 plugs from the hydraulic brake booster assembly.

- (b) Remove the 2 screws and pull the wire harness from the hydraulic brake booster assembly.

Torque: 2.9 N·m (30 kgf·cm, 26 in.-lbf)

- (c) Using a screwdriver, remove the clip from the hydraulic brake booster assembly.

- (d) Using a hexagon wrench (4 mm), loosen the 2 pins and brake booster w/ accumulator pump assembly from the hydraulic brake booster assembly.

Torque: 7.8 N·m (80 kgf·cm, 69 in.-lbf)

- (e) Remove the 2 pins, 2 bushes and 2 collars from the brake booster w/ accumulator pump assembly.

**6. REMOVE BRAKE ACTUATOR BRACKET**

Using a hexagon wrench (5 mm), remove the screw and brake actuator bracket from the hydraulic brake booster assembly.

Torque: 7.8 N-m (80 kgf-cm, 69 in.-lbf)

**7. REMOVE BRAKE BOOSTER PUMP BRACKET**

(a) Using a hexagon wrench (5 mm), remove the 2 screws and brake booster pump bracket from the hydraulic brake booster assembly.

Torque: 7.8 N-m (80 kgf-cm, 69 in.-lbf)

(b) Remove the bush from the brake booster pump bracket.

**8. REMOVE MASTER CYLINDER SOLENOID**

(a) Remove the 6 bolts.

Torque: 31.9 N-m (325 kgf-cm, 24 ft-lbf)

(b) Remove the master cylinder solenoid and the gasket from the master cylinder body.

NOTICE:

Do not let water, dust, and/or other objects attach to the surface and/or attaching surface of the master cylinder solenoid, master cylinder and body gasket.

**9. REMOVE CLEVIS**

(a) Loosen the clevis lock nut.

Torque: 25.5 N-m (260 kgf-cm, 19 ft-lbf)

(b) Remove the clevis and clevis lock nut from the hydraulic brake booster assembly.

10. REMOVE BOOT**11. REMOVE PISTON**

(a) Pressing the piston in with a screwdriver, use a pin or equivalent to push the C-ring from the hole in the master cylinder body then remove it with another screwdriver.

(b) Remove the piston, pulling it straight out, not at an angle.

NOTICE:

- **If pulled out at an angle, there is a possibility that the cylinder bore could be damaged.**
- **During reassembly, be careful not to damage the rubber lips of the piston.**

**12. REMOVE BRAKE BOOSTER ACCUMULATOR ASSEMBLY**

- (a) Place the brake booster w/ accumulator pump assembly in a vise between a cloth.
- (b) Using a socket wrench (17 mm), remove the brake booster accumulator assembly from the pump motor assembly.
Torque: 57.4 N·m (585 kgf·cm, 42 ft·lbf)
- (c) Remove the brake accumulator pipe, compression spring and O-ring from the brake booster accumulator assembly and the pump motor assembly.

INSPECTION

INSPECT HYDRAULIC BRAKE BOOSTER PUMP MOTOR ASSEMBLY OPERATION

- (a) Connect the positive (+) lead from the battery to the red cable of the pump motor, and the negative (-) lead to the black cable.
- (b) Check pump motor operation.

OK: Normal operating sound is heard.

DISPOSAL

DISPOSAL METHOD OF BRAKE BOOSTER ACCUMULATOR ASSEMBLY

- (a) Place the brake booster accumulator assembly in a vise and cover it with cloth.
- (b) Carefully cut a hole in area A of the brake accumulator assembly shown in the illustration on the left using a saw and discharge the gas remaining inside.

CAUTION:

- **Cover with a piece of cloth when working because gas and liquid may blow out.**
 - **Carefully, not abruptly, cut the assembly.**
 - **Wear protective glasses.**
- (c) When the outer body of the brake booster accumulator assembly is cut, gas and liquid discharge.

HINT:

- The gas is colorless, odorless and harmless nitrogen gas.
- The liquid is brake fluid.

REASSEMBLY

Reassembly is in the reverse order of disassembly (See page [BR-86](#)).

NOTICE:

Apply lithium soap base glycol grease to the rubber parts indicated by the arrows (See page [BR-82](#)).

INSTALLATION

Installation is in the reverse order of removal (See page [BR-84](#)).

HINT:

- After installation, fill the brake reservoir with brake fluid and bleed the brake system (See page [BR-4](#)).
- Check for leaks.

FRONT SPEED SENSOR COMPONENTS

BR0A2-06

REMOVAL

1. **REMOVE FRONT WHEEL**
Torque: 113 N·m (1,150 kgf·cm, 83 ft·lbf)
2. **DISCONNECT SPEED SENSOR CONNECTOR**
3. **REMOVE SPEED SENSOR**
 - (a) Remove the 2 clips and 3 clamp bolts holding the sensor harness from the frame, upper arm and steering knuckle.
Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)
 - (b) Remove the bolt and speed sensor from the steering knuckle.
Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

INSTALLATION

Installation is in the reverse order of removal (See page [BR-95](#)).

HINT:

After installation, check the speed sensor signal (See page [DI-1387](#) or [DI-1478](#)).

STEERING ANGLE SENSOR REMOVAL

BR1YG-01

1. REMOVE STEERING WHEEL PAD

NOTICE:

If the airbag connector is disconnected with the ignition switch in ACC or ON, DTCs will be recorded.

(a) Disconnect battery negative terminal.

(b) Place the front wheels facing straight ahead.

(c) Remove the steering wheel lower No. 3 cover.

(d) Remove the steering wheel lower No. 2 cover.

(e) Using a torx® socket wrench (T30), loosen the 2 torx® screws.

HINT:

Loosen the screw until the groove along the screw circumference catches on the screw case.

(f) Pull out the wheel pad from the steering wheel.

(g) Using a screwdriver, disconnect the airbag connector.

CAUTION:

- When storing the steering wheel pad, keep the upper surface of the pad facing upward.
- Never disassemble the steering wheel pad.

NOTICE:

When removing the steering wheel pad, take care not to pull the airbag wire harness.

(h) Disconnect the horn connector and remove the steering wheel pad.

2. REMOVE STEERING WHEEL

(a) Remove the steering wheel set nut.

(b) Place matchmarks on the steering wheel and main shaft assembly.

(c) Using SST, remove the wheel.

SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

3. REMOVE SPIRAL CABLE

(a) Disconnect the 2 connectors.

(b) Remove the 4 screws and remove the spiral cable.

4. REMOVE STEERING ANGLE SENSOR

- (a) Disconnect the connector.
- (b) While pressing the 2 claws, remove the steering sensor.

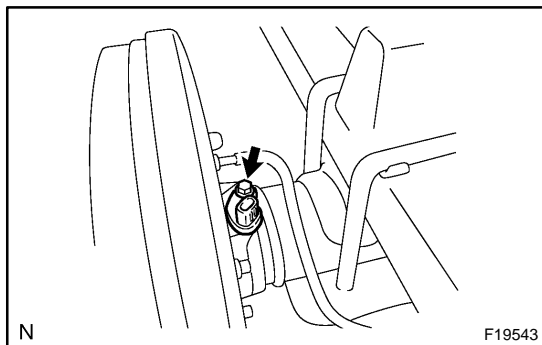

INSTALLATION

Installation is in the reverse order of removal (See page [BR-97](#)).

REAR SPEED SENSOR COMPONENTS

BR0A5-06

REMOVAL

1. **REMOVE REAR WHEEL**
Torque: 113 N·m (1.150 kgf·cm, 83 ft·lbf)
2. **DISCONNECT SPEED SENSOR CONNECTOR**
3. **REMOVE SPEED SENSOR**
 - (a) Remove the bolt and speed sensor from the axle carrier.
Torque: 8.0 N·m (82 kgf·cm, 71 ft·lbf)

INSTALLATION

Installation is in the reverse order of removal (See page [BR-101](#)).

HINT:

After installation, check the speed sensor signal
(See page [DI-1387](#) or [DI-1478](#)).

STEERING SYSTEM

SR01S-07

PRECAUTION

- ★ Care must be taken to replace parts properly because they could affect the performance of the steering system and result in a driving hazard.
- ★ The TOYOTA TUNDRA is equipped with an SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operation in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices in the RS section.
- ★ When replacing the steering angle sensor, drive the vehicle straight ahead at a speed of 6.5 mph (10.5 km/h) or more. Accordingly, zero point calibration of the steering angle sensor is performed.
- ★ After performing "Front wheel alignment adjustment", clearing and reading the yaw rate & deceleration sensor zero point calibration data is necessary (See page [DI-1494](#)).

TROUBLESHOOTING

SR01T-09

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in the order shown. If necessary, repair or replace these parts.

Symptom	Suspect Area	See page
Hard steering	<ol style="list-style-type: none"> 1. Tires (Improperly inflated) 2. Power steering fluid level (Low) 3. Drive belt (Loose) 4. Front wheel alignment (Incorrect) 5. Steering system joints (Worn) 6. Suspension arm ball joints (Worn) 7. Steering column (Binding) 8. Power steering vane pump 9. Power steering gear 	<p>SA-3</p> <p>SR-5</p> <p>SR-3</p> <p>SA-5</p> <p>-</p> <p>SA-84</p> <p>-</p> <p>SR-45</p> <p>SR-59</p> <p>SR-70</p>
Poor return	<ol style="list-style-type: none"> 1. Tires (Improperly inflated) 2. Front wheel alignment (Incorrect) 3. Steering column (Binding) 4. Power steering gear 	<p>SA-3</p> <p>SA-5</p> <p>-</p> <p>SR-70</p>
Excessive play	<ol style="list-style-type: none"> 1. Steering system joints (Worn) 2. Suspension arm ball joints (Worn) 3. Intermediate shaft, Sliding yoke (Worn) 4. Front wheel bearing (Worn) 5. Power steering gear 	<p>-</p> <p>SA-84</p> <p>-</p> <p>SA-19</p> <p>SR-70</p>
Abnormal noise	<ol style="list-style-type: none"> 1. Power steering fluid level (Low) 2. Steering system joints (Worn) 3. Power steering vane pump 4. Power steering gear 	<p>SR-5</p> <p>-</p> <p>SR-45</p> <p>SR-59</p> <p>SR-70</p>

DRIVE BELT INSPECTION

SR1KF-01

INSPECT DRIVE BELT

- (a) Visually check the belt for excessive wear, frayed cords, etc.

If any defect is found, replace the drive belt.

HINT:

Cracks on the rib side of a belt are considered acceptable. Replace the belt if there are any missing ribs.

HINT:

- ★ After installing a belt, check that it fits properly in the ribbed grooves.
- ★ Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

POWER STEERING FLUID BLEEDING

SR01V-11

1. **CHECK FLUID LEVEL** (See page [SR-5](#))
2. **JACK UP FRONT OF VEHICLE AND SUPPORT IT WITH STANDS**

3. **TURN STEERING WHEEL**

With the engine stopped, turn the wheel slowly from lock to lock several times.

4. **LOWER VEHICLE**

5. **START ENGINE**

Run the engine at idle for a few minutes.

6. **TURN STEERING WHEEL**

(a) With the engine idling, turn the wheel left or right to the full lock position and keep it there for 2 to 3 seconds, then turn the wheel to the opposite full lock position and keep it there for 2 to 3 seconds.

(b) Repeat (a) several times.

7. **STOP ENGINE**

8. **CHECK FOR FOAMING OR EMULSIFICATION**

If the system has to be bled twice specifically because of foaming or emulsification, check for fluid leaks in the system.

9. **CHECK FLUID LEVEL** (See page [SR-5](#))

INSPECTION

1. CHECK FLUID LEVEL

- (a) Keep the vehicle level.
- (b) With the engine stopped, check the fluid level in the reservoir.

If necessary, add fluid.

Fluid: ATF DEXRON® II or III

HINT:

When the fluid is hot, check that the fluid level is within the HOT range.

If the fluid is cold, check that it is within the COLD range.

- (c) Start the engine and run at idle.
- (d) Turn the steering wheel from lock to lock several times to raise fluid temperature.

Fluid temperature: 80°C (176°F)

- (e) Check for foaming or emulsification.
- If foaming or emulsification is identified, bleed air from the power steering system (See page [SR-4](#)).

- (f) With the engine idling, measure the fluid level in the reservoir.
- (g) Stop the engine.
- (h) Wait a few minutes and remeasure the fluid level in the reservoir.

Maximum fluid level rise: 5 mm (0.20 in.)

If the fluid level rise exceeds the maximum, bleed air from the power steering system (See page [SR-4](#)).

- (i) Check the fluid level.

2. CHECK STEERING FLUID PRESSURE

- (a) 2UZ-FE engine:
Remove the air cleaner assembly with the air cleaner hose (See page [SR-61](#)).
- (b) Disconnect the pressure feed tube from the PS vane pump.
(1GR-FE engine: See page [SR-47](#) .)
(2UZ-FE engine: See page [SR-61](#) .)
- (c) Connect SST, as shown in the illustration below.
SST 09640-10010 (09641-01010, 09641-01030, 09641-01060)

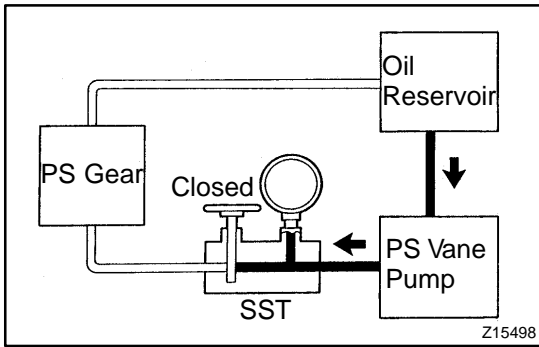

NOTICE:

Check that the valve of the SST is in the open position.

- (d) Bleed air from the power steering system (See page [SR-4](#)).
- (e) Start the engine and run at idle.
- (f) Turn the steering wheel from lock to lock several times to raise fluid temperature.

Fluid temperature: 80 °C (176 °F)

- (g) With the engine idling, close the valve of the SST and observe the reading on the SST.
Minimum fluid pressure:
8,336 kPa (85 kgf/cm², 1,209 psi)

NOTICE:

- ★ Do not keep the valve closed for more than 10 seconds.
- ★ Do not allow the fluid temperature to become too high.

- (h) With the engine idling, fully open the valve.
- (i) Measure the fluid pressure at engine speeds of 1,000 rpm and 3,000 rpm.

Difference in fluid pressure:
490 kPa (5 kgf/cm², 71 psi) or less

NOTICE:

Do not turn the steering wheel.

- (j) With the engine idling and the valve fully opened, turn the steering wheel left or right to the full lock position.

Minimum fluid pressure:
8,336 kPa (85 kgf/cm², 1,209 psi)

NOTICE:

- ★ Do not keep the steering wheel in the full lock position for more than 10 seconds.
- ★ Do not allow the fluid temperature to become too high.

- (k) Disconnect the SST.
 SST 09640-10010 (09641-01010, 09641-01030, 09641-01060)
- (l) Connect the pressure feed tube.
 (1GR-FE engine: See page [SR-57](#).)
 (2UZ-FE engine: See page [SR-69](#).)
- (m) 2UZ-FE engine:
 Install the air cleaner assembly with the air cleaner hose
 (See page [SR-69](#)).
- (n) Bleed air from the power steering system (See page [SR-4](#)).

AIR CONTROL VALVE INSPECTION

SR01X-04

1. **TURN AIR CONDITIONING SWITCH OFF**
2. **CHECK IDLE-UP**
 - (a) Start the engine and run it at idle.
 - (b) Fully turn the steering wheel.
 - (c) Check that the engine rotations decrease when the vacuum hose of the air control valve is pinched.
 - (d) Check that the engine rotations increase when the hose is released.

STEERING WHEEL INSPECTION

SR01Y-13

1. CHECK STEERING WHEEL FREE PLAY

- Stop the vehicle and face the tires straight ahead.
- Gently rock the steering wheel up and down with a finger, and check the steering wheel free play.

Maximum free play: 30 mm (1.18 in.)

2. CHECK STEERING EFFORT

- Center the steering wheel.
- Remove the steering wheel pad (See page [SR-18](#) , [SR-33](#)).
- Start the engine and run at idle.
- Measure the steering effort in both directions.

Steering effort (Reference):

4.9 N·m (50 kgf·cm, 43 in.-lbf)

HINT:

Check tire type, pressure and contact surface before making your diagnosis.

- Tighten the steering wheel set nut.

Torque: 50 N·m (510 kgf·cm, 37 ft-lbf)

- Install the steering wheel pad (See page [SR-28](#) , [SR-42](#)).

REPAIR PROCEDURES

HINT:

This is the repair procedure for steering off center.

1. INSPECT STEERING WHEEL OFF CENTER

- (a) Apply masking tape on the top center of the steering wheel and steering column upper cover.

- (b) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), and hold the steering wheel to maintain the course.
- (c) Draw a line on the masking tape as shown in the illustration.

(d) Turn the steering wheel to its straight position.

HINT:

Refer to the upper surface of the steering wheel, steering spoke and SRS airbag line for the straight position.

(e) Draw a new line on the masking tape of the steering wheel as shown in the illustration.

(f) Measure the distance between the 2 lines on the masking tape of the steering wheel.

(g) Convert the measured distance to steering angle.

Measured distance 1 mm (0.04 in.) = Steering angle approximately 1 deg.

HINT:

Make a note of the steering angle.

2. ADJUST STEERING ANGLE

(a) Lift up the vehicle.

NOTICE:

The adjustment method for steering angle is different depending on the models. Check whether it is type A or B.

(b) Draw a line on the RH and LH tie rod and rack ends where it can easily be seen.

(c) Using a paper gauge, measure the distance from RH and LH tie rod ends to the rack end screws.

HINT:

★ Measure the RH side and LH side.

★ Make a note of the measured values.

(d) Remove the RH and LH boot clips from the rack boots.

(e) Loosen the RH and LH lock nuts.

(f) Turn the RH and LH rack end by the same amount (but in different directions) according to the steering angle.

1 turn 360 deg. of rack end (1.5 mm (0.059 in.) horizontal movement) = 12 deg. of steering angle

(g) Tighten the RH and LH lock nuts by the specified torque.

Torque: 55 N·m (560 kgf·cm, 41 ft·lbf)

NOTICE:

Make sure that the difference in length between RH and LH tie rod ends and rack end screws are within 1.5 mm (0.059 in.).

(h) Install the RH and LH boot clips.

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

2. REMOVE STEERING WHEEL PAD

NOTICE:

If the airbag connector is disconnected with the ignition switch in the ON or ACC position, DTCs will be recorded.

- Place the front wheels facing straight ahead.
- Remove the steering wheel lower No. 2 cover.
- Remove the steering wheel lower No. 3 cover.
- Using a torx® socket wrench, loosen the 2 torx® screws.

HINT:

Loosen each screw until the groove along the screw circumference is caught on the screw case.

- Pull out the wheel pad from the steering wheel and disconnect the airbag connectors and horn terminal.

CAUTION:

- ★ When storing the wheel pad, keep the upper surface of the pad facing upward.
- ★ Never disassemble the wheel pad.

NOTICE:

When removing the wheel pad, take care not to pull on the airbag wire harness.

3. REMOVE STEERING WHEEL

- Remove the steering wheel set nut.
- Put matchmarks on the steering wheel and main shaft assembly.
- Using SST, remove the wheel.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)
- Disconnect the connector.

4. REMOVE UPPER AND LOWER COLUMN COVERS

Remove the 3 screws, upper and lower column covers.

5. REMOVE COMBINATION SWITCH WITH SPIRAL CABLE

- (a) M/T:
Disconnect the 3 connectors.
- (b) A/T:
Disconnect the 4 connectors.
- (c) Disconnect the airbag connector.
- (d) Remove the 3 screws and combination switch.

6. REMOVE SPIRAL CABLE (See page BE-40)**NOTICE:**

Do not disassemble the cable or apply oil to it.

7. REMOVE LOWER LH FINISH PANEL

- (a) Remove the 2 screws and disconnect the hood lock release lever from the panel.
- (b) Remove the 4 panel set bolts and lower LH finish panel.

8. REMOVE NO. 2 HEATER TO REGISTER DUCT**9. REMOVE BRAKE PEDAL RETURN SPRING****10. REMOVE SLIDING YOKE**

- (a) Put matchmarks on the sliding yoke and No. 2 intermediate shaft assembly.
- (b) Remove the "A" bolt.
- (c) Remove the "B" bolt.
- (d) Slide the sliding yoke and remove it.

**11. REMOVE COLUMN HOLE COVER NO. 2**

Remove the 3 bolts and column hole cover No. 2.

**12. A/T:****DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**

Disconnect the cable assembly from the column shift lever assembly.

13. REMOVE STEERING COLUMN ASSEMBLY WITH NO. 2 UNIVERSAL JOINT ASSEMBLY

- (a) Disconnect the connectors.
- (b) Remove the 4 steering column set nuts.
- (c) Pull out the steering column assembly with the No. 2 universal joint assembly.

**14. DISCONNECT NO. 2 UNIVERSAL JOINT ASSEMBLY**

- (a) Put matchmarks on the steering column assembly and No. 2 universal joint assembly.
- (b) Remove the bolt and No. 2 universal joint assembly.

**15. REMOVE NO. 2 INTERMEDIATE SHAFT ASSEMBLY**

- (a) Put matchmarks on the No. 2 intermediate shaft assembly and control valve shaft.
- (b) Remove the bolt and No. 2 intermediate shaft assembly.

DISASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. REMOVE KEY CYLINDER LAMP ASSEMBLY

Remove the clip and key cylinder lamp assembly.

2. REMOVE COLUMN UPPER BRACKET AND COLUMN UPPER CLAMP

- Using a centering punch, mark the center of the 2 tapered-head bolts.
- Using a 3 to 4 mm (0.12 to 0.16 in.) drill, drill a hole into the 2 bolts.
- Using a screw extractor, remove the 2 bolts, column upper bracket and column upper clamp.

3. A/T: REMOVE SHIFT LEVER

Remove the screw and shift lever.

4. A/T: REMOVE UPPER NO. 2 STEERING COVER

5. A/T: REMOVE PARK LOCK CABLE ASSEMBLY (See page [AT-21](#))

6. A/T: REMOVE SHIFT LEVER HOUSING

Remove the 3 torx® screws and shift lever housing.

7. Tilt steering column: REMOVE RELEASE LEVER SPRING

8. REMOVE TURN SIGNAL BRACKET

Remove the 2 torx® screws and turn signal bracket.

9. Non-tilt steering column: REMOVE COLUMN UPPER TUBE WITH MAIN SHAFT ASSEMBLY

- Remove the 4 torx® bolts.
- Remove the column upper tube with the main shaft assembly from the column tube assembly.

**10. Tilt steering column:
REMOVE STEERING COLUMN HOUSING WITH MAIN
SHAFT ASSEMBLY**

- (a) Set SST, 2 plate washers (18 and 36 mm outer diameter) and a screw (4.0 mm diameter, 0.7 mm pitch, 15.0 mm length), as shown in the illustration. Then remove the 2 pivot pins.

SST 09910-00015 (09911-0001 1, 09912-00010)

Reference

Plate washer A (18 mm): 90562-04012

Plate washer B (36 mm): 90201-10201

Screw: 90154-40015

- (b) Remove the column housing with the shaft assembly from the column tube assembly.

NOTICE:

Do not bend the universal joint of the main shaft assembly more than 15°.

- (c) Remove the tilt spring and spring guide.

**11. Tilt steering column:
REMOVE STEERING COLUMN HOUSING SUPPORT**

- (a) Remove the 4 torx® bolts.
(b) Remove the 2 tilt No.1 stoppers and steering column housing support.

12. REMOVE MAIN SHAFT STOPPER

13. REMOVE MAIN SHAFT ASSEMBLY

- (a) Install SST to the main shaft assembly, as shown in the illustration.

SST 09612-07010

- (b) Using SST, compress the compression spring.

NOTICE:

Do not bend the universal joint of the shaft assembly more than 15°.

HINT:

Hold the shaft assembly with your hand to prevent rotation.

- (c) Using a screwdriver, remove the retaining ring.
(d) Non-tilt steering column:
Remove the spring retainer and compression spring.
(e) Tilt steering column:
Remove the spring retainer, compression spring, upper bearing inner race seat and inner race.

INSPECTION

1. INSPECT STEERING LOCK OPERATION

Check that the steering lock mechanism operates properly.

2. IF NECESSARY, REPLACE KEY CYLINDER

- (a) Place the ignition key in the ACC position.
- (b) Push down the stop pin with a screwdriver, and pull out the cylinder.
- (c) Install a new cylinder.

HINT:

Make sure the key is in the ACC position.

3. INSPECT IGNITION SWITCH (See page BE-37)

4. IF NECESSARY, REPLACE IGNITION SWITCH

- (a) Remove the 2 screws and ignition switch.
- (b) Install a new ignition switch with the 2 screws.

5. INSPECT KEY UNLOCK WARNING SWITCH (See page BE-37)

6. IF NECESSARY, REPLACE KEY UNLOCK WARNING SWITCH

- (a) Slide out the key unlock warning switch.
- (b) Install a new key unlock warning switch.

7. A/T:

INSPECT BEARING

- (a) Check that the bearing rotates smoothly without abnormal noise.

If it does not rotate smoothly or abnormal noise occurs, replace the column housing.

- (b) Coat the bearing with molybdenum disulfide lithium base grease.

8. IF NECESSARY, REPLACE SHAFT BEARING

- (a) Using SST and a press, press out the shaft bearing.
 SST 09950-60010 (09951-00430),
 09950-70010 (09951-07360)

- (b) Coat a new shaft bearing with molybdenum disulfide lithium base grease.
- (c) Using SST and a press, press in the shaft bearing.
SST 09950-60010 (09951-00460),
09950-70010 (09951-07150)

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. **COAT PARTS INDICATED BY ARROWS WITH MOLYBDENUM DISULFIDE LITHIUM BASE GREASE (See page SR-12)**

2. INSTALL MAIN SHAFT ASSEMBLY

- (a) **Non-tilt steering column:**
Install the compression spring and spring retainer.
- (b) **Tilt steering column:**
Install the inner race, upper bearing inner race seat, compression spring and spring retainer.
- (c) Install a new retaining ring to the main shaft assembly.
- (d) Install the washer of SST to the main shaft assembly.
- (e) Set SST on the main shaft assembly, as shown in the illustration.
SST 09612-07010
- (f) Using SST, push down the retaining ring until it fits into the shaft groove and install the main shaft assembly.

NOTICE:

Do not bend the universal joint of the shaft assembly more than 15°.

HINT:

Hold the main shaft assembly with your hand to prevent rotation.

3. INSTALL MAIN SHAFT STOPPER

4. Tilt steering column:

INSTALL STEERING COLUMN HOUSING SUPPORT

- (a) Install 2 new tilt No.1 stoppers and the steering column housing support.
- (b) Install 4 new torx® bolts.
Torque: 19 N·m (195 kgf-cm, 14 ft-lbf)

5. Non-tilt steering column:

INSTALL COLUMN UPPER TUBE WITH MAIN SHAFT ASSEMBLY

- (a) Install the column upper tube with the main shaft assembly to the column tube assembly.
- (b) Install 4 new torx® bolts.
Torque: 19 N·m (195 kgf-cm, 14 ft-lbf)

**6. Tilt steering column:
INSTALL STEERING COLUMN HOUSING WITH MAIN
SHAFT ASSEMBLY**

- (a) Install the steering column housing with the main shaft assembly into the column tube assembly.
- (b) Install the tilt spring and spring guide.
- (c) Hold the steering column housing and steering column housing support in a vise.
- (d) Temporarily install 2 new pivot pins.

- (e) Using a punch and a hammer, tap in the pivot pin.
- (f) Using a pin punch and hammer, stake at 3 places evenly around the hole as shown in the illustration.

7. INSTALL TURN SIGNAL BRACKET

Install the turn signal bracket with 2 new torx® screws.

Torque: 7.5 N·m (75 kgf·cm, 65 in.-lbf)

HINT:

Make sure that the protrusion on the steering column housing is fitted into the hole of the turn signal bracket.

- 8. Tilt steering column:
INSTALL RELEASE LEVER SPRING**
- 9. A/T:
INSTALL PARK LOCK CABLE ASSEMBLY (See page
[AT-22](#))**
- 10. A/T:
INSTALL SHIFT LEVER HOUSING**
Install the shift lever housing with 3 new torx® screws.
Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)
- 11. A/T:
INSTALL UPPER NO. 2 STEERING COVER**
- 12. A/T:
INSTALL SHIFT LEVER**
Install the shift lever with a new torx® screw.
Torque: 18 N·m (180 kgf·cm, 13 ft·lbf)

**13. INSTALL COLUMN UPPER BRACKET AND COLUMN UPPER CLAMP**

- (a) Install the column upper bracket and column upper clamp with 2 new tapered-head bolts.

HINT:

Insert the bracket pin into the column tube hole.

- (b) Tighten the tapered-head bolts until the bolt heads break off.

14. INSTALL KEY CYLINDER LAMP ASSEMBLY

Install the key cylinder lamp assembly with the clip.

INSTALLATION

NOTICE:

When replacing the steering angle sensor, drive the vehicle straight ahead at a speed of 6.5 mph (10.5 km/h) or more. Accordingly, zero point calibration of the steering angle sensor is performed.

HINT:

If the steering angle sensor zero point calibration is not performed, its value will be fixed. Check after driving the vehicle straight ahead at a speed of 6.5 mph (10.5 km/h) or more (See page [DI-1568](#)).

1. **INSTALL NO. 2 INTERMEDIATE SHAFT ASSEMBLY**
 - (a) Align the matchmark on the No. 2 intermediate shaft assembly with the one on the control valve shaft.
 - (b) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

2. **CONNECT NO. 2 UNIVERSAL JOINT ASSEMBLY**
 - (a) Insert the column hole cover No. 2.
 - (b) Align the matchmarks on the column assembly and No. 2 universal joint assembly.
 - (c) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

3. **INSTALL STEERING COLUMN ASSEMBLY WITH NO. 2 UNIVERSAL JOINT ASSEMBLY**

- (a) Install the column assembly with the No. 2 universal joint assembly.
- (b) Install the 4 steering column set nuts.
- (c) Connect the connectors.

Torque: 26 N·m (260 kgf·cm, 19 ft·lbf)

4. **A/T:**

CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

Connect the cable assembly to the shift lever assembly.

**5. INSTALL COLUMN HOLE COVER NO. 2**

Install the column hole cover No. 2 to the body with the 3 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 ft·lbf)

**6. INSTALL SLIDING YOKE**

(a) Align the matchmark on the sliding yoke with the one on the No. 2 intermediate shaft assembly.

(b) Install the "B" bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

(c) Install the "A" bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

7. INSTALL BRAKE PEDAL RETURN SPRING**8. INSTALL NO. 2 HEATER TO REGISTER DUCT****9. INSTALL LOWER LH FINISH PANEL**

(a) Install the lower LH finish panel with the 4 bolts.

(b) Connect the hood lock release lever with the 2 screws.

10. INSTALL SPIRAL CABLE (See page BE-40)**11. INSTALL COMBINATION SWITCH WITH SPIRAL CABLE**

(a) Install the combination switch with the 3 screws.

(b) Connect the airbag connector.

(c) M/T:

Connect the 3 connectors.

(d) A/T:

Connect the 4 connectors.

12. INSTALL UPPER AND LOWER COLUMN COVERS

Install the upper and lower column covers with the 3 screws.

**13. CENTER SPIRAL CABLE**

(a) Check that the front wheels are facing straight ahead.

(b) Turn the cable counterclockwise by hand until it feels firm.

(c) Then rotate the cable clockwise about 2.5 turns to align the marks.

HINT:

The cable will rotate about 2.5 turns to both the left and right from the center.

14. INSTALL STEERING WHEEL

- (a) Align the matchmarks on the wheel and main shaft.
- (b) Install the wheel set nut.

Torque: 50 N·m (510 kgf·cm, 37 ft·lbf)

- (c) Connect the connector.

15. INSTALL STEERING WHEEL PAD**NOTICE:**

- ★ **Never use airbag parts from another vehicle. When replacing parts, replace with new ones.**
- ★ **Make sure the wheel pad is installed with the specified torque.**
- ★ **If the wheel pad has been dropped, or there are cracks, dents or other defects on the case or connector, replace the wheel pad with a new one.**
- ★ **When installing the wheel pad, take care that the wirings do not interfere with other parts and are not pinched between other parts.**
- ★ **When installing torx® screws, take care not to scratch other parts (ex. cruise control switch, lower cover) with a torx® socket wrench.**

- (a) Connect the airbag connectors and horn terminal.
- (b) Install the wheel pad after confirming that the circumference groove of the torx® screw is caught on the screw case.
- (c) Using a torx® socket wrench, tighten the 2 screws while holding down the upper surface of the wheel pad properly to prevent the wheel pad from floating up.

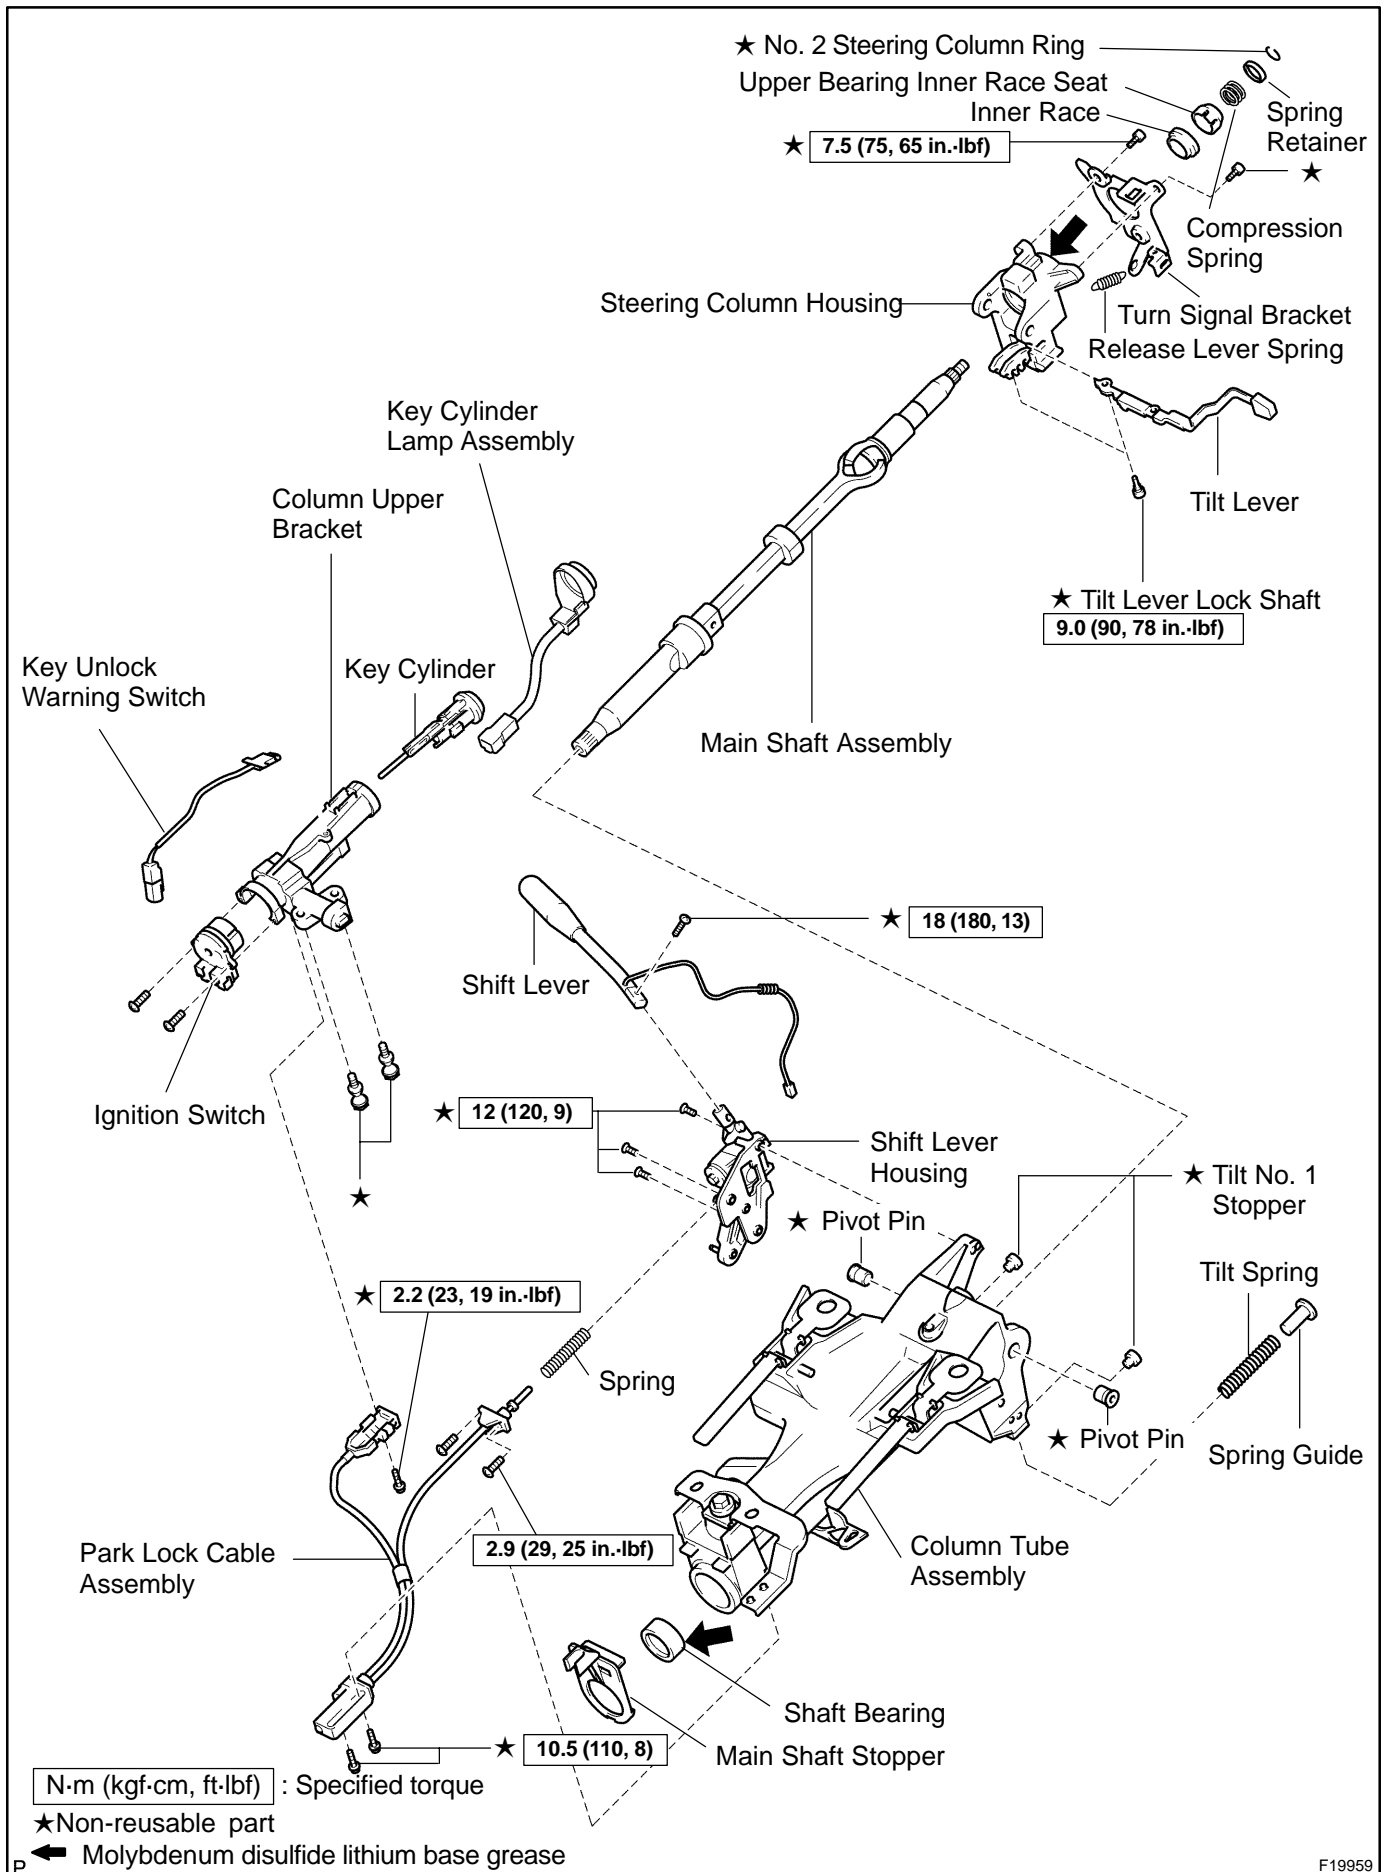

Torque: 8.8 N·m (90 kgf·cm, 78 in.-lbf)
- (d) Install the steering wheel lower No. 2 cover.
- (e) Install the steering wheel lower No. 3 cover.

16. CHECK STEERING WHEEL CENTER POINT**17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

STEERING COLUMN (Double Cab) COMPONENTS

SR1KM-01

F19959

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

2. REMOVE STEERING WHEEL PAD

NOTICE:

If the airbag connector is disconnected with the ignition switch in the ON or ACC position, DTCs will be recorded.

- Place the front wheels facing straight ahead.
- Remove the steering wheel lower No. 2 cover.
- Remove the steering wheel lower No. 3 cover.
- Using a torx® socket wrench, loosen the 2 torx® screws.

HINT:

Loosen each screw until the groove along the screw circumference is caught on the screw case.

- Pull out the wheel pad from the steering wheel and disconnect the airbag connectors and horn terminal.

CAUTION:

- ★ When storing the wheel pad, keep the upper surface of the pad facing upward.
- ★ Never disassemble the wheel pad.

NOTICE:

When removing the wheel pad, take care not to pull the airbag wire harness.

3. REMOVE STEERING WHEEL

- Remove the steering wheel set nut.
- Put matchmarks on the steering wheel and main shaft assembly.
- Using SST, remove the wheel.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)
- Disconnect the connector.

4. REMOVE UPPER AND LOWER COLUMN COVERS

Remove the 3 screws, upper and lower column covers.

5. REMOVE COMBINATION SWITCH WITH SPIRAL CABLE

- (a) Disconnect the 4 connectors.
- (b) Disconnect the airbag connector.
- (c) Remove the 3 screws and combination switch.

6. REMOVE SPIRAL CABLE (See page BE-40)**NOTICE:**

Do not disassemble the cable or apply oil to it.

7. REMOVE LOWER LH FINISH PANEL

- (a) Remove the 2 screws and disconnect the hood lock release lever from the panel.
- (b) Remove the 4 panel set bolts and lower LH finish panel.

8. REMOVE NO. 2 HEATER TO REGISTER DUCT**9. REMOVE BRAKE PEDAL RETURN SPRING****10. REMOVE SLIDING YOKE**

- (a) Put matchmarks on the sliding yoke and No. 2 intermediate shaft assembly.
- (b) Remove the "A" bolt.
- (c) Remove the "B" bolt.
- (d) Slide the sliding yoke and remove it.

**11. REMOVE COLUMN HOLE COVER NO. 2**

Remove the 3 bolts and column hole cover No. 2.

**12. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**

Disconnect the cable assembly from the column shift lever assembly.

13. REMOVE STEERING COLUMN ASSEMBLY WITH NO. 2 UNIVERSAL JOINT ASSEMBLY

- (a) Disconnect the connectors.
- (b) Remove the 4 steering column set nuts.
- (c) Pull out the steering column assembly with the No. 2 universal joint assembly.

**14. DISCONNECT NO. 2 UNIVERSAL JOINT ASSEMBLY**

- (a) Put matchmarks on the steering column assembly and No. 2 universal joint assembly.
- (b) Remove the bolt and No. 2 universal joint assembly.

**15. REMOVE NO. 2 INTERMEDIATE SHAFT ASSEMBLY**

- (a) Put matchmarks on the No. 2 intermediate shaft assembly and control valve shaft.
- (b) Remove the bolt and No. 2 intermediate shaft assembly.

DISASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. REMOVE KEY CYLINDER LAMP ASSEMBLY

2. REMOVE COLUMN UPPER BRACKET

- Using a centering punch, mark the center of the 2 tapered-head bolts.
- Using a 3 to 4 mm (0.12 to 0.16 in.) drill, drill a hole into the 2 bolts.
- Using a screw extractor, remove the 2 bolts and column upper bracket.

3. REMOVE SHIFT LEVER

Using a torx® socket wrench, remove the torx® screw and shift lever.

4. REMOVE PARK LOCK CABLE ASSEMBLY (See page [AT-21](#))

5. REMOVE SHIFT LEVER HOUSING

Using a torx® socket wrench, remove the 3 torx® screws and shift lever housing.

6. REMOVE RELEASE LEVER SPRING

7. REMOVE TURN SIGNAL BRACKET

Using a torx® socket wrench, remove the 2 torx® screws and turn signal bracket.

8. REMOVE STEERING COLUMN HOUSING WITH MAIN SHAFT ASSEMBLY

- (a) Set SST, 2 plate washers (18 and 36 mm outer diameter) and a screw (4.0 mm diameter, 0.7 mm pitch, 15.0 mm length), as shown in the illustration. Then remove the 2 pivot pins.

SST 09910-00015 (09911-0001 1, 09912-00010)

Reference

Plate washer A (18 mm): 90562-04012

Plate washer B (36 mm): 90201-10201

Screw: 90154-40015

- (b) Remove the column housing with the shaft assembly from the column tube assembly.

NOTICE:

Do not bend the universal joint of the main shaft assembly more than 15°.

- (c) Remove the tilt spring and spring guide.

9. REMOVE 2 TILT NO. 1 STOPPERS

10. REMOVE MAIN SHAFT STOPPER

11. REMOVE MAIN SHAFT ASSEMBLY

- (a) Install SST to the main shaft assembly, as shown in the illustration.

SST 09612-07010

- (b) Using SST, compress the compression spring.

SST 09612-07010

NOTICE:

Do not bend the universal joint of the shaft assembly more than 15°.

HINT:

Hold the shaft assembly with your hand to prevent rotation.

- (c) Using a screwdriver, remove the No. 2 steering column ring.

- (d) Remove the spring retainer, compression spring, upper bearing inner race seat and inner race.

12. REMOVE TILT LEVER

Remove the tilt lever lock shaft and shift lever.

INSPECTION

1. INSPECT STEERING LOCK OPERATION

Check that the steering lock mechanism operates properly.

2. IF NECESSARY, REPLACE KEY CYLINDER

- (a) Turn the ignition key to the ACC position.
- (b) Push down the stop pin with a screwdriver, and pull out the cylinder.
- (c) Install a new cylinder.

HINT:

Make sure that the key is in the ACC position.

3. INSPECT IGNITION SWITCH (See page BE-37)

4. IF NECESSARY, REPLACE IGNITION SWITCH

- (a) Remove the 2 screws and ignition switch.
- (b) Install a new ignition switch with the 2 screws.

5. INSPECT KEY UNLOCK WARNING SWITCH (See page BE-37)

6. IF NECESSARY, REPLACE KEY UNLOCK WARNING SWITCH

- (a) Slide out the key unlock warning switch.
- (b) Install a new key unlock warning switch.

7. INSPECT BEARING

- (a) Check that the bearing rotates smoothly without abnormal noise.

If it does not rotate smoothly or abnormal noise occurs, replace the column housing.

- (b) Coat the bearing with molybdenum disulfide lithium base grease.

8. IF NECESSARY, REPLACE SHAFT BEARING

- (a) Using SST and a press, press out the shaft bearing.
 SST 09950-60010 (09951-00400),
 09950-70010 (09951-07360)

- (b) Coat a new shaft bearing with molybdenum disulfide lithium base grease.
- (c) Using SST and a press, press in the shaft bearing.
SST 09950-60010 (09951-00460),
09950-70010 (09951-07150)

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. COAT PARTS INDICATED BY ARROWS WITH MOLYBDENUM DISULFIDE LITHIUM BASE GREASE (See page SR-31)
2. INSTALL TILT LEVER

Install the tilt lever with a new tilt lever lock shaft.

Torque: 9.0 N·m (90 kgf·cm, 78 in.-lbf)

3. INSTALL MAIN SHAFT ASSEMBLY

- (a) Install the inner race, upper bearing inner race seat, compression spring and spring retainer.
- (b) Install a new No. 2 steering column ring to the main shaft assembly.
- (c) Install the washer of SST on the main shaft assembly.
SST 09612-07010
- (d) Set SST on the main shaft assembly, as shown in the illustration.
SST 09612-07010
- (e) Using SST, push down the retaining ring until it fits into the shaft groove and install the main shaft assembly.

NOTICE:

Do not bend the universal joint of the shaft assembly more than 15°.

HINT:

Hold the main shaft assembly with your hand to prevent rotation.

4. INSTALL MAIN SHAFT STOPPER
5. INSTALL 2 NEW TILT NO. 1 STOPPERS

6. INSTALL STEERING COLUMN HOUSING WITH MAIN SHAFT ASSEMBLY

- (a) Install the steering column housing with the main shaft assembly into the column tube assembly.
- (b) Install the tilt spring and spring guide.
- (c) Hold the steering column housing and steering column housing support in a vise.
- (d) Temporarily install 2 new pivot pins.

- (e) Using a punch and a hammer, tap in the pivot pin.
 (f) Using a pin punch and a hammer, stake at 3 places evenly around the hole as shown in the illustration.

7. INSTALL TURN SIGNAL BRACKET

Using a torx® socket wrench, install the turn signal bracket with 2 new torx® screws.

Torque: 7.5 N·m (75 kgf·cm, 65 in.-lbf)

HINT:

Make sure that the protrusion on the steering column housing is fitted into the hole of the turn signal bracket.

8. INSTALL RELEASE LEVER SPRING

9. INSTALL SHIFT LEVER HOUSING

Using a torx® socket wrench, install the shift lever housing with 3 new torx® screws.

Torque: 12 N·m (120 kgf·cm, 9 ft-lbf)

10. INSTALL PARK LOCK CABLE ASSEMBLY (See page [AT-22](#))

11. INSTALL SHIFT LEVER

Using a torx® socket wrench, install the shift lever with a new torx® screw.

Torque: 18 N·m (180 kgf·cm, 13 ft-lbf)

12. INSTALL COLUMN UPPER BRACKET

- (a) Install the column upper bracket with 2 new tapered-head bolts.

HINT:

Insert the bracket pin into the column tube hole.

- (b) Tighten the tapered-head bolts until the bolt heads break off.

13. INSTALL KEY CYLINDER LAMP ASSEMBLY

INSTALLATION

NOTICE:

When replacing the steering angle sensor, drive the vehicle straight ahead at a speed of 6.5 mph (10.5 km/h) or more. Accordingly, zero point calibration of the steering angle sensor is performed.

HINT:

If the steering angle sensor zero point calibration is not performed, its value will be fixed. Check after driving the vehicle straight ahead at a speed of 6.5 mph (10.5 km/h) or more (See page [DI-1568](#)).

1. **INSTALL NO. 2 INTERMEDIATE SHAFT ASSEMBLY**
 - (a) Align the matchmark on the No. 2 intermediate shaft assembly with the one on the control valve shaft.
 - (b) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

2. **CONNECT NO. 2 UNIVERSAL JOINT ASSEMBLY**
 - (a) Insert the column hole cover No. 2.
 - (b) Align the matchmarks on the column assembly and No. 2 universal joint assembly.
 - (c) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

3. **INSTALL STEERING COLUMN ASSEMBLY WITH NO. 2 UNIVERSAL JOINT ASSEMBLY**

- (a) Install the column assembly with the No. 2 universal joint assembly.
 - (b) Install the 4 steering column set nuts.
- Torque: 26 N·m (260 kgf·cm, 19 ft·lbf)**
- (c) Connect the connectors.

4. **CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**

Connect the cable assembly to the shift lever assembly.

**5. INSTALL COLUMN HOLE COVER NO. 2**

Install the column hole cover No. 2 to the body with the 3 bolts.
Torque: 8.0 N-m (82 kgf-cm, 71 ft-lbf)

**6. INSTALL SLIDING YOKE**

(a) Align the matchmark on the sliding yoke with the one on the No. 2 intermediate shaft assembly.

(b) Install the "B" bolt.

Torque: 35 N-m (360 kgf-cm, 26 ft-lbf)

(c) Install the "A" bolt.

Torque: 35 N-m (360 kgf-cm, 26 ft-lbf)

7. INSTALL BRAKE PEDAL RETURN SPRING**8. INSTALL NO. 2 HEATER TO REGISTER DUCT****9. INSTALL LOWER LH FINISH PANEL**

(a) Install the lower LH finish panel with the 4 bolts.

(b) Connect the hood lock release lever with the 2 screws.

10. INSTALL SPIRAL CABLE (See page BE-40)**11. INSTALL COMBINATION SWITCH WITH SPIRAL CABLE**

(a) Install the combination switch with the 3 screws.

(b) Connect the airbag connector.

(c) Connect the 4 connectors.

12. INSTALL UPPER AND LOWER COLUMN COVERS

Install the upper and lower column covers with the 3 screws.

13. CENTER SPIRAL CABLE

(a) Check that the front wheels are facing straight ahead.

(b) Turn the cable counterclockwise by hand until it feels firm.

(c) Then rotate the cable clockwise about 2.5 turns to align the marks.

HINT:

The cable will rotate about 2.5 turns to both the left and right from the center.

**14. INSTALL STEERING WHEEL**

(a) Align the matchmarks on the wheel and main shaft.

(b) Install the wheel set nut.

Torque: 50 N-m (510 kgf-cm, 37 ft-lbf)

(c) Connect the connector.

15. INSTALL STEERING WHEEL PAD**NOTICE:**

- ★ **Never use airbag parts from another vehicle. When replacing parts, replace with new ones.**
- ★ **Make sure the wheel pad is installed with the specified torque.**
- ★ **If the wheel pad has been dropped, or there are cracks, dents or other defects on the case or connector, replace the wheel pad with a new one.**
- ★ **When installing the wheel pad, take care that the wirings do not interfere with other parts and are not pinched between other parts.**
- ★ **When installing torx® screws, take care not to scratch other parts (ex. cruise control switch, lower cover) with a torx® socket wrench.**

- (a) Connect the airbag connectors and horn terminal.
- (b) Install the wheel pad after confirming that the circumference groove of the torx® screw is caught on the screw case.
- (c) Using a torx® socket wrench, tighten the 2 screws while holding down the upper surface of the wheel pad properly to prevent the wheel pad from floating up.
Torque: 8.8 N·m (90 kgf·cm, 78 in.-lbf)
- (d) Install the steering wheel lower No. 2 cover.
- (e) Install the steering wheel lower No. 3 cover.

16. CHECK STEERING WHEEL CENTER POINT**17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

POWER STEERING VANE PUMP (1GR-FE) COMPONENTS

SR1KS-01

N·m (kgf·cm, ft·lbf) : Specified torque

★ Non-reusable part

↔ Power steering fluid

N

F17906

REMOVAL

1. REMOVE ENGINE UNDER COVER

2. REMOVE DRIVE BELT

While releasing the belt tension by turning the belt tensioner counterclockwise, remove the drive belt.

3. DISCONNECT SUCTION HOSE

Remove the clip and disconnect the suction hose.

4. DISCONNECT PRESSURE FEED TUBE

- (a) Remove the bolt and disconnect the pressure feed tube.
- (b) Remove the gasket.

5. REMOVE VANE PUMP ASSEMBLY

- (a) Disconnect the oil pressure switch connector.

(b) Remove the 2 bolts and vane pump assembly.

DISASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. FIX VANE PUMP ASSEMBLY

- (a) Using SST, hold the vane pump assembly in a vise.
SST 09630-00014 (09631-00132)

HINT:

Detach SST depending on the situation.

2. REMOVE SUCTION PORT UNION

- (a) Remove the bolt and suction port union.
- (b) Remove the O-ring from the suction port union.

3. REMOVE PRESSURE PORT UNION, FLOW CONTROL VALVE AND SPRING

- (a) Remove the pressure port union, flow control valve and spring.
- (b) Remove the O-ring from the pressure port union.

4. REMOVE OIL PRESSURE SWITCH

NOTICE:

If the oil pressure switch is dropped or damaged, replace it with a new one.

5. REMOVE REAR HOUSING

- (a) Remove the 4 bolts and rear housing.
- (b) Remove the O-ring from the rear housing.

6. REMOVE VANE PUMP SHAFT WITH VANE PUMP PULLEY

- (a) Using 2 screwdrivers, remove the snap ring from the vane pump shaft with vane pump pulley.
- (b) Remove the vane pump shaft with vane pump pulley.

NOTICE:

Be careful not to drop or damage the vane pump shaft with vane pump pulley. If it is damaged, replace the vane pump assembly.

7. REMOVE 10 VANE PLATES AND VANE PUMP ROTOR

- (a) Remove the 10 vane plates.

NOTICE:

Take care not to drop the vane plate.

- (b) Remove the vane pump rotor.

8. REMOVE CAM RING**9. REMOVE SIDE PLATE**

- (a) Remove the side plate from the front housing.

- (b) Remove the O-ring from the side plate.

- (c) Remove the O-ring from the front housing.

INSPECTION

1. MEASURE OIL CLEARANCE BETWEEN VANE PUMP SHAFT AND BUSHING

Using a micrometer and a caliper gauge, measure the oil clearance.

Maximum clearance: 0.07 mm (0.0028 in.)

If it is more than the maximum, replace the vane pump assembly.

2. INSPECT VANE PUMP ROTOR AND VANE PLATES

(a) Using a micrometer, measure the thickness of the 10 vane plates.

Standard thickness:

1.405 to 1.411 mm (0.05531 to 0.05555 in.)

(b) Using a feeler gauge, measure the clearance between a side face of the vane pump rotor groove and the vane plate.

Maximum clearance: 0.03 mm (0.0012 in.)

If it is more than the maximum, replace the vane pump assembly.

3. INSPECT FLOW CONTROL VALVE

(a) Coat the flow control valve with power steering fluid and check that it falls smoothly into the valve hole of the front housing under its own weight.

If it lacks smoothness, replace the vane pump assembly.

(b) Check the flow control valve for leakage. Close one of the holes and apply compressed air of 392 to 490 kPa (4 to 5 kgf/cm², 57 to 71 psi) into the opposite side hole, and confirm that air does not come out from the end hole.

If air leaks, replace the vane pump assembly.

4. INSPECT SPRING

Using vernier calipers, measure the free length of the spring.

Minimum free length: 36.9 mm (1.453 in.)

If it is not within the specification, replace the vane pump assembly.

5. INSPECT PRESSURE PORT UNION

If the union seat in the pressure port union is severely damaged, it may cause fluid leakage. In that case, replace the vane pump assembly.

REPLACEMENT

NOTICE:

When using a vise, do not overtighten it.

IF NECESSARY, REPLACE OIL SEAL

- (a) Using a screwdriver with vinyl tape wound around its tip, remove the oil seal.

NOTICE:

Be careful not to damage the bushing of the front housing.

- (b) Coat a new oil seal lip with power steering fluid.

- (c) Using SST, press in the oil seal.

SST 09950-60010 (09951-00280),
09950-70010 (09951-07100)

NOTICE:

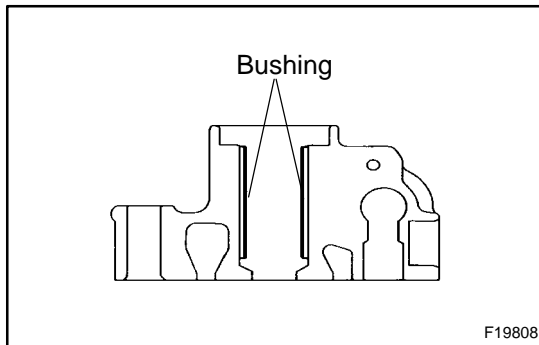

Make sure that the oil seal is installed in the correct direction.

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. COAT PARTS INDICATED BY ARROWS WITH POWER STEERING FLUID (See page [SR-45](#))

2. INSTALL VANE PUMP SHAFT WITH VANE PUMP PULLEY

- (a) Coat the inside surface of the bushing in the front housing with power steering fluid.
- (b) Gradually insert the vane pump shaft.

NOTICE:

Do not damage the oil seal lip in the front housing.

HINT:

Wrap the shaft surface with vinyl tape before inserting.

3. INSTALL SIDE PLATE

- (a) Coat a new O-ring with power steering fluid, and install it to the front housing.

- (b) Coat a new O-ring with power steering fluid, and install it to the side plate.

(c) Align the dent of the side plate with the dent of the front housing, and install the side plate.

NOTICE:

Make sure that the side plate is installed in the correct direction.

4. INSTALL CAM RING

Align the dent of the cam ring with the dent of the side plate, and install the cam ring with the inscribed mark facing outward.

NOTICE:

Make sure that the cam ring is installed in the correct direction.

5. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor.

HINT:

Vane pump rotor has no specific direction.

(b) Coat 10 vane plates with power steering fluid.

(c) Install the 10 vane plates with the round end facing outward.

(d) Using a screwdriver and a snap ring expander, install a new snap ring to the vane pump shaft.

**6. INSTALL REAR HOUSING**

- (a) Coat a new O-ring with power steering fluid, and install it to the rear housing.
- (b) Align the straight pin of the rear housing with the dents of the cam ring, side plate and front housing, and install the rear housing with the 4 bolts.

Torque: 22 N·m (220 kgf-cm, 16 ft-lbf)

**7. INSPECT PRELOAD**

- (a) Check that the pump rotates smoothly without abnormal noise.

- (b) Temporarily install the service bolt.

Recommended service bolt:

Thread diameter: 10 mm (0.39 in.)

Thread pitch: 1.25 mm (0.0492 in.)

Bolt length: 50 mm (1.97 in.)

- (c) Using a torque wrench, check the pump rotating torque.

Rotating torque:

0.27 N·m (2.8 kgf-cm, 2.4 in.-lbf) or less

If the rotating torque is not as specified above, check the installation of the vane pump housing oil seal.

8. INSTALL OIL PRESSURE SWITCH

Torque: 21 N·m (210 kgf-cm, 15 ft-lbf)

9. INSTALL SPRING, FLOW CONTROL VALVE AND PRESSURE PORT UNION

- (a) Coat the spring and flow control valve with power steering fluid.

- (b) Install the spring.

- (c) Install the flow control valve in the correct direction (See page [SR-45](#)).

- (d) Coat a new O-ring with power steering fluid, and install it to the pressure port union.

- (e) Install the pressure port union.

Torque: 69 N·m (700 kgf-cm, 51 ft-lbf)

10. INSTALL SUCTION PORT UNION

- (a) Coat a new O-ring with power steering fluid, and install it to the suction port union.

- (b) Install the suction port union with the bolt.

Torque: 12 N·m (120 kgf-cm, 9 ft-lbf)

INSTALLATION

1. INSTALL VANE PUMP ASSEMBLY

- (a) Install the vane pump assembly with the 2 bolts.
Torque: 21 N·m (210 kgf·cm, 15 ft·lbf)

- (b) Connect the oil pressure switch connector.

NOTICE:

Be careful that the oil does not come into contact with the connector.

2. CONNECT PRESSURE FEED TUBE

- (a) Install a new gasket to the pressure feed tube.
 (b) Install the pressure feed tube with the union bolt.

HINT:

Make sure that the stopper of the pressure feed tube contacts the pump housing as shown in the illustration.

- (c) Tighten the union bolt.
Torque: 46.5 N·m (474 kgf·cm, 34 ft·lbf)

3. CONNECT SUCTION HOSE

Connect the suction hose with the clip.

**4. INSTALL DRIVE BELT**

- (a) While turning the belt tensioner counterclockwise, align the holes, and then insert a bar of 6 mm (0.24 in.) into the holes to fix the belt tensioner.
- (b) Install the drive belt.
- (c) While turning the belt tensioner counterclockwise, remove the bar.

- (d) If it is hard to install the drive belt, perform the following procedure:
 - (1) Wrap the drive belt around all the pulleys and idlers, except for the vane pump assembly, as shown in the illustration.
 - (2) While releasing belt tension by turning the belt tensioner counterclockwise, wrap the drive belt around the vane pump assembly.

- 5. ADD POWER STEERING FLUID**
- 6. BLEED POWER STEERING FLUID**
- 7. INSPECT FLUID LEAK**
- 8. INSTALL ENGINE UNDER COVER**

POWER STEERING VANE PUMP (2UZ-FE) COMPONENTS

SR0MD-14

N

F06723

N

F06720

REMOVAL

1. REMOVE AIR CLEANER ASSEMBLY WITH AIR CLEANER HOSE

- (a) Disconnect the MAF meter connector.
- (b) Disconnect the hoses.
- (c) Remove the clamp.
- (d) Remove the 3 bolts and air cleaner assembly with air cleaner hose connected.

2. REMOVE DRIVE BELT

Loosen the drive belt tension by turning the drive belt tensioner counterclockwise, and remove the drive belt.

3. DISCONNECT 2 VACUUM HOSES

Remove the 2 clips and disconnect the 2 vacuum hoses.

4. DISCONNECT RETURN HOSE

Remove the clip and disconnect the return hose.

5. DISCONNECT PRESSURE FEED TUBE

Remove the union bolt and gasket, disconnect the pressure feed tube.

6. REMOVE PS VANE PUMP ASSEMBLY

Remove the 2 bolts, nut, stud bolt and PS vane pump assembly.

DISASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. MEASURE PS VANE PUMP ROTATING TORQUE

- (a) Check that the pump rotates smoothly without abnormal noise.
- (b) Temporarily install the bolt.
- (c) Using a torque wrench, check the pump rotating torque.

Rotating torque:

0.28 N·m (2.8 kgf·cm, 2.4 in.-lbf) or less

2. REMOVE SUCTION PORT UNION

- (a) Remove the bolt and suction port union.
- (b) Remove the O-ring from the union.

3. REMOVE PRESSURE PORT UNION, FLOW CONTROL VALVE AND SPRING

- (a) Remove the pressure port union, the flow control valve and spring.
- (b) Remove the O-ring from the pressure port union.

4. REMOVE REAR HOUSING

- (a) Remove the 4 bolts and rear housing.

HINT:

If the wave washer and side plate are stuck to the rear housing, lightly tap the rear housing with a plastic hammer, and remove the wave washer and side plate.

- (b) Remove the 2 O-rings from the rear housing.

5. REMOVE WAVE WASHER

6. REMOVE SIDE PLATE

7. REMOVE GASKET

8. REMOVE CAM RING, 10 VANE PLATES AND VANE PUMP ROTOR

- (a) Using a screwdriver, remove the snap ring from the vane pump shaft.
- (b) Remove the cam ring, 10 vane plates and vane pump rotor.

NOTICE:

Be careful not to drop the plates.

9. REMOVE VANE PUMP SHAFT WITH VANE PUMP PULLEY

10. REMOVE STRAIGHT PINS

Remove the 2 pins from the front housing.

INSPECTION

1. CHECK OIL CLEARANCE BETWEEN VANE PUMP SHAFT AND BUSHING

Using a micrometer and caliper gauge, measure the oil clearance.

Standard clearance:

0.03 to 0.05 mm (0.0012 to 0.0020 in.)

Maximum clearance: 0.07 mm (0.0028 in.)

If it is more than the maximum, replace the shaft and front housing.

2. INSPECT VANE PUMP ROTOR AND VANE PLATES

(a) Using a micrometer, measure the height, thickness and length of the 10 plates.

Minimum height: 8.6 mm (0.339 in.)

Minimum thickness: 1.397 mm (0.0550 in.)

Minimum length: 14.991 mm (0.5902 in.)

(b) Using a feeler gauge, measure the clearance between the rotor groove and plate.

Maximum clearance: 0.033 mm (0.0013 in.)

If it is more than the maximum, replace the plate and/or rotor with the one having the same mark stamped on the cam ring.

Inscribed mark: 1, 2, 3, 4 or None

HINT:

There are 5 vane plate lengths with the following rotor and cam ring marks:

Rotor and cam ring mark	Vane plate part number	Vane plate length mm (in.)
None	44345-04010	14.999-15.001 (0.59051-0.59059)
1	44345-04020	14.997-14.999 (0.59043-0.59051)
2	44345-04030	14.995-14.997 (0.59035-0.59043)
3	44345-04040	14.993-14.995 (0.59027-0.59035)
4	44345-04050	14.991-14.993 (0.59020-0.59027)

3. INSPECT FLOW CONTROL VALVE

(a) Coat the valve with power steering fluid and check that it falls smoothly into the valve hole under its own weight.

(b) Check the flow control valve for leakage. Close one of the holes and apply compressed air 392 to 490 kPa (4 to 5 kgf/cm², 57 to 71 psi) into the opposite side, and confirm that air does not come out from the end holes.

If necessary, replace the valve with the one having the same letter inscribed on the front housing.

Inscribed mark: A, B, C, D, E or F

4. INSPECT SPRING

Using vernier calipers, measure the free length of the spring.

Minimum free length: 33.2 mm (1.307 in.)

If it is not within the specification, replace the spring.

REPLACEMENT

NOTICE:

When using a vise, do not overtighten it.

IF NECESSARY, REPLACE OIL SEAL

- (a) Using a screwdriver with vinyl tape wound around its tip, remove the oil seal.

NOTICE:

Be careful not to damage the front housing.

- (b) Coat a new oil seal lip with power steering fluid.

- (c) Using SST, press in the oil seal.

SST 09950-60010 (09951-00330),
09950-70010 (09951-07100)

NOTICE:

Make sure to install the oil seal in the correct direction.

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. COAT PARTS INDICATED BY ARROWS WITH POWER STEERING FLUID (See page [SR-59](#))
2. INSTALL VANE PUMP SHAFT WITH VANE PUMP PULLEY
3. INSTALL STRAIGHT PINS

Using a plastic hammer, tap in 2 new pins into the front housing.

NOTICE:

Be careful not to damage the pins.

4. INSTALL CAM RING

Install the cam ring with the inscribed mark facing outward.

HINT:

Align the hole of the cam ring with the one of the straight pins.

5. INSTALL VANE PUMP ROTOR

- (a) Install the vane pump rotor with the inscribed mark facing outward.
- (b) Install a new snap ring to the vane pump shaft.

6. INSTALL VANE PLATES AND GASKET

- (a) Install the 10 plates with the round end facing outward.
- (b) Install a new gasket on the front housing.

NOTICE:

Be careful of the direction of the gasket.

7. INSTALL SIDE PLATE

Align the hole of the plate with the hole of the 2 straight pins.

8. INSTALL WAVE WASHER

Install the washer so that the protrusions fit into the slots in the side plate.

9. INSTALL REAR HOUSING

- (a) Coat 2 new O-rings with power steering fluid and install them to the rear housing.
- (b) Install the rear housing with the 4 bolts.

Torque: 24 N·m (240 kgf·cm, 17 ft·lbf)

10. INSTALL SPRING, FLOW CONTROL VALVE AND PRESSURE PORT UNION

- (a) Install the spring on the front housing.
- (b) Install the flow control valve in the correct direction (See page [SR-59](#)).
- (c) Coat a new O-ring with power steering fluid and install it on the pressure port union.
- (d) Install the pressure port union.

Torque: 83 N·m (850 kgf·cm, 61 ft·lbf)**11. INSTALL SUCTION PORT UNION**

- (a) Coat a new O-ring with power steering fluid and install it on the suction port union.
- (b) Install the suction port union with the bolt.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)**12. MEASURE PS VANE PUMP ROTATING TORQUE****(See page [SR-62](#))**

INSTALLATION

1. INSTALL PS VANE PUMP ASSEMBLY

- (a) Install the PS vane pump assembly with the stud bolt.
Torque: 22 N·m (220 kgf·cm, 16 ft·lbf)
- (b) Install the 2 bolt and nut.
Torque: 44 N·m (450 kgf·cm, 33 ft·lbf)

2. INSTALL PRESSURE FEED TUBE

- (a) Connect the pressure feed tube.
- (b) Install a new gasket and the union bolt on the pressure feed tube.

HINT:

Make sure that the stopper of the pressure feed tube contacts the PS vane pump body as shown in the illustration, then tighten the union bolt.

Torque: 46.5 N·m (475 kgf·cm, 34 ft·lbf)

3. CONNECT RETURN HOSE

Connect the return hose with the clip.

4. CONNECT 2 VACUUM HOSES

Connect the 2 vacuum hoses and install the 2 clips.

5. INSTALL DRIVE BELT

Loosen the drive belt tension by turning the drive belt tensioner counterclockwise, and install the belt.

6. INSTALL AIR CLEANER ASSEMBLY WITH AIR CLEANER HOSE

- (a) Install the air cleaner assembly with air cleaner hose and the 3 bolts.
- (b) Install the clamp.
- (c) Connect the hoses.
- (d) Connect the MAF meter connector.

7. BLEED POWER STEERING SYSTEM

(See page [SR-4](#))

POWER STEERING GEAR COMPONENTS

SR02N-09

F17905

STEERING - POWER STEERING GEAR

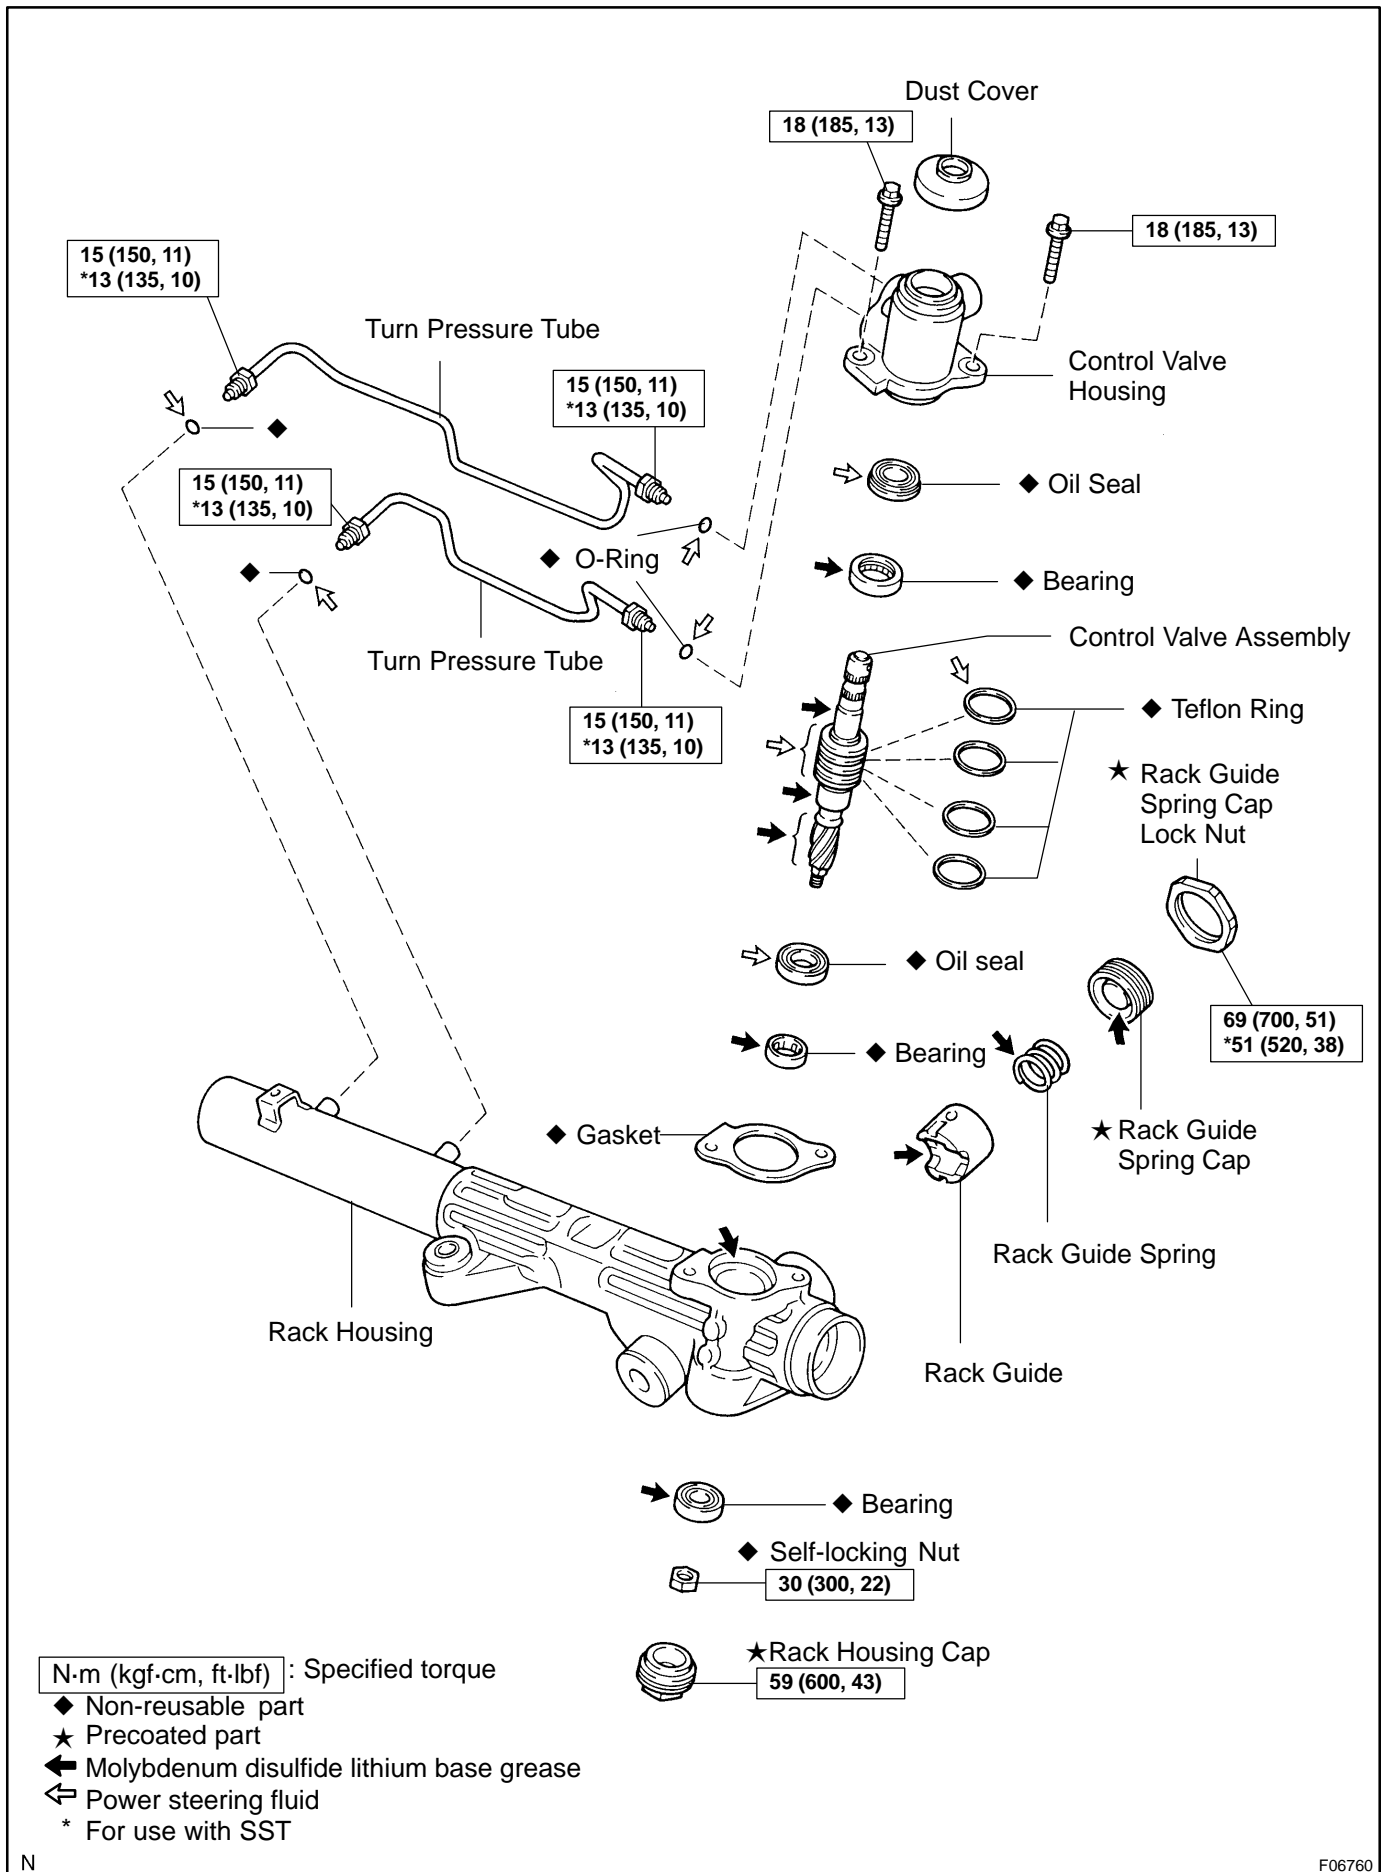

N-m (kgf-cm, ft-lbf) : Specified torque

◆ Non-reusable part

← Molybdenum disulfide lithium base grease

↔ Power steering fluid

N * For use with SST

REMOVAL

NOTICE:

Remove the steering wheel assembly before the steering gear removal, because there is possibility of breaking of the spiral cable.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

2. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

3. REMOVE STEERING WHEEL PAD

(See page [SR-18](#) , [SR-33](#))

4. REMOVE STEERING WHEEL

(See page [SR-18](#) , [SR-33](#))

5. DISCONNECT RH AND LH TIE ROD ENDS

(See page [SA-84](#))

6. DISCONNECT NO. 2 INTERMEDIATE SHAFT ASSEMBLY (See page [SR-18](#) , [SR-33](#))

7. DISCONNECT CLAMP PLATE

Remove the bolt and disconnect the clamp plate.

8. DISCONNECT PRESSURE FEED AND RETURN TUBES

Using SST, disconnect the tube.

SST 09023-12701

9. REMOVE PS GEAR ASSEMBLY

(a) Remove the bolt, nut and stud bolt from the bracket.

(b) Remove the 2 set bolts, nut, washer and PS gear assembly.

10. REMOVE BRACKET AND GROMMET

DISASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. REMOVE 2 TURN PRESSURE TUBES

- (a) Using SST, remove the 2 turn pressure tubes.
SST 09023-38401
- (b) Remove the 4 O-rings from the tubes.

2. SECURE PS GEAR ASSEMBLY IN VISE

Using SST, 2 bolts and nuts, secure the gear assembly in a vise, as shown in the illustration.

SST 09612-00012

Reference:

Bolt: 90105-10346

Nut: 90170-10198

HINT:

Use 2 of the same type of SST.

3. REMOVE RH AND LH TIE ROD ENDS AND LOCK NUTS

- (a) Put matchmarks on the tie rod end, lock nut and rack end.
- (b) Loosen the lock nut, remove the tie rod end and lock nut.
- (c) Perform the same procedure on the other side.

4. REMOVE RH AND LH CLIPS, RACK BOOTS AND CLAMPS

- (a) Using a screwdriver, loosen the 2 clamps.
- (b) Remove the 2 clips and boots.

HINT:

Mark the RH and LH boots.

NOTICE:

Be careful not to damage the boot.

5. REMOVE RH AND LH RACK ENDS AND CLAW WASHERS

- (a) Using a screwdriver and hammer, unstake the washer.

NOTICE:

Avoid any impact on the steering rack.

- (b) Using a spanner to hold the steering rack steadily, and using SST, remove the rack end.

SST 09922-10010

HINT:

Mark the RH and LH rack ends.

NOTICE:

Use SST 09922-10010 in the direction shown in the illustration.

- (c) Remove the washer from the rack end.
 (d) Perform the same procedure on the other side.

6. REMOVE RACK GUIDE SPRING CAP LOCK NUT

Using SST, remove the lock nut.

SST 09922-10010

NOTICE:

Use SST 09922-10010 in the direction shown in the illustration.

7. REMOVE RACK GUIDE SPRING CAP, RACK GUIDE SPRING AND RACK GUIDE

- (a) Using a hexagon wrench, remove the rack guide spring cap.
 (b) Remove the rack guide spring and rack guide.

**8. REMOVE RACK HOUSING CAP**

Using SST, remove the rack housing cap.
SST 09816-30010

**9. REMOVE SELF-SOCKING NUT**

Using SST to stop the control valve shaft rotating, remove the nut.

SST 09616-0001 1

10. REMOVE DUST COVER**11. REMOVE CONTROL VALVE HOUSING WITH CONTROL VALVE ASSEMBLY**

- Put matchmarks on the control valve housing and rack housing.
- Remove the 2 bolts and control valve housing with control valve assembly.
- Remove the gasket from the rack housing.

**12. REMOVE CONTROL VALVE ASSEMBLY**

- To prevent oil seal lip damage, wind vinyl tape on the serrated part of the valve shaft.
- Press out the valve assembly with the oil seal.

NOTICE:

- ★ Place a shop rag between the valve housing and the blocks.
- ★ Be careful not to drop the valve assembly.
- ★ Be careful not to damage the oil seal lip.

13. REMOVE OIL SEAL

Remove the oil seal from the control valve assembly.

14. REMOVE CYLINDER END STOPPER

- (a) Using SST, turn the stopper clockwise until the wire end is visible through the service hole.
SST 09631-16010
- (b) Using SST, turn the stopper counterclockwise, and remove the wire.
SST 09631-16010

15. REMOVE STEERING RACK AND BUSHING

- (a) Using SST, press out the steering rack with the bushing

NOTICE:

Take care not to drop the rack.

- SST 09950-70010 (09951-07200)
- (b) Remove the bushing from the rack.
- (c) Remove the O-ring from the bushing.

16. REMOVE OIL SEAL

Using SST, press out the oil seal.

- SST 09950-60010 (09951-00360),
- 09950-70010 (09951-07360)

INSPECTION

INSPECT STEERING RACK

- (a) Using a dial indicator, check the rack for runout, teeth wear and damage.

Maximum runout: 0.09 mm (0.0035 in.)

- (b) Check the back surface for wear and damage.

REPLACEMENT

NOTICE:

When using a vise, do not overtighten it.

1. IF NECESSARY, REPLACE OIL SEAL AND BEARING

- (a) Using SST, press out the oil seal and bearing from the control valve housing.

SST 09950-60010 (09951-00250),
09950-70010 (09951-07150)

- (b) Coat a new oil seal lip with power steering fluid.

- (c) Using SST, press in the oil seal.

SST 09950-60010 (09951-00180, 09951-00320,
09952-06010), 09950-70010 (09951-07150)

NOTICE:

Make sure to install the oil seal in the correct direction.

- (d) Coat a new bearing with molybdenum disulfide lithium base grease.

- (e) Using SST, press in the bearing.

SST 09950-60010 (09951-00340),
09950-70010 (09951-07150)

2. IF NECESSARY, REPLACE 2 BEARINGS

- (a) Using SST, press out the bearing.

SST 09950-60010 (09951-00260),
09950-70010 (09951-07150)

- (b) Using SST, press out the bearing from the rack housing.

SST 09950-60010 (09951-00260),
09950-70010 (09951-07200)

- (c) Coat a new bearing with molybdenum disulfide lithium base grease.
- (d) Using SST, press in the bearing.
SST 09950-60010 (09951-00310),
09950-70010 (09951-07150)

- (e) Coat a new bearing with molybdenum disulfide lithium base grease.
- (f) Using SST, press in the bearing.
SST 09950-60010 (09951-00320),
09950-70010 (09951-07150)

- 3. IF NECESSARY, REPLACE OIL SEAL**
- (a) Using SST, remove the oil seal from the bushing.
SST 09527-2001 1, 09612-24014 (09613-22011)

NOTICE:
Be careful not to damage the bushing.

- (b) Coat a new oil seal lip with power steering fluid.
- (c) Using SST, press in the oil seal.
SST 09950-60010 (09951-00300, 09951-00460,
09952-06010)

NOTICE:
Make sure to install the oil seal in the correct direction.

- 4. IF NECESSARY, REPLACE TEFLON RING AND O-RING**

- (a) Using a screwdriver, remove the teflon ring and O-ring from the steering rack.

NOTICE:
Be careful not to damage the groove for the teflon ring.

- (b) Coat a new O-ring with power steering fluid and install it to steering rack.

(c) Expand a new teflon ring with your fingers.

NOTICE:

Be careful not to over-expand the teflon ring.

(d) Coat the teflon ring with power steering fluid.

(e) Install the teflon ring to the steering rack, and settle it down with your fingers.

5. IF NECESSARY, REPLACE TEFLON RINGS

(a) Using a screwdriver, remove the 4 teflon rings from the control valve assembly.

NOTICE:

Be careful not to damage the grooves for the teflon ring.

(b) Expand 4 new teflon rings with your fingers.

NOTICE:

Be careful not to overexpand the teflon ring.

(c) Coat the teflon rings with power steering fluid.

(d) Install the teflon rings to the control valve assembly, and settle them down with your fingers.

(e) Carefully slide the tapered end of SST over the teflon rings until they fit to the control valve assembly.

SST 09631-20081

NOTICE:

Be careful not to damage the teflon rings.

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.

1. COAT PARTS INDICATED BY ARROWS WITH POWER STEERING FLUID OR MOLYBDENUM DISULFIDE LITHIUM BASE GREASE (See pages [SR-70](#))

2. INSTALL OIL SEAL

- (a) Coat a new oil seal lip with power steering fluid.
- (b) Using SST, press in the oil seal.
SST 09950-60010 (09951-00330, 09951-00490, 09952-06010), 09950-70010 (09951-07360)

NOTICE:

- ★ Make sure to install the oil seal in the correct direction.
- ★ Take care that the oil seal does not get reversed as you install it.

3. INSTALL STEERING RACK

- (a) Install SST to the rack.
SST 09631-20051

HINT:

If necessary, scrape the burrs off the rack teeth end and bur-nish.

- (b) Coat the SST with power steering fluid.
- (c) Install the steering rack into the rack housing.

NOTICE:

Be careful not to damage the oil seal lip.

- (d) Remove the SST.
SST 09631-20051

4. INSTALL BUSHING

- (a) Coat a new O-ring with power steering fluid and install it to the bushing.
- (b) To prevent oil seal lip damage, wind vinyl tape on the steering rack end, and apply power steering fluid.
- (c) Install the bushing.

NOTICE:

- ★ Make sure to install the bushing in the correct direction.
- ★ Be careful not to damage the oil seal lip.

5. INSTALL CYLINDER END STOPPER

- Align the installation hole for the wire of the stopper with the slot of the rack housing.
- Install a new wire into the stopper.
- Using SST, turn the stopper clockwise 400° to 500° .
SST 09631-16010

6. AIR TIGHTNESS TEST

- Install SST to the rack housing.
SST 09631-12071
- Apply 53 kPa (400 mmHg, 15.75 in.Hg) of vacuum for about 30 seconds.
- Check that there is no change in the vacuum.

If there is change in the vacuum, check the installation of the oil seals.

7. INSTALL CONTROL VALVE ASSEMBLY

- To prevent oil seal lip damage, wind vinyl tape on the serrated part of the valve shaft.
- Coat the teflon rings with power steering fluid.
- Install the valve assembly into the valve housing.

NOTICE:

Be careful not to damage the teflon rings and oil seal.

8. INSTALL OIL SEAL

- Coat a new oil seal lip with power steering fluid.
- Using SST, press in the oil seal.
SST 09612-2201 1

NOTICE:

Make sure to install the oil seal in the correct direction.

9. INSTALL CONTROL VALVE HOUSING WITH CONTROL VALVE ASSEMBLY

- Place a new gasket on the rack housing.
- Align the matchmark on the control valve housing with control valve assembly and rack housing.
- Install the 2 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

**10. INSTALL SELF-LOCKING NUT**

Using SST to stop the control valve shaft rotating, install a new nut.

SST 09616-0001 1

Torque: 30 N·m (300 kgf·cm, 22 ft·lbf)

11. INSTALL DUST COVER**12. INSTALL RACK HOUSING CAP**

(a) Apply sealant to 2 or 3 threads of the rack housing cap.

Sealant:

**Part No.08833-00080, THREE BOND 1344,
LOCTITE 242 or equivalent**

(b) Using SST, install the rack housing cap.

SST 09816-30010

Torque: 59 N·m (600 kgf·cm, 43 ft·lbf)

(c) Using a punch and hammer, stake the 2 parts of the cap.

13. INSTALL RACK GUIDE, RACK GUIDE SPRING AND RACK GUIDE SPRING CAP

(a) Install the rack guide and rack guide spring.

(b) Apply sealant to 2 or 3 threads of the rack guide spring cap.

Sealant:

**Part No.08833-00080, THREE BOND 1344,
LOCTITE 242 or equivalent**

(c) Temporarily install the rack guide spring cap.

**14. ADJUST TOTAL PRELOAD**

(a) To prevent the steering rack teeth from damaging the oil seal lip, temporarily install the RH and LH rack ends.

(b) Using a hexagon wrench, install the rack guide spring cap.

Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

(c) Using a hexagon wrench, return the rack guide spring cap 12°.

(d) Using SST, turn the control valve shaft right and left 1 or 2 times.

SST 09616-0001 1

(e) Using a hexagon wrench, loosen the rack guide spring cap until the rack guide spring is not functioning.

(f) Using SST, torque wrench and hexagon wrench, tighten the rack guide spring cap until the preload is within specification.

SST 09616-0001 1

Preload (turning):

1.0 to 1.45 N-m (10 to 14.5 kgf-cm, 8.7 to 12.6 in.-lbf)

15. INSTALL RACK GUIDE SPRING CAP LOCK NUT

(a) Apply sealant to 2 or 3 threads of the lock nut.

Sealant:

Part No.08833-00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Temporarily install the lock nut.

(c) Using a hexagon wrench to hold the rack guide spring cap, and using SST, tighten the lock nut.

SST 09922-10010

Torque: 51 N-m (520 kgf-cm, 38 ft-lbf)

NOTICE:

Use SST 09922-10010 in the direction shown in the illustration.

HINT:

Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

(d) Recheck the total preload.

Preload (turning):

1.0 to 1.45 N-m (10 to 14.5 kgf-cm, 8.7 to 12.6 in.-lbf)

(e) Remove the RH and LH rack ends.

16. INSTALL RH AND LH CLAW WASHERS AND RACK ENDS

(a) Install a new claw washer, and temporarily install the rack end.

HINT:

Align the claws of the claw washer with the steering rack grooves.

- (b) Using a spanner to hold the steering rack steady, and using SST, tighten the rack end.

SST 09922-10010

Torque: 76 N·m (770 kgf·cm, 56 ft·lbf)

NOTICE:

Use SST 09922-10010 in the direction shown in the illustration.

HINT:

Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

- (c) Using a brass bar and hammer, stake the washer.

NOTICE:

Avoid any impact on the rack.

- (d) Perform the same procedure on the other side.

17. INSTALL RH AND LH RACK BOOTS, CLAMPS AND CLIPS

- (a) Ensure that the steering rack hole is not clogged with grease.

HINT:

If the hole is clogged, the pressure inside the boot will change after it is assembled and the steering wheel is turned.

- (b) Set a new clamp to the groove of the rack boot.

- (c) Install the boot.

NOTICE:

Be careful not to damage or twist the boot.

- (d) Using SST, tighten the clamp as shown in the illustration.

SST 09521-24010

- (e) Install the clip to the rack boot.

- (f) Perform the same procedure on the other side.

18. INSTALL RH AND LH TIE ROD ENDS AND LOCK NUTS

- (a) Screw the lock nut and tie rod end onto the rack end until the matchmarks are aligned.

- (b) After adjusting toe-in, tighten the nut

(See page [SA-5](#)).

Torque: 55 N·m (560 kgf·cm, 41 ft·lbf)

**19. INSTALL 2 TURN PRESSURE TUBES**

- (a) Coat 4 new O-rings with power steering fluid and install them to the turn pressure tubes.
- (b) Using SST, install the 2 turn pressure tubes.

SST 09023-34201

Torque: 13 N·m (135 kgf·cm, 10 ft·lbf)

HINT:

- ★ Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- ★ This torque value is effective in case that SST is parallel to a torque wrench.

INSTALLATION

1. INSTALL GROMMET AND BRACKET

2. INSTALL PS GEAR ASSEMBLY

- (a) Install the PS gear assembly with the gear assembly set bolt.

Torque: 165 N·m (1,700 kgf·cm, 123 ft·lbf)

- (b) Install the gear assembly set bolt, washer and nut.

Torque: 130 N·m (1,350 kgf·cm, 96 ft·lbf)

- (c) Install the stud bolt to the bracket.

Torque: 20 N·m (200 kgf·cm, 15 ft·lbf)

- (d) Install the bolt and nut to the bracket.

Torque: 165 N·m (1,700 kgf·cm, 123 ft·lbf)

3. CONNECT PRESSURE FEED AND RETURN TUBES

Using SST, connect the tubes.

SST 09023-12701

Torque: 22 N·m (227 kgf·cm, 16 ft·lbf)

HINT:

- ★ Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).
- ★ This torque value is effective in case that SST is parallel to a torque wrench.

4. CONNECT CLAMP PLATE

Connect the clamp plate and install the bolt.

Torque: 29 N·m (290 kgf·cm, 21 ft·lbf)

5. CONNECT NO. 2 INTERMEDIATE SHAFT ASSEMBLY (See page [SR-28](#) , [SR-42](#))

6. CONNECT RH AND LH TIE ROD ENDS (See page [SA-84](#))

7. POSITION FRONT WHEEL FACING STRAIGHT AHEAD

HINT:

Do it with the front of the vehicle jacked up.

8. CENTER SPIRAL CABLE

(See page [SR-28](#) , [SR-42](#))

9. INSTALL STEERING WHEEL

- (a) Align the matchmark on the wheel and steering column main shaft.

- (b) Temporarily tighten the wheel set nut.

- (c) Connect the connector.

10. BLEED POWER STEERING SYSTEM (See page [SR-4](#))

11. CHECK STEERING WHEEL CENTER POINT
12. TORQUE STEERING WHEEL SET NUT
Torque: 50 N·m (510 kgf·cm, 37 ft·lbf)
13. INSTALL STEERING WHEEL PAD
(See page [SR-28](#) , [SR-42](#))
14. CHECK FRONT WHEEL ALIGNMENT
(See page [SA-5](#))
15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
16. PERFORM YAW RATE AND DECELERATION SENSOR ZERO POINT CALIBRATION (See page [DI-1494](#))

SRS AIRBAG

PRECAUTION

RS01Y-61

CAUTION:

- ◆ The vehicle is equipped with SRS, which consists of a driver airbag, front passenger airbag, side airbag and curtain shield airbag. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Further, if a mistake is made in servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the correct procedures indicated in the repair manual.
- ◆ Wait at least 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (-) terminal cable is disconnected from the battery.
(The SRS is equipped with a back-up power source, so that if work is started within 90 seconds after disconnecting the negative (-) terminal cable of the battery, the SRS may be deployed.)
- ◆ Do not expose the steering wheel pad, front passenger airbag assembly, side airbag assembly, curtain shield airbag assembly, airbag sensor assembly, front airbag sensor, side airbag sensor assembly, curtain shield airbag sensor assembly, seat position sensor assembly or occupant classification ECU directly to hot air or flames.
- ◆ Be sure to perform the initialization of the occupant classification ECU if any of the following conditions occur (see page [DI-1849](#)). If the initialization is not performed, the SRS may not operate properly.
 - ◆ The occupant classification ECU is replaced.
 - ◆ Accessories (seatback tray, seat cover, etc.) are installed to the vehicle.
 - ◆ The passenger seat is removed from the vehicle, and then reinstalled or replaced.
 - ◆ The passenger airbag ON/OFF indicator light ("OFF") comes on when the passenger seat is not occupied.
 - ◆ The vehicle is brought to the workshop for repair due to an accident or collision.

NOTICE:

- ◆ Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.
- ◆ Even in the case of a minor collision when the SRS does not deploy, the steering wheel pad, front passenger airbag assembly, side airbag assembly, curtain shield airbag assembly, airbag sensor assembly, front airbag sensor, side airbag sensor assembly, curtain shield airbag sensor assembly, seat position sensor assembly and occupant classification ECU should be inspected. (see page [RS-24](#) , [RS-38](#) , [RS-52](#) , [RS-67](#) , [RS-77](#) , [RS-85](#) , [RS-97](#) , [RS-102](#) , [RS-107](#) , [RS-112](#) , [RS-120](#) and [RS-126](#)).
- ◆ Before repair work, remove the airbag sensor if any kind of shock is likely to occur to the airbag sensor during the operation.
- ◆ Never use SRS parts from another vehicle. When replacing the parts, replace them with new ones.
- ◆ Never disassemble or repair the steering wheel pad, front passenger airbag assembly, side airbag assembly, curtain shield airbag assembly, airbag sensor assembly, front airbag sensor, side airbag sensor assembly, curtain shield airbag sensor assembly, seat position sensor assembly or occupant classification ECU in order to reuse it.

- ◆ If the steering wheel pad, front passenger airbag assembly, side airbag assembly, curtain shield airbag assembly, airbag sensor assembly, front airbag sensor, side airbag sensor assembly, curtain shield airbag sensor assembly, seat position sensor assembly or occupant classification ECU has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ Use a volt/ohmmeter with high impedance (10 k Ω /V minimum) for troubleshooting the electrical circuits.
- ◆ Information labels are attached to the periphery of the SRS components. Follow the instructions in the caution.
- ◆ After work on the SRS is completed, perform the SRS warning light check (see page [DI-1859](#)).
- ◆ When the negative (-) terminal cable is disconnected from the battery, the memory will be cleared. Because of this, be sure to make a record of the contents memorized in each system before starting work. When work is finished, adjust each system as it was before. Never use a back-up power supply from outside the vehicle to avoid erasing the memory in any system.

OPERATION

CAUTION:

Be sure to perform the initialization of the occupant classification ECU if any of the following conditions occur (see page [DI-1849](#)). If the initialization is not performed, the SRS may not operate properly.

- ◆ The occupant classification ECU is replaced.
- ◆ Accessories (seatback tray, seat cover, etc.) are installed to the vehicle.
- ◆ The passenger seat is removed from the vehicle, and then reinstalled or replaced.
- ◆ The passenger airbag ON/OFF indicator light ("OFF") comes on when the passenger seat is not occupied.
- ◆ The vehicle is brought to the workshop for repair due to an accident or collision.

1. STEERING WHEEL PAD

The inflator and bag of the SRS are stored in the steering wheel pad and cannot be disassembled. The inflator contains a squib, igniter charge, and gas generator, etc., and inflates the bag when instructed by the airbag sensor assembly. The steering wheel pad cannot be disassembled.

2. SPIRAL CABLE

A spiral cable is used as an electrical joint from the vehicle body side to the steering wheel. The spiral cable cannot be disassembled.

3. FRONT PASSENGER AIRBAG ASSEMBLY

The inflator and bag of the SRS are stored in the front passenger airbag assembly and cannot be disassembled. The inflator contains a squib, igniter charge, gas generator, etc., and inflates the bag when instructed by the airbag sensor assembly. The front passenger airbag assembly cannot be disassembled.

4. SIDE AIRBAG ASSEMBLY

The inflator and bag of the SRS are stored in the side airbag assembly and cannot be disassembled. The inflator contains a squib, igniter charge and gas generator, etc., and inflates the bag when instructed by the airbag sensor assembly. The side airbag assembly cannot be disassembled.

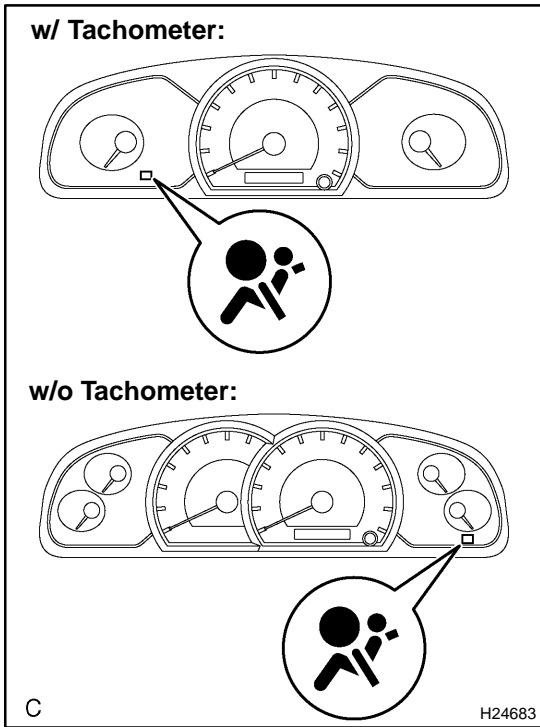

5. CURTAIN SHIELD AIRBAG ASSEMBLY

The inflator and bag of the SRS are stored in the curtain shield airbag assembly and cannot be disassembled. The inflator contains a squib, igniter charge, gas generator, etc., and inflates the bag when instructed by the airbag sensor assembly. The curtain shield airbag assembly cannot be disassembled.

6. SEAT BELT PRETENSIONER

The front seat outer belt has the seat belt pretensioner system. The pretensioner operates in the event of a frontal collision. The seat belt pretensioner cannot be disassembled.

7. SRS WARNING LIGHT

The SRS warning light is located on the combination meter. It comes on to alert the driver of trouble in the system when a malfunction is detected in the airbag sensor assembly. In normal operation conditions when the ignition switch is turned to the ON position, the light comes on for approximately 6 seconds and then goes off.

8. AIRBAG SENSOR ASSEMBLY

The airbag sensor assembly is mounted on the floor inside the lower center finish panel. The airbag sensor assembly consists of an airbag sensor, safing sensor, diagnosis circuit, ignition control, drive circuit, etc. It receives signals from the airbag sensor, front airbag sensor, side and curtain shield airbag sensor and curtain shield airbag sensor, and judges whether the SRS must be activated or not. The airbag sensor assembly cannot be disassembled.

9. FRONT AIRBAG SENSOR

The front airbag sensor is mounted inside each of the radiator support. The front airbag sensor consists of an airbag sensor, diagnosis circuit, etc. It sends signals to the airbag sensor assembly to judge whether the SRS must be activated or not. The front airbag sensor cannot be disassembled.

10. SIDE AIRBAG SENSOR ASSEMBLY

The side airbag sensor assembly is mounted in the LH and RH center pillars. The side airbag sensor assembly consists of an airbag sensor, diagnosis circuit, etc. It sends signals to the airbag sensor assembly to judge whether the SRS must be activated or not. The side airbag sensor assembly cannot be disassembled.

11. CURTAIN SHIELD AIRBAG SENSOR ASSEMBLY

The curtain shield airbag sensor assembly is mounted in the LH and RH quarter panels. The curtain shield airbag sensor assembly consists of an airbag sensor, diagnosis circuit, etc. It sends signals to the airbag sensor assembly to judge whether the SRS must be activated or not. The curtain shield airbag sensor assembly cannot be disassembled.

12. SEAT POSITION SENSOR ASSEMBLY

The seat position sensor assembly is mounted in the driver's seat. The sensor unit consists of a magnet sensor, etc. It judges the seat sliding position and sends the signal to the airbag sensor assembly. The seat position sensor assembly cannot be disassembled.

13. OCCUPANT CLASSIFICATION ECU

The occupant classification ECU is mounted in the passenger seat. Based on the information sent from the occupant classification ECU, the airbag sensor assembly determines whether the SRS should be activated or not. The occupant classification ECU cannot be disassembled.

14. PASSENGER AIRBAG MANUAL AUTO (ON)- OFF SWITCH

The passenger airbag manual AUTO (ON)- OFF switch is mounted on the lower center cover or front console box. By turning the passenger airbag manual AUTO (ON)-OFF switch to OFF with the ignition key, the passenger airbag system can be disabled. Also, in order to inform the passenger that the front passenger airbag is disabled, the OFF indicator inside the switch illuminates.

Switch Position	Passenger Airbag	Indicator Light
ON or AUTO	Operative	OFF
OFF	Disabled	ON

15. RSCA OFF SWITCH

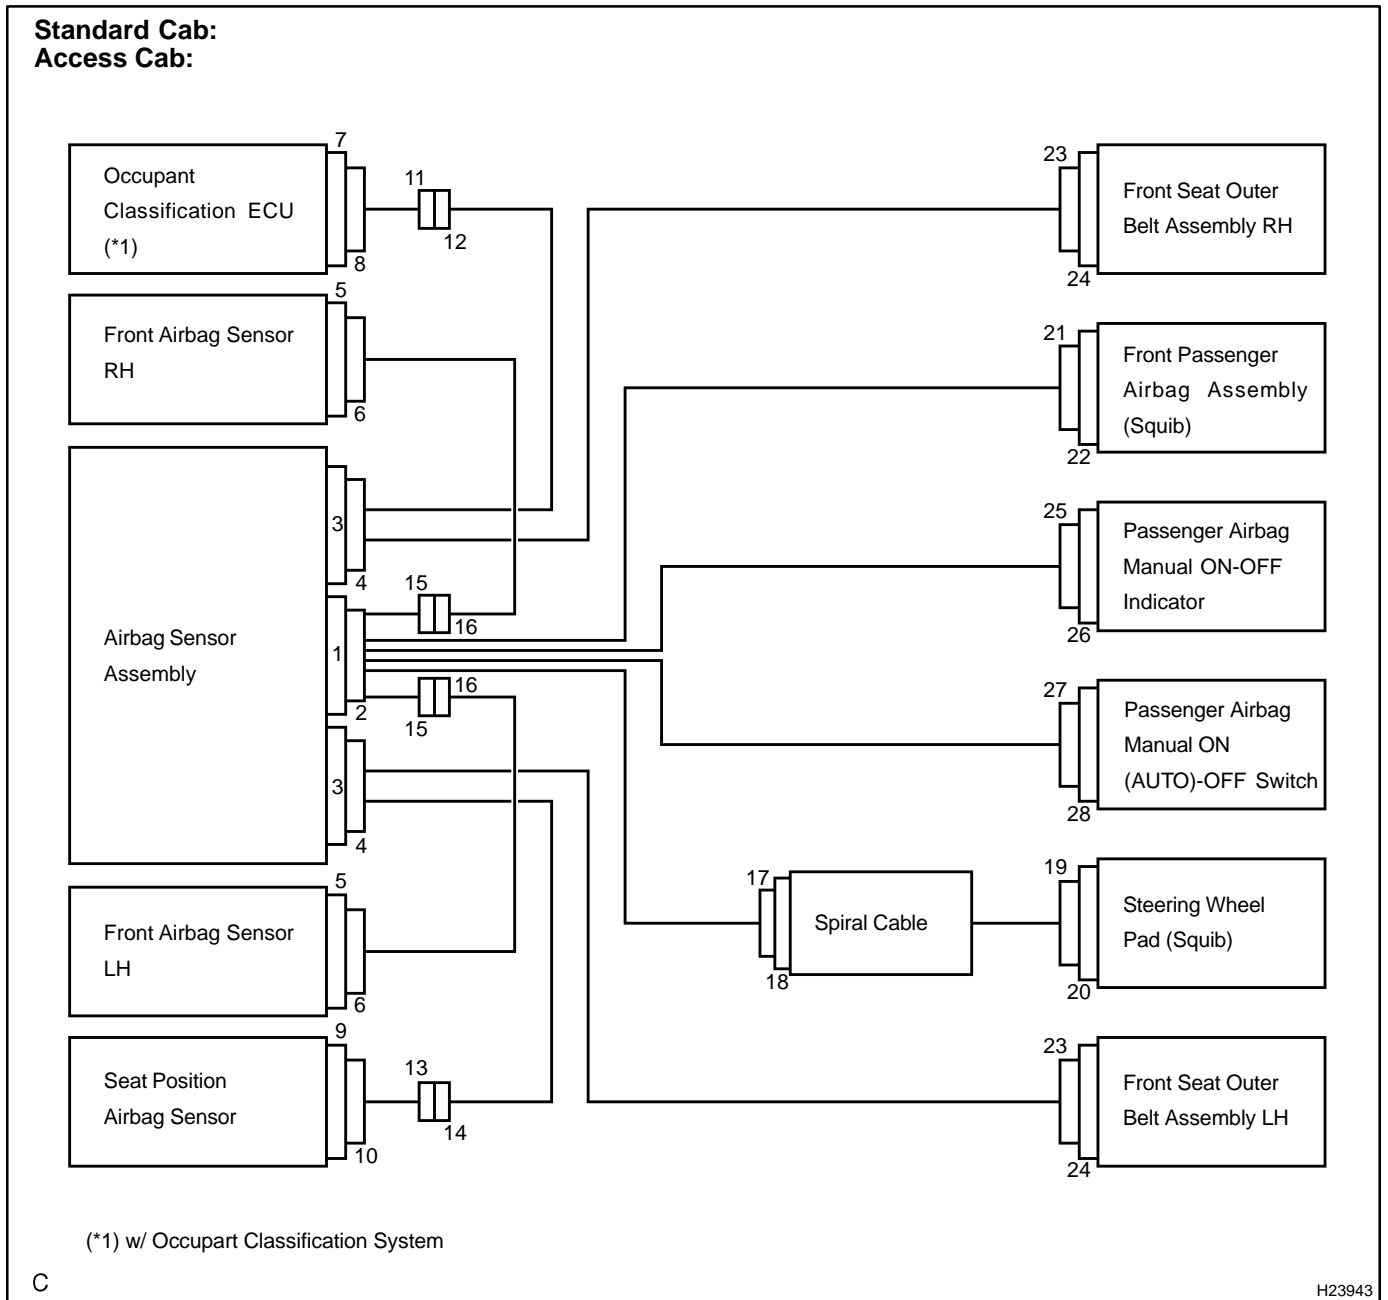

The RSCA OFF switch is located on the switch base. The curtain shield airbag can be switched ON and OFF by pushing the RSCA OFF switch. Also, the RSCA OFF indicator lamp comes on to inform the passenger that the curtain shield airbag is disabled.

Switch Position	Curtain Shield Airbag	Indicator Light
ON	Operative	OFF
OFF	Disabled	ON

16. SRS CONNECTORS

HINT:

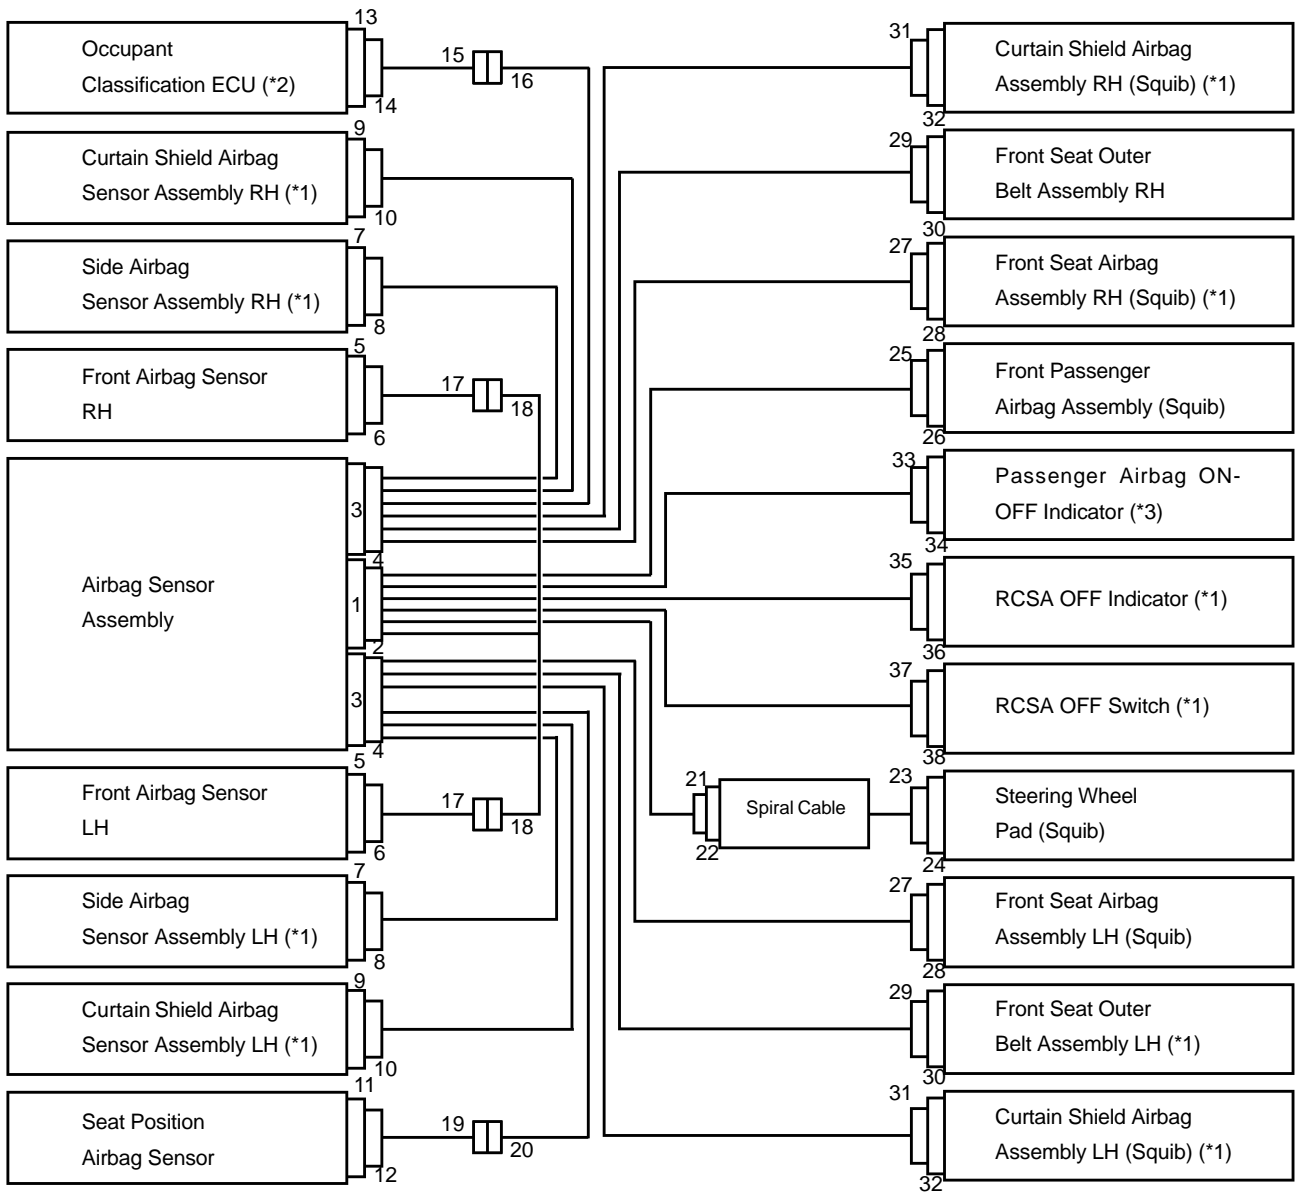

SRS connectors are located as shown in the following illustration.

No.	Connector Type	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 2, 4, 16, 17, 21, 22
(2)	Activation Prevention Mechanism	Connectors 2, 4, 18, 20, 22, 24
(3)	Half Connection Prevention Mechanism	Connectors 6, 15, 17, 21
(4)	Connector Lock Mechanism (1)	Connectors 19, 31
(5)	Connector Lock Mechanism (2)	Connectors 2, 4
(6)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3
(7)	RSCA OFF Switch	Connectors 1, 3

SUPPLEMENTAL RESTRAINT SYSTEM - SRS AIRBAG

Double Cab:

(*1) w/ Side Airbag and Curtain Shield Airbag (*3) Separate Seat Type
 (*2) w/ Occupant Classification System

H24699

No.	Connector Type	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 2, 4, 6, 8, 10, 18, 21, 25, 26, 27, 28, 31, 32
(2)	Activation Prevention Mechanism	Connectors 2, 4, 22, 24, 26, 28, 30, 32
(3)	Half Connection Prevention Mechanism	Connectors 6, 8, 10, 17, 21, 25, 27
(4)	Connector Lock Mechanism (1)	Connectors 23, 29
(5)	Connector Lock Mechanism (2)	Connectors 2, 4
(6)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3

- (a) All connectors in the SRS, except the seat position airbag sensor connector and occupant classification ECU connectors, are colored yellow to distinguish them from other connectors. These connectors have special functions, and are specially designed for the SRS. All SRS connectors use durable gold-plated terminals, and are placed in the locations shown on the previous page to ensure high reliability.

- (1) **Terminal Twin-Lock Mechanism**
 Each connector has a two-piece component consisting of a housing and a spacer. This design allows the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.
- (2) **Activation Prevention Mechanism**
 Each connector contains a short spring plate. When the connector is disconnected, the short spring plate automatically connects the positive (+) terminal and negative (-) terminal of the squib.

- (3) Half connection prevention mechanism:
 If the connector is not completely connected, the connector is disconnected due to the spring operation to the extent that no continuity exists.

- (4) Connector lock mechanism (1):
 Locking the connector lock button securely connects the connector.

- (5) Connector lock mechanism (2): Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from becoming disconnected.

- (6) Improper connection prevention lock mechanism: When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.

17. DISCONNECTION OF CONNECTORS FOR STEERING WHEEL PAD

- (a) Release the lock button (yellow part) of the connector using a screwdriver.
- (b) Insert the screwdriver tip between the connector and the base, and then raise the connector.

**18. CONNECTION OF CONNECTORS FOR STEERING WHEEL PAD**

- (a) Connect the connector.
- (b) Push down securely on the lock button (yellow part) of the connector. (When locking, a click sound can be heard.)

19. DISCONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY AND CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.

H01586

20. CONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY AND CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)

HINT:

When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

H01587

21. DISCONNECTION OF CONNECTOR FOR AIRBAG SENSOR ASSY CENTER

- (a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).

HINT:

Perform the following procedures when replacing the holder.

- (b) Remove the holder.
 - (1) Using a screwdriver, unlock the retainer.

- (2) Release the fitting lances and remove the holder.

- (c) Install the holder.
(1) Install the connectors to the holder. (When locking, a click sound can be heard.)

HINT:

The retainer is locked when the holder is connected.

22. CONNECTION OF CONNECTOR FOR AIRBAG SENSOR ASSY CENTER

- (a) Firmly insert the holder (with connectors) until it can not be pushed any further.
(b) Push the lever to connect the holder (with connectors). (When locking, a click sound can be heard.)

HINT:

The holder slides when connecting. Be sure not to hold the holder while connecting, as it may result in an insecure fit.

23. DISCONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

- (a) Push down the housing lock (white part) and slide the CPA (yellow part). (At this time, the connector cannot be disconnected yet).
- (b) Push down the housing lock (white part) again and disconnect the connector.

HINT:

Do not push down the A part shown in the illustration when disconnecting.

- (c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

24. CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

- (a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

- (b) Be sure to engage the connectors until they are locked. (When locking, make sure that a click sound can be heard.)

HINT:

When connecting them, the housing lock (white part) slides. Be sure not to hold the housing lock (white part) and A part, as it may result in an insecure fit.

25. DISCONNECTION OF CONNECTOR FOR SIDE AIRBAG ASSEMBLY

- (a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.

**26. CONNECTION OF CONNECTOR FOR SIDE AIRBAG ASSEMBLY**

- (a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)

HINT:

When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

27. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND CURTAIN SHIELD AIRBAG SENSOR

- (a) While holding both outer flank sides, slide the outer in the direction shown by the arrow.
- (b) When the connector lock is released, the connectors are disconnected.

HINT:

Be sure to hold both outer flank sides. Holding the top and bottom sides will make disconnection difficult.

28. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND CURTAIN SHIELD AIRBAG SENSOR

- (a) Connect the connector as shown in the illustration. (When locking, make sure that the outer returns to its original position and a click sound can be heard.)

HINT:

When connecting, the outer will slide. Be sure not to hold the outer while connecting, as it may result in an insecure fit.

STEERING WHEEL PAD AND SPIRAL CABLE COMPONENTS

RS00Y-59

REMOVAL

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected and the ignition switch is in the ON or ACC position, DTCs will be recorded.
 - ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
1. PRECAUTION (SEE PAGE [RS-1](#) AND [RS-3](#))
 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
- Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
3. REMOVE STEERING WHEEL PAD (SEE PAGE [SR-18](#) AND [SR-33](#))
 4. REMOVE STEERING WHEEL (SEE PAGE [SR-18](#) AND [SR-33](#))
 5. REMOVE STEERING COLUMN COVER LOWER (SEE PAGE [SR-18](#) AND [SR-33](#))
 6. REMOVE SPIRAL CABLE (SEE PAGE [SR-18](#) AND [SR-33](#))

INSPECTION

1. VEHICLES NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the steering wheel pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering wheel pad with a new one: Cuts, minute cracks or marked discoloration on the steering wheel pad top surface or in the grooved portion.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the steering wheel pad removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering wheel pad or steering wheel assembly with a new one:
 - ◆ Cuts, minute cracks or marked discoloration on the steering wheel pad top surface or in the grooved portion.
 - ◆ Cracks or other damage to the connectors.
 - ◆ Deformation of the steering wheel assembly.

- ◆ Deformation of the horn button contact plate of the horn button assembly.

- ◆ There should be no interference between the steering wheel pad and steering wheel assembly, and the clearance should be uniform all the way around when the new steering wheel pad is installed on the steering wheel assembly.

CAUTION:

For removal and installation procedures of the steering wheel pad, see page [RS-23](#) and [RS-33](#) . Be sure to follow the correct procedure.

DISPOSAL

HINT:

When scrapping a vehicle equipped with SRS or disposing of the steering wheel pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, USA, INC.

CAUTION:

- ◆ Never dispose of a steering wheel pad which has an undeployed airbag.
- ◆ The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.

- ◆ When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- ◆ When deploying an airbag, perform the operation at least 10 m (33 ft) away from the steering wheel pad.
- ◆ The steering wheel pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a steering wheel pad with a deployed airbag.
- ◆ Do not apply water, etc. to a steering wheel pad with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

1. AIRBAG DEPLOYMENT WHEN SCRAPPING VEHICLE

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Check the function of the SST.

SST 09082-00700

CAUTION:

When deploying the airbag, always use the specified SST: SRS Airbag Deployment Tool.

- (1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

- (2) Check the function of the SST.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.

CAUTION:

- ◆ Do not connect the SST connector (yellow colored one) to the airbag.
- ◆ If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so replace the SST with a new one.

- (3) Disconnect the SST from the battery.
- (b) Precaution (see page RS-1 and RS-3).
- (c) Disconnect the cable from the negative battery terminal.
Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

- (d) Remove the steering column cover lower.
 - (1) While turning the steering wheel assembly to the right and left, remove the 3 screws and steering column cover lower.

- (e) Install the SST.

CAUTION:

Check that there is no looseness in the steering wheel assembly and steering wheel pad.

- (1) Disconnect the airbag connector (yellow colored one) from the spiral cable.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (2) Connect the SST connector to the airbag connector of the spiral cable.

SST 09082-00700, 09082-00780

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

- (3) Move the SST at least 10 m (33 ft) away from the vehicle front side window.
- (4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

- (f) Deploy the airbag.

- (1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
- (2) Press the SST activation switch and deploy the airbag.

CAUTION:

- ◆ When deploying the airbag, make sure that no one is near the vehicle.
- ◆ The steering wheel pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a steering wheel pad with a deployed airbag.
- ◆ Do not apply water, etc. to a steering wheel pad with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

2. DEPLOYMENT WHEN DISPOSING OF STEERING WHEEL PAD ONLY

NOTICE:

- ◆ When disposing of the steering wheel pad, never use the customer's vehicle to deploy the airbag.
- ◆ Be sure to follow the procedure given below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Check the function of the SST (see step 1-(a)).
- (b) Remove the steering wheel pad (see page RS-23).

CAUTION:

- ◆ When removing the steering wheel pad, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (-) terminal cable is disconnected from the battery.
- ◆ When storing the steering wheel pad, keep the airbag deployment side facing upward.

- (c) Using a service-purpose wire harness for the vehicle, tie down the steering wheel pad to the disc wheel.

Wire harness: Stripped wire harness section 1.25 mm² or more (0.0019 in.² or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the steering wheel pad, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire harness section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 \text{ divided by } 4$$

- (1) Install the 2 bolts with washers into the 2 bolt holes on the steering wheel pad.

Bolt:

L: 35.0 mm (1.378 in.)

M: 6.0 mm (0.236 in.)

Pitch: 1.0 mm (0.039 in.)

NOTICE:

- ◆ Tighten the bolts by hand until the bolts become difficult to turn.
- ◆ Do not tighten the bolts excessively.

- (2) After connecting the SST below to each other, connect them to the steering wheel pad connectors.

SST 09082-00802 (09082-10801, 09082-30801)

- (3) Using 3 wire harnesses, wind wire harness at least 2 times each around the bolts installed on the left and right sides of the steering wheel pad.

CAUTION:

- ◆ Tightly wind the wire harness around the bolts so that there is no slack.
- ◆ Make sure that the wire harness is tight. If there is slack in wire harness, the steering wheel pad may become loose due to the shock when the airbag is deployed.

- (4) Face the airbag deployment side of the steering wheel pad upward. Separately tie the left and right sides of the steering wheel pad to the disc wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole in the disc wheel.

CAUTION:

- ◆ Make sure that the wire harness is tight. If there is slack in wire harness, the steering wheel pad may become loose due to the shock when the airbag is deployed.
- ◆ Always tie down the steering wheel pad with the airbag deployment side facing upward.

NOTICE:

The disc wheel will be marked by the airbag deployment, so use an extra disc wheel.

- (d) Install the SST.

CAUTION:

Place the disc wheel on level ground.

- (1) Connect the SST connector.
SST 09082-00700

CAUTION:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.

- (2) Move the SST at least 10 m (33 ft) away from the steering wheel pad tied down to the disc wheel.

- (e) Cover the steering wheel pad with a cardboard box or tires.

Covering method using a cardboard box:

Cover the steering wheel pad with the cardboard box and place weights on the cardboard box in 4 places totalling at least 190 N (19 kg, 43 lb).

Cardboard box size:

Must exceed the following dimensions:

X = 460 mm (18.11 in.)

Y = 650 mm (25.59 in.)

NOTICE:

- ◆ When dimension Y of the cardboard box exceeds the diameter of the disc wheel with tire which the steering wheel pad is tied to, X should be the following size.
 $X = 460 \text{ mm (18.11 in.)} + \text{width of tire}$
- ◆ If a cardboard box which is smaller than the specified size is used, the cardboard box will be broken by the shock from the airbag deployment.

- ◆ Covering method using tires:

Place at least 3 tires without disc wheels on the tire with disc wheel which the steering wheel pad is tied to. Place the tire with disc wheel on them.

Tire size: Must exceed the following dimensions:

Width: 185 mm (7.28 in.)

Inner diameter: 360 mm (14.17 in.)

CAUTION:

Do not use tires with disc wheels except on the top and bottom.

NOTICE:

- ◆ The tires may be marked by the airbag deployment, so use the redundant tires.
- ◆ Do not place the SST connector under the tire because it could be damaged.

- (1) Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

- (f) Deploy the airbag.

- (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
- (2) Check that no one is within a 10 m (33 ft) radius of the disc wheel which the steering wheel pad is tied to.
- (3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

- (g) Dispose of the steering wheel pad.

CAUTION:

- ◆ The steering wheel pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a steering wheel pad with a deployed airbag.
- ◆ Do not apply water, etc. to a steering wheel pad with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

- (1) Remove the steering wheel pad from the disc wheel.
- (2) Place the steering wheel pad in a plastic bag, tie it tightly and dispose of it as other general part disposal.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the steering wheel pad, steering wheel or spiral cable with a new one.

Case	Replacing part
The airbag has been deployed.	Steering wheel pad
The steering wheel pad has been found to be faulty in troubleshooting.	Steering wheel pad
The spiral cable has been found to be faulty in troubleshooting.	Spiral cable
The steering wheel pad has been found to be faulty while checking items. (see page RS-24)	Steering wheel pad
The steering wheel has been found to be faulty while checking items. (see page RS-24)	Steering wheel
The spiral cable has been found to be faulty while checking items. (see page RS-24)	Spiral cable
The steering wheel pad has been dropped.	Steering wheel pad

CAUTION:

For removal and installation of the steering wheel pad, see page [RS-23](#) and [RS-33](#) . Be sure to follow the correct procedure.

INSTALLATION

CAUTION:

- ◆ If the steering wheel pad has been dropped, or there are cracks, dents or other defects in the case or connector, replace the steering wheel pad with a new one.
 - ◆ When installing the steering wheel pad, take care that it is not pinched between other parts.
 - ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
1. INSTALL SPIRAL CABLE (SEE PAGE [SR-28](#) AND [SR-42](#))
 2. INSTALL STEERING COLUMN COVER LOWER (SEE PAGE [SR-28](#) AND [SR-42](#))
 3. INSTALL STEERING WHEEL (SEE PAGE [SR-28](#) AND [SR-42](#))
 4. INSTALL STEERING WHEEL PAD (SEE PAGE [SR-28](#) AND [SR-42](#))
 5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
 6. INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))

**15. REMOVE LOWER INSTRUMENT COVER
(SEE PAGE BO-1 11)**

- 16. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY**
 (a) Using a clip remover, disengage the connector clamp.
 (b) Disconnect the airbag connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (c) Remove the bolt holding the front passenger airbag assembly and instrument panel.
 (d) Remove the 2 bolts holding the front passenger airbag assembly and instrument panel reinforcement.
 (e) Remove the front passenger airbag assembly.

CAUTION:

- ◆ Do not store the front passenger airbag assembly with the airbag deployment side facing downward.
- ◆ Never disassemble the front passenger airbag assembly.

INSPECTION

1. VEHICLES NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the front passenger airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger airbag assembly with a new one:

Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag assembly.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).

- (b) With the front passenger airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one:

- ◆ Cuts, minute cracks or marked discoloration on the front passenger airbag assembly.
- ◆ Cracks or other damage to the connectors.

- ◆ Deformation or cracks on the instrument panel or instrument panel reinforcement.

CAUTION:

For removal and installation procedures of the front passenger airbag assembly, see page [RS-36](#) and [RS-46](#) . Be sure to follow the correct procedure.

DISPOSAL

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the front passenger airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- ◆ Never dispose of a front passenger airbag assembly that has an undeployed airbag.
- ◆ The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.

- ◆ When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- ◆ When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag assembly.
- ◆ The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- ◆ Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

HINT:

Prepare a battery as the power source to deploy the airbag.

1. AIRBAG DEPLOYMENT WHEN SCRAPPING VEHICLE

- (a) Check the function of the SST (see step 1-(a) on page RS-25).
- (b) Precaution (see page RS-1 and RS-3).
- (c) Disconnect the cable from the negative battery terminal. Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
- (d) Remove the glove compartment door (see page BO-1 11).
- (e) Remove the lower No. 2 finish panel (see page BO-1 11).

- (f) Disconnect the airbag connector (yellow colored one) from the front passenger airbag assembly.
 - (1) Using a clip remover, disengage the connector clamp.
 - (2) Disconnect the airbag connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (g) Install the SST.
 - (1) Connect the SST connector to the front passenger airbag assembly.
- SST 09082-00700, 09082-00780

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

- (2) Move the SST at least 10 m (33 ft) away from the vehicle side window.
- (3) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (4) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

- (h) Deploy the airbag.
- (1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
 - (2) Press the SST activation switch and deploy the airbag.

CAUTION:

- ◆ When deploying the airbag, make sure that no one is near the vehicle.
- ◆ The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- ◆ Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

2. DEPLOYMENT WHEN DISPOSING OF FRONT PASSENGER AIRBAG ASSEMBLY ONLY

NOTICE:

- ◆ When disposing of the front passenger airbag assembly, never use the customer's vehicle to deploy the airbag.
- ◆ Be sure to follow the procedure detailed below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Check the function of the SST (see step 1-(a)).

- (b) Remove the front passenger airbag assembly (see page [RS-36](#)).

CAUTION:

- ◆ When removing the front passenger airbag assembly, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (-) terminal cable is disconnected from the battery.
- ◆ When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

- (c) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.
Wire harness: Stripped wire harness section 1.25 mm² or more (0.0019 in.² or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger airbag assy, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 X (Diameter)² divided by 4

- (1) Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size: Must exceed the following dimensions:

Width: 185 mm (7.28 in.)

Inner diameter: 360 mm (14.17 in.)

CAUTION:

- ◆ Make sure that the wire harness is tight. If there is slack in wire harness, the front passenger airbag assembly may become loose due to the shock when the airbag is deployed.
- ◆ Always tie down the front passenger airbag assembly with the airbag deployment side facing inside.

NOTICE:

The tire will be marked by the airbag deployment, so use an extra tire.

SUPPLEMENTAL RESTRAINT SYSTEM - FRONT PASSENGER AIRBAG ASSEMBLY

- (d) Place the tires.
- (1) Place at least 2 tires under the tire which the front passenger airbag assembly is tied to.
 - (2) Place at least 2 tires over the tire which the front passenger airbag assembly is tied to. The top tire should have the disc wheel installed.

- (3) Tie the tires together with 2 wire harness.

CAUTION:

Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

- (e) Install the SST.
Connect the SST connector.
SST 09082-00700, 09082-00780

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

- (f) Deploy the airbag.
- (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
 - (2) Check that no one is within a 10 m (33 ft) radius of the tire which the front passenger airbag assembly is tied to.
 - (3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

(g) Dispose of the front passenger airbag assembly.

CAUTION:

- ◆ The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
 - ◆ Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
 - ◆ Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
 - ◆ Always wash your hands with water after completing the operation.
- (1) Remove the front passenger airbag assembly from the tire.
 - (2) Place the front passenger airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one.

Case	Replacing part
The airbag has been deployed.	Front passenger airbag assembly
The front passenger airbag assembly has been found to be faulty in troubleshooting.	Front passenger airbag assembly
The front passenger airbag assembly has been found to be faulty while checking items (see page RS-38).	Front passenger airbag assembly
The instrument panel has been found to be faulty while checking items (see page RS-38).	Instrument panel
The instrument panel reinforcement has been found to be faulty while checking items (see page RS-38).	Instrument panel reinforcement
The front passenger airbag assembly has been dropped.	Front passenger airbag assembly

CAUTION:

For replacement of the front passenger airbag assembly, see page [RS-36](#) and [RS-46](#) . Be sure to follow the correct procedure.

INSTALLATION

NOTICE:

- ◆ If the front passenger airbag assembly has been dropped, or there are cracks, dents or other defects in the case or connector, replace the front passenger airbag assembly with a new one.
- ◆ When installing the front passenger airbag assembly, take care it is not pinched between other parts.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY**
 - (a) Install the bolt to hold the front passenger airbag assembly and instrument panel reinforcement.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)
 - (b) Install the 2 bolts to hold the front passenger airbag assembly and instrument panel.
Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)
2. **INSTALL LOWER INSTRUMENT COVER (SEE PAGE BO-120)**
3. **Access cab (w/ Large type console box):**
Double cab:
INSTALL FRONT CONSOLE BOX (SEE PAGE BO-120)
4. **Access cab (w/ Large type console box):**
Double cab:
INSTALL REAR CONSOLE BOX (SEE PAGE BO-120)
5. **Access cab (w/ Large type console box):**
Double cab:
INSTALL UPPER CONSOLE PANEL (SEE PAGE BO-120)
6. **Access cab (w/ Large type console box):**
Double cab:
INSTALL SHIFTING HOLE COVER (SEE PAGE BO-120)
7. **Standard cab:**
Access cab (w/o Large type console box):
Double cab (Split type seat):
INSTALL LOWER CENTER COVER (SEE PAGE BO-120)

- 8. CONNECT AIRBAG CONNECTOR**
 - (a) Connect the airbag connector as shown in the illustration.
 - (b) Attach the connector clamp to the reinforcement.
- 9. INSTALL LOWER NO. 2 FINISH PANEL**
(SEE PAGE [BO-120](#))
- 10. INSTALL GLOVE COMPARTMENT DOOR**
(SEE PAGE [BO-120](#))
- 11. INSTALL LOWER FINISH PANEL**
(SEE PAGE [BO-120](#))
- 12. Double cab:**
INSTALL SIDE PANELS (SEE PAGE [BO-120](#))
- 13. Double cab:**
INSTALL COWL SIDE TRIM BOARDS
(SEE PAGE [BO-120](#))
- 14. Standard cab:**
Access cab:
INSTALL COWL SIDE TRIMS (SEE PAGE [BO-120](#))
- 15. INSTALL FRONT DOOR SCUFF PLATES**
(SEE PAGE [BO-120](#))
- 16. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
- 17. INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

SIDE AIRBAG ASSEMBLY (Power Adjuster Type) COMPONENTS

RS126-01

H23932

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected and the ignition switch is in the ON or ACC position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE SEAT TRACK COVERS

Using a screwdriver, remove the 2 seat track covers.

HINT:

Tape the screwdriver tip before use.

4. REMOVE FRONT SEAT

- (a) Remove the 4 bolts.
- (b) Disconnect the connectors.
- (c) Remove the front seat.

CAUTION:

Be careful not to damage the body.

5. REMOVE HEADREST

6. REMOVE SLIDE KNOB AND RECLINING KNOB

Using a screwdriver, remove the slide knob and reclining knob.

HINT:

Tape the screwdriver tip before use.

7. REMOVE SEAT CUSHION LOWER SHIELD, SEAT CUSHION OUTER SHIELD AND SEAT CUSHION INNER SHIELD

- (a) Remove the screw from the seat cushion outer shield.
- (b) Perform the same procedure as for the seat cushion inner shield.

- (c) Remove the 2 screws from the seat cushion outer shield.
- (d) Remove the screw from the seat cushion inner shield.

- (e) Remove the 2 screws from the seat cushion lower shield.
- (f) Disconnect the lumbar switch connector from the lumbar switch, and remove the seat cushion lower shield, outer shield and inner shield.

- (g) Remove the screw and separate the seat cushion lower shield and seat cushion outer shield.
- (h) Perform the same procedure as for the other side.

8. REMOVE FRONT SEAT INNER BELT

- (a) Disconnect the wire harness clamps and connectors.
- (b) Remove the nut and front seat inner belt.

9. REMOVE LUMBAR SWITCH

Remove the 2 screws and lumbar switch from the seat cushion outer shield.

10. REMOVE POWER SEAT SWITCH

Remove the 3 screws and power seat switch.

11. REMOVE ARMREST ASSEMBLY

- (a) Using a screwdriver, remove the armrest cap.
- (b) Remove the bolt, armrest spacer, armrest lock plate and armrest assembly.
- (c) Remove the spacer from the armrest assembly.

**12. REMOVE SEATBACK COVER AND PAD**

- (a) Remove the seatback cover belt from the seat frame assembly.
- (b) Open the fastener.

- (c) Remove the hog rings from the seat frame assembly.

- (d) Remove the hog rings from the seat frame assembly.
- (e) Remove the 2 headrest supports from the seat frame assembly.
- (f) Remove the seatback cover and pad from the seat frame assembly.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the front seat airbag assy installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seatback assy with a new one:

Cuts, minute cracks or marked discoloration on the front seatback assy around the front seat airbag assy.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).

- (b) Perform a visual check which includes the following items with the seatback assembly removed from the vehicle.

- ◆ Cuts, tears and cracks on the side airbag assembly.
- ◆ Cuts and cracks in the wire harness, and chipping in the connectors.

CAUTION:

For removal and installation of the front seatback assembly, see page [RS-49](#) and [RS-60](#) . Be sure to follow the correct procedure.

DISPOSAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.
- ◆ When scrapping a vehicle equipped with the SRS or disposing of the front seat airbag assy LH, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- ◆ **Never dispose of a front seat airbag assembly that has an undeployed airbag.**
- ◆ **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

- ◆ **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- ◆ **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front seat airbag assembly.**
- ◆ **The front seat airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- ◆ **Use gloves and safety glasses when handling a front seat airbag assembly with a deployed airbag.**
- ◆ **Always wash your hands with water after completing the operation.**
- ◆ **Do not apply water, etc. to a front seat airbag assembly with a deployed airbag.**

HINT:

Prepare a battery as the power source to deploy the airbag.

1. AIRBAG DEPLOYMENT WHEN SCRAPPING VEHICLE

- (a) Check the function of the SST (see step 1-(a) on page RS-25).
SST 09082-00700
- (b) Precaution (see page RS-1 and RS-3).
- (c) Disconnect the battery negative terminal.
Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
- (d) Remove the 4 bolts from the front seat assy (see page RS-49 (power adjuster type), RS-64 (manual adjuster type) and RS-74 (passenger side of split type)).

HINT:

Keep the front seat assy LH in the cabin.

- (e) Disconnect the connector (yellow colored one) from the front seat airbag assy LH.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (f) Install the SST.
 - (1) Connect the connectors of the SST to the airbag connector.
SST 09082-00700, 09082-00750

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

- (2) Move the SST at least 10 m (33 ft) away from the vehicle side window.
- (3) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (4) Connect the red clip of the SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

- (g) Deploy the airbag.
- (1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
 - (2) Press the SST activation switch and deploy the airbag.

CAUTION:

- ◆ When deploying the airbag, make sure that no one is near the vehicle.
- ◆ The front seat airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a front seat airbag assembly with a deployed airbag.
- ◆ Do not apply water, etc. to a front seat airbag assembly with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

2. DEPLOYMENT WHEN DISPOSING OF SIDE AIRBAG ASSEMBLY

NOTICE:

- ◆ When disposing of the side airbag assembly, never use the customer's vehicle to deploy the airbag.
- ◆ Be sure to follow the procedure given below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Check the function of the SST (see step 1-(a)).
- (b) Remove the front seat airbag assembly (see page [RS-49](#) (power adjuster type), [RS-64](#) (manual adjuster type) and [RS-74](#) (passenger side of split type)).
- (c) Remove the seatback assembly (see page [RS-49](#) (power adjuster type), [RS-64](#) (manual adjuster type) and [RS-74](#) (passenger side of split type)).

- (d) Remove the 2 nuts and side airbag assembly from the seatback assembly.

CAUTION:

- ◆ When removing the front seat airbag assembly, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (-) terminal cable is disconnected from the battery.
- ◆ When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

- (e) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.

**Wire harness: Stripped wire harness section
1.25 mm² or more (0.0019 in.² or more)**

HINT:

To calculate the area of the stripped wire harness section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 \text{ divided by } 4$$

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger airbag assy, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

- (1) Install the 2 nuts to the side airbag assembly.

SUPPLEMENTAL RESTRAINT SYSTEM - SIDE AIRBAG ASSEMBLY (Power Adjuster Type)

- (2) Wind the wire harness around the stud bolts of the side airbag assembly as shown in the illustration.

- (3) Position the side airbag assembly inside the tire with the airbag deployment direction facing inside.
Tire size: Must exceed the following dimensions:
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)

CAUTION:

- ◆ Make sure that the wire harness is tight. If there is slack in wire harness, the side airbag assembly may become loose due to the shock when the airbag is deployed.
- ◆ Always tie down the side airbag assembly with the airbag deployment side facing inside the tire.

NOTICE:

The tire will be marked by the airbag deployment, so use an extra tire.

- (f) Install the SST.
 - (1) Connect the SST connector to the side airbag assembly connector.
 SST 09082-00750

- (g) Place the tires.
 - (1) Place at least 2 tires under the tire which the front seat airbag assembly is tied to.
 - (2) Place at least 2 tires over the tire which the front seat airbag assembly is tied to. The top tire should have the disc wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

- (3) Tie the tires together with 2 wire harness.

CAUTION:

Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

- (h) Install the SST.

Connect the connectors of the 2 SST to the side airbag assembly connector.

SST 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

- (i) Deploy the airbag.

- (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
- (2) Check that no one is within a 10 m (33 ft) radius of the tire which the front seat airbag assy LH is tied to.
- (3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the seat frame assembly or seatback cover with a new one.

Case	Replacing part
The side airbag has been deployed.	Seat assembly
The side airbag assembly has been found to be faulty in troubleshooting.	Seat frame assembly
The side airbag assembly has been found to have cuts while checking items (see page RS-52).	Seat frame assembly
The seatback cover has been found to have cuts and frayed seams while checking items (see page RS-52).	Seatback cover
The side airbag assembly has been found to be faulty while checking items (see page RS-52).	Seat frame assembly
The seatback cover has been found to be faulty while checking items (see page RS-52).	Seatback cover
The seatback assembly has been dropped.	Seat frame assembly

CAUTION:

For removal and installation of the seat frame assembly, see page [RS-49](#) and [RS-60](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the side airbag assembly has been dropped, or there are cracks, dents or other defects in the case or connector, replace the side airbag assembly with a new one.
- ◆ When installing the side airbag assembly, take care it is not pinched between other parts.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. INSTALL SEATBACK COVER AND PAD

- (a) Install the seatback cover and pad to the seat frame assembly.
- (b) Install the 2 headrest supports to the seat frame assembly.

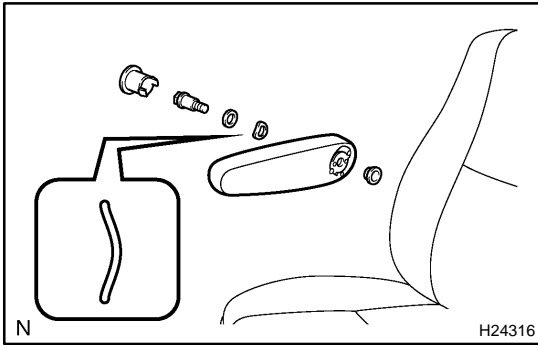

- (c) Install the hog rings to the seat frame assembly.

- (d) Install the hog rings to the seat frame assembly.
- (e) Close the fastener.

- (f) Install the seatback cover belt to the seat frame assembly.

2. INSTALL ARMREST ASSEMBLY

- (a) Install the spacer to the armrest assembly.
- (b) Install the armrest assembly, armrest lock plate and armrest spacer with the bolt.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

HINT:

- (c) Install the armrest cap to the armrest assembly.

3. INSTALL POWER SWITCH

Install the power switch with the 3 screws.

4. INSTALL LUMBAR SWITCH

Install the lumbar switch with the 2 screws to the seat cushion outer shield.

5. INSTALL FRONT SEAT INNER BELT

- (a) Install the front seat inner belt with the nut.

Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

- (b) Connect the connectors and wire harness clamps.

6. INSTALL SEAT CUSHION LOWER SHIELD, SEAT CUSHION OUTER SHIELD AND SEAT CUSHION INNER SHIELD

- (a) Assemble the seat cushion lower shield and seat cushion outer shield with the screw.
- (b) Perform the same procedure as for the other side.
- (c) Connect the lumbar switch connector to the lumbar switch, and install the seat cushion lower shield, outer shield and inner shield.

- (d) Install the 2 screws to the seat cushion lower shield.

- (e) Install the 2 screws to the seat cushion inner shield.

- (f) Install the 2 screws to the seat cushion outer shield.

- (g) Install the screw to the seat cushion outer shield.
7. **INSTALL SLIDE KNOB AND RECLINING KNOB**
 8. **INSTALL HEADREST**
 9. **INSTALL FRONT SEAT**

Mount the front seat to the vehicle.

NOTICE:

Be careful not to damage the body.

- (a) Connect the connectors.
 - (b) Slide the front seat to the rearmost position.
 - (c) Temporarily tighten the bolts on the front side, starting from the bolt on the inner side, and fully tighten them.
Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)
 - (d) Slide the front seat to the most front position.
 - (e) Temporarily tighten the bolts on the rear side, starting from the bolt on the inner side, and fully tighten them.
Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)
10. **INSTALL SEAT TRACK COVERS**
 11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
 12. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

SIDE AIRBAG ASSEMBLY (Manual Adjuster Type) COMPONENTS

RS12C-01

H24667

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected and the ignition switch is in the ACC or ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE SEAT TRACK COVERS

Using a screwdriver, remove the seat track covers.

HINT:

Tape the screwdriver tip before use.

4. REMOVE FRONT SEAT

- (a) Remove the 4 bolts.
- (b) Disconnect the connectors.
- (c) w/ Side airbag:
Disconnect the airbag connector.
- (d) Remove the front seat.

NOTICE:

Be careful not to damage the body.

5. REMOVE HEADREST

6. REMOVE SEAT CUSHION OUTER SHIELD

- (a) Remove the screw from the seat cushion outer shield.
- (b) Using a screwdriver, remove the seat cushion outer shield.

HINT:

Tape the screwdriver tip before use.

7. REMOVE RECLINING ADJUSTER RELEASE HANDLE

8. REMOVE VERTICAL ADJUSTER HANDLE

- (a) Using a screwdriver, remove the vertical adjuster handle cap.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and vertical adjuster handle.

9. REMOVE SEAT CUSHION INNER SHIELD

- (a) Remove the screw from the seat cushion inner shield.
- (b) Using a screwdriver, remove the seat cushion inner shield.

HINT:

Tape the screwdriver tip before use.

10. REMOVE FRONT SEAT INNER BELT

- (a) Disconnect the wire harness clamps and connectors.
- (b) Remove the nut and front seat inner belt.

11. REMOVE ARMREST ASSEMBLY

- (a) Using a screwdriver, remove the armrest cap.
- (b) Remove the bolt, armrest spacer, armrest lock plate and armrest assembly.
- (c) Remove the spacer from the armrest assembly.

12. REMOVE SEATBACK COVER AND PAD

- (a) Remove the seatback cover lower part from the seat frame assembly.
- (b) Open the fastener.

- (c) w/ Side airbag:
Remove the nut and disconnect the seatback cover bracket from the seat frame assembly.

- (d) Remove the hog rings from the seat frame assembly.

- (e) Remove the hog rings from the seat frame assembly.

- (f) Remove the hog rings shown in the illustration from the seat frame assembly.
 (g) Remove the seatback cover and pad from the seat frame assembly.

13. REMOVE SEATBACK COVER

- (a) Turn up the seatback cover and remove the hog rings.
 (b) Remove the 2 headrest supports.
 (c) Remove the seatback cover from the seatback pad.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the front seat airbag assy installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seatback assy with a new one:

Cuts, minute cracks or marked discoloration on the front seatback assy around the front seat airbag assy.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).

- (b) Perform a visual check which includes the following items with the seatback assembly removed from the vehicle.

- ◆ Cuts, tears and cracks on the side airbag assembly.
- ◆ Cuts and cracks in the wire harness, and chipping in the connectors.

CAUTION:

For removal and installation of the front seatback assembly, see page [RS-64](#) and [RS-70](#) . Be sure to follow the correct procedure.

DISPOSAL

See page [RS-53](#).

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the seat frame assembly or seatback cover with a new one.

Case	Replacing part
The side airbag has been deployed.	Seat assembly
The side airbag assembly has been found to be faulty in troubleshooting.	Seat frame assembly
The side airbag assembly has been found to have cuts while checking items (see page RS-67).	Seat frame assembly
The seatback cover has been found to have cuts while checking items (see page RS-67).	Seatback cover
The side airbag assembly has been found to be faulty while checking items (see page RS-67).	Seat frame assembly
The seatback cover has been found to be faulty while checking items (see page RS-67).	Seatback cover
The front seat adjuster LH has been dropped.	Seat frame assembly

CAUTION:

For removal and installation procedures of the seat frame assembly, see page [RS-64](#) and [RS-70](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the side airbag assembly has been dropped, or there are cracks, dents or other defects in the case or connector, replace the side airbag assembly with a new one.
- ◆ When installing the side airbag assembly, take care that it is not pinched between other parts.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. INSTALL SEATBACK COVER AND PAD

- (a) Install the seatback cover and pad to the seat frame assembly.

- (b) Install the seatback cover tubes with the hog rings to the seat frame assembly.

- (c) Install the hog rings to the seat frame assembly.

- (d) w/ Side airbag:
Connect the seatback cover bracket with the nut to the seat frame assembly.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

- (e) Close the fastener.

- (f) Install the seatback cover belt to the seat frame assembly.

2. INSTALL ARMREST ASSEMBLY

- (a) Install the spacer to the armrest assembly.
 (b) Install the armrest assembly, armrest lock plate and armrest spacer with the bolt.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

HINT:

Install the armrest lock plate as shown in the illustration.

- (c) Install the armrest cap.

3. INSTALL FRONT SEAT INNER BELT

- (a) Install the front seat inner belt with the nut.

Torque: 42 N·m (428 kgf-cm, 31 ft-lbf)

- (b) Connect the connectors and wire harness clamps.

4. INSTALL SEAT CUSHION INNER SHIELD

Install the seat cushion inner shield with the screw.

5. INSTALL VERTICAL ADJUSTER HANDLE

- (a) Install the vertical adjuster handle with the 2 screws.
 (b) Install the vertical adjuster handle cap.

6. INSTALL RECLINING ADJUSTER RELEASE HANDLE

7. INSTALL SEAT CUSHION OUTER SHIELD

Install the seat cushion outer shield with the screw.

8. INSTALL HEADREST

9. INSTALL FRONT SEAT

Mount the front seat to the vehicle.

NOTICE:

Be careful not to damage the body.

- (a) Connect the connectors.
- (b) Slide the front seat to the rearmost position.
- (c) Temporarily tighten the bolts on the front side, starting from the bolt on the inner side, and fully tighten them.
- (d) Slide the front seat to the most front position.
- (e) Temporarily tighten the bolts on the rear side, starting from the bolt on the inner side, and fully tighten them.

Torque: 37 N·m (377 kgf-cm, 27 ft-lbf)

10. INSTALL SEAT TRACK COVERS

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

12. INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))

SIDE AIRBAG ASSEMBLY (Passenger Side of Split Type) COMPONENTS

RS121-01

H24691

REMOVAL

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected and the ignition switch is in the ACC or ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE SEAT TRACK COVERS

Using a screwdriver, remove the seat track covers.

HINT:

Tape the screwdriver tip before use.

4. REMOVE FRONT SEAT

- (a) Remove the 4 bolts.
- (b) Disconnect the connectors.
- (c) w/ Side airbag:
Disconnect the airbag connector.
- (d) Remove the front seat.

NOTICE:

Be careful not to damage the body.

5. REMOVE HEADRESTS

- ### 6. REMOVE RECLINING ADJUSTER RELEASE HANDLE
- Using a screwdriver, remove the reclining adjuster release handle.

HINT:

Tape the screwdriver tip before use.

7. REMOVE RH SEAT CUSHION SHIELD

Disengage the claws and remove the RH seat cushion shield.

8. REMOVE SEAT CUSHION LOWER SHIELD

Remove the 2 screws and seat cushion lower shield.

9. REMOVE SEATBACK ASSEMBLY

- (a) Remove the hog rings from the seatback cover belt.
- (b) Remove the seatback cover belt from the hook.

- (c) Remove the hog rings from the seatback cover.
- (d) Open the fastener.
- (e) Remove the bolt and center armrest assembly.
- (f) Remove the 2 bushings.

- (g) Remove the hog rings from the seatback cover.

- (h) w/ Side airbag:
Remove the nut and disconnect the seatback cover brackets from the seatback frame.

- (i) Remove the hog rings from the seat cushion cover.

- (j) Remove the bolt and disconnect the front seat center belt from the seat cushion assembly.
- (k) Remove the screw and RH seat cushion lower shield.
- (l) Remove the 2 screws and RH reclining adjuster inside cover.

- (m) Remove the 3 nuts and disconnect the front seat center belt.

- (n) Remove the 3 bolts.
- (o) Using a torx® socket wrench, remove the 2 torx® screws and seatback assembly from the seat cushion assembly.
- (p) Remove the bushing from the seatback frame.
- (q) Remove the 4 headrest supports from the seatback assembly.
- (r) Remove the seatback lock upper bezel.
- (s) Remove the seatback frame from the seatback pad.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the front seat airbag assy installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seatback assy with a new one:

Cuts, minute cracks or marked discoloration on the front seatback assy around the front seat airbag assy.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).

- (b) Perform a visual check which includes the following items with the seatback assembly removed from the vehicle:
 - ◆ Cuts, tears and cracks on the side airbag assembly.
 - ◆ Cuts and cracks in the wire harness, and chipping in the connectors.

CAUTION:

For removal and installation of the front seatback assembly, see page [RS-74](#) and [RS-80](#) . Be sure to follow the correct procedure.

DISPOSAL

See page [RS-53](#) .

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the seat frame assembly or seatback cover with a new one.

Case	Replacing part
The side airbag has been deployed.	Seat assembly
The side airbag assembly has been found to be faulty in troubleshooting.	Seatback assembly
The side airbag assembly has been found to have cuts while checking items (see page RS-77).	Seat frame assembly
The seatback cover has been found to have cuts and frayed seams while checking items (see page RS-77).	Seatback cover
The side airbag assembly has been found to be faulty while checking items (see page RS-77).	Seat frame assembly
The seatback cover has been found to be faulty while checking items (see page RS-77).	Seatback cover
The seatback assembly has been dropped.	Seat frame assembly

CAUTION:

For removal and installation of the seat frame assembly, see page [RS-74](#) and [RS-80](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the side airbag assembly has been dropped, or there are cracks, dents or other defects in the case or connector, replace the side airbag assembly with a new one.
- ◆ When installing the side airbag assembly, take care it is not pinched between other parts.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. INSTALL SEATBACK ASSEMBLY

- (a) Install the bushing to the seatback frame.
- (b) Using a torx® socket wrench, install the seatback assembly with the 2 torx® screws to the seat cushion assembly.
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)
- (c) Install the 3 bolts.

Torque:

Bolt A: 55 N·m (561 kgf·cm, 41 ft·lbf)

Bolt B: 21 N·m (214 kgf·cm, 15 ft·lbf)

- (d) Connect the front seat center belt with the 3 nuts.
- (e) Install the RH reclining adjuster inside cover with the 2 screws.
- (f) Install the RH seat cushion lower shield with the screw.

- (g) Connect the front seat center belt with the bolt to the seat cushion assembly.
Torque: 42 N·m (428 kgf-cm, 31 ft-lbf)

- (h) Install the hog rings to the seat cushion cover.
HINT:
 When installing hog rings, take care to prevent wrinkles as much as possible.

- (i) w/ Side airbag:
 Connect the seatback cover brackets with the nut to the seatback frame.
Torque: 5.5 N·m (56 kgf-cm, 49 in.-lbf)

- (j) Install the hog rings to the seatback cover.
HINT:
 When installing hog rings, take care to prevent wrinkles as much as possible.

- (k) Install the 2 bushings.
 (l) Install the center armrest assembly with the bolt.
Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)

- (m) Close the fastener.

- (n) Install the hog rings to the seatback cover.
HINT:
 When installing hog rings, take care to prevent wrinkles as much as possible.

- (o) Install the seatback cover belt to the hook.
- (p) Install the hog rings to the seatback cover belt.

2. INSTALL SEAT CUSHION LOWER SHIELD

Install the seat cushion lower shield with the 2 screws.

3. INSTALL RH SEAT CUSHION SHIELD

Engage the claws and install the RH seat cushion shield.

4. INSTALL RECLINING ADJUSTER RELEASE HANDLE

5. INSTALL HEADRESTS

6. INSTALL SEAT LEG INNER COVER

Install the seat leg inner cover with the 3 screws.

7. INSTALL FRONT SEAT

- (a) Mount the front seat to the vehicle.

NOTICE:

Be careful not to damage the body.

- (b) w/ Side airbag:
Connect the airbag connector.
- (c) Connect the connectors.
- (d) Slide the front seat to the rearmost position .
- (e) Tighten the bolts on the front side temporarily, starting from the bolt on the inner side tighten them completely.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

- (f) Slide the front seat to the most front position.
- (g) Tighten the bolts on the rear side temporarily, starting from the bolt on the inner side tighten them completely.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

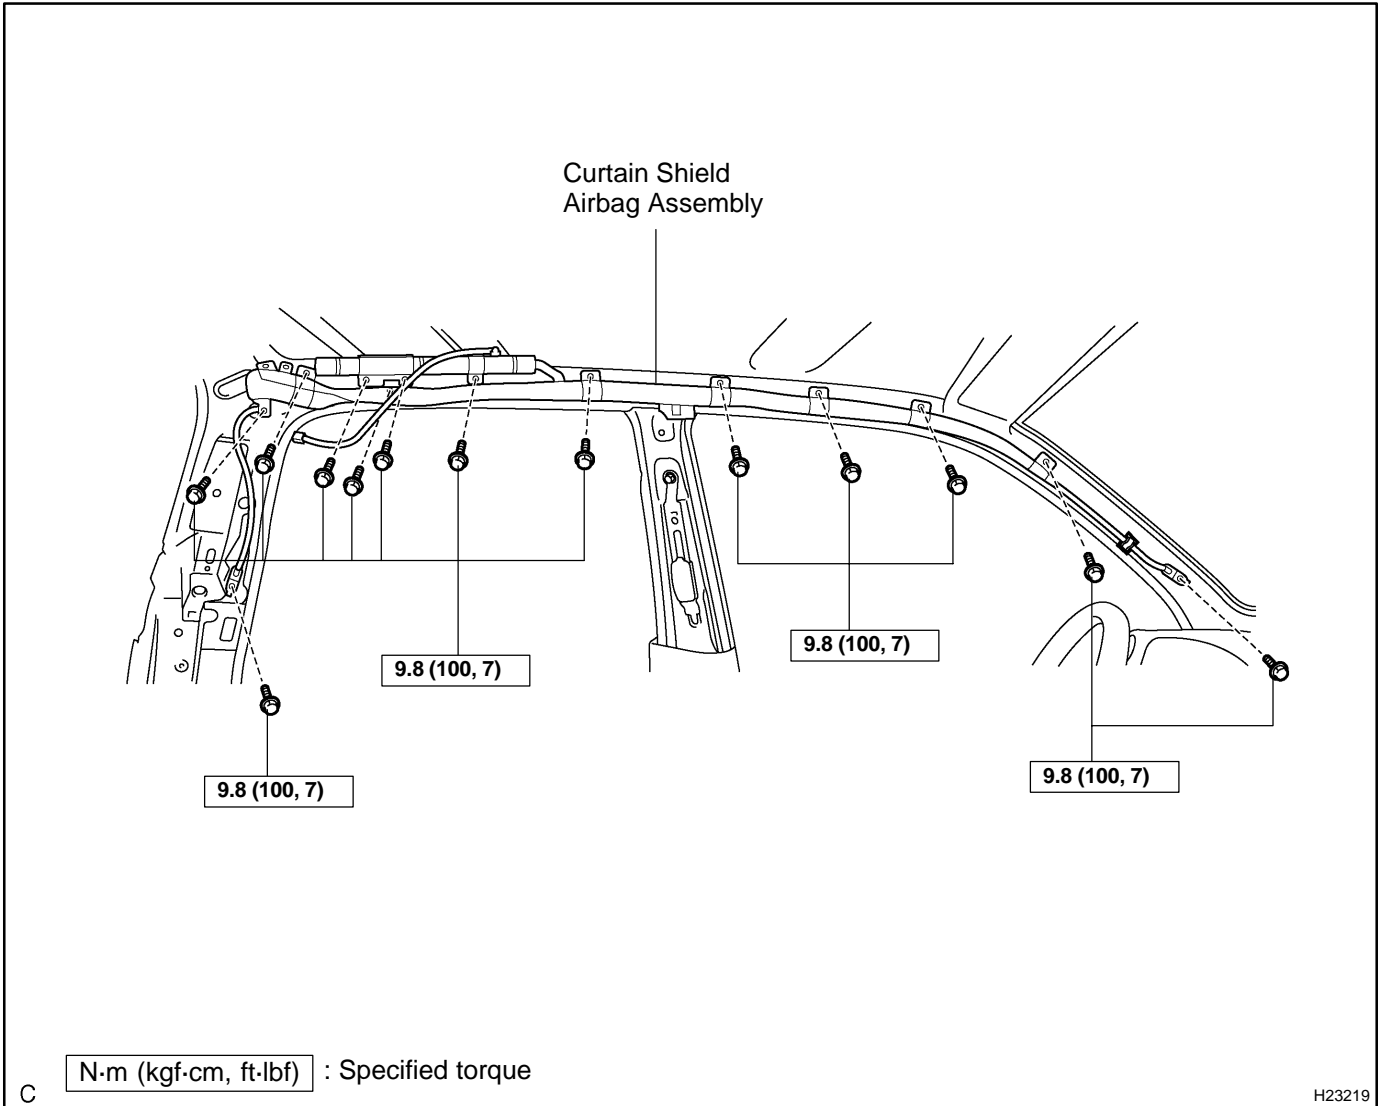

8. INSTALL SEAT TRACK COVERS

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

10. INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))

CURTAIN SHIELD AIRBAG ASSEMBLY COMPONENTS

RS0N2-17

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected and the ignition switch is in the ACC or ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE ROOF HEADLINING (SEE PAGE BO-126 AND BO-133)
4. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY
 - (a) Disconnect the curtain shield airbag connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (b) Remove the 13 bolts and the curtain shield airbag assembly.

C

H23220

INSPECTION

1. VEHICLES NOT INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front pillar garnish or roof headlining assy with a new one:

Cuts, minute cracks or marked discoloration on the front pillar garnish or roof headlining assy around the curtain shield airbag assembly.

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

- (a) Perform a diagnostic system check (see page [DI-1871](#)).

- (b) With the curtain shield airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag assembly with a new one:

- ◆ Cuts, tears and cracks, or marked discoloration on the curtain shield airbag assembly.
- ◆ Cracks or other damage to the connector.

CAUTION:

For removal and installation of the curtain shield airbag assembly, see page [RS-1 11](#) and [RS-1 14](#). Be sure to follow the correct procedure.

DISPOSAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.
- ◆ When scrapping a vehicle equipped with the SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- ◆ **Never dispose of a curtain shield airbag assembly which has an undeployed airbag.**
- ◆ **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

- ◆ **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- ◆ **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag assembly.**
- ◆ **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- ◆ **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- ◆ **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- ◆ **Always wash your hands with water after completing the operation.**

HINT:

Prepare a battery as the power source to deploy the airbag.

1. AIRBAG DEPLOYMENT WHEN SCRAPPING VEHICLE

- (a) Check the function of the SST (see step 1-(a) on page [RS-25](#)).
SST 09082-00700
- (b) Precaution (see page [RS-1](#) and [RS-3](#)).
- (c) Disconnect the cable from the negative battery terminal. Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
- (d) Remove the roof headlining (see page [BO-126](#) and [BO-133](#)).
- (e) Disconnect the curtain shield airbag connector.

NOTICE:

When handling the airbag connector, be careful not to damage the airbag wire harness.

- (f) Install the SST.
 - (1) Connect the connectors of the SST to the curtain shield airbag assembly.
SST 09082-00700, 09082-00760

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

- (2) Move the SST at least 10 m (33 ft) away from the vehicle rear side window.
- (3) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (4) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

- (g) Deploy the airbag.
- (1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
 - (2) Press the SST activation switch and deploy the airbag.

CAUTION:

- ◆ When deploying the airbag, make sure that no one is near the vehicle.
- ◆ The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- ◆ Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

2. DEPLOYMENT WHEN DISPOSING OF CURTAIN SHIELD AIRBAG ASSEMBLY

NOTICE:

- ◆ When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.
- ◆ Be sure to follow the procedure given below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

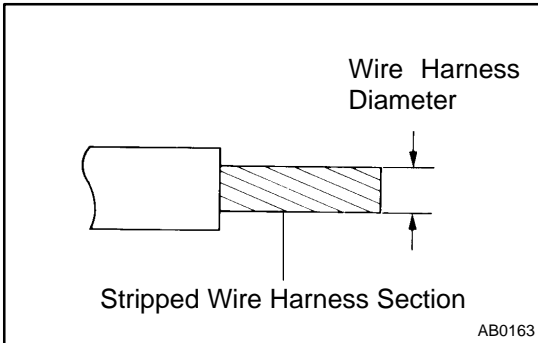

- (a) Check the function of the SST (see step 1-(a) on page [RS-25](#)).
 - (b) Remove the curtain shield airbag assembly (see page [RS-84](#)).
- ◆ When removing the front passenger airbag assembly, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (-) terminal cable is disconnected from the battery.
 - ◆ When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

SUPPLEMENTAL RESTRAINT SYSTEM - CURTAIN SHIELD AIRBAG ASSEMBLY

(c) Cut off the deployment section of the curtain shield airbag assembly.

(d) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.

Wire harness: Stripped wire harness section 1.25 mm² or more (0.0019 in². or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm² (0.0019 in².).

HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x (Diameter)² divided by 4

(1) Position the curtain shield airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size: Must exceed the following dimensions:

Width: 185 mm (7.28 in.)

Inner diameter: 360 mm (14.17 in.)

CAUTION:

- ◆ Make sure that the wire harness is tight. If there is slack in wire harness, the curtain shield airbag assembly may become loose due to the shock when the airbag is deployed.
- ◆ Always tie down the curtain shield airbag assembly with the airbag deployment side facing inside.

NOTICE:

The tire will be marked by the airbag deployment, so use an extra tire.

- (e) Install the SST.
After connecting the SST below to each other, connect them to the curtain shield airbag assembly.
SST 09082-00802, 09082-00760

- (f) Place the tires.
(1) Place at least 2 tires under the tire which the curtain shield airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the curtain shield airbag assembly is tied to. The top tire should have the disc wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.

- (3) Tie the tires together with 2 wire harness.

CAUTION:

Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

- (g) Install the SST.
Connect the SST connector.
SST 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

- (h) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire which the shield airbag assembly is tied to.

- (3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag deploys as the LED of the SST activation switch comes on.

- (i) Dispose of the curtain shield airbag assembly.

CAUTION:

- ◆ The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- ◆ Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- ◆ Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.
- ◆ Always wash your hands with water after completing the operation.

- (1) Remove the curtain shield airbag assembly from the tire.
- (2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the curtain shield airbag assembly or curtain shield airbag cover with a new one.

Case	Replacing part
The curtain shield airbag has been deployed.	Curtain shield airbag assembly
The curtain shield airbag assembly has been found to be faulty in troubleshooting.	Curtain shield airbag assembly
The curtain shield airbag assembly has been found to be faulty while checking items (see page RS-85).	Curtain shield airbag assembly
The front pillar garnish has been found to be faulty while checking items (see page RS-85).	Front pillar garnish
The roof headlining has been found to be faulty while checking items (see page RS-85).	Roof headlining
The curtain shield airbag assembly has been dropped.	Curtain shield airbag assembly

CAUTION:

For removal and installation of the curtain shield airbag assembly, see page [RS-1 11](#) and [RS-1 14](#). Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

- (a) Install the curtain shield airbag assembly with the 13 bolts.

Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

CAUTION:

Pay attention not to twist the deployment section of the curtain shield airbag assembly.

NOTICE:

- ◆ If the curtain shield airbag assembly has been dropped, or there are cracks, dents or other defects in the case or connector, replace the curtain shield airbag assembly with a new one.
- ◆ When installing the curtain shield airbag assembly, take care that it is not pinched between other parts.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.

- (b) Connect the connector of the curtain shield airbag assembly.
2. **INSTALL ROOF HEADLINING (SEE PAGE [BO-130](#) AND [BO-138](#))**
 3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
 4. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

REMOVAL

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected with the ignition switch in the ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse an airbag sensor assembly if the airbag has previously deployed in a collision.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. **Standard cab:**
 Access cab (w/o Large type console box):
 Double cab (Split type seat):
REMOVE LOWER CENTER COVER
 (SEE PAGE BO-1 11)
4. **Access cab (w/ Large type console box):**

REMOVE SHIFTING HOLE COVER
 (SEE PAGE BO-1 11)
5. **Access cab (w/ Large type console box):**
 Double cab:
REMOVE UPPER CONSOLE PANEL
 (SEE PAGE BO-1 11)
6. **Access cab (w/ Large type console box):**
 Double cab:
REMOVE REAR CONSOLE BOX
 (SEE PAGE BO-1 11)
7. **Access cab (w/ Large type console box):**
 Double cab:
REMOVE FRONT CONSOLE BOX
 (SEE PAGE BO-1 11)

8. **REMOVE AIRBAG SENSOR ASSEMBLY**
 - (a) Disconnect the holder (with connectors) from the airbag sensor assembly.
 - (b) Remove the 4 bolts and airbag sensor assembly.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

Perform a diagnostic system check (see page [DI-1871](#)).

3. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS DEPLOYED

Replace the airbag sensor assembly (see page [DI-1871](#)).

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the airbag sensor assembly with a new one.

- ◆ The SRS has been deployed in a collision.
- ◆ The airbag sensor assembly has been found to be faulty in troubleshooting.
- ◆ The airbag sensor assembly has been dropped.

CAUTION:

For removal and installation of the airbag sensor assembly, see page [RS-101](#) and [RS-104](#) . Be sure to follow the correct procedure.

INSTALLATION

NOTICE:

- ◆ Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse the airbag sensor assembly involved in a collision when the airbag has deployed.
- ◆ If the airbag sensor assembly center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ When installing the airbag sensor assembly center, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- ◆ After installing, shake the airbag sensor assembly to check that there is no looseness.

1. **INSTALL AIRBAG SENSOR ASSEMBLY**
 - (a) Install the airbag sensor assembly with the 4 bolts.
Torque: 17.5 N·m (179 kgf·cm, 13 ft·lbf)
 - (b) Connect the airbag sensor holder (with connectors).
2. **Access cab (w/ Large type console box):**
Double cab:
INSTALL FRONT CONSOLE BOX
(SEE PAGE [BO-120](#))
3. **Access cab (w/ Large type console box):**
Double cab:

(SEE PAGE [BO-120](#))
5. **Access cab (w/ Large type console box):**
Double cab:
INSTALL SHIFTING HOLE COVER
(SEE PAGE [BO-120](#))
6. **Standard cab:**
Access cab (w/o Large type console box):
Double cab (Split type seat):
INSTALL LOWER CENTER COVER
(SEE PAGE [BO-120](#))
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

FRONT AIRBAG SENSOR COMPONENTS

RS01L-39

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected with the ignition switch in the ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse a front airbag sensor if the airbag has previously deployed in a collision.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE FRONT AIRBAG SENSOR LH

- (a) Disconnect the front airbag sensor LH connector.

NOTICE:

Disconnect the connector with the sensor assembly installed.

- (b) Remove the 2 nuts and front airbag sensor LH.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

Perform a diagnostic system check (see page [DI-1871](#)).

3. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS DEPLOYED

Replace the front airbag sensor RH and LH (see page [DI-1871](#)).

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the front airbag sensor with a new one.

- ◆ The SRS has been deployed in a collision. (Replace both the left and right airbag sensors.)
- ◆ The front airbag sensor has been found to be faulty in troubleshooting.
- ◆ The front airbag sensor has been found to be faulty while checking items (see page [RS-102](#)).
- ◆ The front airbag sensor has been dropped.

CAUTION:

For removal and installation of the front airbag sensor, see page [RS-101](#) and [RS-104](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ **Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.**
- ◆ **Never reuse the front airbag sensor involved in a collision when the airbag has deployed.**
- ◆ **If the front airbag sensor center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- ◆ **When installing the front airbag sensor center, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
- ◆ **After installing, shake the front airbag sensor to check that there is no looseness.**

1. INSTALL FRONT AIRBAG SENSOR LH

- (a) Install the front airbag sensor LH with the 2 nuts.

Torque: 17.5 N·m (179 kgf·cm, 13 ft·lbf)

- (b) Connect the front airbag sensor connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

3. INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))

SIDE AIRBAG SENSOR ASSEMBLY COMPONENTS

RS12S-01

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected with the ignition switch in the ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse a side airbag sensor assembly if the airbag has previously deployed in a collision.

1. PRECAUTION (SEE PAGE [RS-1](#) AND [RS-3](#))
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE FRONT DOOR SCUFF PLATE (SEE PAGE [BO-133](#))
4. REMOVE REAR DOOR SCUFF PLATE (SEE PAGE [BO-133](#))
5. REMOVE FRONT SEAT OUTER BELT FLOOR ANCHOR (SEE PAGE [BO-133](#))
6. REMOVE CENTER PILLAR LOWER GARNISH (SEE PAGE [BO-133](#))
7. REMOVE FRONT SEAT OUTER BELT RETRACTOR (SEE PAGE [BO-236](#))

8. REMOVE SIDE AIRBAG SENSOR ASSEMBLY LH
 - (a) Disconnect the connector from the side airbag sensor assembly LH.
 - (b) Remove the 3 bolts and the side airbag sensor assembly LH.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

Perform a diagnostic system check (see page [DI-1871](#)).

3. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS DEPLOYED

Replace the side airbag sensor assembly (see page [DI-1871](#)).

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the side airbag sensor assembly with a new one.

- ◆ The side airbag assembly has been deployed in a collision.
- ◆ The side airbag sensor assembly has been found to be faulty in troubleshooting.
- ◆ The side airbag sensor assembly has been dropped.

CAUTION:

For removal and installation of the side airbag sensor assembly, see page [RS-106](#) and [RS-109](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse the side airbag sensor assembly involved in a collision when the airbag has deployed.
- ◆ If the side airbag sensor assembly center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ When installing the side airbag sensor assembly, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- ◆ After installing, shake the side airbag sensor assembly to check that there is no looseness.

1. **INSTALL SIDE AIRBAG SENSOR ASSEMBLY LH**
 - (a) Install the side airbag sensor assembly LH with the 3 bolts.
Torque: 17.5 N·m (179 kgf·cm, 13 ft·lbf)
 - (b) Connect the connector to the side airbag sensor assembly LH.
2. **INSTALL FRONT SEAT OUTER BELT RETRACTOR (SEE PAGE [BO-252](#))**
3. **INSTALL CENTER PILLAR LOWER GARNISH (SEE PAGE [BO-138](#))**
4. **INSTALL FRONT SEAT OUTER BELT FLOOR ANCHOR (SEE PAGE [BO-138](#))**
5. **INSTALL REAR DOOR SCUFF PLATE (SEE PAGE [BO-138](#))**
6. **INSTALL FRONT DOOR SCUFF PLATE (SEE PAGE [BO-138](#))**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

CURTAIN SHIELD AIRBAG SENSOR ASSEMBLY COMPONENTS

RSOSH-08

REMOVAL

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected with the ignition switch in the ON position, DTCs will be recorded.
- ◆ Never use airbag parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse a curtain shield airbag sensor assembly if the airbag has previously deployed in a collision.

1. PRECAUTION (SEE PAGE RS-1 AND RS-3)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE REAR DOOR SCUFF PLATE
(SEE PAGE BO-133)
4. REMOVE BACK PANEL TRIM ASSEMBLY
(SEE PAGE BO-133)
5. REMOVE REAR SEAT OUTER BELT FLOOR ANCHOR
(SEE PAGE BO-133)
6. REMOVE QUARTER TRIM PANEL LOWER LH
(SEE PAGE BO-133)
7. REMOVE REAR SEAT OUTER BELT RETRACTOR
(SEE PAGE BO-236)

8. REMOVE CURTAIN SHIELD AIRBAG SENSOR ASSEMBLY LH

- (a) Disconnect the curtain shield airbag sensor assembly LH connector.

NOTICE:

Disconnect the connector with the sensor assembly installed.

- (b) Remove the 2 nuts and curtain shield airbag sensor assembly LH.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS NOT DEPLOYED

Perform a diagnostic system check (see page [DI-1871](#)).

3. VEHICLE INVOLVED IN A COLLISION AND AIRBAG IS DEPLOYED

Replace the curtain shield airbag sensor assembly (see page [DI-1871](#)).

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the curtain shield airbag sensor assembly with a new one.

- ◆ The curtain shield airbag assembly has been deployed in a collision.
- ◆ The curtain shield airbag sensor assembly has been found to be faulty in troubleshooting.
- ◆ The curtain shield airbag sensor assembly has been dropped.

CAUTION:

For removal and installation procedures of the curtain shield airbag sensor assembly, see page [RS-1 18](#) and [RS-122](#) . Be sure to follow the correct procedure.

INSTALLATION

HINT:

- ◆ Use the same procedures for the RH side and LH side.
- ◆ The procedures listed below are for the LH side.

NOTICE:

- ◆ Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse the curtain shield airbag sensor assembly involved in a collision when the airbag has deployed.
- ◆ If the curtain shield airbag sensor assembly center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ When installing the curtain shield airbag sensor assembly center, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- ◆ After installing, shake the curtain shield airbag sensor assembly to check that there is no looseness.

1. **INSTALL CURTAIN SHIELD AIRBAG SENSOR ASSEMBLY LH**
 - (a) Install the curtain shield airbag sensor assembly LH with the 2 nuts.
Torque: 17.5 N·m (179 kgf·cm, 13 ft·lbf)
 - (b) Connect the curtain shield airbag sensor assembly LH connector.
2. **INSTALL REAR SEAT OUTER BELT RETRACTOR (SEE PAGE [BO-252](#))**
3. **INSTALL QUARTER TRIM PANEL LOWER LH (SEE PAGE [BO-138](#))**
4. **INSTALL REAR SEAT OUTER BELT FLOOR ANCHOR (SEE PAGE [BO-138](#))**

- 10. REMOVE SEAT POSITION SENSOR ASSEMBLY**
- Disconnect the connector from the seat position sensor assembly.
 - Using a torx® socket wrench (T30), remove the torx® screw and the seat position sensor assembly.

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) Even if the airbag was not deployed, perform a visual check for damage to the seat position sensor assembly. If there are any defects mentioned below, replace the seat position sensor assembly with a new one:
 - ◆ Cracks, dents or chips in the case.
 - ◆ Cracks or other damage to the connector.

CAUTION:

For removal and installation procedures of the seat position sensor assembly, see page [RS-1 18](#) and [RS-122](#) . Be sure to follow the correct procedure.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the seat position sensor assembly with a new one.

- ◆ The seat position sensor assembly has been found to be faulty in troubleshooting.
- ◆ The seat position sensor assembly has been dropped.

CAUTION:

For removal and installation procedures of the seat position sensor assembly, see page [RS-1 18](#) and [RS-122](#) . Be sure to follow the correct procedure.

INSTALLATION

NOTICE:

- ◆ Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse the seat position sensor assembly involved in a collision when the airbag has deployed.
- ◆ If the seat position sensor assembly center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ When installing the seat position sensor assembly center, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- ◆ After installing, shake the seat position sensor assembly to check that there is no looseness.

1. INSTALL SEAT POSITION SENSOR ASSEMBLY

- (a) Using a torx[®] socket wrench, install the seat position sensor assembly.

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

NOTICE:

Using a feeler gauge of 1 mm (0.039 in.), make a clearance between the seat position sensor assembly and the seat rail.

- (b) Make sure that a clearance between the seat position sensor assembly and the seat rail is between 0.6 mm (0.023 in.) and 2 mm (0.079 in.).
- (c) Connect the connector to the seat position sensor assembly.

2. Separate type:

Split type:

INSTALL SEAT POSITION SENSOR ASSEMBLY PROTECTOR

Install the seat position sensor assembly protector to the seat position sensor assembly.

3. Separate type (Power adjuster):

OCCUPANT CLASSIFICATION ECU COMPONENTS

RS00U-06

C

H23886

REMOVAL

NOTICE:

- ◆ If the wiring connector of the SRS is disconnected with the ignition switch in the ON position, DTCs will be recorded.
- ◆ Never use SRS parts from another vehicle. When replacing the parts, replace them with new ones.
- ◆ Never reuse an occupant classification ECU if the airbag has previously deployed in a collision.

1. PRECAUTION (SEE PAGE [RS-1](#) AND [RS-3](#))
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. REMOVE FRONT SEAT ASSEMBLY RH
(SEE PAGE [BO-141](#))

4. REMOVE OCCUPANT CLASSIFICATION ECU

- (a) Disconnect the 2 connectors from the occupant classification ECU.
- (b) Using a screwdriver, remove the occupant classification ECU.

C

H23887

INSPECTION

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) Even if the airbag was not deployed, perform a visual check for damage to the occupant classification ECU. If there are any defects mentioned below, replace the occupant classification ECU with a new one:
 - ◆ Cracks, dents or chips in the case.
 - ◆ Cracks or other damage to the connector.

CAUTION:

For removal and installation procedures of the occupant classification ECU, see page [RS-125](#) and [RS-128](#) . Be sure to follow the correct procedure.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the occupant classification ECU with a new one.

- ◆ The occupant classification ECU has been found to be faulty in troubleshooting.
- ◆ The occupant classification ECU has been dropped.

CAUTION:

For removal and installation procedures of the occupant classification ECU, see page [RS-125](#) and [RS-128](#) . Be sure to follow the correct procedure.

INSTALLATION

NOTICE:

- ◆ Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- ◆ Never reuse the occupant classification ECU involved in a collision when the airbag has deployed.
- ◆ If the occupant classification ECU center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.
- ◆ When installing the seat position sensor assembly center, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.

1. **INSTALL OCCUPANT CLASSIFICATION ECU**
 - (a) Install the occupant classification ECU.
 - (b) Connect the 2 connectors to the occupant classification ECU.
2. **INSTALL FRONT SEAT ASSEMBLY RH (SEE PAGE [BO-153](#))**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
4. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

REMOVAL

1. **PRECAUTION (SEE PAGE RS-1 AND RS-3)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. **REMOVE PASSENGER AIRBAG MANUAL AUTO (ON)-OFF SWITCH**

- (a) Using a screwdriver, release the 2 claws and remove the passenger airbag manual AUTO (ON)-OFF switch.

HINT:

Tape up the screwdriver tip before use.

- (b) Disconnect the connector.

INSPECTION

1. INSPECT PASSENGER AIRBAG MANUAL AUTO (ON)-OFF SWITCH

Measure the resistance between terminals 1 and 2 of the passenger airbag manual AUTO (ON)-OFF switch.

Result:

Switch Position	Tester Connection	Specified Condition
ON	1 - 2	360 to 440 Ω
OFF	1 - 2	90 to 110 Ω

If the result is not as specified, replace the switch.

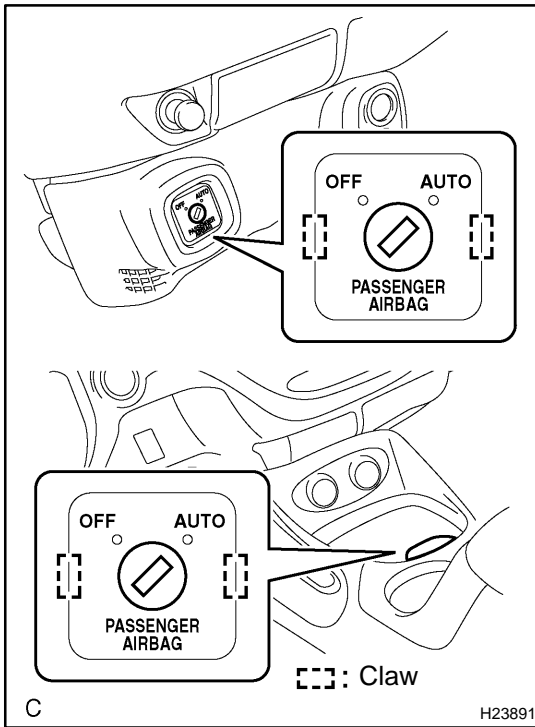

2. INSPECT PASSENGER AIRBAG MANUAL ON-OFF INDICATOR OPERATION

- Remove the center cluster integration panel assembly (see page [BO-1 11](#)).
- Using a service wire, connect terminals B1 and B2.
- Connect the battery's positive (+) lead from the battery to terminal A17 and the negative (-) lead to terminal A1.
- Check that the indicator ON light illuminates.

If it does not illuminate, replace the center cluster integration panel assembly.

- (e) Using a service wire, connect terminals B1 and B2.
 - (f) Connect the battery's positive (+) lead from the battery to terminal A17 and the negative (-) lead to terminal A2.
 - (g) Check that the indicator OFF light illuminates.
- If it does not illuminate, replace the center cluster integration panel assembly.

INSTALLATION

1. **INSTALL PASSENGER AIRBAG MANUAL AUTO (ON)-OFF SWITCH**
 - (a) Connect the connector.
 - (b) Install the passenger airbag manual AUTO (ON)-OFF switch.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
3. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

RSCA OFF SWITCH COMPONENTS

RS130-01

REMOVAL

1. **PRECAUTION (SEE PAGE RS-1 AND RS-3)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

3. **REMOVE LOWER FINISH PANEL (SEE PAGE BO-1 11)**

4. **REMOVE SWITCH BASE**

(a) Using a screwdriver, remove the 3 claws and switch base.

HINT:

Tape up the screwdriver tip before use.

(b) Disconnect the connectors.

INSPECTION

1. INSPECT RSCA OFF INDICATOR LIGHT

- Turn the ignition switch to the ON position.
- Check that the RSCA OFF indicator light goes off after it comes on for 3 seconds.
- Check that the RSCA OFF indicator light comes on after pressing the RSCA OFF switch for approx. 2 seconds.

2. INSPECT RSCA OFF SWITCH CONTINUITY

- Inspect the continuity between each terminal.

Switch Position	Tester Connection	Specified Condition
OFF	SW (1) ↔ E (4)	No Continuity
Hold ON	SW (1) ↔ E (4)	Continuity

If continuity is not as specified, replace the RSCA OFF switch.

INSTALLATION

1. **INSTALL SWITCH BASE**
 - (a) Connect the connectors.
 - (b) Install the switch base.
2. **INSTALL LOWER FINISH PANEL (SEE PAGE [BO-120](#))**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
4. **INSPECT SRS WARNING LIGHT (SEE PAGE [DI-1859](#))**

INSPECTION

HINT:

The SRS wire harness is integrated with the cowl wire harness assembly. The SRS wire harness are encased in a yellow corrugated tube and all the connectors in the system except the seat position airbag sensor connector and occupant classification ECU connectors, are colored yellow.

1. VEHICLE NOT INVOLVED IN A COLLISION

Perform a diagnostic system check (see page [DI-1871](#)).

2. VEHICLE INVOLVED IN A COLLISION

- (a) Perform a diagnostic system check (see page [DI-1871](#)).
- (b) Check breaks in all wires of the SRS wire harness, and exposed conductors.
- (c) Check if the SRS wire harness connectors are cracked or chipped.

REPLACEMENT

REPLACEMENT REQUIREMENTS

In the following cases, replace the wire harness or connector with a new one.

- ◆ Any of the SRS wire harness and connectors has been found to be faulty in troubleshooting.
- ◆ Any of the SRS wire harness and connectors has been found to be faulty while checking items (see page [RS-141](#)).

CAUTION:

If the wire harness used in the SRS is damaged, replace the whole SRS wire harness assembly.

BODY ELECTRICAL SYSTEM

BE01E-11

PRECAUTION

Carefully to observe the following precautions when servicing the parts related to the body electrical system.

1. LIGHTING SYSTEM

Halogen bulbs have pressurized gas inside and require special handling.

They can burst or scatter if scratched or dropped. Hold a bulb only by its plastic or metal case. Do not touch the glass part of a bulb with bare hands.

2. SRS (SUPPLEMENTAL RESTRAINT SYSTEM)

The TOYOTA TUNDRA is equipped with the Supplemental Restraint System (SRS) (for example, the driver airbag). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal, installation, inspection and replacement), be sure to read the precautionary notices in the RS section.

3. AUDIO SYSTEM

If the battery negative (-) terminal is disconnected, the preset AM, FM 1 and FM 2 stations stored in the memory are erased. Be sure to make a note of the stations and reset them after the battery terminal is reconnected.

4. MOBILE COMMUNICATION SYSTEM

If the vehicle is equipped with a mobile communication system, refer to the precautions for the mobile communication system in the IN section.

TROUBLESHOOTING (Double Cab)

Symptom	Suspected Area	See Page
Theft deterrent system operates abnormally.	TROUBLESHOOTING	DI-2317

WIRELESS DOOR LOCK CONTROL SYSTEM

This system uses the multiplex communication system. Check the diagnosis system of the multiplex communication system before you proceed with this troubleshooting.

HINT:

Troubleshooting of the wireless door lock control system is based on the premise that the door lock control system is operating normally. Accordingly, before troubleshooting the wireless door lock control system, first make certain that the door lock control system is operating normally.

Symptom	Suspected Area	See Page
Entire wireless door lock control system does not operate.	1. Transmitter 2. Body ECU 3. Wire Harness	BE-166 DI-2411 -
Wireless door lock operates, but the buzzer does not sound.	1. Wireless Door Lock Buzzer 2. Wireless Door Lock Control Receiver 3. Wire Harness	BE-159 BE-159 -

POWER SEAT CONTROL SYSTEM

Symptom	Suspected Area	See Page
Power seat does not operate.	1. POWER SEAT Fuse 2. Power Seat Switch 3. Wire Harness	BE-24 BE-184 -
Slide operation does not operate.	1. Power Seat Switch 2. Slide Motor 3. Wire Harness	BE-184 BE-184 -
Front tilt operation does not operate.	1. Power Seat Switch 2. Front Tilt Motor 3. Wire Harness	BE-184 BE-184 -
Rear lifter operation does not operate.	1. Power Seat Switch 2. Rear Lifter Motor 3. Wire Harness	BE-184 BE-184 -
Reclining operation does not operate.	1. Power Seat Switch 2. Reclining Motor 3. Wire Harness	BE-184 BE-184 -
Lumbar support operation does not operate.	1. Lumbar Support Switch 2. Lumbar Support Motor 3. Wire Harness	BE-184 BE-184 -

POWER MIRROR CONTROL SYSTEM

This system uses the multiplex communication system. Check the diagnosis system of the multiplex communication system before you proceed with this troubleshooting.

Symptom	Suspected Area	See Page
Mirror does not operate.	1. RAD NO. 2 Fuse 2. ACC CUT Relay 3. Ignition Switch 4. Mirror Switch 5. Mirror Motor 6. Wire Harness	BE-24 BE-189 BE-37 BE-189 BE-189 -
Mirror operates abnormally.	1. Mirror Switch 2. Mirror Motor 3. Wire Harness	BE-189 BE-189 -

ELECTRO CHROMIC MIRROR SYSTEM

Symptom	Suspected Area	See Page
Electro chromic mirror does not operate.	1. GAUGE Fuse 2. Electro Chromic Mirror 3. Wire Harness	BE-24 BE-189 -

SEAT HEATER SYSTEM

Symptom	Suspected Area	See Page
Seat heaters do not operate.	1. SEAT HTR Fuse 2. Seat Heater Switch	BE-24 BE-198
Driver's seat heater does not operate.	1. Driver's Seat Heater Switch 2. Seat Heater 3. Wire Harness	BE-198 BE-198 -
Passenger's seat heater does not operate.	1. Passenger's Seat Heater Switch 2. Seat Heater 3. Wire Harness	BE-198 BE-198 -
Seat heater temperature is too hot.	Seat Heater	BE-198

CLOCK SYSTEM (in A/C Control Panel)

Symptom	Suspected Area	See Page
Clock does not operate.	TROUBLESHOOTING NO. 1	BE-200
Clock loses or gains time.	TROUBLESHOOTING NO. 2	BE-200

GARAGE DOOR OPENER SYSTEM

Symptom	Suspected Area	See Page
The equipment of which code has been registered does not operate.	1. Garage Door Opener Switch 2. Wire Harness 3. *	BE-208 - -
LED does not turn on. (Even though either switch is pressed.)	1. Garage Door Opener Switch 2. Wire Harness	BE-208 -
LED does not turn on. (Only one switch is pressed.)	Garage Door Opener Switch	BE-208

*: As the GARAGE DOOR OPENER on the vehicle side seems to be normal, check the OPENER on the equipment side, of which code has been registered.

NAVIGATION SYSTEM

Symptom	Suspected Area	See Page
Navigation system operates abnormally.	TROUBLESHOOTING	DI-2786

AUDIO SYSTEM

Symptom	Suspected Area	See Page
Audio system operates abnormally.	TROUBLESHOOTING	DI-2545
Rear seat audio system operates abnormally.	TROUBLESHOOTING	DI-2656

REAR SEAT ENTERTAINMENT SYSTEM

Symptom	Suspected Area	See Page
Rear seat entertainment system operates abnormally.	TROUBLESHOOTING	DI-2693

TRAILER TOWING

Symptom	Suspected Area	See Page
Trailer towing does not operate.	<ol style="list-style-type: none">1. TOWING Fuse2. TOWING TAIL Fuse3. TOWING BRK Fuse4. TOWING TAIL Relay5. BATT CHARGE Relay6. Towing Converter7. Wire Harness	<p>BE-24 BE-24 BE-24 BE-210 BE-210 BE-210 -</p>

Double Cab (w/ Rear Seat Entertainment System):
Voltage Inverter

P

I27183

INSPECTION

1. Double cab (115 V): INSPECT MAIN SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
ON	3 - 6	Continuity
OFF	3 - 6	No continuity

If the continuity is not as specified, replace the switch.

2. Double cab (115 V): INSPECT MAIN SWITCH INDICATOR LIGHT OPERATION

- Connect the positive (+) lead from the battery to terminal 3 and the negative (-) lead to terminal 2.
- Push the main switch and check that the indicator light turns on.

If operation is not as specified, replace the switch.

3. Double cab (115 V): INSPECT INVERTER RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the switch.

4. Double cab (12 V): INSPECT ACC RELAY AND ACC CUT RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the switch.

5. Except double cab: INSPECT POWER OUTLET RELAY (Marking: PWR OUTLET) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the switch.

6. Double cab (115 V):

INSPECT VOLTAGE INVERTER CIRCUIT

Disconnect the connector from the voltage inverter and check the connector on the wire harness side, as shown in the table.

Main Switch Position	Tester Connection	Specified Condition
ON	1 - 4	10 - 14 V
OFF	1 - 4	No continuity

If the result is not as specified, replace the inverter.

IGNITION SWITCH AND KEY UNLOCK WARNING SWITCH LOCATION

BE02W-05

INSPECTION

1. Double cab: INSPECT IGNITION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
ACC	1 - 3	Continuity
ON	1 - 2 - 3 5 - 6	Continuity
START	1 - 2 4 - 5 - 6	Continuity

If the continuity is not as specified, replace the switch.

2. Except double cab: INSPECT IGNITION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
ACC	2 - 3	Continuity
ON	2 - 3 - 4 6 - 7	Continuity
START	1 - 2 - 4 6 - 7 - 8	Continuity

If the continuity is not as specified, replace the switch.

3. INSPECT KEY UNLOCK WARNING SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
Switch not pushed (Key removed)	1 - 2	No continuity
Switch pushed (Key inserted)	1 - 2	Continuity

If the continuity is not as specified, replace the switch.

*: w/ Daytime Running Light

P

COMPONENTS

INSPECTION

1. INSPECT LIGHT CONTROL SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF	-	No continuity
TAIL	14 - 16	Continuity
HEAD	13 - 14 - 16	Continuity

If the continuity is not as specified, replace the switch.

2. INSPECT HEADLIGHT DIMMER SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
Flash	7 - 8 - 16	Continuity
Low beam	16 - 17	Continuity
High beam	7 - 16	Continuity

If the continuity is not as specified, replace the switch.

3. INSPECT HEADLIGHT RELAY (Marking: HEAD (Double Cab) or H-LP (Except Double Cab)) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

4. Double cab: INSPECT TAILLIGHT RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

5. w/ Daytime running light: INSPECT DIMMER RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 4	Continuity
3 - 4	No continuity (When battery voltage is applied to terminals 1 and 2)
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the switch.

**6. Except double cab (w/ Day time running light):
CHECK INTEGRATION RELAY (DRIVER SIDE J/B)
CIRCUIT**

- (a) Disconnect the 1I, 1J, 1K, 1M and 1N driver side J/B connectors, and check the voltage or continuity of each terminal of the wire harness side connectors.

Tester Connection	Condition	Specified Condition
1I-2 - Body ground	Ignition switch LOCK or ACC	No voltage
1I-2 - Body ground	Ignition switch ON or START	10 - 14 V
1J-8 - Body ground	Constant	Continuity
1K-2 - Body ground	Constant	10 - 14 V
1K-5 - Body ground	Constant	10 - 14 V
1M-5 - Body ground	Fog light ON	10 - 14 V
1M-5 - Body ground	Fog light OFF	Below 1 V
1M-6 - Body ground	Constant	Continuity

BODY ELECTRICAL - HEADLIGHT AND TAILLIGHT SYSTEM

Tester Connection	Condition	Specified Condition
1N-1 - Body ground	Parking lever released	No continuity
1N-1 - Body ground	Parking lever pulled up	Continuity
1N-2 - Body ground	Engine Stop	No voltage
1N-2 - Body ground	Engine Running	10 - 14 V
1N-3 - Body ground	Light control switch OFF or TAIL	No continuity
1N-3 - Body ground	Light control switch HEAD	Continuity
1N-4 - Body ground	Light control switch OFF or TAIL	No continuity
1N-4 - Body ground	Light control switch HEAD	Continuity
1N-7 - Body ground	Headlight dimmer switch low beam	No continuity
1N-7 - Body ground	Headlight dimmer switch high beam or flash	Continuity
1N-8 - Body ground	Headlight dimmer switch low or high beam	No continuity
1N-8 - Body ground	Headlight dimmer switch flash	Continuity
1N-13 - Body ground	Brake fluid level warning light OFF	No continuity
1N-13 - Body ground	Brake fluid level warning light ON	Continuity
1N-24 - Body ground	Constant	Continuity

If the result is not as specified, there may be a malfunction on the wire harness side.

- (b) Reconnect the 1I, 1J, 1K, 1M and 1N J/B connectors, and check the voltage of each terminal of the connectors.

Tester Connection	Condition	Specified Condition
1M-3 - Body ground	Light control switch TAIL or HEAD	10 - 14 V
1M-3 - Body ground	Light control switch OFF	Below 1 V
1N-15 - Body ground	Light control switch TAIL or HEAD	10 - 14 V
1N-15 - Body ground	Light control switch OFF	Below 1 V

If the result is not as specified, the integration relay (drive side J/B) may have a malfunction.

- (c) Remove the integration relay from the driver side J/B, and check the voltage or continuity of each terminal on the J/B side (see page BE-128).

**7. Except double cab (Daytime running light):
CHECK INTEGRATION RELAY (DRIVER SIDE J/B)
CIRCUIT**

Disconnect the 1L driver side J/B connector, and check the voltage or continuity of each terminal of the wire harness side connector.

Tester Connection	Condition	Specified Condition
1L-5 - Body ground	Light control switch OFF	No continuity
1L-5 - Body ground	Light control switch TAIL or HEAD	Continuity
1L-6 - Body ground	Constant	10 - 14 V
1L-13 - Body ground	Light control switch OFF	No continuity
1L-13 - Body ground	Light control switch TAIL or HEAD	Continuity

If the result is as specified, there may be a malfunction on the wire harness side.

8. INSPECT DAYTIME RUNNING LIGHT NO. 4 RELAY (Marking: DRL NO. 4) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

9. INSPECT DAYTIME RUNNING LIGHT RESISTOR

Tester Condition	Specified Condition
1 - 2	Approx. 337 m Ω

If the result is not as specified, replace the resistor.

ADJUSTMENT

P

127016

ADJUST HEADLIGHT AIM ONLY

- (a) Place the vehicle in the following conditions.
 - The area where the headlight aiming is not deformed.
 - The vehicle is parked in a flat area.
 - The tire inflation pressure is at the specified value.
 - A driver is in the driver side seat, the vehicle is ready for driving and with the tank is full.
 - The vehicle has been bounced several times.
- (b) Check the headlight aiming.
 - (1) Prepare thick white paper.
 - (2) Put the paper perpendicularly on a ground at the position 3 m (9.84 ft) away from the headlights.
 - (3) Make sure that the center line of the vehicle and the paper face forms a 90-degree angle as shown in the illustration.
 - (4) Draw a horizontal line (H line) across the paper so that it is at the same height as the center mark of the low beam lamp on the vehicle.
 - (5) Draw a vertical line (V line) to where the center line of the vehicle is to be.
 - (6) Draw 2 vertical lines to where the headlights should strike (V RH and V LH lines).
 - (7) Draw a horizontal line by connecting both low beam center marks to where the headlights should strike (H RH and H LH lines).

HINT:

The H RH and H LH lines are 0.4° below the horizontal line (H line) of the light axis.

- (8) Start the engine.
- (9) Turn the headlights ON.
- (10) Check if the headlights properly strike the position as shown in the illustration.
- (11) If not, adjust the headlights aim vertically.

HINT:

As shown in the illustration, adjust the aim of the RH and LH headlights.

- (c) When adjusting the headlight aim vertically:
 - Using a adjusting bolt, adjust the headlight aim within the specified range.

FOG LIGHT SYSTEM LOCATION

BE0H2-18

127059

INSPECTION

1. INSPECT FOG LIGHT SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF	10 - 11	No continuity
ON	10 - 11	Continuity

If the continuity is not as specified, replace the switch.

2. Double cab: INSPECT FOG LIGHT RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the switch.

3. Except double cab: INSPECT FOG LIGHT RELAY (Marking: FOG) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

ADJUSTMENT

ADJUST FOG LIGHT AIM

Adjusting screw: Vertical direction

TURN SIGNAL AND HAZARD WARNING SYSTEM LOCATION

BE2K6-01

Except Double Cab

P

125229

INSPECTION

1. INSPECT TURN SIGNAL SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
Left turn	1 - 2	Continuity
Original	1 -2, 2 - 3	No continuity
Right turn	2 - 3	Continuity

If the continuity is not as specified, replace the switch.

2. INSPECT TURN SIGNAL FLASHER RELAY CIRCUIT

Disconnect the connector from the turn signal flasher and inspect the connector on the wire harness side, as shown in the table.

Tester Connection	Condition	Specified Condition
1 - Body ground	Ignition switch LOCK or ACC	Below 1 V
1 - Body ground	Ignition switch ON	10 - 14 V
2 - Body ground	Constant	Continuity
3 - Body ground	Constant	Continuity
4 - Body ground	Constant	10 - 14 V
5 - Body ground	Turn signal switch RIGHT or OFF	No Continuity
5 - Body ground	Turn signal switch LEFT	Continuity
6 - Body ground	Turn signal switch LEFT or OFF	No Continuity
6 - Body ground	Turn signal switch RIGHT	Continuity
7 - Body ground	Constant	Continuity
8 - Body ground	Hazard warning switch OFF	No Continuity
8 - Body ground	Hazard warning switch ON	Continuity

If the result is as specified, replace the flasher.

**3. Double cab:****INSPECT HAZARD WARNING SWITCH CONTINUITY**

- (a) Remove the integration control panel.
- (b) Check that the continuity exists between terminal 16 and terminal 10 with the switch ON.
- (c) Check that no continuity exists between terminal 16 and terminal 10 with the switch OFF.

If the continuity is not as specified, replace the panel.

**4. Except double cab:****INSPECT HAZARD WARNING SWITCH CONTINUITY**

- (a) Remove the integration control panel.
- (b) Check that the continuity exists between terminal 17 and terminal 1 with the switch ON.
- (c) Check that no continuity exists between terminal 17 and terminal 1 with the switch OFF.

If the continuity is not as specified, replace the panel.

INTERIOR LIGHT SYSTEM (Double Cab)

LOCATION

BE2K8-01

I27421

P

I27063

INSPECTION

1. INSPECT FRONT PERSONAL LIGHT SWITCH CONTINUITY

- Disconnect the connector from the personal light.
- Push the personal light switch on, check that continuity exists between terminals 1 and 3.

If the continuity is not as specified, replace the bulb or light.

2. INSPECT DOME LIGHT SWITCH CONTINUITY

- Disconnect the connector from the dome light.
- Push the personal light switch on, check that continuity exists between terminals 1 and 3.

If the continuity is not as specified, replace the bulb or light.

- Turn the light switch to the DOOR position, check that continuity exists between terminals 2 and 3.

If the continuity is not as specified, replace the light.

3. INSPECT DOOR COURTESY SWITCH CONTINUITY

- Check that continuity exists between the terminal and the switch body with the switch ON (switch pin released: door opened).
- Check that no continuity exists between the terminal and the switch body with the switch OFF (switch pin pushed in: door closed).

If the continuity is not as specified, replace the switch.

4. INSPECT DOOR COURTESY LIGHT CONTINUITY

Check that continuity exists between terminals 1 and 2.

If the continuity is not as specified, replace the light assembly or bulb.

5. INSPECT VANITY LIGHT CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Closed)	1 - 2	No continuity
ON (Opened)	1 - 2	Continuity

If the continuity is not as specified, replace the bulb or vanity light.

INTERIOR LIGHT SYSTEM (Except Double Cab)

LOCATION

BE2KA-01

INSPECTION

1. INSPECT FRONT PERSONAL LIGHT CONTINUITY

- (a) Disconnect the connector from the personal light.
- (b) Push the personal light switch ON, check that continuity exists between terminals 3 and 1.

- (c) Turn the light switch to the DOOR position, check that continuity exists between terminals 2 and 3.

If the result is not as specified, replace the bulb or light.

2. INSPECT ROOM LIGHT CONTINUITY

- (a) Disconnect the connector from the light.
- (b) Turn the interior light switch ON, check that continuity exists between terminal 2 and body ground.

- (c) Turn the light switch to the DOOR position, check that continuity exists between terminals 1 and 2.

If the result is not as specified, replace the bulb or light.

3. INSPECT (FRONT) DOOR COURTESY SWITCH CONTINUITY

- (a) Check that continuity exists between the terminal and the switch body with the switch ON (switch pin released: door opened).
- (b) Check that no continuity exists between terminals and the switch body with the switch OFF (switch pin pushed in: door closed).

If the result is not as specified, replace the switch.

**4. Access door:
INSPECT REAR UPPER DOOR COURTESY SWITCH
CONTINUITY**

Switch Position	Tester Connection	Specified Condition
ON (Open)	1 - 2	Continuity
ON (Half latch)	1 - 2	Continuity
OFF (Full latch)	1 - 2	No continuity

If the continuity is not as specified, replace the upper door lock.

**5. Access door:
INSPECT REAR LOWER DOOR COURTESY SWITCH
CONTINUITY**

Switch Position	Tester Connection	Specified Condition
ON (Open)	1 - 2	Continuity
ON (Half latch)	1 - 2	Continuity
OFF (Full latch)	1 - 2	No continuity

If the continuity is not as specified, replace the lower door lock.

6. INSPECT DOOR COURTESY LIGHT CONTINUITY

Check that continuity exists between terminals 1 and 2.

If the continuity is not as specified, replace the bulb or light.

7. INSPECT VANITY LIGHT CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Closed)	1 - 2	No continuity
ON (Opened)	1 - 2	Continuity

If the continuity is not as specified, replace the bulb or vanity light.

BACK-UP LIGHT SYSTEM LOCATION

Stop Light Switch

High-mounted Stop Light

Rear Combination Light
● Stop Light

INSPECTION

1. Double cab: INSPECT STOP LIGHT SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
Not pushed	1 - 4	Continuity
Pushed in	1 - 4	No continuity
Not pushed	2 - 3	No continuity
Pushed in	2 - 3	Continuity

If the continuity is not as specified, replace the switch.

2. Except double cab: INSPECT STOP LIGHT SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
Not pushed	1 - 2	Continuity
Pushed in	1 - 2	No continuity
Not pushed	3 - 4	No continuity
Pushed in	3 - 4	Continuity

If the continuity is not as specified, replace the switch.

3. INSPECT HI-MOUNTED STOP LIGHT ASSEMBLY CONTINUITY

Using an ohmmeter, check that continuity exists between terminals 1 and 2.

If the continuity is not as specified, replace the bulb or light.

CARGO LIGHT SYSTEM (Double Cab)

LOCATION

BE2L1-01

INSPECTION

1. INSPECT CARGO LIGHT SWITCH CONTINUITY

- (a) Remove the integration control panel.
- (b) Check that continuity exists between terminals 3 and 10 with the switch ON.
- (c) Check that no continuity exists between terminals 3 and 10 with the switch OFF.

If the continuity is not as specified, replace the panel.

2. INSPECT CARGO LIGHT ASSEMBLY CONTINUITY

Using an ohmmeter, check that continuity exists between terminals 3 and 2.

If the continuity is not as specified, replace the bulb or the stop light assembly.

CARGO LIGHT SYSTEM (Except Double Cab)

LOCATION

BE2L3-01

INSPECTION

1. INSPECT CARGO LIGHT SWITCH CONTINUITY

- Remove the integration control panel.
- Check that continuity exists between terminals 9 and 1 with the switch ON.
- Check that no continuity exists between terminals 9 and 1 with the switch OFF.

If the continuity is not as specified, replace the panel.

2. INSPECT CARGO LIGHT ASSEMBLY CONTINUITY

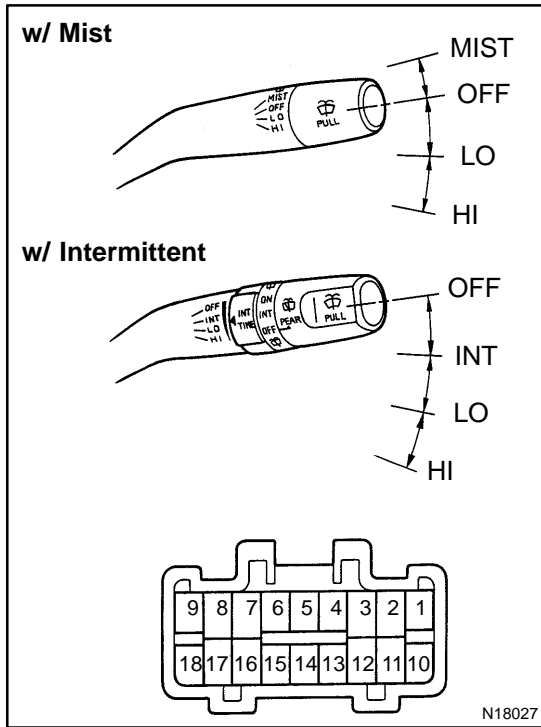

Using an ohmmeter, check that continuity exists between terminals 3 and 2.

If the continuity is not as specified, replace the bulb or the stop light assembly.

WIPER AND WASHER SYSTEM LOCATION

BE03B-09

INSPECTION

1. INSPECT FRONT WIPER AND WASHER SWITCH CONTINUITY

w/ Mist:

Switch Position	Tester Connection	Specified Condition
MIST	7 - 17, 16 - 17	Continuity
OFF	7 - 16	Continuity
LO	7 - 17	Continuity
HI	8 - 17	Continuity
Washer ON	2 - 11	Continuity

w/ Intermittent:

Switch Position	Tester Connection	Specified Condition
OFF	7 - 16	Continuity
INT	7 - 16	Continuity
LO	7 - 17	Continuity
HI	8 - 17	Continuity
Washer ON	2 - 11	Continuity

If the continuity is not as specified, replace the switch.

2. INSPECT INTERMITTENT OPERATION

- Turn the wiper switch to the INT position.
- Turn the intermittent time control switch to the FAST position.
- Connect the positive (+) lead from the battery to terminal 16 and the negative (-) lead to terminal 2.
- Connect the positive (+) lead from the voltmeter to terminal 7 and the negative (-) lead to terminal 2, check that the meter needle indicates battery positive voltage.

INT time control switch position	Voltage
FAST	Approx. 1 to 3 sec. Battery positive voltage 0 V
SLOW	Approx. 10 to 15 sec. Battery positive voltage 0 V

V03883

If the result is not as specified, replace the switch.

3. INSPECT WASHER LINKED OPERATION

- Connect the positive (+) lead from the battery to terminal 16 and the negative (-) lead to terminal 2.
- Connect the positive (+) lead from the voltmeter to terminal 7 and the negative (-) lead to terminal 2.
- Push in the washer switch, and check that the voltage changes as shown in the table below.

If the operation is not as specified, replace the wiper and washer switch.

4. Low speed:

INSPECT WIPER MOTOR OPERATION

Connect the positive (+) lead from the battery to terminal 5 and the negative (-) lead from the battery to the motor body or terminal 4, and check that the motor operates at low speed. If operation is not as specified, replace the motor.

5. High speed:

INSPECT WIPER MOTOR OPERATION

Connect the positive (+) lead from the battery to terminal 3 and the negative (-) lead from the battery to the motor body or terminal 4, and check that the motor operates at high speed. If operation is not as specified, replace the motor.

6. Stopping at stop position:

INSPECT WIPER MOTOR OPERATION

- Operate the motor at low speed and stop the motor operation anywhere except at the stop position by disconnecting the positive (+) lead from terminal 5.

- (b) Connect terminals 1 and 5.
- (c) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead from the battery to the motor body or terminal 4, and check that the motor stops running at the stop position after the motor operates again. If operation is not as specified, replace the motor.

7. INSPECT WASHER MOTOR OPERATION

Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, and check that the motor operates.

NOTICE:

These tests must be performed quickly (within 20 seconds) to prevent the coil from burning out.

If operation is not as specified, replace the motor.

INSPECTION

1. INSPECT SPEEDOMETER ON-VEHICLE

Using a speedometer tester, check the speedometer for indication error and check operation of the odometer.

HINT:

Tire wear and tire over or under inflation will increase the indication error.

USA (mph)		CANADA (km/h)	
Standard Indication	Allowable Range	Standard Indication	Allowable Range
20	19 to 22	20	17.5 to 21.5
40	39 to 42.5	40	38 to 42
60	59.5 to 63.5	60	58 to 63
80	79.5 to 84	80	78 to 84
100	100 to 105	100	98.5 to 104.5
-		120	119 to 125
-		140	139 to 146
-		160	159 to 167

If the error is excessive, replace the speedometer.

2. INSPECT INPUT VEHICLE SPEED SIGNAL WAVEFORM (A/T)

- (a) Remove the combination meter with connectors still connected.
- (b) Connect the oscilloscope to terminal A-24 and body ground.
- (c) Start the engine.

- (d) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV, 20 ms/DIV
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

As shown in the illustration

HINT:

As vehicle speed increases, the cycle of the signal waveform narrows.

3. INSPECT INPUT VEHICLE SPEED SIGNAL WAVEFORM (M/T)

- Shift the shift lever to neutral.
- Jack up either of the front wheel.
- Turn the ignition switch to ON.
- Measure the voltage between terminals 2 and 3 of speed sensor when the front wheel is turning slowly.

Standard voltage:

Voltage is generated intermittently.

4. INSPECT TACHOMETER ON-VEHICLE

- Connect a tune-up test tachometer, and start the engine.

NOTICE:

- Reversing the connection of the tachometer will damage the transistors and diodes inside the tachometer.
- When removing or installing the tachometer, be careful not to drop or subject it to heavy shocks.

- Compare the tester and tachometer indications.

DC 13.5 V at 20°C (68°F)

2UZ-FE		1GR-FE	
Standard Indication	Allowable Range	Standard Indication	Allowable Range
700	630 to 770	700	630 to 770
1,000	900 to 1,100	1,000	900 to 1,000
2,000	1,875 to 2,125	2,000	1,850 to 2,150
3,000	2,850 to 3,150	3,000	2,800 to 3,200
4,000	3,850 to 4,150	4,000	3,800 to 4,200
5,000	4,850 to 5,150	5,000	4,800 to 5,100
6,000	5,820 to 6,180	6,000	5,750 to 6,250

If the error is excessive, replace the tachometer.

5. INSPECT INPUT TACHO SIGNAL WAVEFORM

- (a) Remove the combination meter with connector still connected.
- (b) Connect the oscilloscope to terminal A-23 and body ground.
- (c) Start the engine.

- (d) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV, 10 ms/DIV
Vehicle condition	Engine idle speed

OK:

As shown in the illustration

6. INSPECT OUTPUT TACHO SIGNAL WAVEFORM

- (a) Remove the combination meter with connector still connected.
- (b) Connect the oscilloscope to terminal A-25 and body ground.
- (c) Start the engine.

- (d) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV, 10 ms/DIV
Vehicle condition	Engine idle speed

OK:

As shown in the illustration

7. INSPECT FUEL RECEIVER GAUGE OPERATION

- (a) Disconnect the connector from the sender gauge.
- (b) Turn the ignition switch ON, and check that the receiver gauge needle indicates EMPTY.

- (c) Connect terminals 2 and 3 of the wire harness side connector through a 3.4 W test bulb.
- (d) Turn the ignition switch ON, and check that the bulb lights up and the receiver gauge needle moves towards the full side.

HINT:

Because of the silicon oil in the gauge, it will take a short time for needle to stabilize.

If the operation is not as specified, inspect the receiver gauge resistance.

8. INSPECT FUEL SENDER GAUGE RESISTANCE

Measure the resistance between terminals 2 and 3 at each float position.

Float Position mm (in.)	Resistance (Ω)
SF: Approx. 116.5 (4.59) ± 2.5 (0.10)	Approx. 4.0
1/2: Approx. 14 (0.55)	Approx. 59.0
W/L: Approx. 72.2 (2.84)	Approx. 98.8
SE: Approx. 100 (3.90) ± 2.5 (0.10)	Approx. 110.0 ± 2.5

If the resistance value is not as specified, replace the fuel sender gauge.

9. INSPECT FUEL LEVEL WARNING LIGHT

- (a) Disconnect the connector from the sender gauge.
- (b) Connect terminals 1 and 3 of the wire harness side connector.
- (c) Turn the ignition switch ON, and check that the warning light lights up.

If the warning light does not light up, inspect the bulb or wire harness.

10. INSPECT FUEL LEVEL WARNING SWITCH

- (a) Apply battery voltage between terminals 1 and 3 through a 3.4 W test bulb, and check that the bulb lights up.

HINT:

It will take a short time for the bulb to light up.

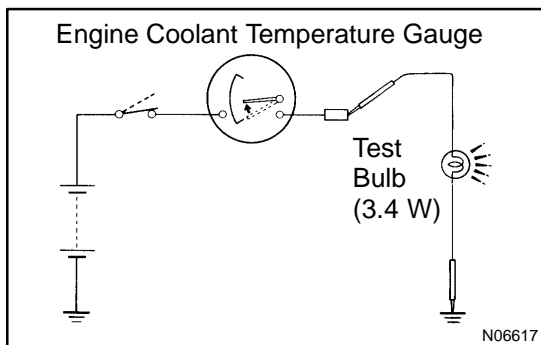

- (b) Submerge the switch in fuel, and check that the bulb turns off.

If operation is not as specified, replace the sender gauge.

11. INSPECT ENGINE COOLANT TEMPERATURE RECEIVER GAUGE OPERATION

- (a) Disconnect the connector from the sender gauge.
- (b) Turn the ignition switch ON, and check that the receiver gauge needle indicates cool side.

- (c) Ground the terminal of the wire harness side connector through a 3.4 W test bulb.
- (d) Turn the ignition switch ON, check that the bulb lights up and the receiver gauge needle moves to the hot side.

12. INSPECT INPUT ENGINE COOLANT TEMPERATURE SIGNAL WAVEFORM

- (a) Remove the combination meter with connectors still connected.
- (b) Connect the oscilloscope to terminal A32 and body ground.
- (c) Start the engine.
- (d) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV, 10 ms/DIV
Vehicle condition	Ignition switch ACC or ON

OK:

As shown in the illustration

13. INSPECT ENGINE COOLANT TEMPERATURE SENDER GAUGE RESISTANCE

- (a) Disconnect the connector from the engine coolant temperature sender gauge.
- (b) Measure the resistance according to the value(s) in the table below.

Temperature °C (°F)	Resistance (kΩ)
-20 (-4)	13.54 to 16.63
20 (68)	2.28 to 2.63
80 (176)	0.31 to 0.33
110 (230)	0.13 to 0.15

If the resistance value is not as specified, replace the sender gauge.

**14. 1GR-FE (Standard cab):
INSPECT OIL PRESSURE SWITCH CONTINUITY**

- Disconnect the connector from the switch.
- Check that continuity exists between the terminal and ground with the engine stopped.
- Check that no continuity exists between the terminal and ground with the engine running.

HINT:

The oil pressure should be over 24.5 kPa (0.25 kgf/cm², 3.55 psi).

If the continuity is not as specified, replace the switch.

**15. 1GR-FE (Access cab) and 2UZ-FE:
INSPECT OIL PRESSURE SENDER GAUGE CONTINUITY**

- Disconnect the connector from the sender gauge.
- Check that no continuity exists between the terminal and ground with the engine stopped.
- Check that continuity exists between the terminal and ground with the engine running.

HINT:

The oil pressure should be over 29.0 kPa (0.3 kgf/cm², 4.2 psi).

If the continuity is not as specified, replace the sender gauge.

16. INSPECT BRAKE WARNING LIGHT

- Disconnect the connector from the brake fluid warning switch.
- Release the parking brake pedal.
- Connect the terminals on the harness side of the level warning switch connector.
- Start the engine, and check that the warning light lights up.

If the warning light does not light up, inspect the bulb or wire harness.

17. INSPECT BRAKE FLUID LEVEL WARNING SWITCH CONTINUITY

- Remove the reservoir tank cap and strainer.
- Disconnect the connector.
- Check that no continuity exists between the terminals with the switch OFF (float).
- Use siphon to take fluid out of the reservoir tank.
- Check that continuity exists between the terminals with the switch ON (sink).

If the continuity is not as specified, replace the switch.

- Pour the fluid back in the reservoir tank.

18. Double cab: INSPECT PARKING BRAKE SWITCH CONTINUITY

- Check that there is continuity between the terminal and switch body with the switch ON (switch pin released).
- Check that there is no continuity between the terminals with the switch OFF (switch pin pushed in).

If the continuity is not as specified, replace the switch.

19. Except double cab (A/T): INSPECT PARKING BRAKE SWITCH CONTINUITY

- Check that there is continuity between the terminal and switch body with the switch ON (switch pin released).
- Check that there is no continuity between the terminals with the switch OFF (switch pin pushed in).

If the continuity is not as specified, replace the switch.

20. Except double cab (M/T): INSPECT PARKING BRAKE SWITCH CONTINUITY

- Check that there is continuity between the terminals with the switch ON (switch pin released).
- Check that there is no continuity between the terminals with the switch OFF (switch pin pushed in).

If the continuity is not as specified, replace the switch.

21. INSPECT WASHER LEVEL WARNING LIGHT

- (a) Disconnect the connectors from the level warning switch.
- (b) Connect the terminals of the wire harness side of the level warning switch connector.
- (c) Turn the ignition switch ON, and check that the warning light turns on.

If the warning light does not turn on, inspect the bulb.

22. INSPECT WASHER LEVEL SWITCH CONTINUITY

- (a) Check that there is no continuity between the terminals with the switch OFF (float).
- (b) Check that there is continuity between the terminals with the switch ON (sink).

If the continuity is not as specified, replace the switch.

23. INSPECT DRIVER'S SEAT BELT WARNING LIGHT

- (a) Disconnect connector B from the combination meter.
- (b) Connect the negative (-) lead from the battery to terminal 9.
- (c) Turn the ignition switch ON and check that the warning light lights up.

If the warning light does not light up, inspect the bulb or wire harness.

24. Except regular cab (w/o Power seat (Driver side): INSPECT BUCKLE SWITCH CONTINUITY

- (a) Check that continuity exists between terminals 3 and 13 of the switch connector with the switch ON (belt fastened).
- (b) Check that no continuity exists between terminals 3 and 13 on the switch side connector with the switch OFF (belt unfastened).

If the continuity is not as specified, replace the inner seat belt.

25. Except regular cab (w/ Power seat (Driver side): INSPECT BUCKLE SWITCH CONTINUITY

- (a) Check that continuity exists between terminals 2 and 3 on the switch side connector with the switch ON (belt fastened).
- (b) Check that no continuity exists between terminals 2 and 3 on the switch side connector with the switch OFF (belt unfastened).

If the continuity is not as specified, replace the inner seat belt.

**26. Regular cab (Driver side):
INSPECT BUCKLE SWITCH CONTINUITY**

- (a) Check that continuity exists between terminals 1 and 2 of the switch connector with the switch ON (belt fastened).
- (b) Check that no continuity exists between terminals 1 and 2 on the switch side connector with the switch OFF (belt unfastened).

If the continuity is not as specified, replace the inner seat belt.

**27. Except regular cab (60:40 separate seat type (Passenger side)):
INSPECT BUCKLE SWITCH CONTINUITY**

- (a) Check that continuity exists between terminals 1 and 4 on the switch connector with the switch ON (belt fastened).
- (b) Check that no continuity exists between terminals 1, 3 and 4 on the switch side connector with the switch OFF (belt unfastened).

If the continuity is not as specified, replace the inner seat belt.

**28. Regular cab (Passenger side):
INSPECT BUCKLE SWITCH CONTINUITY**

- (a) Check that continuity exists between terminals 1 and 3 on the switch connector with the switch ON (belt fastened).
- (b) Check that no continuity exists between terminals 1, 3 and 4 on the switch side connector with the switch OFF (belt unfastened).

If the continuity is not as specified, replace the inner seat belt.

**29. Except regular cab (Except 60:40 separate seat type (Passenger side)):
INSPECT BUCKLE SWITCH CONTINUITY**

The seat belt buckle switch cannot be inspected independently because it is a hall effect switch.

30. INSPECT LIGHT CONTROL RHEOSTAT OPERATION

- (a) Connect terminals 1 and 3 through a 3.4 W test bulb.
- (b) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2.
- (c) Turn the rheostat knob fully counterclockwise, and check that the test bulb turns off.
- (d) Gradually turn the rheostat knob clockwise, and check that the test bulb brightness changes from dark to bright.

If operation is not as specified, replace the rheostat.

31. INSPECT OPEN DOOR WARNING LIGHT

- (a) Disconnect the connector from the door courtesy switch and ground terminal on the wire harness side.
- (b) Turn the ignition switch ON, and check that the warning light lights up.

If the warning light does not light up, inspect the bulb.

**32. Double cab (Passenger's seat only):
INSPECT SEAT BELT WARNING OCCUPANT DETECTION SENSOR CONTINUITY**

Check that continuity exists between terminals 1 and 2 when pressing the sensing part.

If the continuity is not as specified, replace the sensor.

**33. Except double cab (Passenger's seat only):
INSPECT SEAT BELT WARNING OCCUPANT DETECTION SENSOR CONTINUITY**

Check that continuity exists between terminals 1 and 2 when pressing the sensing part.

If the continuity is not as specified, replace the sensor.

**34. INSPECT PASSENGER SEAT BELT WARNING LIGHT**

- Remove the center cluster finish panel.
- Disconnect the connectors from the center integration.
- Connect the positive(+) lead the vattery to the terminal 11 and negative (-) lead terminal 10, and check that the warning light lights up.

If the warning light does not light up, inspect the bulb or wire harness.

35. MAINTENANCE LIQUID RESETTING PROCEDURE

- Set the display window to ODO.
- Turn the ignition switch off.
- Pressing the reset switch, turn the ignition switch to the ON position (keep pressing for at least 5 seconds.)
- Reset procedure is completed.

HINT:

- If the ignition switch is turned off during the reset procedure.
LCD: off
IND: off
- If the reset switch is pressed off during the reset procedure.
LCD: return to ODO
IND: Keep the previous state of reset

Indicator Condition:

State	Condition	Specified State
Blinking	The vehicle runs 4,500 miles after the previous setting	The indicator blinks for 12 seconds after the ignition switch is on (after 3 seconds for a bulb check).
Continuously Illuminated	The vehicle runs 5,000 miles after the previous setting	The indicator is continuously illuminated after the ignition switch is on.

COMPASS (Double Cab)

LOCATION

BE2L8-01

CALIBRATION

1. SELECTING COMPASS DISPLAY MODE

The mode select switch allows you to select the Display or Non-display mode of the compass.

2. SETTING ZONE

Deviation between the "magnetic north" and "actual north" differs depending on the terrestrial location. Therefore, adjustment of the magnetism is required. Since the magnetic condition differs depending on the area where the vehicle is used, it is necessary for each user to set the zone. (Refer to Compass Zone Map). The zone setting can be changed using the E/M switch of the display.

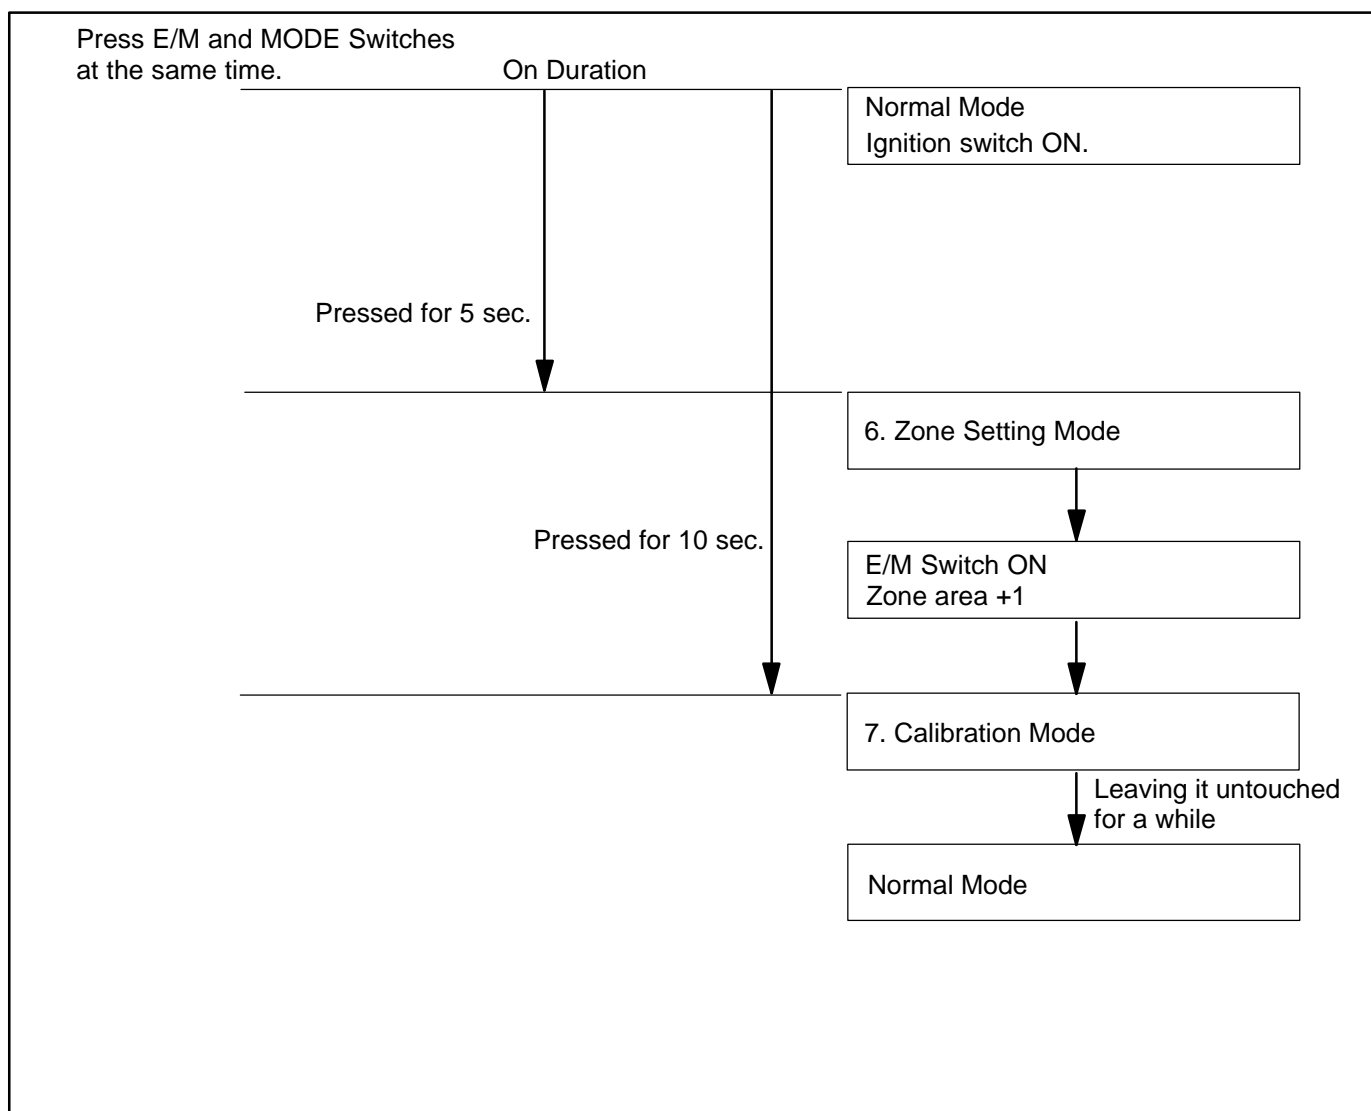

3. PERFORMING CALIBRATION

Because each vehicle has its own magnetic field, calibration should be performed for each vehicle. This compass function is used when storing the record of the vehicle's magnetic field.

4. WHEN COMPASS MAGNETIZED:

A compass could be magnetized during shipping by vessels or freight cars. Therefore, make sure to perform calibration and ensure that calibration is performed properly before delivery. If it cannot be done (cannot complete in spite of driving round several times), it may be caused by magnetization. Demagnetize the vehicle using a demagnetizer and perform calibration again.

5. SETTING COMPASS

6. ZONE SETTING MODE

- (a) Turn the ignition switch ON.
- (b) To keep pressing the E/M switch and MODE switch for 5 seconds when outer temperature is displayed will activate the zone setting mode. A number (1 to 15) is displayed on the compass display.

I27615

HINT:

In the initial status, "8" is displayed.

- (c) The displayed number increases +1 every time the E/M switch is pressed. Referring to the map, check the number for the area where the vehicle will be used and set the zone number.
- (d) Leave it untouched for several seconds after setting and check that the compass display shows an azimuthal direction (N, NE, E, SE, S, SW, W, or NW) or "VAR".

7. CALIBRATION SETTING MODE

- (a) After the set zone is displayed, if the E/M switch and MODE switch remains pressed another 5 seconds will activate the calibration setting mode.
- (b) To keep pressing the E/M switch and MODE switch for 10 seconds when outer temperature is displayed will also activate this mode.
- (c) Drive the vehicle at a slow speed of 8 km/h (5 mph) or less in the circular direction.
- (d) Driving round the circle 1 to 3 times will display the azimuthal direction on the display, completing the calibration.

HINT:

After the calibration is completed, it is not necessary to perform the above procedures unless the magnetic field strength is drastically changed. If this happens, the azimuthal display will be changed to "CAL".

DEFOGGER SYSTEM (Double Cab)

LOCATION

BE2LA-01

Wire Harness Side

I27503

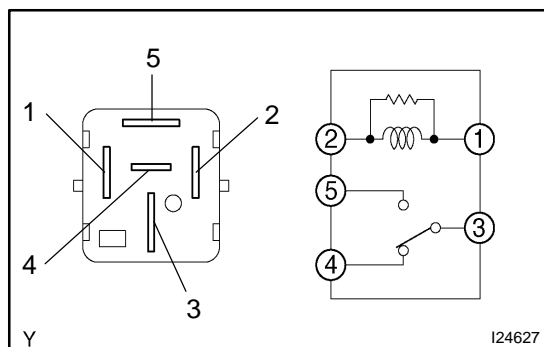

INSPECTION

1. INSPECT DEFOGGER SWITCH (in INTEGRATION CONTROL PANEL SWITCH) CIRCUIT

Disconnect the connector from the panel and inspect the connector on wire harness side, as shown in the chart.

Tester Connection	Condition	Specified Condition
4 - Ground	Ignition switch OFF or ACC	Below 1 V
4 - Ground	Ignition switch ON	10 - 14 V
6 - Ground	Constant	Continuity
10 - Ground	Constant	Continuity
14 - Ground	Ignition switch OFF or ACC	Below 1 V
14 - Ground	Ignition switch ON	10 - 14 V
15 - Ground	Constant	10 - 14 V

If the result is as specified, replace the panel.

I24627

2. INSPECT DEFOGGER RELAY (Making: DEFOG) CONTINUITY

Tester Connection	Specified Condition
3 - 4	Continuity
3 - 4	No continuity (When battery voltage is applied to terminals 1 and 2)
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

3. INSPECT MIRROR HEATER RELAY (Marking: MIR HTR) CONTINUITY

Condition	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

4. INSPECT DEFOGGER WIRE

NOTICE:

- When cleaning the glass, use a soft and dry cloth and wipe the glass in the direction of the wire. Take care not to damage the wires.
- Do not use detergents or glass cleaners with abrasive ingredients.
- When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.

- Turn the ignition switch ON.
- Turn the defogger switch on.
- Inspect the voltage at the center of each heat wire, as shown in the illustration.

Voltage	Criteria
Approx. 5 V	Okay (No break in wire)
Approx. 10 V or 0 V	Broken wire

HINT:

If there is approximately 10 V, the wire is broken between the center of the wire and the positive (+) end. If there is no voltage, the wire is broken between the center of the wire and ground.

- Place the voltmeter positive (+) lead against the defogger wire on the battery side.
- Place the voltmeter negative (-) lead with the foil strip against the wire on the ground side.
- Slide the positive (+) lead from the battery to the ground side.
- The point where the voltmeter deflects from several V to zero V is the place where the defogger wire is broken.

HINT:

If the heat wire is not broken, the voltmeter indicates 0 V at the positive (+) end of the heat wire but gradually increases to about 12 V as the meter probe moves to the other end.

**5. IF NECESSARY, REPAIR DEFOGGER WIRE**

- (a) Clean the broken wire tips with grease, wax and silicon remover.
- (b) Place the masking tape along both sides of the wire for repair.
- (c) Thoroughly mix the repair agent (Dupont paste No. 4817).

- (d) Using a fine tip brush, apply a small amount of the agent to the wire.
- (e) After a few minutes, remove the masking tape.
- (f) Do not repair the defogger wire for at least 24 hours.

**6. INSPECT MIRROR HEATER OPERATION**

- (a) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 4.
- (b) Check that the mirror becomes warm.

HINT:

It will take a short time for the mirror to become warm.
If operation is not as specified, replace the mirror.

MIRROR HEATER SYSTEM (Except Double Cab)

LOCATION

BE2LC-01

INSPECTION

1. **INSPECT MIRROR HEATER SWITCH TIMER OPERATION**
 - (a) Connect the positive (+) lead from the battery to terminals 2 and 6 of the mirror heater switch and the negative (-) lead to terminal 4.
 - (b) Connect the positive (+) lead from the voltmeter to terminal 6 of the mirror heater switch and the negative (-) lead to terminal 4.
 - (c) When the switch is OFF, the voltage should be approximately 12 V.

- (d) Push the mirror heater switch on and check that the indicator lights up and that the voltage is less than 1 V.
 - (e) After 15 minutes, check that the switch is OFF and the voltage is approximately 12 V.
- If the result is not as specified, replace the switch.

2. INSPECT MIRROR HEATER RELAY (Marking : MIR HTR) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

3. INSPECT MIRROR HEATER OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 6.
 - (b) Check that the mirror becomes warm.
- HINT:**
It will take a short time for the mirror to become warm.
If operation is not as specified, replace the mirror.

POWER WINDOW CONTROL SYSTEM (Double Cab)

LOCATION

BE2LE-01

P

127062

108152

INSPECTION

1. INSPECT POWER WINDOW REGULATOR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	2 - 3, 4 - 5	Continuity
OFF	2 - 3 - 5	Continuity
DOWN	2 - 4, 3 - 5	Continuity

If the continuity is not as specified, replace the switch.

N14863

2. INSPECT POWER MAIN RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

I15351

3. Driver side door:

INSPECT POWER WINDOW MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the motor turns clockwise.

I15352

- (b) Reverse the polarity and check that the motor turns counterclockwise.

If operation is not as specified, replace the motor.

I27631

4. Passenger side door:

INSPECT POWER WINDOW MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, and check that the motor turns clockwise.

- (b) Reverse the polarity and check that the motor turns counterclockwise.
If operation is not as specified, replace the motor.

5. Rear right door:

INSPECT POWER WINDOW MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminals 2, then check that the motor turns clockwise.

- (b) Reverse the polarity, and check that the motor turns counterclockwise.
If operation is not as specified, replace the motor.

6. Rear left door:

INSPECT POWER WINDOW MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the motor turns clockwise.

- (b) Reverse the polarity and check that the motor turns counterclockwise.
If operation is not as specified, replace the motor.

**7. Driver side door:
INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- Disconnect the connector from the motor.
- Connect the positive (+) lead from the ammeter to terminal 1 of the motor side connector and the negative (-) lead to negative terminal of the battery.
- Connect the positive (+) lead from the battery to terminal 2 of the motor side connector, and raise the window to the fully closed position.
- Continue to apply voltage and check that the current changes from approximately 14 A to less than 1 A within 4 to 90 seconds.
- Disconnect the leads from the terminals.
- Approximately 90 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, then check that the window begins to move down.

If operation is not as specified, replace the motor.

**8. Passenger side door:
INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- Disconnect the connector from the motor.
- Connect the positive (+) lead from the ammeter to terminal 2 of the motor connector and the negative (-) lead to negative terminal of the battery.
- Connect the positive (+) lead from the battery to terminal 1 of the motor connector, and raise the window to the fully closed position.
- Continue to apply voltage and check that the current changes from approximately 14 A to less than 1 A within 4 to 90 seconds.
- Disconnect the leads from the terminals.
- Approximately 90 seconds later, connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the window begins to move down.

If operation is not as specified, replace the motor.

**9. Rear left door:
INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- Disconnect the connector from the motor.
- Connect the negative (+) lead from the ammeter to terminal 1 of the motor connector and the negative (-) lead to negative terminal of the battery.
- Connect the positive (+) lead from the battery to terminal 2 of the motor connector, and raise the window to the fully closed position.

- (d) Continue to apply voltage and check that the current changes from approximately 14 A to less than 1 A within 4 to 90 seconds.
- (e) Disconnect the leads from the terminals.
- (f) Approximately 90 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, then check that the window begins to move down.

If operation is not as specified, replace the motor.

**10. Rear right door:
INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- (a) Disconnect the connector from the motor.
- (b) Connect the negative (+) lead from the ammeter to terminal 2 of the motor connector and the negative (-) lead to negative terminal of the battery.
- (c) Connect the positive (+) lead from the battery to terminal 1 of the motor connector, and raise the window to the fully closed position.

- (d) Continue to apply voltage and check that the current changes from approximately 14 A to less than 1 A within 4 to 90 seconds.
- (e) Disconnect the leads from the terminals.
- (f) Approximately 90 seconds later, connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, check that the window begins to move down.

If operation is not as specified, replace the motor.

POWER WINDOW CONTROL SYSTEM (Except Double Cab) LOCATION

BE2LG-01

INSPECTION

1. INSPECT POWER WINDOW MASTER SWITCH CONTINUITY

Driver's switch:

Switch Position	Tester Connection	Specified Condition
UP	1 - 4, 3 - 9	Continuity
OFF	1 - 3 - 4	Continuity
DOWN (AUTO)	1- 3, 4 - 9	Continuity

Passenger's switch (Window unlock):

Switch Position	Tester Connection	Specified Condition
UP	1 - 10, 8 - 9	Continuity
OFF	1 - 8 - 10	Continuity
DOWN	1 - 8, 9 - 10	Continuity

Passenger's switch (Window lock):

Switch Position	Tester Connection	Specified Condition
UP	8 - 9	Continuity
OFF	8 - 10	Continuity
DOWN	9 - 10	Continuity

If the continuity is not as specified, replace the switch.

2. Using an ammeter:

INSPECT ONE-TOUCH POWER WINDOW SYSTEM/ CURRENT OF CIRCUIT

- Disconnect the connector from the master switch.
- Connect the positive (+) lead from the ammeter to terminal 3 on the wire harness side connector and the negative (-) lead to the negative (-) terminal of the battery.
- Connect the positive (+) lead from the battery to terminal 4 on the wire harness side connector.
- When the window moves down, check that the current is approximately 7 A.

- (e) Check that the current increases to approximately 14.5 A or more when the window stops moving down.

HINT:

Since the PTC opens in 4 to 90 seconds after the window stops moving down, the check must be performed before the PTC starts operating.

If the result is not as specified, replace the switch.

3. Using an ammeter with a current-measuring probe: INSPECT ONE TOUCH POWER WINDOW SYSTEM/ CURRENT OF CIRCUIT

- (a) Remove the master switch with the connector connected.
 (b) Attach a current-measuring probe to terminal 9 of the wire harness side connector.
 (c) Turn the ignition switch ON and set the power window switch in the down position.
 (d) When the window moves down, check that the current is approximately 7 A.

- (e) Check that the current increases to approximately 14.5 A or more when the window stops moving down.

HINT:

Since the circuit breaker opens in 4 to 90 seconds after the window stops moving down, the check must be performed before the PTC starts operating.

If the result is not as specified, replace the master switch.

4. INSPECT POWER WINDOW REGULATOR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	1 - 2, 3 - 4	Continuity
OFF	1 - 2, 3 - 5	Continuity
DOWN	1 - 4, 3 - 5	Continuity

If the continuity is not as specified, replace the switch.

5. INSPECT POWER RELAY CONTINUITY

If the continuity is not as specified, replace the switch.

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

**6. Driver side door:****INSPECT POWER WINDOW MOTOR OPERATION**

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the motor turns counterclockwise.
- (b) Reverse the polarity, and check that the motor turns clockwise.

If operation is not as specified, replace the motor.

**7. Passenger side door:****INSPECT POWER WINDOW MOTOR OPERATION**

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the motor turns counterclockwise.
- (b) Reverse the polarity, and check that the motor turns clockwise.

If operation is not as specified, replace the motor.

**8. Driver side door:****INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- (a) Disconnect the connector from the motor.
- (b) Connect the positive (+) lead from the ammeter to terminal 1 of the wire motor connector and the negative (-) lead to the negative terminal of the battery.
- (c) Connect the positive (+) lead from the battery to terminal 2 of the motor connector, and raise the window to the fully closed position.
- (d) Continue to apply voltage, and check that the current changes to less than 1 A in 4 to 90 seconds.
- (e) Disconnect the leads from the terminals.
- (f) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the window begins to move down.

If operation is not as specified, replace the motor.

**9. Passenger side door:****INSPECT POWER WINDOW MOTOR PTC THERMISTOR OPERATION**

- (a) Disconnect the connector from the motor.
- (b) Connect the positive (+) lead from the ammeter to terminal 2 of the motor connector and the negative (-) lead to the negative terminal of the battery.
- (c) Connect the positive (+) lead from the battery to terminal 1 of the motor connector, and raise the window to the fully closed position.

- (d) Continue to apply voltage and check that the current changes to less than 1 A in 4 to 90 seconds.
- (e) Disconnect the leads from the terminals.
- (f) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, and check that the window begins to move down.

If operation is not as specified, replace the motor.

10. CHECK INTEGRATION RELAY

Remove the integration relay from the driver side J/B, and check the voltage or continuity of each terminal on the driver side J/B side (see page [BE-180](#)).

BACK POWER WINDOW SYSTEM (Double Cab)

LOCATION

BE2LX-01

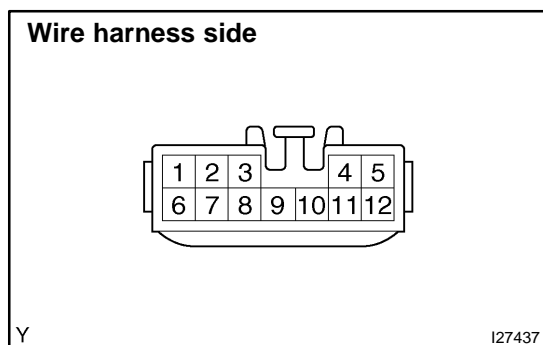

INSPECTION

1. INSPECT BACK POWER WINDOW SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	1 - 3, 2 - 6	Continuity
OFF	2 - 3, 2 - 6	No continuity
DOWN	1 - 6, 2 - 3	Continuity

If the continuity is not as specified, replace the switch.

2. CHECK BACK WINDOW CONTROL RELAY CIRCUIT

- (a) Disconnect the connector from the relay, and check the connector on the wire harness side, as shown in the table below.

Tester Connection	Condition	Specified Condition
6 - Body ground	Ignition switch OFF or ACC → ON	0 V → 10 to 14 V
8 - Body ground	Limit switch OFF → ON	10 kΩ or higher → Below 1 Ω
9 - Body ground	Constant	Continuity
11 - Body ground	Constant	Continuity
12 - Body ground	Ignition switch OFF or ACC → ON	0 V → 10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side or limit switch.

- (b) Reconnect the connector to the relay, and check the connector on the wire harness side, as shown in the table below.

Tester Connection	Condition	Specified Condition
4 - Body ground	<ul style="list-style-type: none"> ● Ignition switch ON ● Power back window fully open ● Limit switch OFF ● Switch not pressed (OFF) → Pressed (UP) 	0 V → 10 to 14 V
5 - Body ground	<ul style="list-style-type: none"> ● Ignition switch ON ● Power back window fully closed ● Switch not pressed (OFF) → Pressed (DOWN) 	0 V → 10 to 14 V

If the result is not as specified, replace the relay.

3. CHECK BACK POWER WINDOW MOTOR PTC THERMISTOR OPERATION

- (a) Disconnect the connector from the window motor.
- (b) Connect the positive (+) lead from the ammeter to terminal 1 of the wire harness side connector and the negative (-) lead to the negative terminal of the battery.
- (c) Connect the positive (+) lead from the battery to terminal 2 of the wire harness side connector, and slide the window to the fully closed position.
- (d) Continue to apply voltage and check that the current changes to less than 1 A in 4 to 90 seconds.
- (e) Disconnect the leads from the terminals.
- (f) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the window begins to move down.

If operation is not as specified, replace the power back window regulator and motor assembly.

4. INSPECT POWER MAIN RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No Continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

5. INSPECT BACK WINDOW RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No Continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

6. INSPECT WINDOW LIMIT SWITCH CONTINUITY

Switch position	Tester Connection	Specified Condition
Lever pushed	1 - 2	No continuity
Lever released	1 - 2	Continuity

If the continuity is not as specified, replace the power back window regulator and motor assembly.

POWER SLIDE BACK WINDOW SYSTEM (Except Double Cab)

LOCATION

BE2LI-01

P

I25442

INSPECTION

1. INSPECT POWER SLIDE BACK WINDOW SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OPEN	1 - 3, 2 - 6	Continuity
OFF	2 - 3, 2 - 6	Continuity
CLOSE	1 - 6, 2 - 3	Continuity

If the continuity is not as specified, replace the switch.

2. CHECK POWER SLIDE BACK WINDOW MOTOR PTC THERMISTOR OPERATION

- Disconnect the connector from the window motor.
- Connect the positive (+) lead from the ammeter to terminal 1 of the motor connector and the negative (-) lead to the negative terminal of the battery.
- Connect the positive (+) lead from the battery to terminal 2 of the motor connector, and slide the window to the fully closed position.

- Continue to apply voltage and check that the current changes to less than 1 A in 4 to 90 seconds.
- Disconnect the leads from the terminals.
- Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the window begins to slide open.

If operation is not as specified, replace the regulator and motor assembly.

3. INSPECT POWER RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

4. CHECK INTEGRATION RELAY

Remove the integration relay from the driver side J/B, and check the voltage or continuity of each terminal on the driver side J/B side (see page BE-128).

POWER DOOR LOCK CONTROL SYSTEM (Double Cab) LOCATION

BE2LV-01

127070

INSPECTION

1. INSPECT DRIVER DOOR KEY LOCK AND UNLOCK SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
LOCK	3 - 5	Continuity
OFF	3 - 5, 3 - 6	No continuity
UNLOCK	3 - 6	Continuity

If the continuity is not as specified, replace the door lock assembly.

2. INSPECT PASSENGER SIDE DOOR KEY LOCK AND UNLOCK SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
LOCK	2 - 4	Continuity
OFF	1 - 4, 2 - 4	No continuity
UNLOCK	1 - 4	Continuity

If the continuity is not as specified, replace the door lock assembly.

3. INSPECT DRIVER SIDE DOOR UNLOCK DETECTION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Door lock set to LOCK)	3 - 4	No continuity
ON (Door lock set to UNLOCK)	3 - 4	Continuity

If the continuity is not as specified, replace the door lock assembly.

4. INSPECT PASSENGER SIDE DOOR UNLOCK DETECTION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Door lock set to LOCK)	3 - 4	No continuity
ON (Door lock set to UNLOCK)	3 - 4	Continuity

If the continuity is not as specified, replace the door lock assembly.

5. INSPECT REAR LEFT DOOR UNLOCK DETECTION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Door lock set to LOCK)	6 - 9	No continuity
ON (Door lock set to UNLOCK)	6 - 9	Continuity

If the continuity is not as specified, replace the door lock assembly.

6. INSPECT REAR RIGHT DOOR UNLOCK DETECTION SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
OFF (Door lock set to LOCK)	6 - 9	No continuity
ON (Door lock set to UNLOCK)	6 - 9	Continuity

If the continuity is not as specified, replace the door lock assembly.

7. INSPECT DRIVER SIDE DOOR LOCK MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check that the door lock cable moves to the UNLOCK position.
- (b) Reverse the polarity and check that the door lock cable moves to the LOCK position.

If operation is not as specified, replace the door lock assembly.

8. INSPECT PASSENGER SIDE DOOR LOCK MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 5 and the negative (-) lead to terminal 6, and check that the door lock cable moves to the UNLOCK position.
- (b) Reverse the polarity and check that the door lock cable moves to the LOCK position.

If operation is not as specified, replace the door lock assembly.

9. INSPECT REAR LEFT SIDE DOOR LOCK MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 4, and check that the door lock cable moves to the UNLOCK position.
- (b) Reverse the polarity and check that the door lock cable moves to the LOCK position.

If operation is not as specified, replace the door lock assembly.

10. INSPECT REAR RIGHT SIDE DOOR LOCK MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 4, and check that the door lock cable moves to the UNLOCK position.
- (b) Reverse the polarity and check that the door lock cable moves to the LOCK position.

If operation is not as specified, replace the door lock assembly.

POWER DOOR LOCK CONTROL SYSTEM (Except Double Cab)

LOCATION

BE2LK-01

INSPECTION

1. **Driver side:**
INSPECT DOOR LOCK CONTROL SWITCH (POWER WINDOW MASTER SWITCH) CONTINUITY

Switch Position	Tester Connection	Specified Condition
LOCK	1 - 2	Continuity
OFF	1 - 2, 1 - 5	No continuity
UNLOCK	1 - 5	Continuity

If the continuity is not as specified, replace the switch.

2. **Passenger side:**
INSPECT DOOR LOCK CONTROL SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
LOCK	3 - 6	Continuity
OFF	3 - 5, 3 - 6	No continuity
UNLOCK	3 - 5	Continuity

If the continuity is not as specified, replace the switch.

3. **INSPECT DOOR KEY LOCK AND UNLOCK SWITCH CONTINUITY**

Switch Position	Tester Connection	Specified Condition
LOCK	1 - 2	Continuity
OFF	1 - 2, 2 - 3	No continuity
UNLOCK	2 - 3	Continuity

If the continuity is not as specified, replace the switch.

4. **INSPECT DOOR UNLOCK DETECTION SWITCH CONTINUITY**

Switch Position	Tester Connection	Specified Condition
OFF (Door lock set to LOCK)	1 - 4	No continuity
ON (Door lock set to UNLOCK)	1 - 4	Continuity

If the continuity is not as specified, replace the actuator.

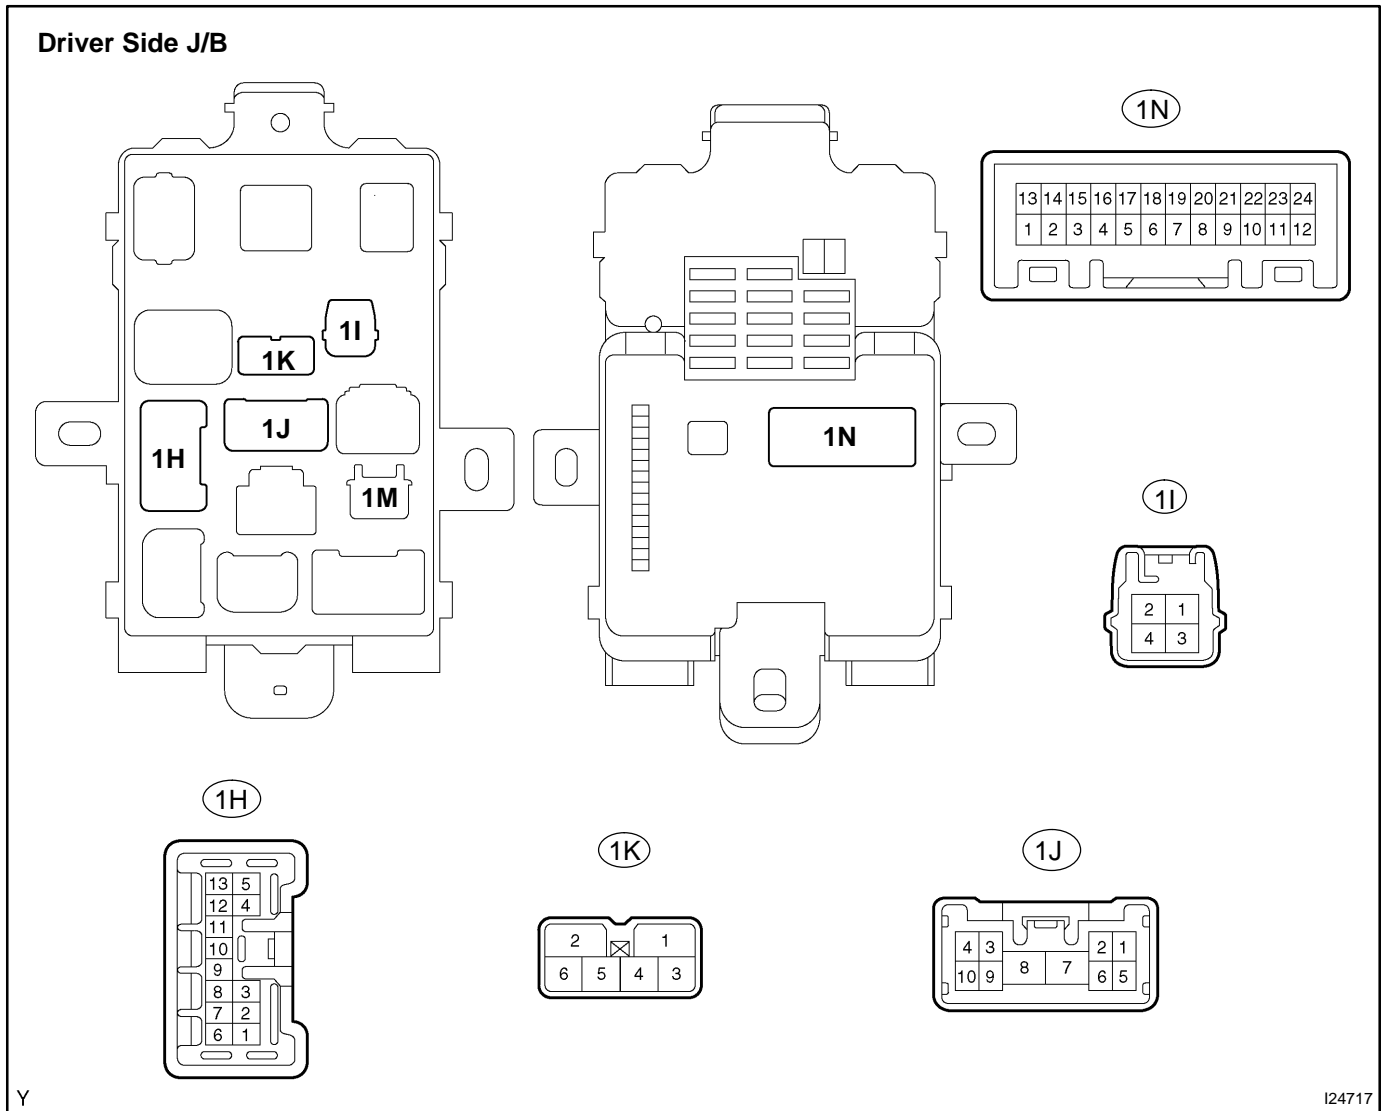

5. INSPECT DOOR LOCK ACTUATOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 3 and the negative (-) lead to terminal 2, and check that the door lock link moves to the UNLOCK position.

- (b) Reverse the polarity and check that the door lock link moves to the LOCK position.
If operation is not as specified, replace the actuator.

6. **w/ Daytime running light:**
CHECK INTEGRATION RELAY (DRIVER SIDE J/B) CIRCUIT
 - (a) Disconnect the 1H, 1I, 1J, 1K and 1N driver side J/B connectors, and check the voltage or continuity of each terminal of the wire harness side connectors.

Tester Connection	Condition	Specified Condition
1H-6 - Body ground	Passenger's door opened	Continuity
1H-6 - Body ground	Passenger's door closed	No continuity
1H-7 - Body ground	Driver's door opened	Continuity
1H-7 - Body ground	Driver's door closed	No continuity
1I-2 - Body ground	Ignition switch LOCK or ACC	Below 1 V
1I-2 - Body ground	Ignition switch ON or START	10 - 14 V
1J-8 - Body ground	Constant	Continuity
1K-2 - Body ground	Constant	10 - 14 V

Tester Connection	Condition	Specified Condition
1N-5 - Body ground	Cargo light switch OFF	No continuity
1N-5 - Body ground	Cargo light switch ON	Continuity
1N-6 - Body ground	Key unlock warning switch OFF (Ignition key removed)	No continuity
1N-6 - Body ground	Key unlock warning switch ON (Ignition key inserted)	Continuity
1N-9 - Body ground	Driver's door unlock detection switch OFF	No continuity
1N-9 - Body ground	Driver's door unlock detection switch ON	Continuity
1N-10 - Body ground	Passenger's door unlock detection switch OFF	No continuity
1N-10 - Body ground	Passenger's door unlock detection switch ON	Continuity
1N-19 - Body ground	Door lock manual switch and door lock control switch LOCK	Continuity
1N-19 - Body ground	Door lock manual switch and door lock control switch OFF or UNLOCK	No continuity
1N-20 - Body ground	Door key lock and unlock switch LOCK	Continuity
1N-20 - Body ground	Door key lock and unlock switch OFF or UNLOCK	No continuity
1N-21 - Body ground	Door lock manual switch or door lock control switch UNLOCK	Continuity
1N-21 - Body ground	Door lock manual switch and door lock control switch OFF or LOCK	No continuity
1N-22 - Body ground	Front passenger's door key lock and unlock switch UNLOCK	Continuity
1N-22 - Body ground	Front passenger's door key lock and unlock switch LOCK or OFF	No continuity
1N-23 - Body ground	Driver's door key lock and unlock switch UNLOCK	Continuity
1N-23 - Body ground	Driver's door key lock and unlock switch LOCK or OFF	No continuity
1N-24 - Body ground	Constant	Continuity

If the result is not as specified, there may be a malfunction on the wire harness side.

- (b) Reconnect the 1H, 1I, 1J, 1K and 1N driver side J/B connectors, and check the voltage of each terminal of the connectors.

Tester Connection	Condition	Specified Condition
1H-8 - Body ground	Door lock manual switch LOCK or UNLOCK	0 V → 10 - 14 V → Below 1 V
1H-9 - Body ground	Door lock manual switch LOCK or UNLOCK	0 V → 10 - 14 V → Below 1 V

If the result is not as specified, the integration relay (driver side J/B) may malfunction.

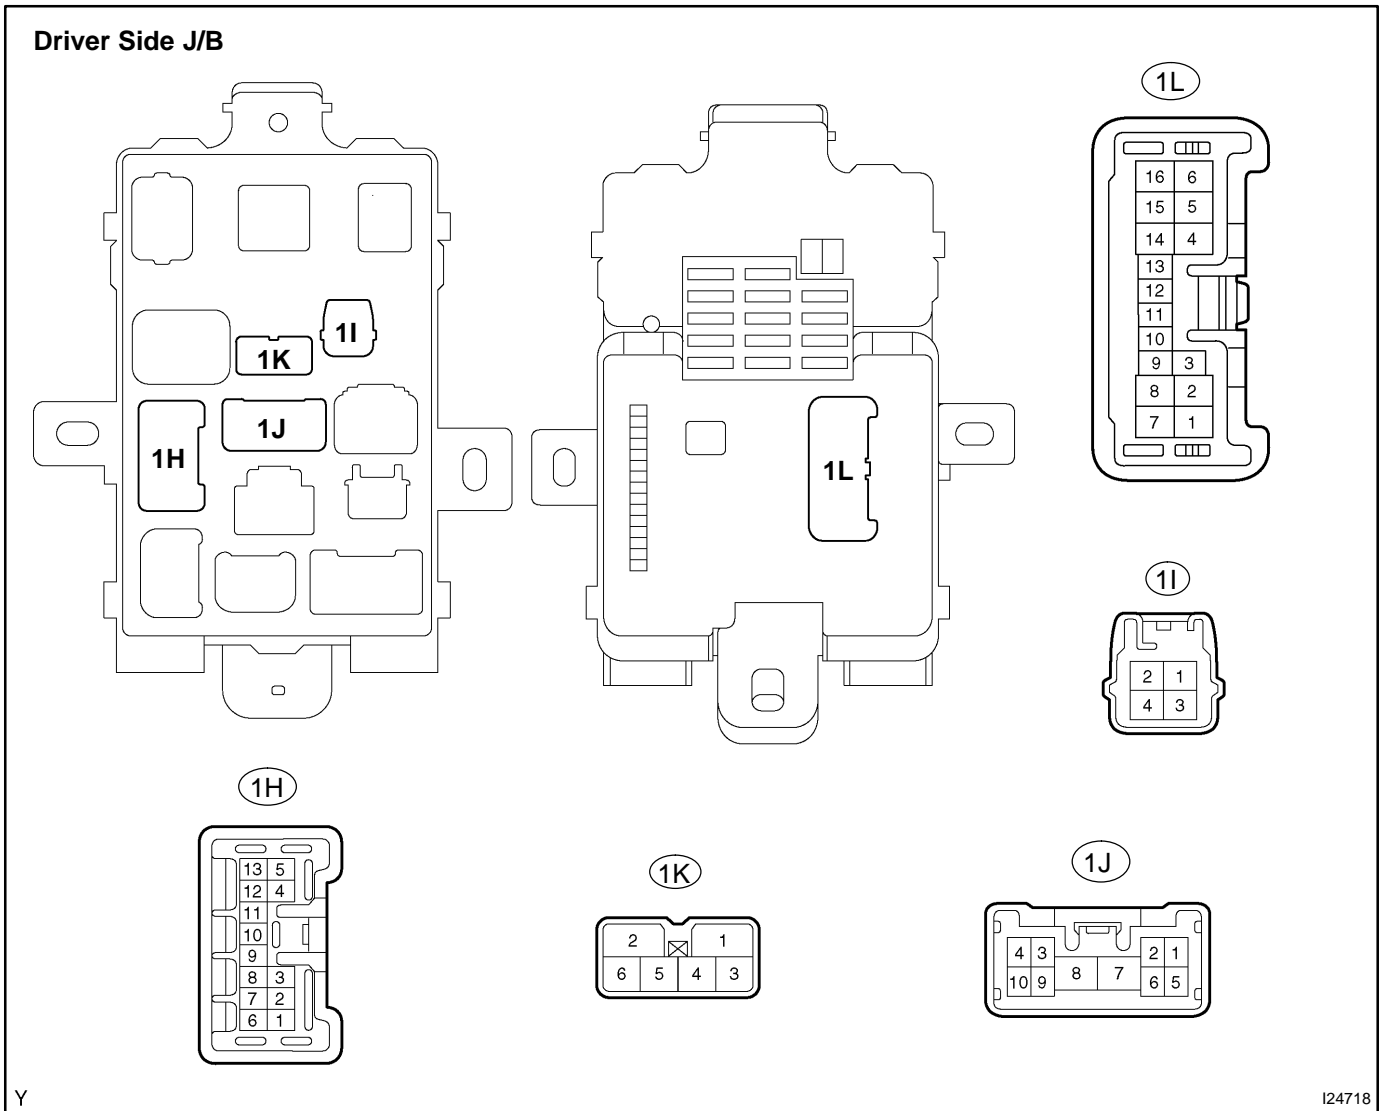

(c) Remove the integration relay from the driver side J/B, and check the voltage or continuity on each terminal of the driver side J/B side.

Tester Connection	Condition	Specified Condition
1 - Body ground	Constant	Continuity
2 - Body ground	Constant	Continuity
3 - Body ground	Constant	10 - 14 V
4 - Body ground	Constant	Continuity
5 - Body ground	Constant	10 - 14 V
6 - Body ground	Constant	10 - 14 V
7 - Body ground	Constant	10 - 14 V
8 - Body ground	Constant	Continuity
10 - Body ground	Ignition switch ON	10 - 14 V
11 - Body ground	Constant	Continuity
12 - Body ground	Constant	No continuity
13 - Body ground	Constant	No continuity
14 - Body ground	Left door courtesy switch OFF (Door closed)	No continuity
14 - Body ground	Left door courtesy switch ON (Door opened)	Continuity
15 - Body ground	Right door courtesy switch OFF (Door closed)	No continuity
15 - Body ground	Right door courtesy switch ON (Door opened)	Continuity

If the result is not as specified, replace the driver side J/B.

7. **w/o Daytime running light:**
CHECK INTEGRATION RELAY (DRIVER SIDE J/B) CIRCUIT

- (a) Disconnect the 1H, 1I, 1K, 1J and 1L driver side J/B connectors, and check the voltage or continuity of each terminal of the wire harness side connectors.

Tester Connection	Condition	Specified Condition
1H-6 - Body ground	Passenger's door opened	Continuity
1H-6 - Body ground	Passenger's door closed	No continuity
1H-7 - Body ground	Driver's door opened	Continuity
1H-7 - Body ground	Driver's door closed	No continuity
1I-2 - Body ground	Ignition switch LOCK or ACC	No voltage
1I-2 - Body ground	Ignition switch ON or START	10 - 14 V
1J-8 - Body ground	Constant	Continuity
1K-2 - Body ground	Constant	10 - 14 V

Tester Connection	Condition	Specified Condition
1L-1 - Body ground	Door lock manual switch, door lock control switch or door key lock and unlock switch LOCK	Continuity
1L-1 - Body ground	Door lock manual switch and door lock control switch and door key lock and unlock switch OFF or UNLOCK	No continuity
1L-2 - Body ground	Door lock manual switch, door lock control switch or front passenger's door key lock and unlock switch UNLOCK	Continuity
1L-2 - Body ground	Door lock manual switch, door lock control switch and front passenger's door key lock and unlock switch OFF or LOCK	No continuity
1L-3 - Body ground	Driver's door key lock and unlock switch UNLOCK	Continuity
1L-3 - Body ground	Driver's door key lock and unlock switch LOCK or OFF	No continuity
1L-6 - Body ground	Key unlock warning switch OFF (Ignition key removed)	No continuity
1L-6 - Body ground	Key unlock warning switch ON (Ignition key inserted)	Continuity
1L-8 - Body ground	Passenger's door unlock detection switch OFF	No continuity
1L-8 - Body ground	Passenger's door unlock detection switch ON	Continuity
1L-9 - Body ground	Driver's door unlock detection switch OFF	No continuity
1L-9 - Body ground	Driver's door unlock detection switch ON	Continuity
1L-10 - Body ground	Cargo light switch OFF	No continuity
1L-10 - Body ground	Cargo light switch ON	Continuity
1L-16 - Body ground	Constant	Continuity

If the result is not as specified, there may be a malfunction on the wire harness side.

- (b) Reconnect the 1H, 1I, 1K, 1J and 1N driver side J/B connectors, and check the voltage of each terminal of the connectors.

Tester Connection	Condition	Specified Condition
1H-8 - Body ground	Door lock manual switch LOCK or UNLOCK	0 V → 10 - 14 V → Below 1 V
1H-9 - Body ground	Door lock manual switch LOCK or UNLOCK	0 V → 10 - 14 V → Below 1 V

If the result is not as specified, the integration relay (driver side J/B) may malfunction.

- (c) Remove the integration relay from the driver side J/B, and check the voltage or continuity of each terminal on the driver side J/B side (see step 6. (c)).

THEFT DETERRENT SYSTEM (Double Cab)

BE2KX-01

ON-VEHICLE INSPECTION

1. OUTLINE OF THEFT DETERRENT SYSTEM

- (a) When the theft deterrent system detects that the vehicle is being tampered with, the system sets off the alarm, causing the horns to sound and the lights to light up or flash in order to alert people around the vehicle to the theft.
- (b) The theft deterrent system has 2 modes; one is the active arming mode that is an initially set mode and another is the passive arming mode that can be switched by the hand-held tester.
- (c) Each mode (active and passive) has 4 states; the disarmed state, the arming preparation state, the armed state and the alarm sounding state.
- (1) Disarmed state:
- The alarm function is not operating.
 - The theft deterrent system is not operating.
- (2) Arming preparation state:
- The theft deterrent system is not operating.
- (3) Armed state:
- The theft deterrent system is operating.
- (4) Alarm sounding state:
When the theft deterrent system detects that the vehicle is being tampered with while in the armed state, the system causes the horns to sound and the lights to light up or flash in order to alert people around the vehicle to the theft.

Refer to table below for alarm method and time:

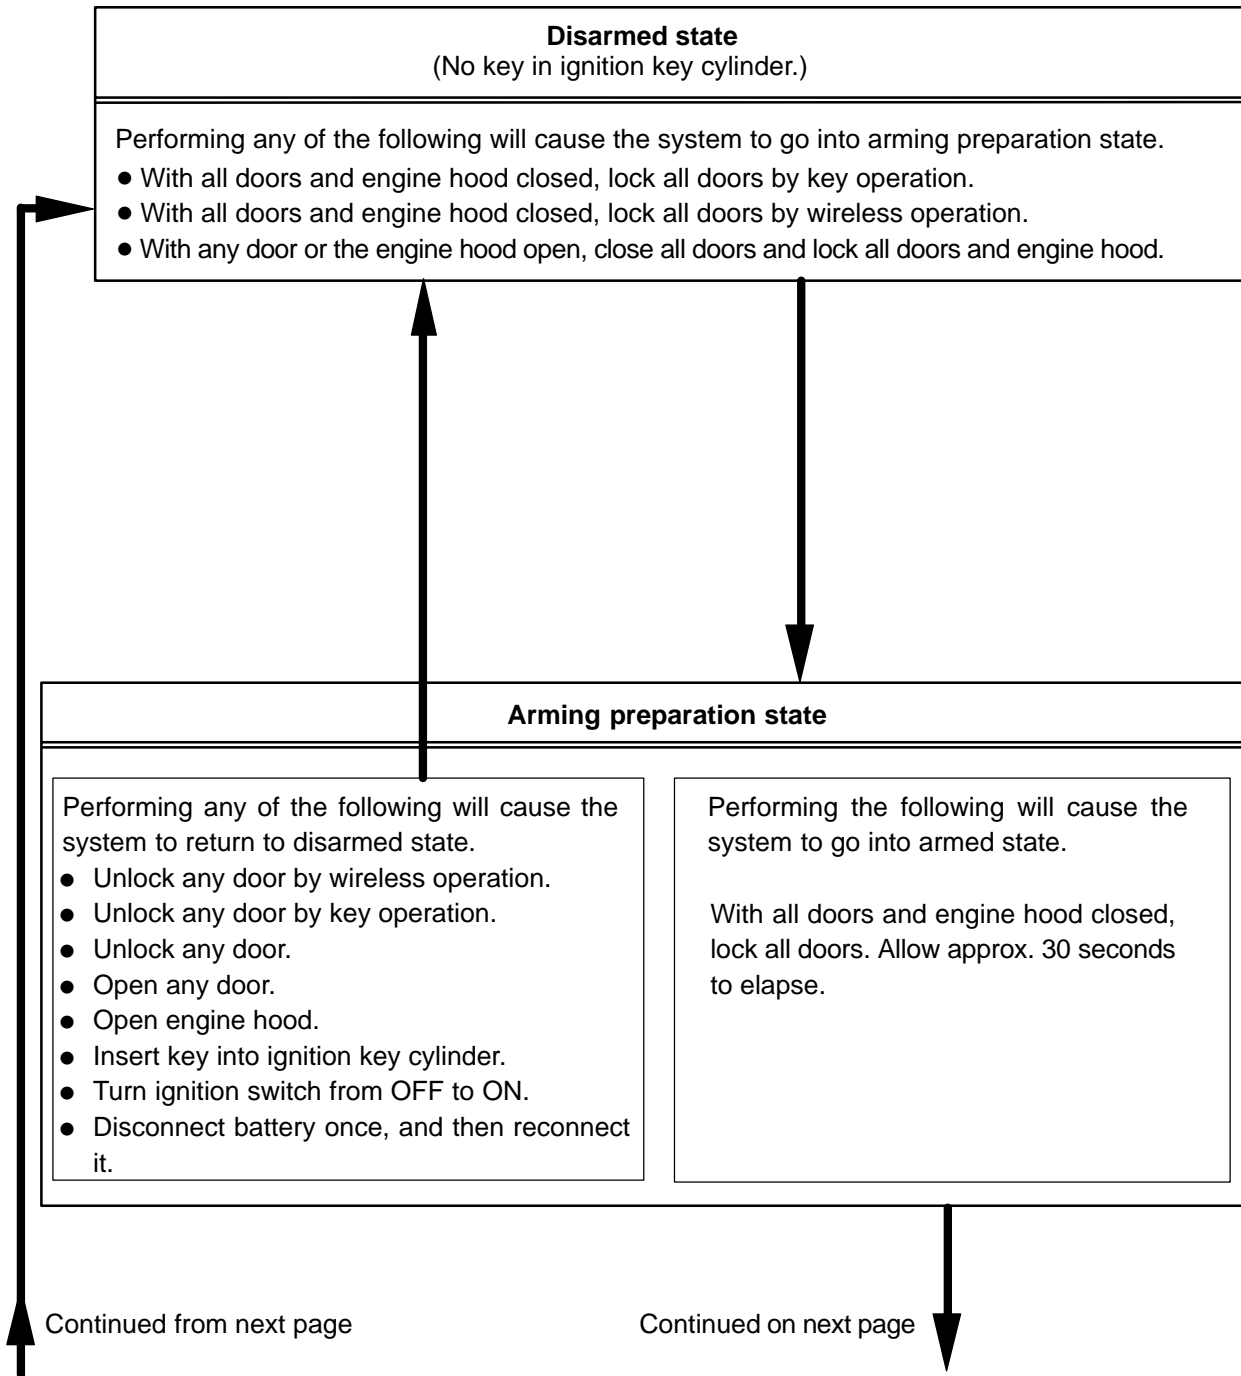

Alarming method	Headlight	Flashing at a cycle of approx. 0.4 seconds
	Taillight	Flashing at a cycle of approx. 0.4 seconds
	Interior light	Illuminating (turn on)
	Vehicle horn	Sounding at a cycle of approx. 0.4 seconds
	Security horn	Sounding at a cycle of approx. 0.4 seconds
Alarming time	Approx. 60 seconds	

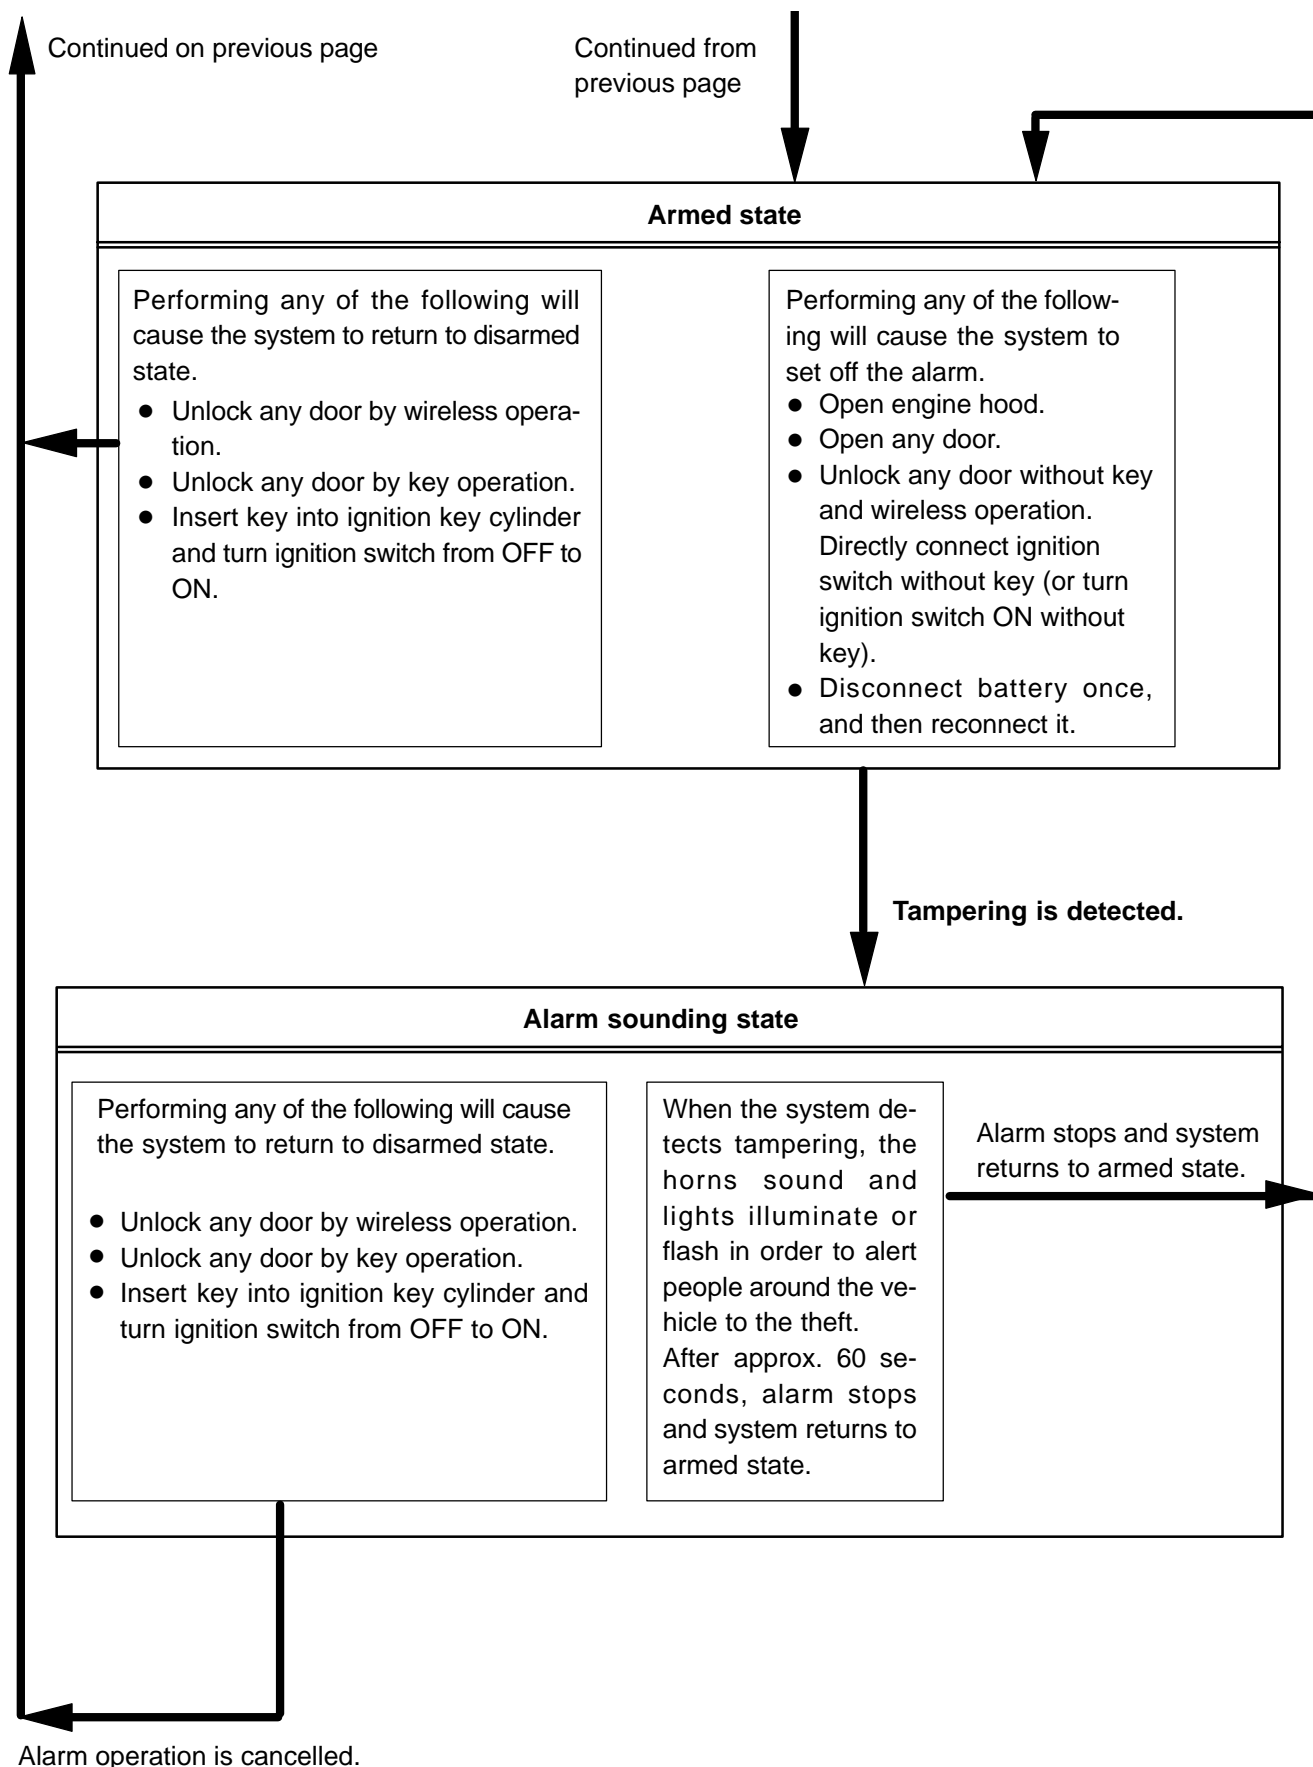

HINT:

If any of the doors are unlocked with no key in the ignition key cylinder during the alarm sounding state, a forced door lock signal will be output (see step 4).

2. ACTIVE ARMING MODE

- Active arming mode starts the alarm control immediately after the doors are locked.

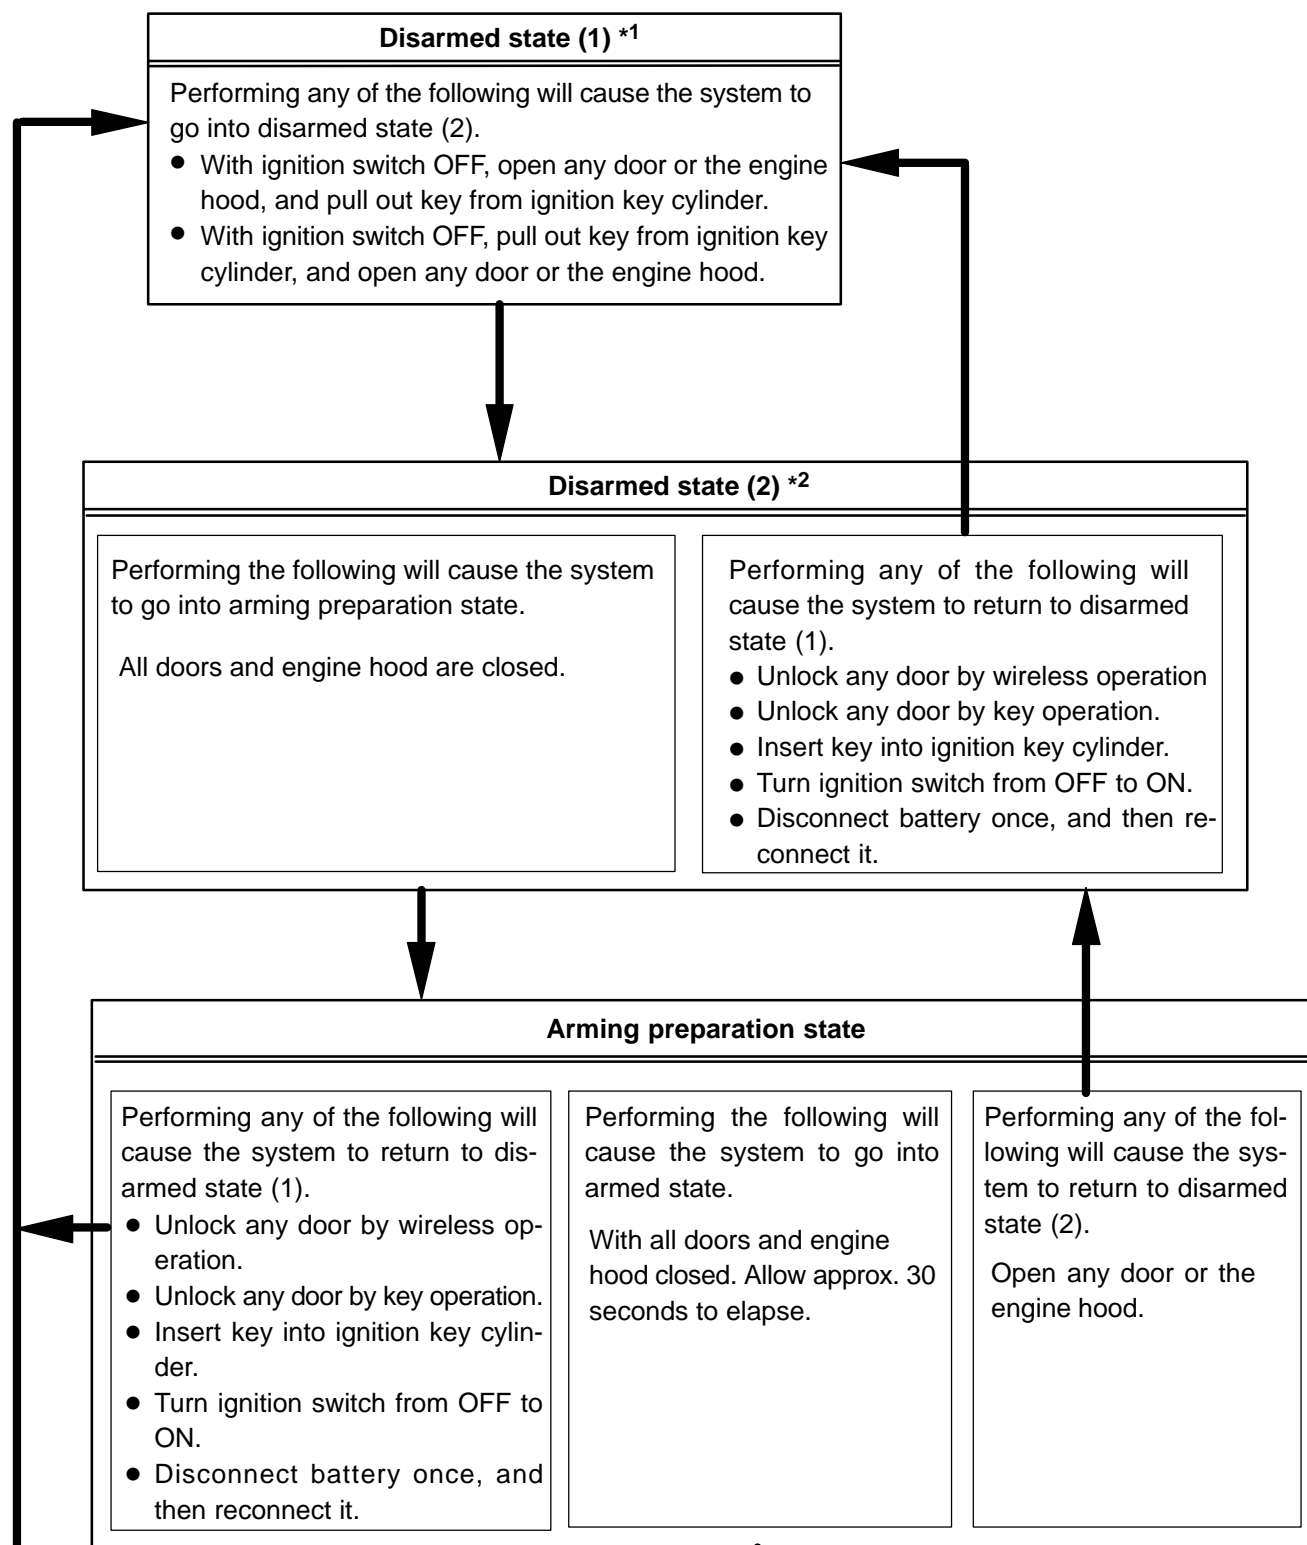

3. PASSIVE ARMING MODE

- Passive arming mode can be switched ON/OFF by the hand-held tester.
- The alarm is initially set (when shipped from factory) to active arming mode (not passive arming mode).
- During passive arming mode, the theft deterrent system goes into the armed state even if the doors are not locked.
- Passive arming mode starts the alarm control after the key is removed from the ignition key cylinder and the doors are closed.
- Detecting that the doors are unlocked does not set off the alarm during passive arming mode.
- A forced door lock signal is not output during passive arming mode (see step 4).
- When the theft deterrent system detects that the doors are opened during passive arming mode, the alarm is not set off immediately because an entry delay time is set.
- If any of the following conditions is met during passive arming mode, the theft deterrent system will switch to active arming mode.
 - With all doors and engine hood closed, lock all doors by key operation.
 - With all doors and engine hood closed, lock all doors by wireless operation.
 - With any door or the engine hood open, close all doors and lock all doors and engine hood.

HINT:

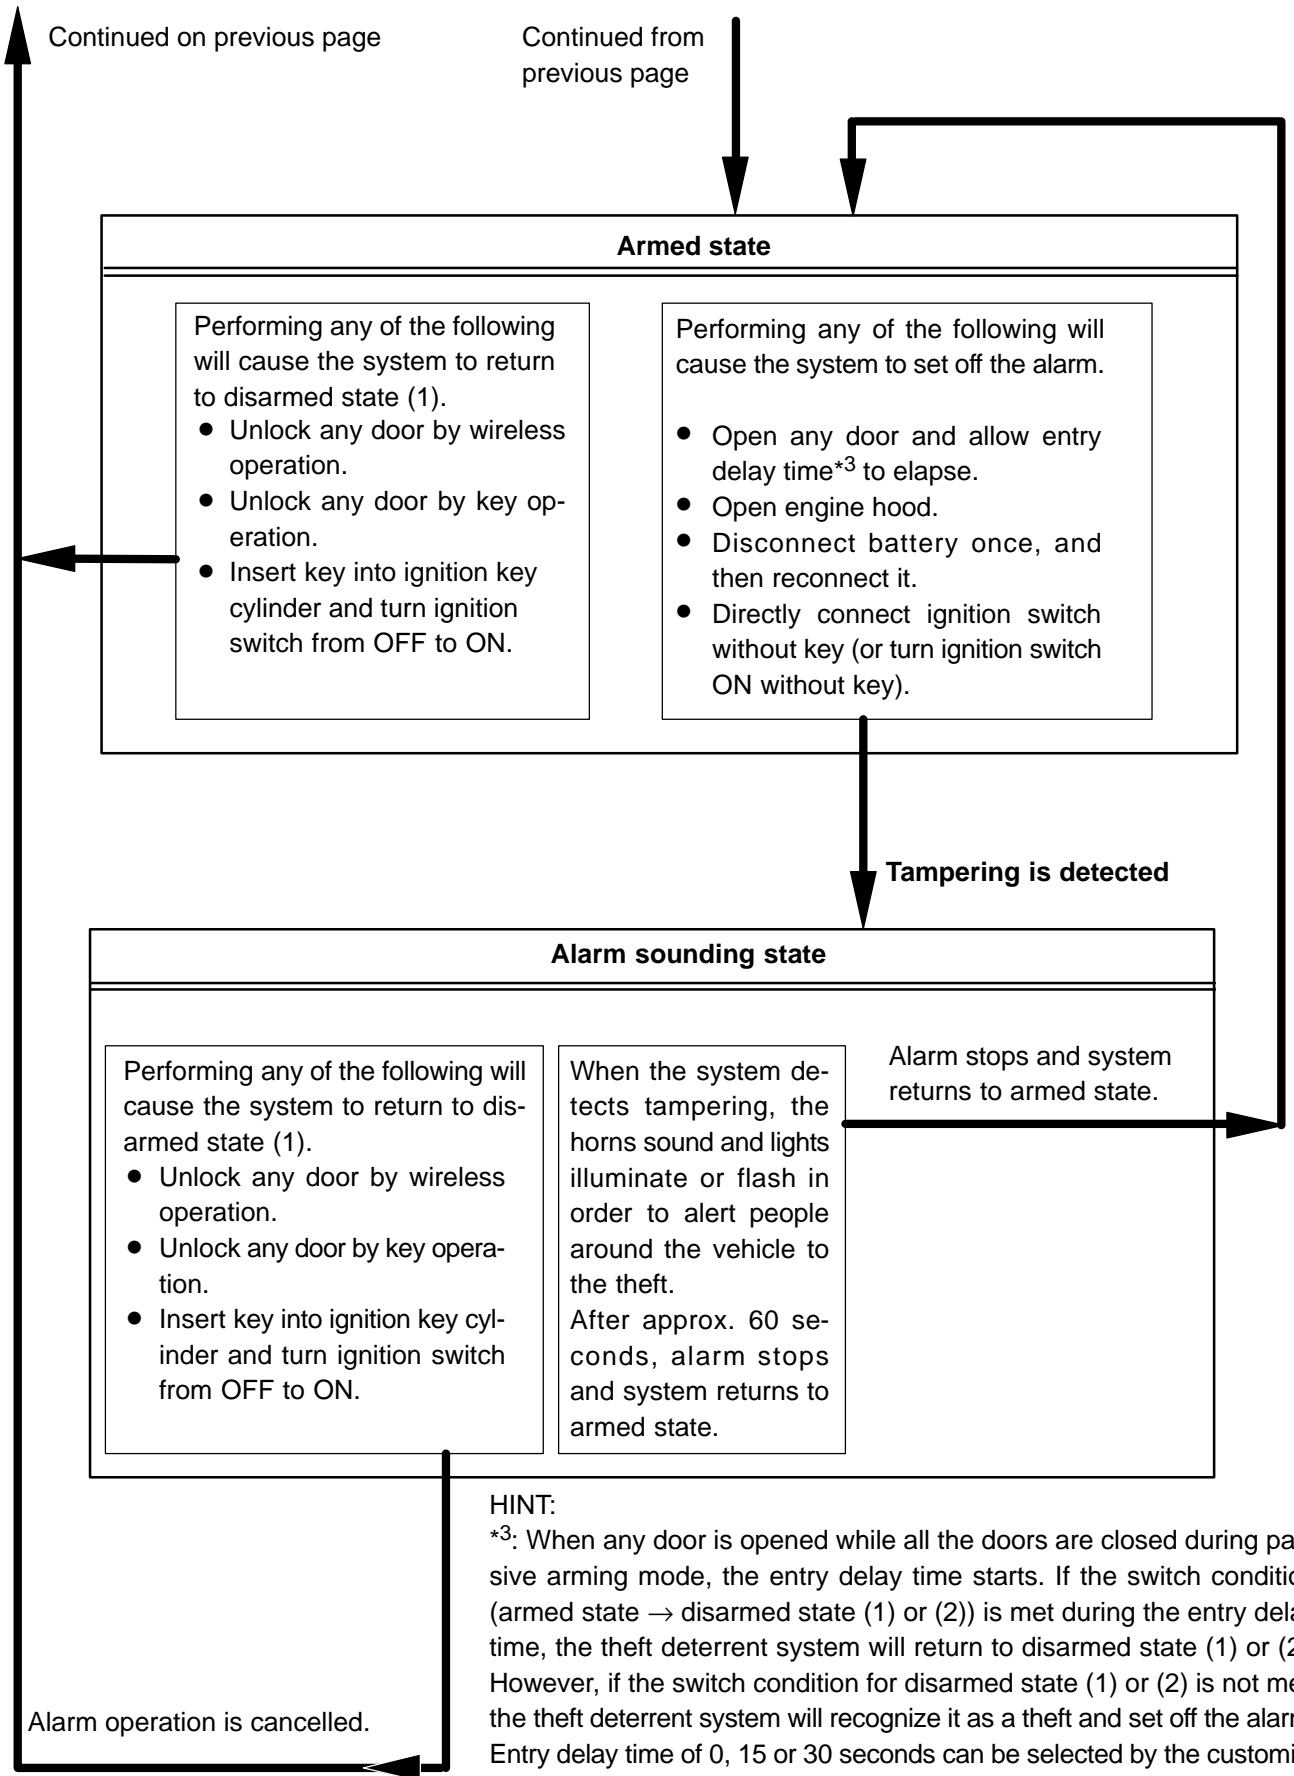

*1: Disarmed state (1) is the normal disarmed state.

*2: Disarmed state (2) is set from either the disarmed state (1) or the arming preparation state.

Continued from next page

Continued on next page

4. FORCED DOOR LOCK CONTROL

- (a) The forced door lock control prevents the vehicle from being tampered with. Immediately after a door is unlocked (alarm starts), the door is forced to lock by a forced door lock signal.
- (1) Conditions that force the doors to lock:
When no key is in the ignition key cylinder, the doors will be forced to lock if any of the following conditions is met.
- The theft deterrent system is in the alarm sounding state of active arming mode.
 - All the doors are locked. ☐ Any door is unlocked.

5. Indicator light output

Condition	Indicator light
Disarmed state	OFF
Arming preparation state	ON
Armed state (Entry delay time)	BLINK (ON)
Alarm sounding state	ON

HINT:

Blinking frequency:

0.2 seconds (ON)

1.8 seconds (OFF)

6. PANIC ALARM CONTROL

- (a) The panic alarm control makes it possible for you to voluntarily set off the panic alarm by pressing the PANIC switch on the wireless transmitter. However, this control operates independently from the alarm control by the theft deterrent system (switched to the alarm sounding state from the armed state).
- (1) Conditions that cause the panic alarm control to set off the panic alarm:
The panic alarm control sets off the panic alarm by pressing the PANIC switch on the wireless transmitter under the following conditions.
- The ignition switch is OFF.
 - The theft deterrent system is not in the alarm sounding state (common to active arming mode and passive arming mode).
 - The panic alarm control is not operating (the alarm is not set off).
- (2) Conditions that cause the panic alarm control to shut off the alarm:
The panic alarm control shuts off the panic alarm when any of the following conditions is met during panic alarm operation.
- The ignition switch is turned ON.
 - Either of the switches on the wireless transmitter (LOCK/UNLOCK) is pressed.
 - The panic alarm ends (60 seconds have passed).
 - The theft deterrent system switches to the alarm sounding state (common to active arming mode and passive arming mode). However, the alarm is still sounding, because the theft deterrent system has switched to the alarm sounding state. Conditions for canceling the panic alarm are the same as for the alarm control.

HINT:

Active arming mode: See step 2

Passive arming mode: See step 3

7. Switch to the active arming mode

HINT:

In each state of the passive arming mode, when the switch condition to the active mode (disarmed state of active arming mode → arming preparation state of active arming mode) is satisfied, the system will switch to each state of the active arming mode. In this case, the active arming mode will continue until the system switches to the disarmed state.

State of Passive Arming Mode Before Switch	State of Active Arming Mode After Switch
Disarmed state	Arming preparation state
Arming preparation state	Arming preparation state (continuing for 30 seconds)
Armed state (during entry delay time)	After alarming time has elapsed, the system will switch to the armed state
Alarm sounding state	After alarming time has elapsed, the system will switch to the armed state

INSPECTION

1. INSPECT SECURITY HORN OPERATION

Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to the horn body, and check that the horn blows.

If operation is not as specified, replace the horn.

2. INSPECT ENGINE HOOD COURTESY SWITCH CONTINUITY

Condition	Tester Connection	Specified Condition
Push	1 - 2	No continuity
Not pushed	1 - 2	Continuity

If the continuity is not as specified, replace the switch.

WIRELESS DOOR LOCK CONTROL SYSTEM (Double Cab)

BE2LM-01

PRECAUTION

NOTICES WHEN CHECKING

(a) Power door LOCK/UNLOCK function:

The wireless remote control function operates only when the following 3 conditions are met.

- (1) No key is inserted into the ignition key cylinder.
- (2) All the doors are closed (door open indicator off).
- (3) The power door lock system operates normally.

HINT:

- The UNLOCK function operates even when any door is open.
- The UNLOCK function operates even when the key is inserted into the ignition key cylinder, however it must be in the OFF position.

(b) Remote panic function:

The wireless remote control function operates only when the following condition is met.

The ignition switch is OFF.

HINT:

The key can be inserted, however it must be in the OFF position.

(c) The wireless door lock remote control operational area differs depending on the situation.

- (1) The operational area differs depending on the operators and the ways the transmitter is held.
- (2) In certain areas, the remote control function will only operate partially for the operational area will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- (3) Since the transmitter uses faint electric waves, strong electric waves or noise in the frequency used may reduce the operational area or the remote control may not function.
- (4) When the battery weakens, the operational area is reduced or the remote control may not function.

HINT:

If the door control transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, it may cause the battery to weaken or cause other such problems.

REGISTRATION PROCEDURE

REGISTER RECOGNITION CODE

HINT:

- Register the recognition code when replacing the door control transmitter or the door control receiver.
- The add mode is used to register new recognition codes while still retaining codes already registered. This mode is used when a new transmitter is added. If the number of registered codes exceeds 4, the previously registered codes will be erased in order, starting from the first registered code.
- The rewrite mode is used to erase all the previously registered recognition codes in order to register new recognition codes. This mode is used when the transmitter or the door control receiver is replaced a new one.
- The confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition codes.
- The prohibition mode is used to erase all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.
- All the following registration procedures must be performed in order continuously.

Flow Chart of Recognition Code Registration

START

Make sure that the following conditions are met.

- No key in ignition key cylinder.
- Driver side door is open (other doors are closed).
- Driver side door is unlocked.

1. Insert key into ignition key cylinder, then pull it out.

2. Press door lock control switch (for manual operation) 5 times to LOCK/UNLOCK at approx. 1 sec. interval.

The diagram shows a timing sequence for step 2. It features three horizontal lines representing the LOCK, OFF, and UNLOCK signals. The UNLOCK signal is active (low) during the first two pulses, while the LOCK signal is active (high) during the remaining three pulses. Each pulse is labeled as '1st time' through '5th time'. The interval between the first two pulses is marked as 'Approx. 1 sec.'.

Within 40 sec.

3. Close and open driver side door

4. Press door lock control switch again (for manual operation) 5 times to LOCK/UNLOCK at approx. 1 sec. interval.

The diagram shows a timing sequence for step 4, identical in format to step 2. It features three horizontal lines representing the LOCK, OFF, and UNLOCK signals. The UNLOCK signal is active (low) during the first two pulses, while the LOCK signal is active (high) during the remaining three pulses. Each pulse is labeled as '1st time' through '5th time'. The interval between the first two pulses is marked as 'Approx. 1 sec.'.

Within 40 sec.

5. Insert key into ignition key cylinder.

Continued on next page

Continued from previous page

Mode Selection:

- 6. Turn ignition switch from LOCK to ON and back to LOCK at approximately 1 second intervals according to the number of times shown below.

Number of ON-LOCK operations of ignition switch:

Add Mode

ON-LOCK operation: 1 time

T1: Approx. 1 sec.

Rewrite Mode

ON-LOCK operation: 2 times

Confirmation Mode

ON-LOCK operation: 3 times

Prohibition Mode

ON-LOCK operation: 5 times

If the number of the ON-LOCK operations of the ignition switch is 0, 4 or 6 or more, there will be no response (power door lock and unlock operation) to show which mode has been selected.

Within 40 sec.

- 7. Remove key from ignition key cylinder.

Within 3 sec.

Continued on next page

Within 3 sec.

Continued from previous page

Response to selected mode (Power door lock operation):

Body ECU automatically performs power door LOCK-UNLOCK operation to inform which mode has been selected.

Add Mode

LOCK-UNLOCK operation: 1 time

T1: Approx. 1 sec.

T2: Approx. 2 sec.

Rewrite Mode

LOCK-UNLOCK operation: 2 times

Confirmation Mode

LOCK-UNLOCK operation: The number of registered codes (1 - 5 times)

Prohibition Mode

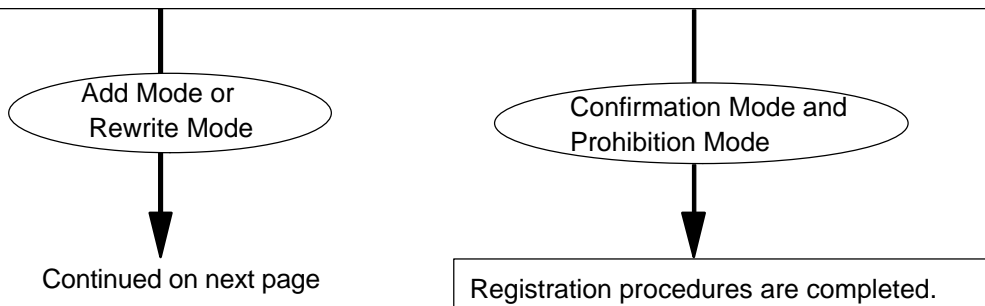

LOCK-UNLOCK operation: 5 times

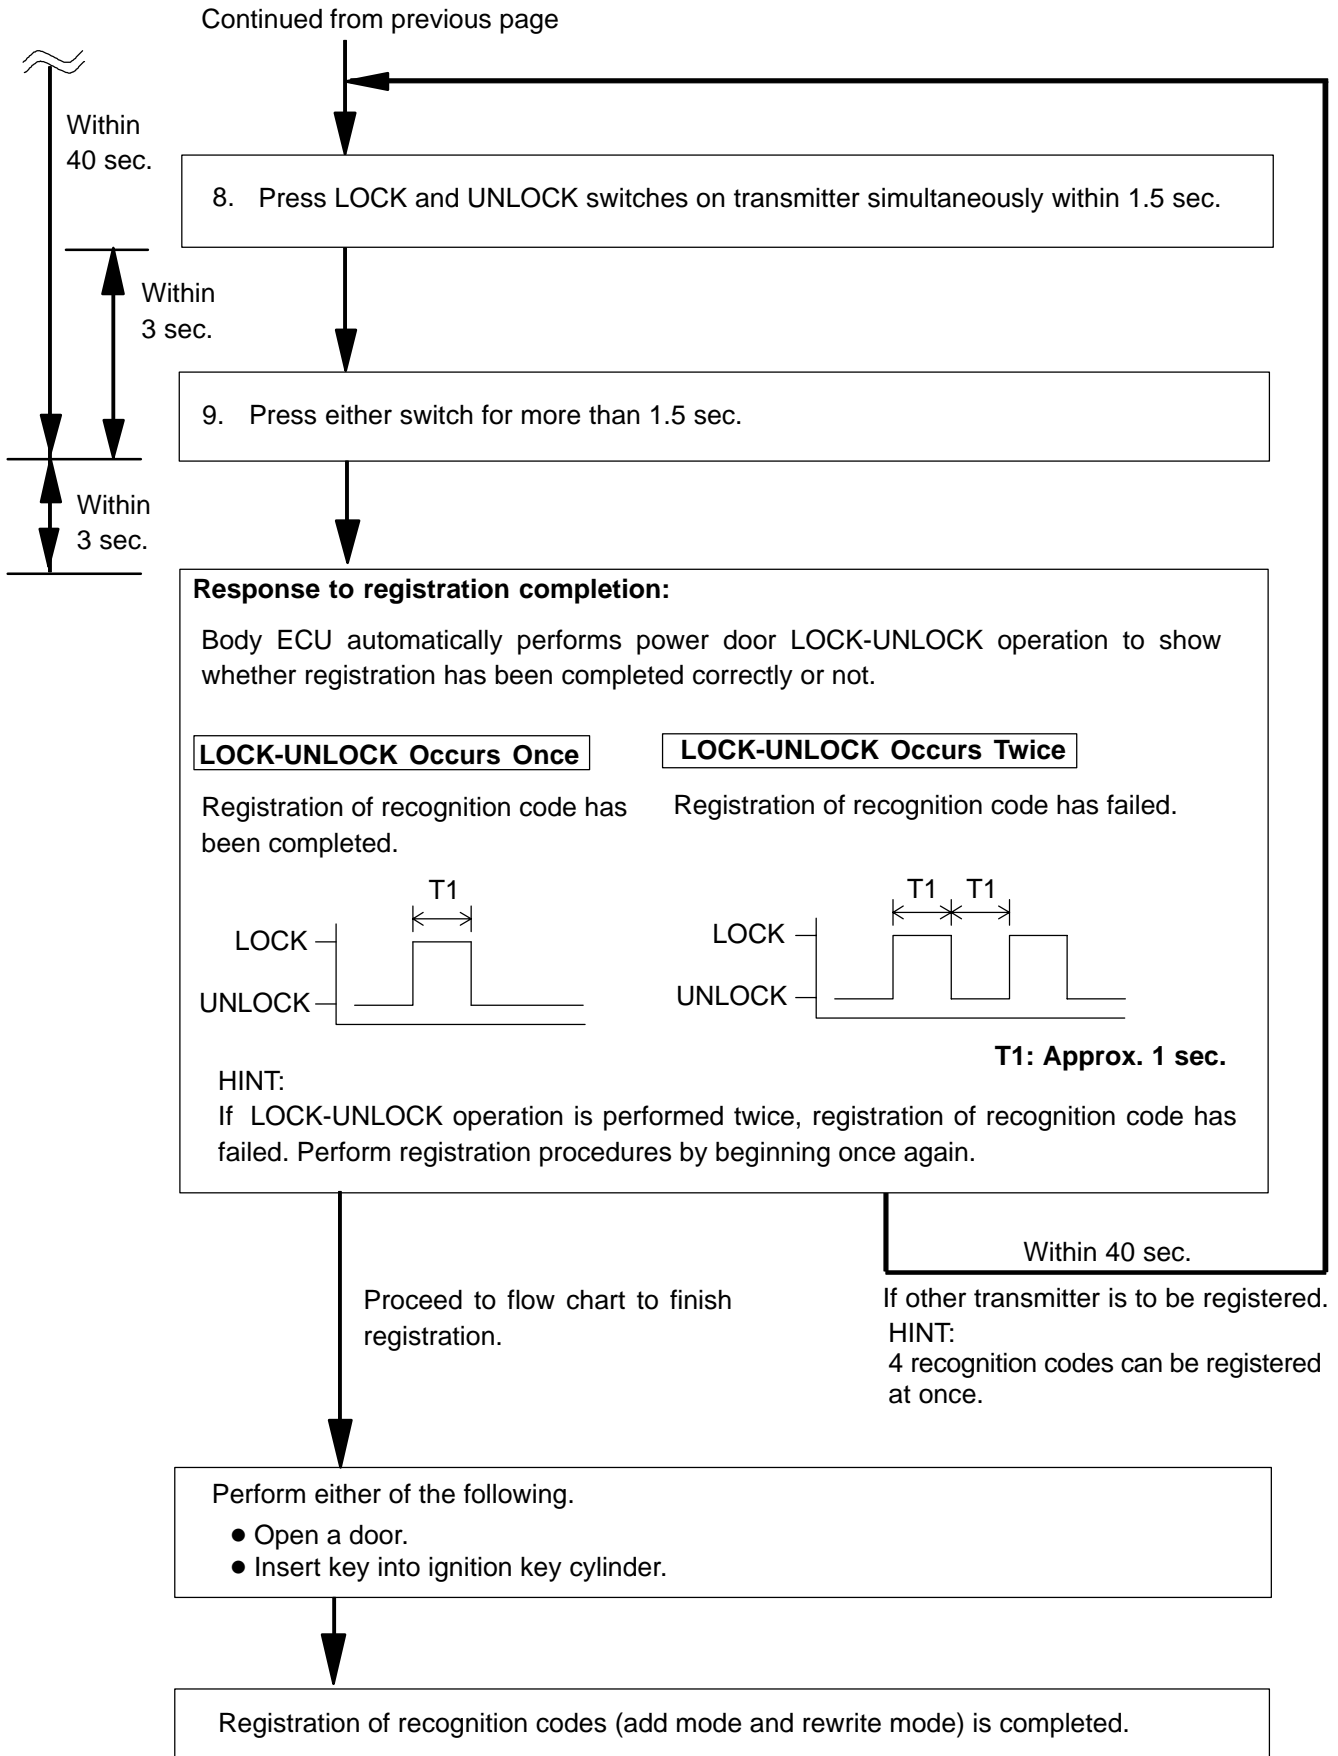

HINT:

- In the confirmation mode, when LOCK-UNLOCK operation is performed twice, the number of registered recognition codes is 2.
- In the confirmation mode, when 0 codes are registered, LOCK-UNLOCK operation is automatically performed 5 times.

Within 40 sec.

ON-VEHICLE INSPECTION

1. SYSTEM CHECK

**Only wireless function (Remote control) does not operate.
(If a new transmitter or a transmitter for same type vehicle that works properly with vehicle is not available.)**

Put vehicle in following conditions (Pre-requisite).
 (1) No key is inserted in ignition key cylinder.
 (2) All doors are closed. (Door warning light is off.)
 (3) All doors are locked.

Basic function check:

Using standard operation, press UNLOCK or LOCK transmitter switch 3 times or more alternately. Check that UNLOCK or LOCK operation works properly from 3rd time onward.

- Standard operation.

(1) Stand approximately 1 m (3.28 ft) away from driver's door outside handle on its right.
 (2) Hold transmitter toward vehicle and press one of transmitter switches for approximately 1 second.

No

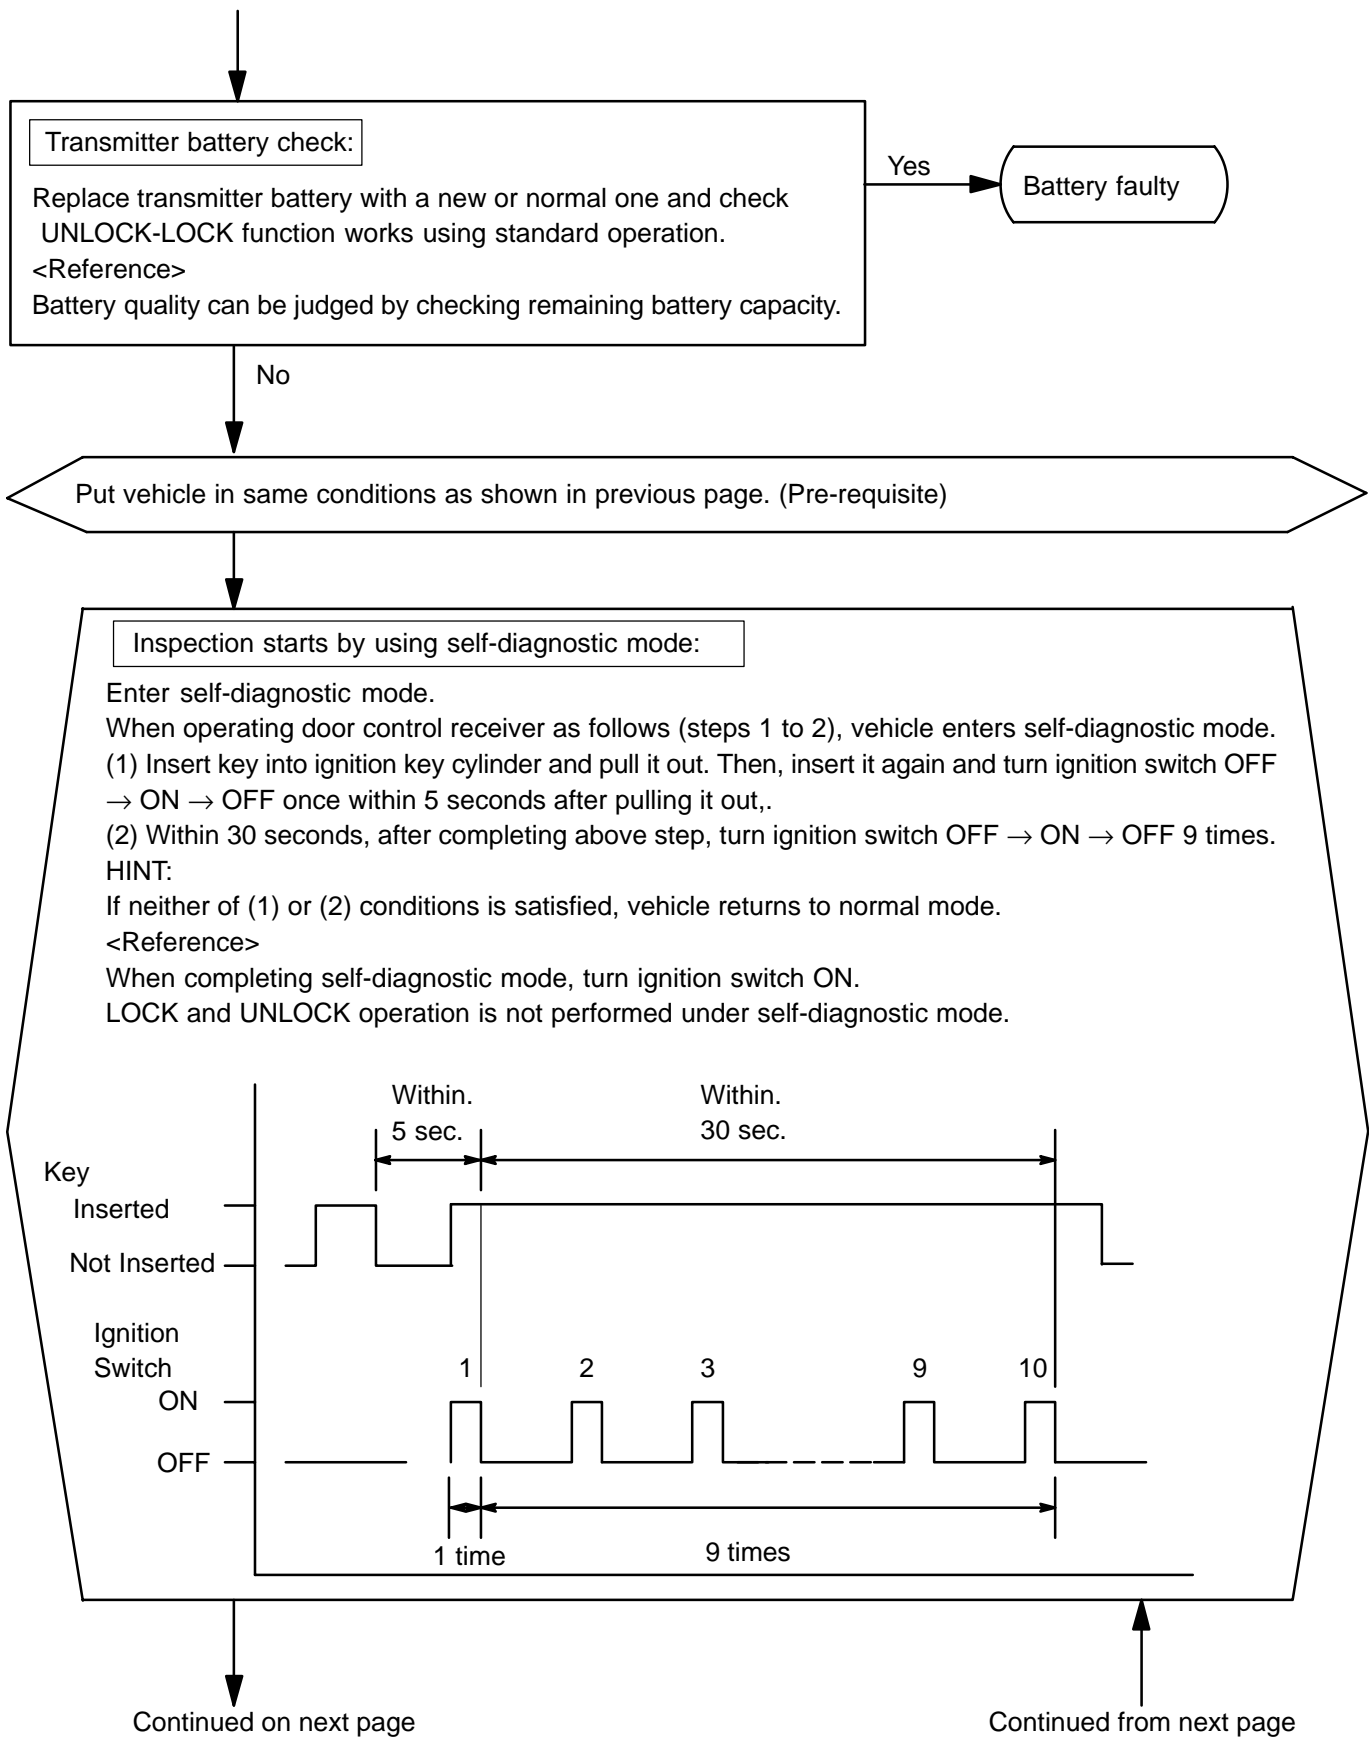

Yes

Normal
 <Reference>

- Operative distance may differ according to an operator, way of holding transmitter or position.
- As weak electric wave is used, when there is strong wave or noise in used frequency, operation distance might be shortened.

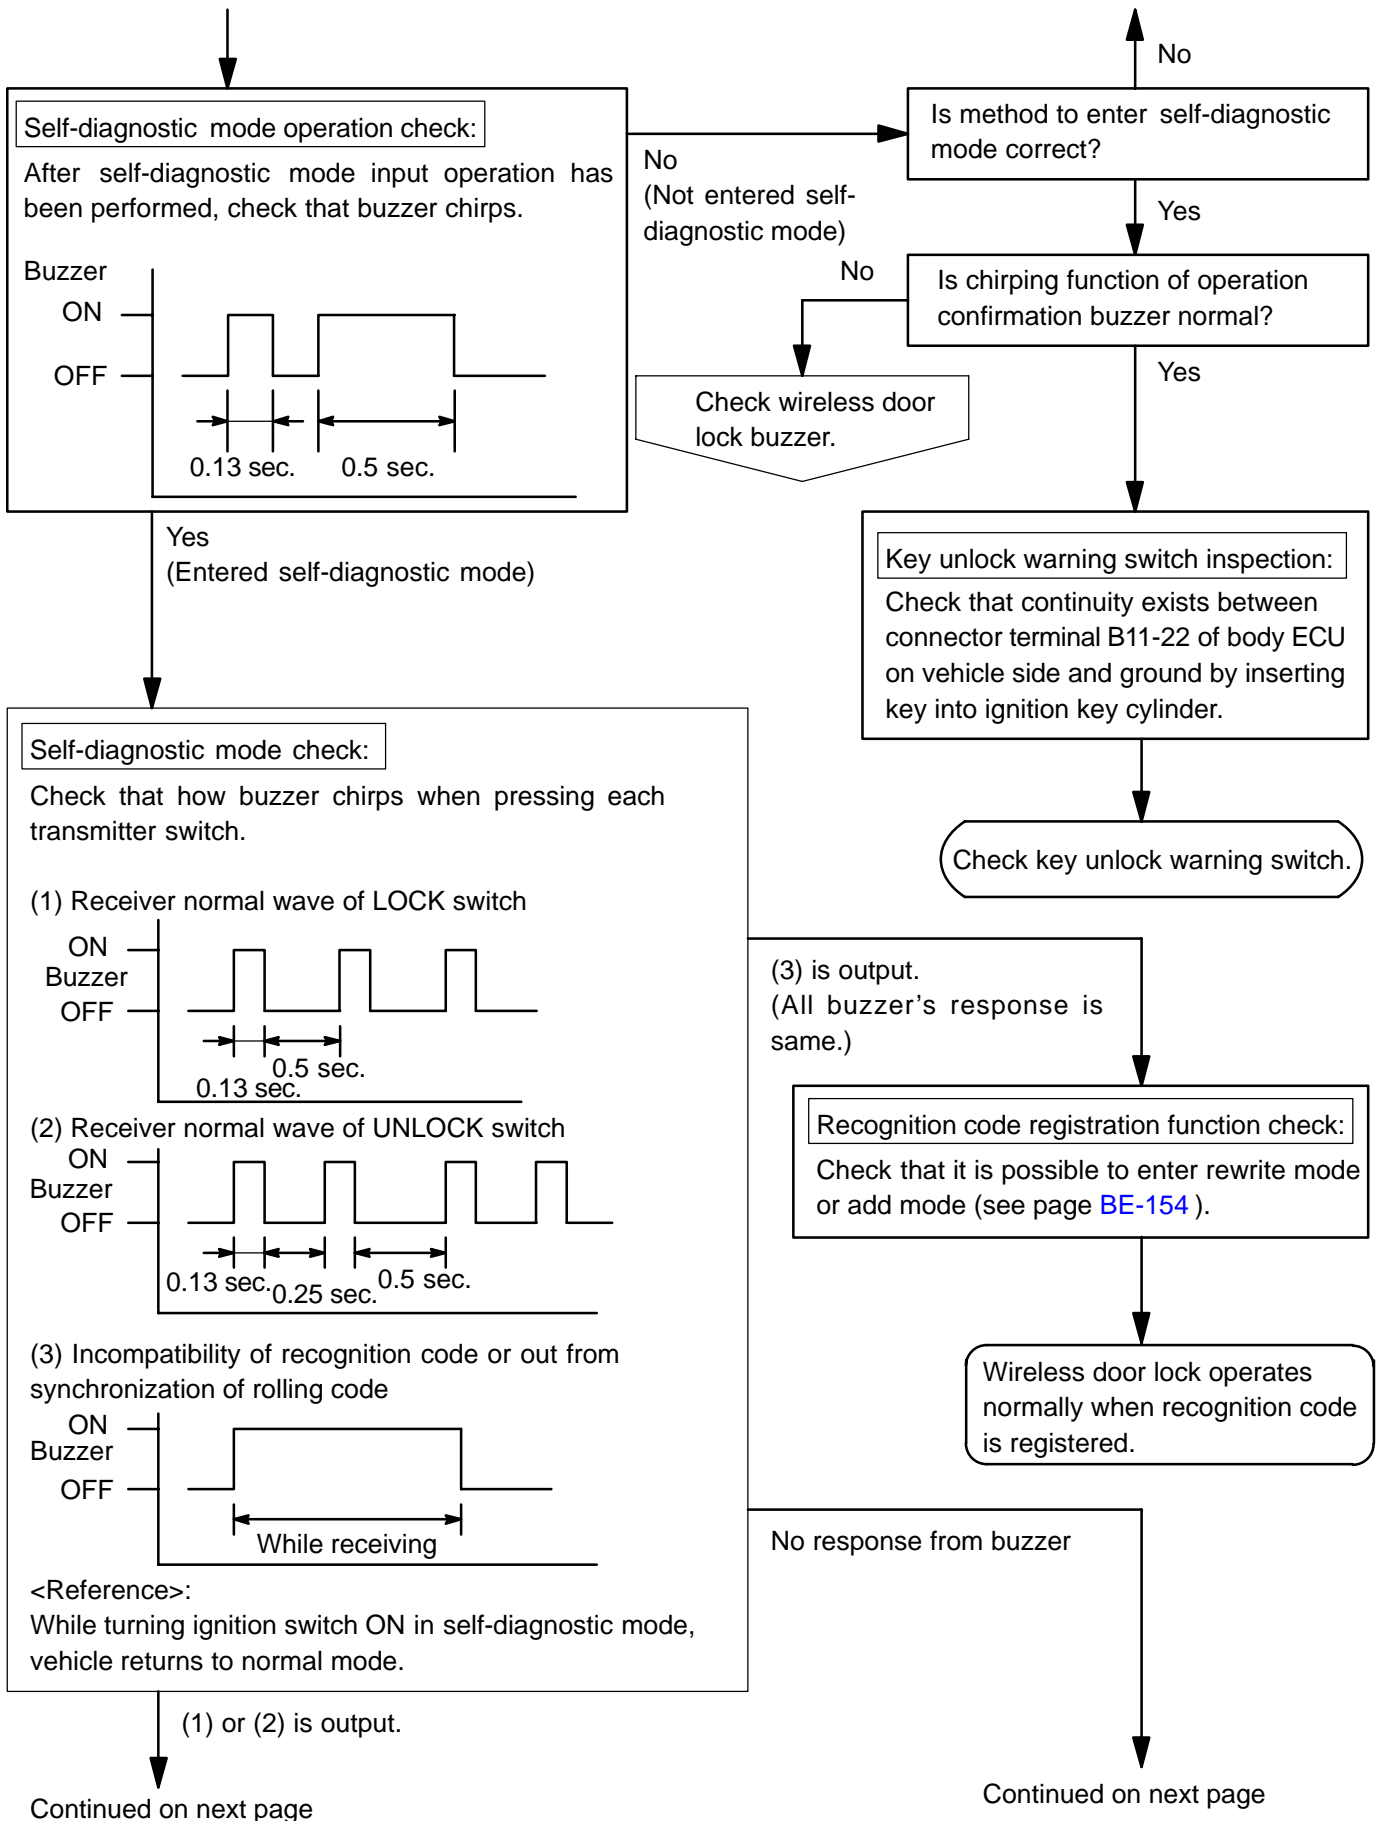

Continued on next page

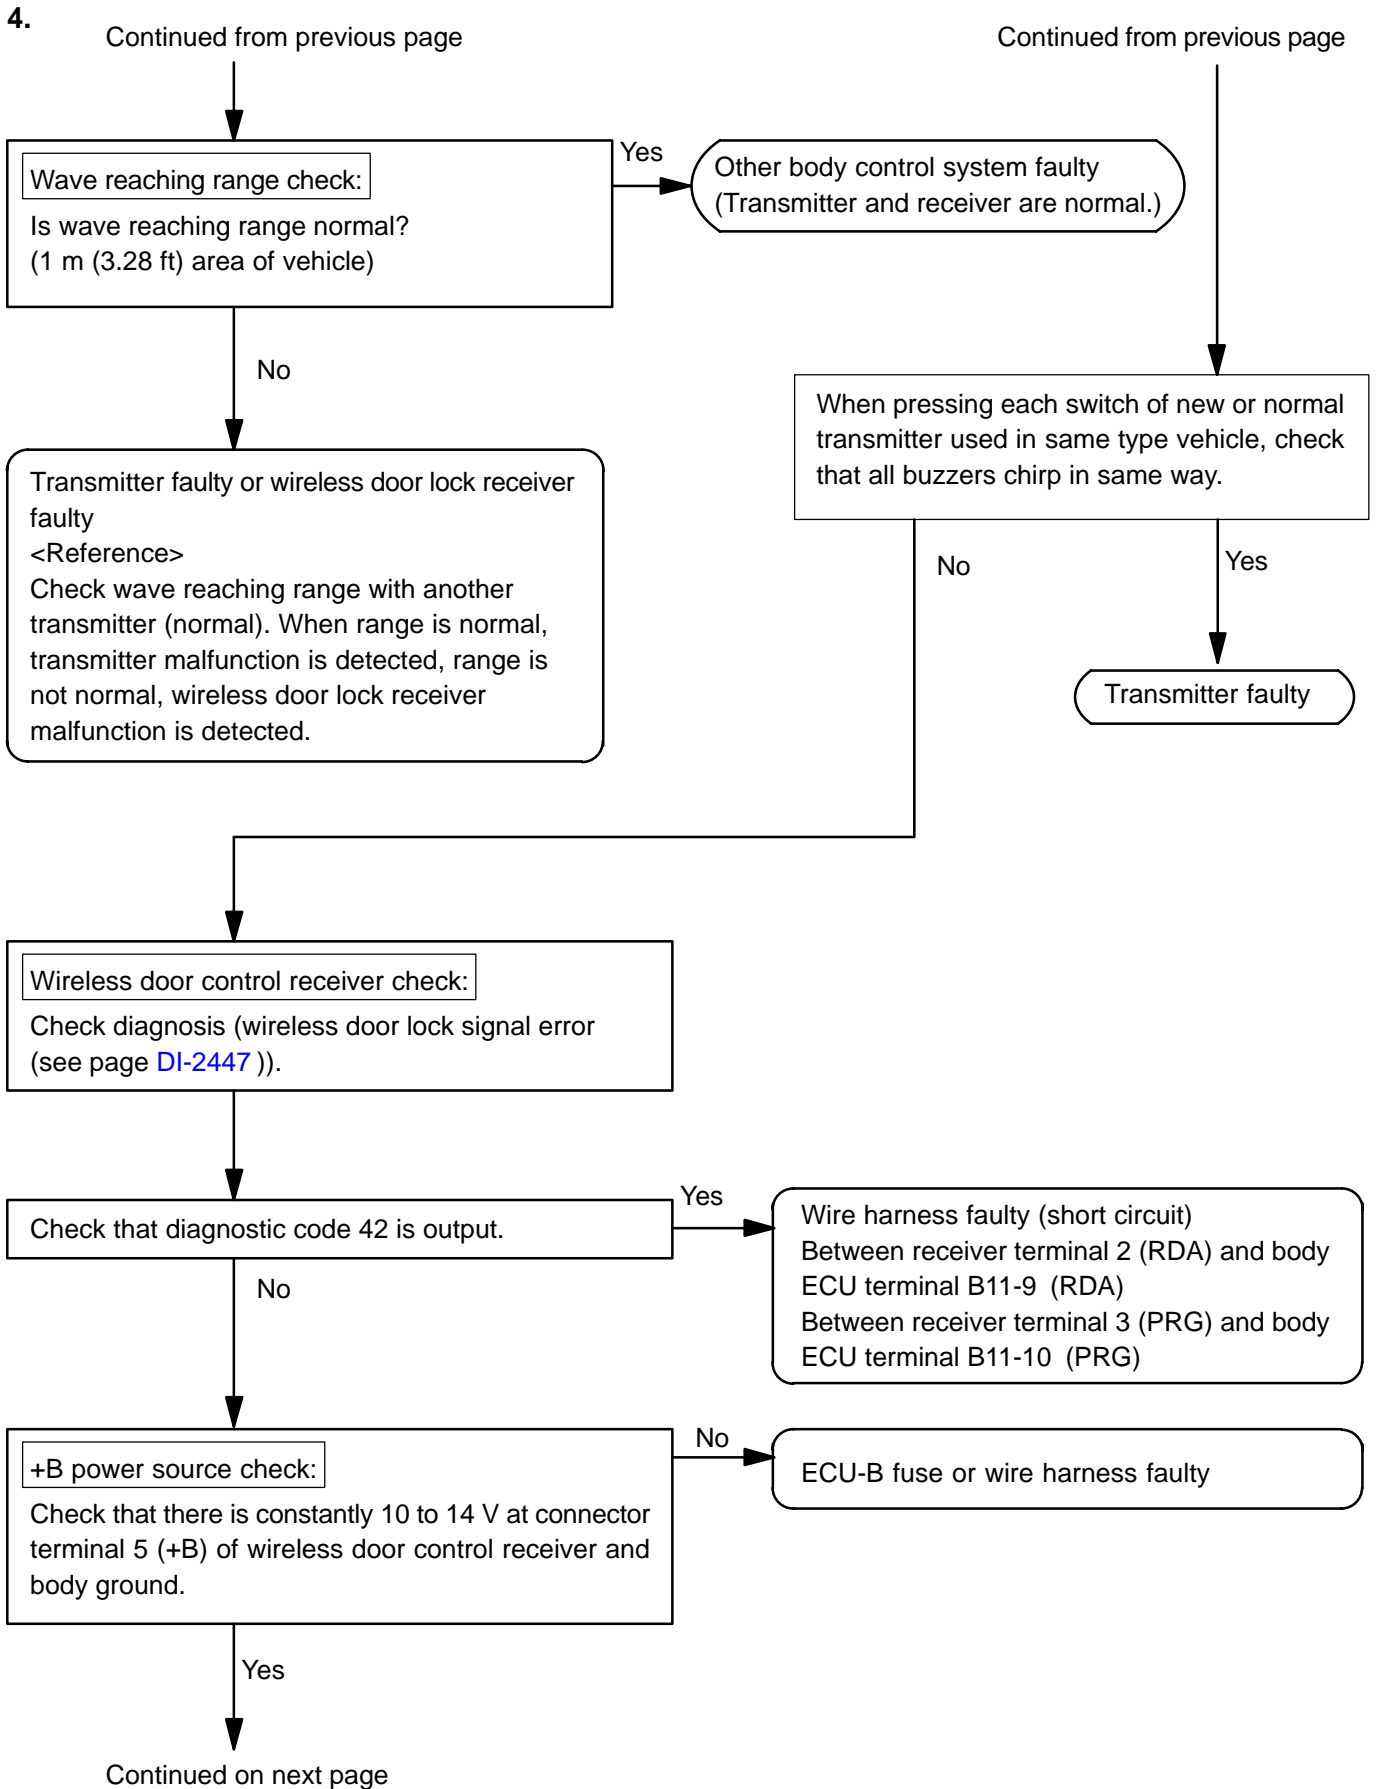

2. Continued from previous page

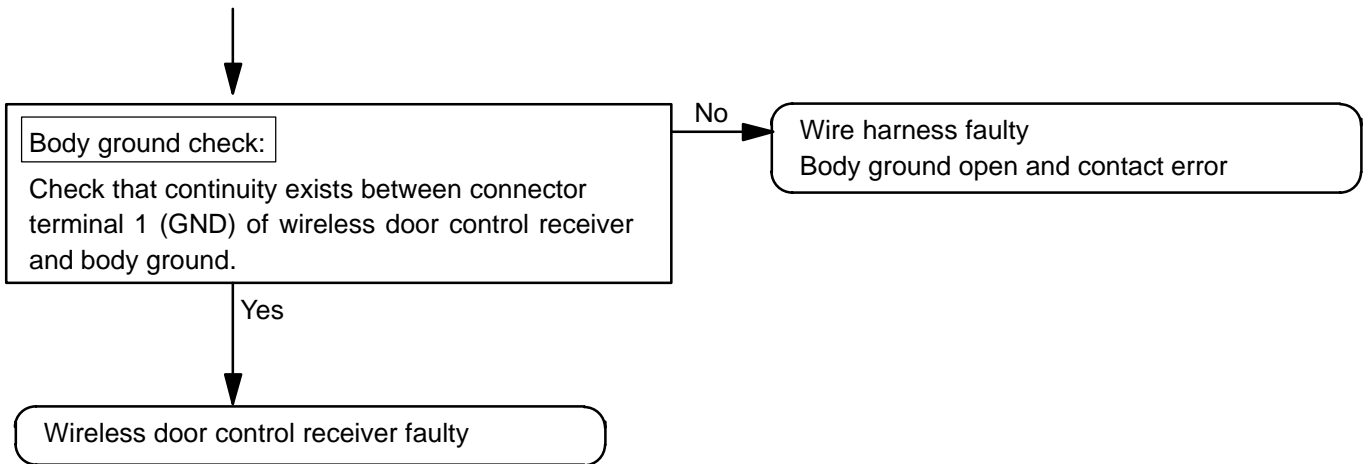

3. Continued from previous page

Continued on previous page

5. Continued from previous page

6. INSPECT WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switch described in this text is a switch for transmitting signals which is built into the door control transmitter.
- All the functions listed below must be checked in the remote control operational area.
- (a) Put the vehicle under the conditions that allow the wireless control function to be operated (see PRECAUTION on page BE-153).
- (b) Check the basic function.
 - (1) Check that all the doors lock when the LOCK switch is pressed.
 - (2) Check that only the driver side door unlocks when the UNLOCK switch is pressed once and the other doors unlock when the UNLOCK switch is pressed again within 3 seconds.
- (c) Check the chattering prevention function.
Check that the corresponding operation occurs only once and is not repeated continuously while the switch is held. However, when the switch is operated repeatedly at 1 second intervals, check that the corresponding operation is carried out.
- (d) Check the automatic lock function.
 - (1) Check that all the doors lock automatically as long as none of them have been opened or all the doors have not been locked within approximately 30 seconds after they are unlocked by pressing the UNLOCK switch.
 - (2) Check that the automatic locking function does not operate when any door has been opened or all of them have been locked within approximately 30 seconds after they are unlocked by pressing the UNLOCK switch.
- (e) Check the switch operation fail-safe function.
Check that the doors cannot be locked using the switch while the key is in the ignition key cylinder. However, this does not apply when the system is in the recognition code registration mode.
- (f) Check the operation stop function when a door is open or not completely closed.
Check that the doors are not locked by the switch while any door is open or not completely closed.
- (g) Check the repeat function.
Check that all the doors attempt to automatically lock once again 1 second after the LOCK switch has been pressed while the movement of the driver side door control knob is being restricted in the unlocked position.
- (h) Check the taillights and parking lights flashing and wireless door lock buzzer chirp functions (answer-back).
 - (1) When the LOCK switch is pressed, check that the lights flash once and buzzer chirps once with the locking of all the doors.

- (2) When the UNLOCK switch is pressed once, check that the lights flash twice with the unlocking of the driver side door.
- (3) When the UNLOCK switch is pressed again within 3 seconds, check that the light flashes twice with the unlocking of all the doors.
- (i) Check the illuminated entry function.
 - (1) When all the doors are locked, pressing the UNLOCK switch causes the interior light (when the light switch is in the DOOR position) to illuminate simultaneously with the unlock operation.
 - (2) Check that the interior light fades out in approximately 15 seconds if doors have not been opened.
- (j) Check the remote panic alarm function.
 Check that the horn sounds, and the headlights and taillights flash for 60 seconds by the theft alarm function when the PANIC switch is pressed. Also, check that the horn stops sounding and the lights stop flashing when either PANIC or UNLOCK switch on the transmitter is pressed or any door is unlocked using the key.

7. CHECK DOOR CONTROL RECEIVER

- (a) Disconnect the receiver connector.
- (b) Check the voltage and resistance between the terminals of the wire harness side connector of the receiver and body ground.

Standard:

Tester Connection	Specified Condition
5 (+B) - Body ground	10 - 14 V
1 (GND) - Body ground	Continuity

If the result is not as specified, there may be a malfunction on the wire harness side.

- (c) Reconnect the connector and check the voltage between the terminal and body ground.

Standard:

Tester Connection	Condition	Specified Condition
2 (RDA) - Body ground	No key in ignition key cylinder, all doors closed and each transmitter switch OFF → ON	Below 1 V → Approx. 6 to 7 V → Below 1 V

If the result is not as specified, the receiver may have a malfunction.

8. INSPECT WIRELESS DOOR LOCK BUZZER

Connect the positive (+) lead from the ohmmeter to terminal 1 and the negative (-) lead to terminal 2, and measure resistance.

Standard: Approximately 1 kΩ

If the resistance is not as specified, replace the buzzer.

LOCATION

INSPECTION

1. INSPECT DOOR LOCK TRANSMITTER

- (a) Inspect operation of the transmitter.
 - (1) Remove the battery (lithium battery) from the transmitter (see page [BE-168](#)).
 - (2) Install a new or normal battery (lithium battery).

HINT:

When a new or normal battery is not available, connect 2 new 1.5 V batteries in series, connect the battery's positive (+) to the battery receptacle side terminal and battery's negative (-) to the bottom terminal, then apply 3 V of voltage to the transmitter.

- (3) In a location that is approx. 1 m (3.28 ft) away from the driver side outside door handle in the right direction, point the key plate of the transmitter at the vehicle and check operation of the transmitter by pressing the transmission switch on the transmitter body.

Standard:

The door lock can be operated via the remote control.

HINT:

- The minimum operational distance differs depending on the operator, the way the transmitter is held and the location.
 - Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or strong electric wave occurs in the area where the frequency is used.
- (4) Install the battery (lithium battery).

- (b) Inspect the battery capacity.

HINT:

- The capacity of the battery can be determined only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed, while no battery is installed in the transmitter. Therefore, it is necessary to measure the voltage while the battery is installed in the transmitter (a resistance of 1.2 k Ω is applied to the battery) when checking the amount of energy left in the battery.
- If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.
 - (1) Remove the battery (lithium battery) from the transmitter (see page [BE-168](#)).

(2) Connect the lead wire to the negative (-) terminal of the transmitter and install the battery.

(3) Connect the tester positive (+) probe to the positive (+) battery (lithium battery) and the tester negative (-) probe to the lead respectively.

(4) Press one of the transmission switches on the transmitter for approx. 1 second.

(5) Press the transmission switch on the transmitter again to check the voltage.

Standard: 2.2 V or higher

HINT:

- When the temperature of the battery is low, the inspection cannot be made correctly. When the outcome of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- The automatic power-off function causes the voltage of the battery to be 2.5 V or more (a voltage with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, make sure to read the voltage just after the switch is pressed.
- Because high voltage might be shown once or twice after the battery returns to the specified temperature, the inspection should be made with the voltage shown after the switch is pressed at least 3 times.

(6) Disconnect the lead.

(7) Set the battery (lithium battery) in the transmitter.

REPLACEMENT

1. REMOVE TRANSMITTER BATTERY

NOTICE:

Special caution should be taken for handling each component as they are precision electronic components.

(a) Using a screwdriver, open the transmitter case.

NOTICE:

Do not forcibly pry out the cover.

(b) Using a screwdriver, pry out the battery (lithium battery).

NOTICE:

- Do not push the terminals with your finger.
- Prying up the batteries (lithium battery) to forcibly remove it will cause deformation of the terminals.
- Do not touch the battery with wet hands. Water may cause unexpected rust.
- Do not touch or move any components inside the transmitter as it may interfere with proper operation.

2. INSTALL TRANSMITTER BATTERY

(a) Install a new battery (lithium battery) with the positive (+) side up, as shown in the illustration.

NOTICE:

- Be sure that the positive side and the negative side of the transmitter battery are matched-up correctly.
- Be careful not to bend the electrode of the transmitter battery insertion.
- Be careful that dust or oil does not adhere to the transmitter case.

(b) Install the case securely.

WIRELESS DOOR LOCK CONTROL SYSTEM (Except Double Cab)

BE2KO-01

PRECAUTION

NOTICES WHEN CHECKING

(a) Power door LOCK/UNLOCK function:

The wireless remote control function operates only when the following 3 conditions are met.

- (1) No key is inserted into the ignition key cylinder.
- (2) All the doors are closed (Door open indicator off).
- (3) The power door lock system operates normally.

HINT:

The UNLOCK function operates even when any door is open.

(b) Remote panic function:

The wireless remote control function operates only when the following condition is met.

No key is inserted into the ignition key cylinder.

(c) The wireless door lock remote control operational area differs depending on the situation.

- (1) The operational area differs depending on the operators and the ways the transmitter is held.
- (2) In certain areas, the remote control function will only operate partially for the operational area will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- (3) Since the transmitter uses faint electric waves, strong electric waves or noise in the frequency used may reduce the operational area or the remote control may not function.
- (4) When the battery weakens, the operational area is reduced or the remote control may not function.

HINT:

If the door control transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, it may cause the battery to weaken or cause other such problems.

REGISTRATION PROCEDURE

1. REGISTER RECOGNITION CODE

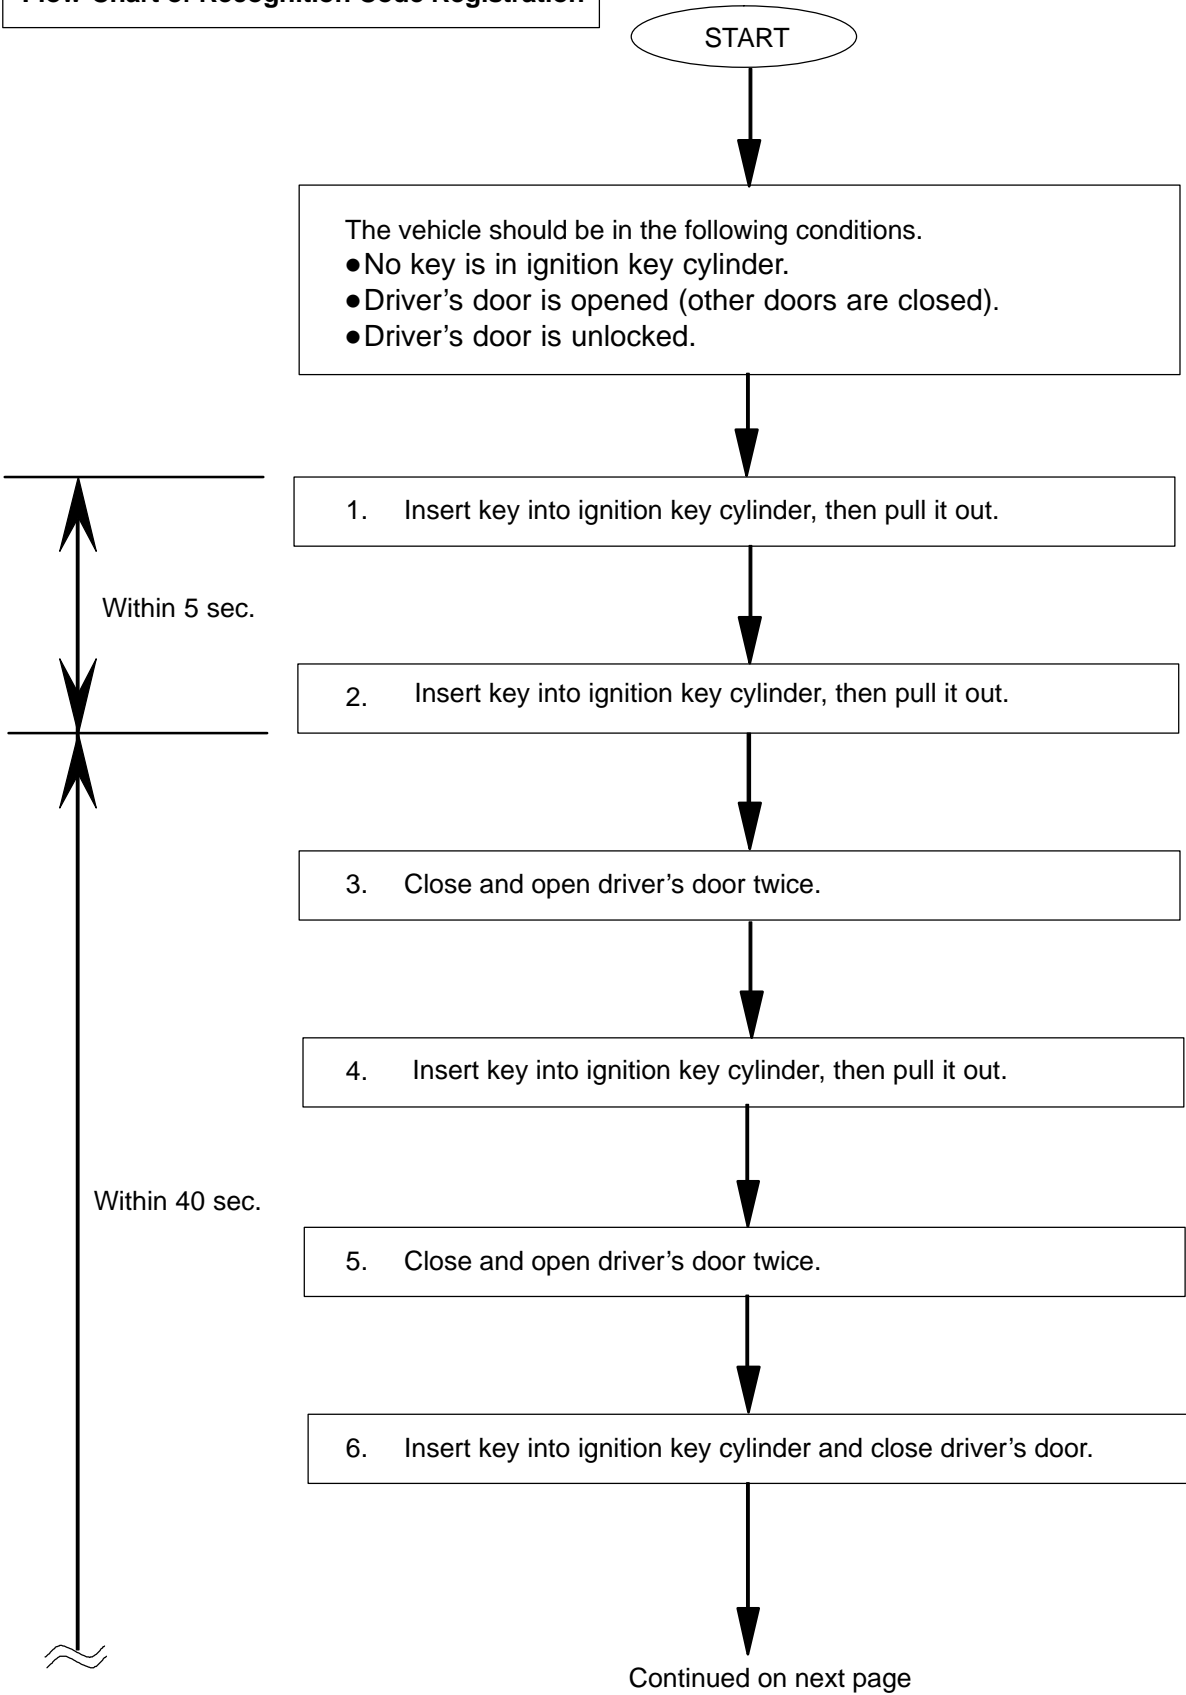

HINT:

- Register the recognition code when replacing the door control transmitter and/or TVIP ECU.
- The add mode is used to retain the registered recognition codes while a new recognition code is additionally registered. This mode is used when a new transmitter is added. If the number of the registered codes exceeds 4, the registered codes will be correspondingly erased in order, starting from the oldest code.
- The rewrite mode is used to erase all the registered recognition codes and register only new recognition codes. This mode is used when the transmitter or the door control receiver is replaced with a for new one.
- The erase mode is used to erase all the registered recognition codes and cancel the wireless door lock function. This mode is used when the transmitter is lost.
- The synchronization mode is used to renew the sequential code (rolling code) of the transmitter and synchronize it with the registered recognition code. This mode is used when the transmitter does not function because they are unsynchronized.*¹ Up to 4 transmitters can be synchronized at one time.
- The setting mode is used to set the optional operation via the transmitter that has the recognition code already registered. Double switch operation*² is available as the option. The setting of up to 4 transmitters can be changed at one time.
- All the following registration procedures must be performed in order continuously.

*¹: If a switch on the transmitter is pressed while out of range of the TVIP ECU, the system will not be able to synchronize the sequential code (rolling code) with the registered recognition code. At this time, the system will automatically synchronize them; however automatic synchronization can be performed only 500 times. Therefore, it is necessary to use this mode after they have synchronized 500 times.

*²: Double switch operation is a operation to unlock the door: when the UNLOCK switch is pressed once, only the driver's door will be unlocked; and when the UNLOCK switch is pressed again within 3 seconds, the other doors will be unlocked.

Flow Chart of Recognition Code Registration

Continued from previous page

Mode Selection:

- 7. Turn ignition switch from LOCK to ON and back to LOCK at approximately 1 second interval 1 to 6 times to select a mode.

Number of ON-LOCK operation of ignition switch:

Add Mode

ON-LOCK operation: 1 time

T1: Approx. 1 sec.

Rewrite Mode

ON-LOCK operation: 2 times

Setting Mode

ON-LOCK operation: 4 times

Erase Mode

ON-LOCK operation: 5 times

Synchronization Mode

ON-LOCK operation: 6 times

If the number of ON-LOCK operation of ignition switch is 0, 3 or 7 or more, there will be no response (power door lock and unlock operation) to inform which mode has been selected.

Within 40 sec.

Continued on next page

Continued from previous page

8. Remove key from ignition key cylinder.

Response of selected mode (Power door lock operation):

TVIP ECU automatically performs power door LOCK-UNLOCK operation to inform which mode has been selected. In response to LOCK-UNLOCK operation, taillights blink and TVIP buzzer chirps.

Add Mode

LOCK-UNLOCK operation: 1 time

T1: Approx. 1 sec.

Rewrite Mode

LOCK-UNLOCK operation: 2 times

Setting Mode

LOCK-UNLOCK operation: 4 times

Erase Mode

LOCK-UNLOCK operation: 5 times

Synchronization Mode

LOCK-UNLOCK operation: 6 times

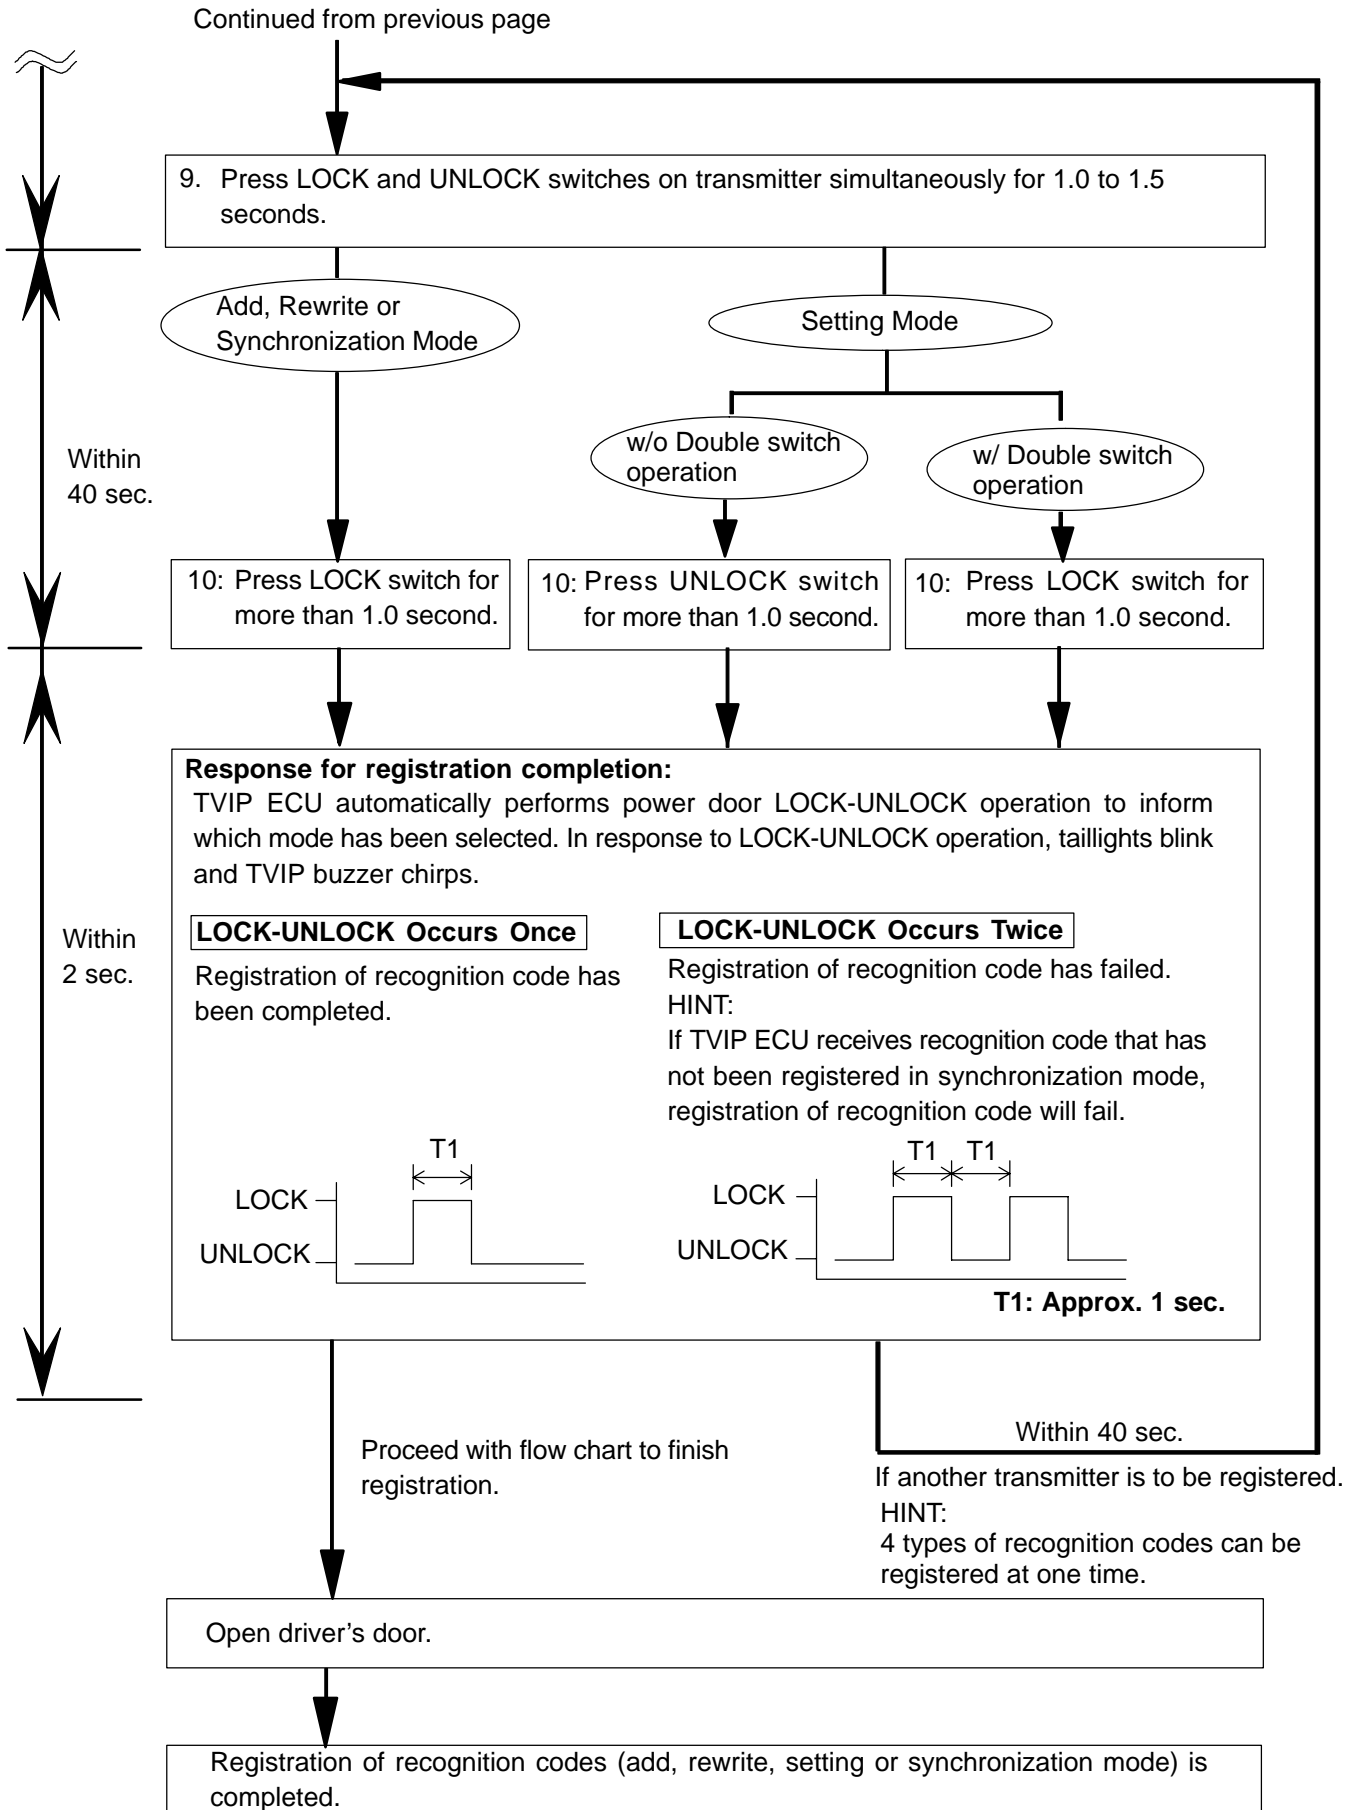

Within 2 sec.

Add, Rewrite, Setting or Synchronization Mode

Erase Mode

Continued on next page

Registration procedure is completed.

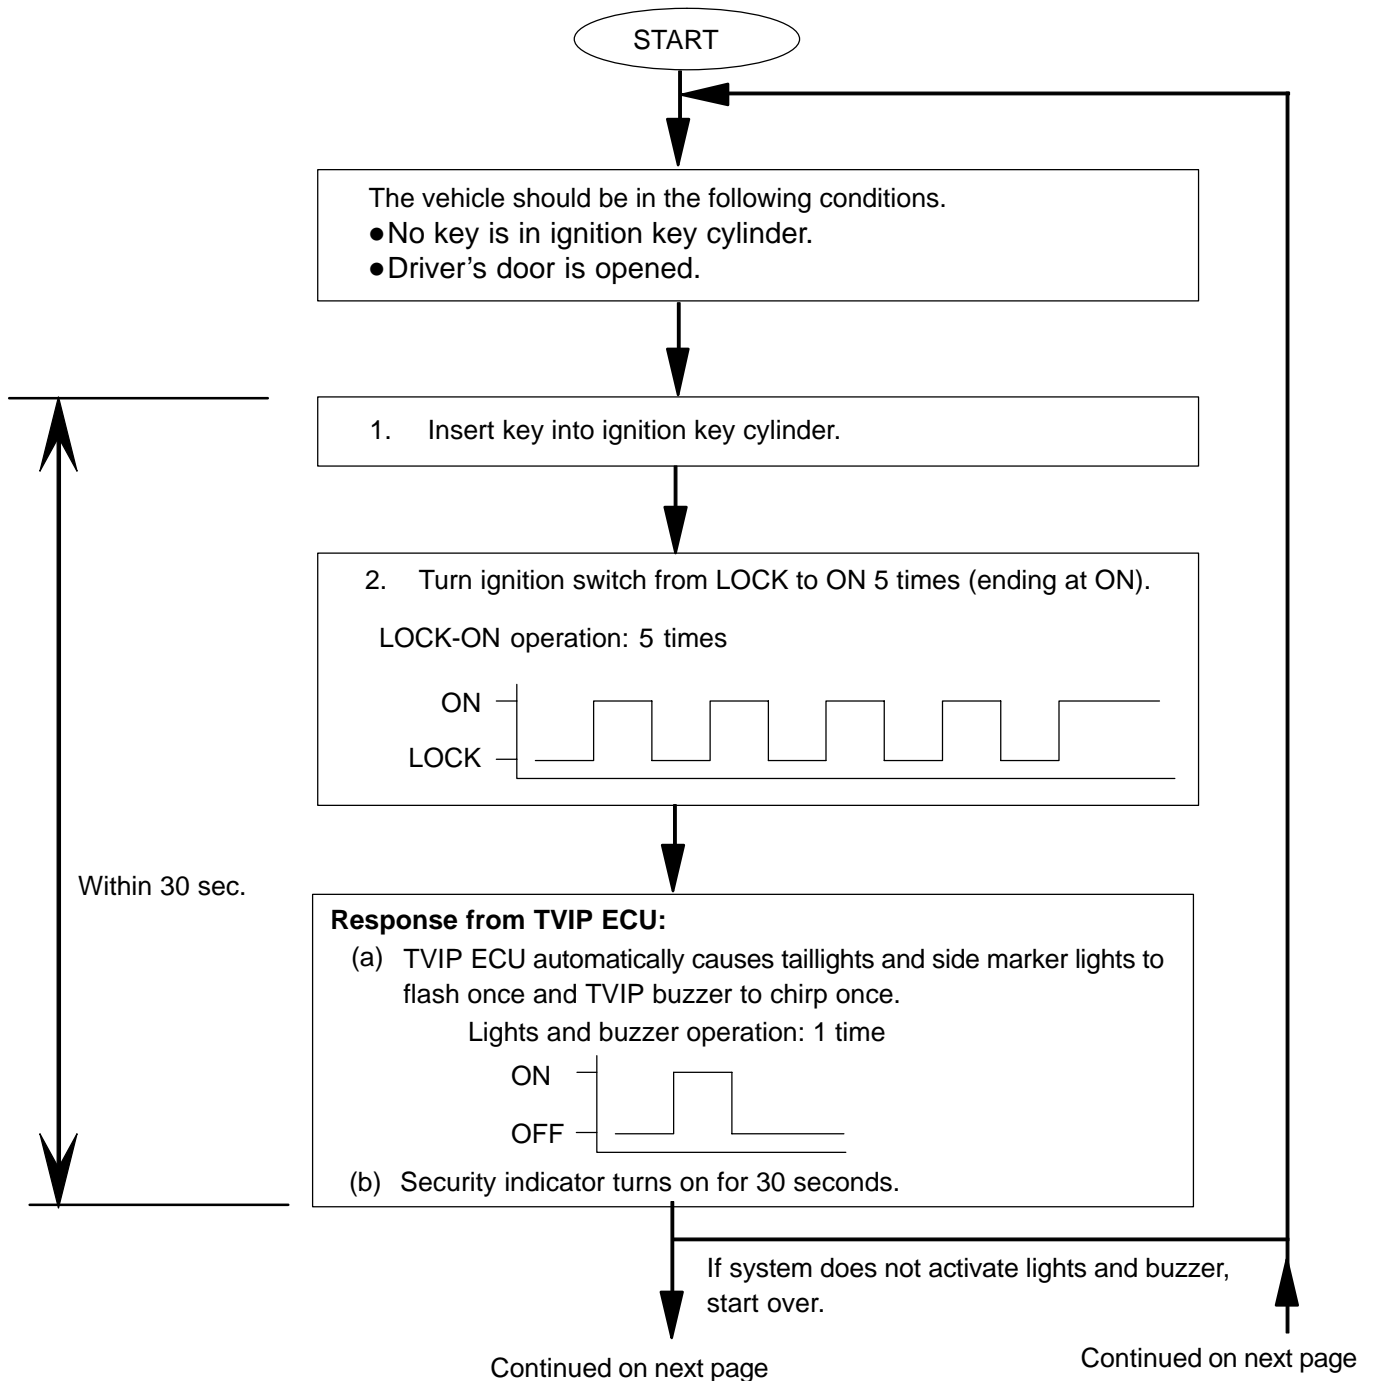

2. PROGRAM IGNITION-CONTROLLED AUTOMATIC DOOR LOCK/UNLOCK FUNCTION

HINT:

- With this function on, when the key is inserted into the ignition key cylinder and turned to the ON or START position, all the doors are automatically locked; and when the key is back to the ACC or LOCK position, all the doors are automatically unlocked.
- This function's initial mode is OFF, however the program for this function can be changed using the following procedures.
- All the following programming procedures must be performed in order continuously.

Flow Chart for Programming Ignition-controlled Automatic Door Lock/Unlock Function

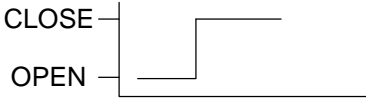

Continued from previous page

Continued from previous page

Mode Selection:

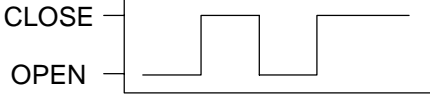

Ignition-controlled door locks ON

3-1. Close driver's door.
OPEN-CLOSE operation: 1 time

Ignition-controlled door locks OFF

3-2. Close, then open and close driver's door again.
OPEN-CLOSE operation: 2 time

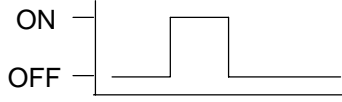

4. Turn ignition key back to LOCK.

Response of selected mode:

TVIP ECU automatically causes taillights and side marker lights to flash once and TVIP buzzer to chirp once.

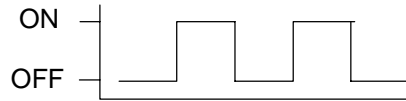

Ignition-controlled door locks ON

Lights and buzzer operation: 1 time

Ignition-controlled door locks OFF

Lights and buzzer operation: 2 time

If system does not activate lights and buzzer, start over.

Programming is completed.

ON-VEHICLE INSPECTION

INSPECT WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switch described in this text is a switch for transmitting signals which is built into the door control transmitter.
 - All the functions listed below must be checked in the remote control operational area.
- (a) Put the vehicle under the conditions that allow the wireless control function to be operated (See PRE-CAUTION on page [BE-169](#)).
 - (b) Check the basic function.
 - (1) Check whether the LED of the transmitter lights up 3 times when each switch is pressed 3 times.

HINT:

- If the LED does not light up when the switch has been pressed 3 times or more, it may be caused by the dead battery.
- If the switch is held down, the LED blinks continuously.
 - (2) Check that all the doors lock when the LOCK switch is pressed.
 - (3) Check that all the doors will be unlocked when the UNLOCK switch is pressed.

HINT:

If the double switch operation is set in the setting mode of a transmitter, the unlock operation is not carried out as specified in step (3) but carried out as follows:

Only the driver's door will be unlocked when the UNLOCK switch is pressed once, and the other door will be unlocked when the UNLOCK switch is pressed again within 3 seconds.

- (c) Check the chattering prevention function.
Check that the corresponding operation occurs only once and is not repeated continuously while the switch is held. However, when the switch is operated repeatedly at 1 second intervals, check that the corresponding operation is carried out.
- (d) Check the automatic lock function.
 - (1) Check that all the doors lock automatically as long as none of them have been opened or all the doors have not been locked within approximately 30 seconds after they are unlocked by pressing the UNLOCK switch.
 - (2) Check that the automatic locking function does not operate when any door has been opened or all of them have been locked within approximately 30 seconds after they are unlocked by pressing the UNLOCK switch.
- (e) Check the switch operation fail-safe function.
Check that the doors can not be locked using the switch while the key is in the ignition key cylinder. However, this does not apply when the system is in the recognition code registration mode.
- (f) Check the operation stop function when a door is open or not completely closed.
Check that the doors are not locked by the switch while any door is open or not completely closed.
- (g) Check the repeat function.
Check that all the doors attempt to automatically lock once again in 2 seconds after the LOCK switch has been pressed while the movement of the driver side door control knob is being restricted while in the unlocked position.
- (h) Check the taillights and parking lights flashing and TVIP buzzer chirps functions (answerback).
 - (1) When the LOCK switch is pressed, check that the lights flash once and buzzer chirps once with the locking of all the doors.
 - (2) When the UNLOCK switch is pressed, check that the lights flash twice and buzzer chirp twice with the unlocking of all the doors.

- (i) Check the illuminated entry function.
 - (1) When all the doors are locked, pressing the UNLOCK switch causes the interior light (when the light switch is in the DOOR position) to illuminate simultaneously with the unlock operation.
 - (2) Check that the interior light fade out in approximately 30 seconds if doors have not been opened.
- (j) Check the remote panic alarm function.

Check that the horn sounds and the headlights and taillights flash for 60 seconds by the TVIP alarm function when the PANIC switch is pressed. Also, check that the horn stops sounding and the lights stop flashing when either switch of the transmitter is pressed or any door is either locked or unlocked using the key.
- (k) Check the ignition-controlled automatic door lock/unlock function.

HINT:

This function's initial mode is OFF, however the program for this function can be changed using the specified method (see page [BE-170](#)).

- (1) Insert the key into the ignition key cylinder and turn the ignition switch to on the ON or START position. Check that all the doors are automatically locked.
- (2) Turn the key back to the ACC or LOCK position, and check that all the doors automatically unlocked.

LOCATION

P

125231

INSPECTION

INSPECT DOOR LOCK TRANSMITTER OPERATION

- (a) Inspect operation of the transmitter.
- (1) Remove the battery (lithium battery) from the transmitter (see page [BE-182](#)).
 - (2) Install a new or normal battery (lithium battery).

HINT:

When a new or normal battery is not available, connect 2 new 1.5 V batteries in series, connect the battery's positive (+) to the battery receptacle side terminal and battery's negative (-) to the bottom terminal, then apply 3 V of voltage to the transmitter.

- (3) In a location that is approx. 1 m (3.28 ft) away from the driver side outside door handle in the right direction, point the key plate of the transmitter at the vehicle and check operation of the transmitter by pressing the transmission switch on the transmitter body.

Standard:

The door lock can be operated via the remote control.

HINT:

- The minimum operational distance differs depending on the operator, the way the transmitter is held and the location.
 - Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or strong electric wave occurs in the area where the frequency is used.
- (4) Install the battery (lithium battery).

- (b) Inspect the battery capacity.

HINT:

- The capacity of the battery can be determined only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed, while no battery is installed in the transmitter. Therefore, it is necessary to measure the voltage while the battery is installed in the transmitter (a resistance of 1.2 k Ω is applied to the battery) when checking the amount of energy left in the battery.
- If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.
 - (1) Remove the battery (lithium battery) from the transmitter (see page [BE-182](#)).

- (2) Connect the lead wire to the negative (-) terminal of the transmitter and install the battery.

- (3) Connect the tester positive (+) probe to the positive (+) battery (lithium battery) and the tester negative (-) probe to the lead respectively.
- (4) Press one of the transmission switches on the transmitter for approx. 1 second.
- (5) Press the transmission switch on the transmitter again to check the voltage.

Standard: 2.2 V or higher

HINT:

- When the temperature of the battery is low, the inspection cannot be made correctly. When the outcome of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
 - The automatic power-off function causes the voltage of the battery to be 2.5 V or more (a voltage with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, make sure to read the voltage just after the switch is pressed.
 - Because high voltage might be shown once or twice after the battery returns to the specified temperature, the inspection should be made with the voltage shown after the switch is pressed at least 3 times.
- (6) Disconnect the lead.
 - (7) Set the battery (lithium battery) in the transmitter.

REPLACEMENT

1. REMOVE TRANSMITTER BATTERY

NOTICE:

Special caution should be taken for handling each component as they are precision electronic components.

(a) Using a screwdriver, open the transmitter case.

NOTICE:

Do not forcibly pry out the cover.

(b) Remove the battery (lithium battery).

NOTICE:

- Do not push the terminals with your finger.
- Prying up the batteries (lithium battery) to forcibly remove it will cause deformation of the terminals.
- Do not touch the battery with wet hands. Water may cause unexpected rust.
- Do not touch or move any components inside the transmitter as it may interfere with proper operation.

2. INSTALL TRANSMITTER BATTERY

(a) Install a new battery (lithium battery) with the positive (+) side up, as shown in the illustration.

NOTICE:

- Be sure that the positive side and the negative side of the transmitter battery are matched-up correctly.
- Be careful not to bend the electrode of the transmitter battery insertion.
- Be careful that dust or oil does not adhere to the transmitter case.

(b) Check that the rubber cover is not distorted or slipped off, and install the cover.

NOTICE:

Any damage might cause faulty contact of battery (lithium battery) and terminals.

POWER SEAT CONTROL SYSTEM

INSPECTION

1. INSPECT POWER SEAT SWITCH CONTINUITY

Slide switch:

Switch Position	Tester Connection	Specified Condition
FRONT	1 - 9, 4 - 6	Continuity
OFF	4 - 6 - 9	Continuity
BACK	1 - 6, 4 - 9	Continuity

Front tilt switch:

Switch Position	Tester Connection	Specified Condition
UP	1 - 10, 4 - 5	Continuity
OFF	4 - 5 - 10	Continuity
DOWN	1 - 5, 4 - 10	Continuity

Rear lifter switch:

Switch Position	Tester Connection	Specified Condition
UP	1 - 7, 4 - 8	Continuity
OFF	4 - 7 - 8	Continuity
DOWN	1 - 8, 4 - 7	Continuity

Reclining switch:

Switch Position	Tester Connection	Specified Condition
FORWARD	1 - 3, 2 - 4	Continuity
OFF	2 - 3 - 4	Continuity
REAR	1 - 2, 3 - 4	Continuity

If the continuity is not as specified, replace the switch.

2. INSPECT LUMBAR SUPPORT SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
FORWARD	1 - 4, 2 - 3	Continuity
OFF	1 - 2 - 3	Continuity
RELEASE	1 - 3, 2 - 4	Continuity

If the continuity is not as specified, replace the switch.

3. INSPECT SLIDE MOTOR OPERATION

- Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the motor turns clockwise.
- Reverse the polarity, and check that the motor turns counterclockwise.

If operation is not as specified, replace the seat adjuster.

4. INSPECT SLIDE MOTOR PTC THERMISTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 2, the positive (+) lead from the ammeter to terminal 1 and the negative (-) lead to the battery negative (-) terminal. Then move the seat cushion to the rear position.
- (b) Continue to apply voltage, and check that current changes to less than 1 A within 4 to 90 seconds.

- (c) Disconnect the leads from the terminals.
- (d) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the seat cushion begins to move forward.

If operation is not as specified, replace the seat adjuster.

5. INSPECT FRONT TILT MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the motor turns clockwise.
- (b) Reverse the polarity, and check that the motor turns counterclockwise.

If operation is not as specified, replace the seat adjuster.

6. INSPECT FRONT TILT MOTOR PTC THERMISTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1, the positive (+) lead from the ammeter to terminal 2 and the negative (-) lead to the battery negative (-) terminal. Then move the seat cushion to the highest position.
- (b) Continue to apply voltage, and check that the current changes to less than 1 A within 4 to 90 seconds.

- (c) Disconnect the leads from the terminals.
- (d) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1. Check that the seat cushion begins to descend.

If operation is not as specified, replace the seat adjuster.

7. INSPECT LIFTER MOTOR OPERATION

- Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the motor turns clockwise.
- Reverse the polarity, and check that the motor turns counterclockwise.

If operation is not as specified, replace the seat adjuster.

8. INSPECT LIFTER MOTOR PTC THERMISTOR OPERATION

- Connect the positive (+) lead from the battery to terminal 1, the positive (+) lead from the ammeter to terminal 2 and the negative (-) lead to the battery negative (-) terminal. Then move the seat cushion to the lowest position.
- Continue to apply voltage, and check that the current changes to less than 1 A within 4 to 90 seconds.

- Disconnect the leads from the terminals.
- Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1. Check that the seat cushion begins to ascend.

If operation is not as specified, replace the seat adjuster.

9. INSPECT RECLINING MOTOR OPERATION

- Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the motor turns clockwise.
- Reverse the polarity, and check that the motor turns counterclockwise.

If operation is not as specified, replace the seat adjuster.

10. INSPECT RECLINING MOTOR PTC THERMISTOR OPERATION

- Connect the positive (+) lead from the battery to terminal 2, the positive (+) lead from the ammeter to terminal 1 and the negative (-) lead to the battery negative (-) terminal. Then recline the seatback to the most forward position.
- Continue to apply voltage, and check that the current changes to less than 1 A within 4 to 90 seconds.

- (c) Disconnect the leads from the terminals.
- (d) Approximately 60 seconds later, connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the seatback begins to fall backward.

If operation is not as specified, replace the seat adjuster.

11. INSPECT LUMBAR SUPPORT MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2. Check that the lumbar support moves to the release side.

- (b) Reverse the polarity, and check that the lumbar support moves forward.

If operation is not as specified, replace the lumbar support adjuster.

12. INSPECT LUMBAR SUPPORT MOTOR CIRCUIT BREAKER OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1 on the lumbar support motor connector. Move the lumbar support to the front end position.

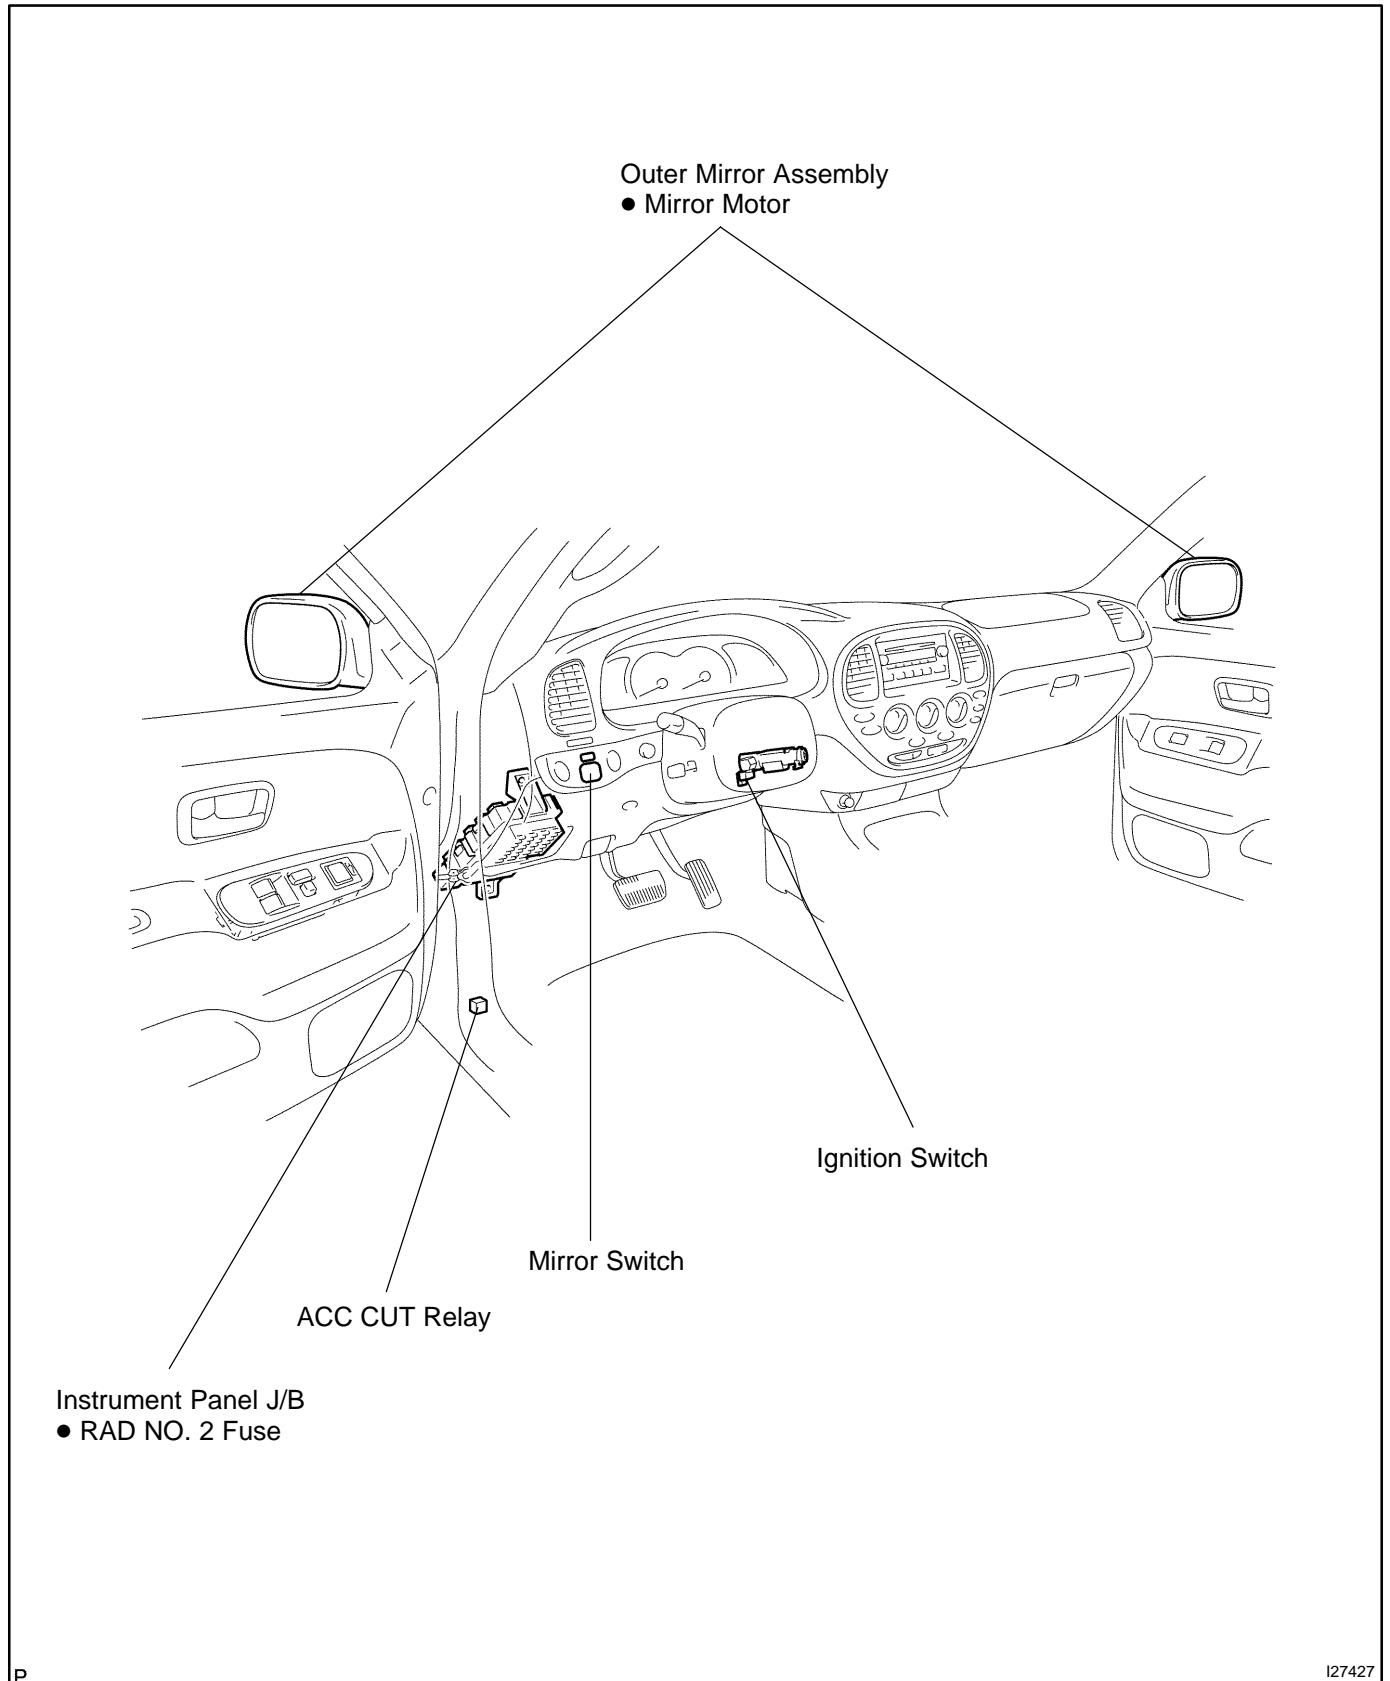

- (b) Continue to apply voltage, and check that a circuit breaker operation noise can be heard within 4 to 60 seconds.
- (c) Reverse the polarity, and check that the lumbar support begins to move to the release side within approximately 60 seconds.

If operation is not as specified, replace the lumbar support adjuster.

POWER MIRROR CONTROL SYSTEM (Double Cab) LOCATION

BE2KN-01

INSPECTION

1. Left side: INSPECT MIRROR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	4 - 8, 6 - 7	Continuity
DOWN	4 - 7, 6 - 8	Continuity
LEFT	5 - 8, 6 - 7	Continuity
RIGHT	5 - 7, 6 - 8	Continuity

If the continuity is not as specified, replace the switch.

2. Right side: INSPECT MIRROR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	3 - 8, 6 - 7	Continuity
DOWN	3 - 7, 6 - 8	Continuity
LEFT	5 - 8, 6 - 7	Continuity
RIGHT	5 - 7, 6 - 8	Continuity

If the continuity is not as specified, replace the switch.

3. INSPECT ACC CUT RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

4. INSPECT MIRROR MOTOR OPERATION

(a) Connect the positive (+) lead from the battery to terminal 3 and negative (-) lead to terminal 1. Check that the mirror turns leftward.

(b) Reverse the polarity, check that the mirror turns rightward.

- (c) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1. Check that the mirror turns upward.

- (d) Reverse the polarity, check that the mirror turns downward.
If operation is not as specified, replace the mirror assembly.

POWER MIRROR CONTROL SYSTEM (Except Double Cab) LOCATION

BE2KL-01

I27069

I27249

INSPECTION

1. Left side: INSPECT MIRROR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	4 - 8, 6 - 7	Continuity
DOWN	4 - 7, 6 - 8	Continuity
LEFT	5 - 8, 6 - 7	Continuity
RIGHT	5 - 7, 6 - 8	Continuity

If the continuity is not as specified, replace the switch.

2. Right side: INSPECT MIRROR SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
UP	3 - 8, 6 - 7	Continuity
DOWN	3 - 7, 6 - 8	Continuity
LEFT	5 - 8, 6 - 7	Continuity
RIGHT	5 - 7, 6 - 8	Continuity

If the continuity is not as specified, replace the switch.

3. 2UZ-FE: INSPECT ACC CUT RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

4. INSPECT MIRROR MOTOR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 (3) and the negative (-) lead to terminal 5 (1). Check that the mirror turns to the left.

(): w/o Mirror heater.

(b) Reverse the polarity, check that the mirror turns to the right.

(c) Connect the positive (+) lead from the battery to terminal 3 (2) and the negative (-) lead to terminal 5 (1). Check that the mirror turns upward.

(): w/o Mirror heater.

(d) Reverse the polarity, and check that the mirror turns downward.
If operation is not as specified, replace the mirror assembly.

ELECTRO CHROMIC MIRROR SYSTEM LOCATION

BE2MG-01

INSPECTION

1. INSPECT ELECTRO CHROMIC INNER MIRROR OPERATION

- (a) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2.
- (b) Attach a black coloured tape to forward sensor to prevent it from sensing.
- (c) When the mode is turned to AUTO, check that indicator light lights up.
- (d) Shine an electric light on the mirror. Check that the mirror surface changes from bright to dark.

If operation is not as specified, replace the inner mirror.

2. INSPECT ELECTRO CHROMIC INNER MIRROR CIRCUIT

Disconnect the connector from the mirror and inspect the connector on the wire harness side, as shown.

Tester connection	Condition	Specified condition
1 - Ground	Ignition switch LOCK or ACC	No voltage
1 - Ground	Ignition switch ON	Battery positive voltage
2 - Ground	Constant	Continuity

If circuit is not as specified, inspect the circuits connected to other parts.

SEAT HEATER SYSTEM (Double Cab)

BE2KJ-01

LOCATION

INSPECTION

1. INSPECT SEAT HEATER SWITCH CONTINUITY

Switch Position	Tester Connection	Specified Condition
HI	3 - 4, 5 - 6	Continuity
LO	4 - 5	Continuity
Illumination circuit	1 - 2	Continuity

If the continuity is not as specified, replace the switch.

2. INSPECT SEAT HEATER INDICATOR LIGHT OPERATION

- Connect the positive (+) lead from the battery to terminal 4 and the negative (-) lead to terminal 6.
- Push the seat heater switch on the HI position and check that the HI indicator light turns on.
- Push the seat heater switch on the LO position and check that the LO indicator light turns on.

If operation is not as specified, replace the switch.

3. INSPECT SEAT CUSHION HEATER CONTINUITY

- (a) Heat the thermostat with a light.
- (b) Inspect the seat cushion heater continuity between the terminals, as shown in the illustration.

Tester Connection	Condition	Specified Condition
2 - 4	Constant	Continuity
1 - 3	Seat heater temperature below 30°C (80°F)	Continuity
1 - 3	Seat heater temperature above 40°C (104°F)	No continuity

If the continuity is not as specified, replace the seat cushion pad.

4. INSPECT SEATBACK HEATER CONTINUITY

- (a) Heat the thermostat with a light.
- (b) Inspect the seatback heater continuity between terminals, as shown in the illustration.

Tester Connection	Condition	Specified Condition
2 - 3	Constant	Continuity
1 - 2, 1 - 3	Seat heater temperature below 30°C (86°F)	Continuity
1 - 2, 1 - 3	Seat heater temperature above 50°C (122°F)	No continuity

If the continuity is not as specified, replace the seatback pad.

5. INSPECT SEAT HEATER RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

CLOCK TROUBLESHOOTING

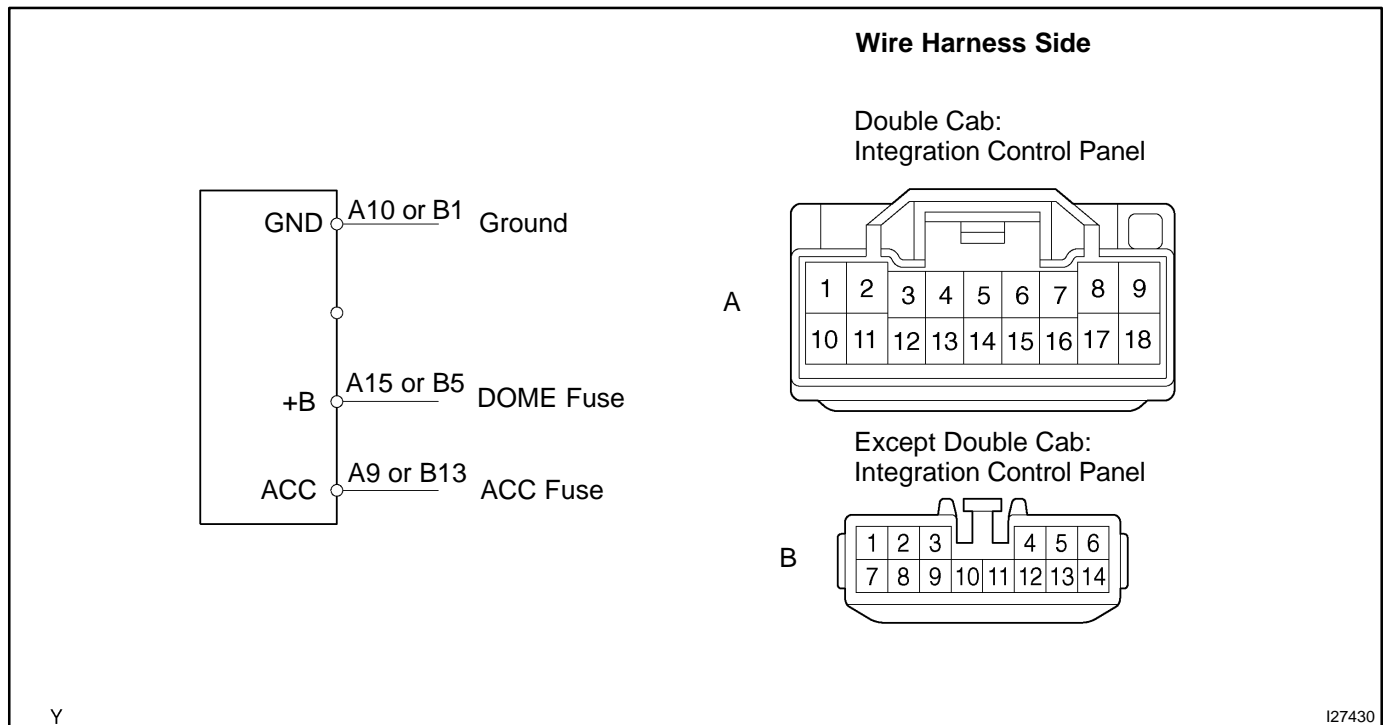

BE03N-13

HINT:

Troubleshoot the clock according to the table below.

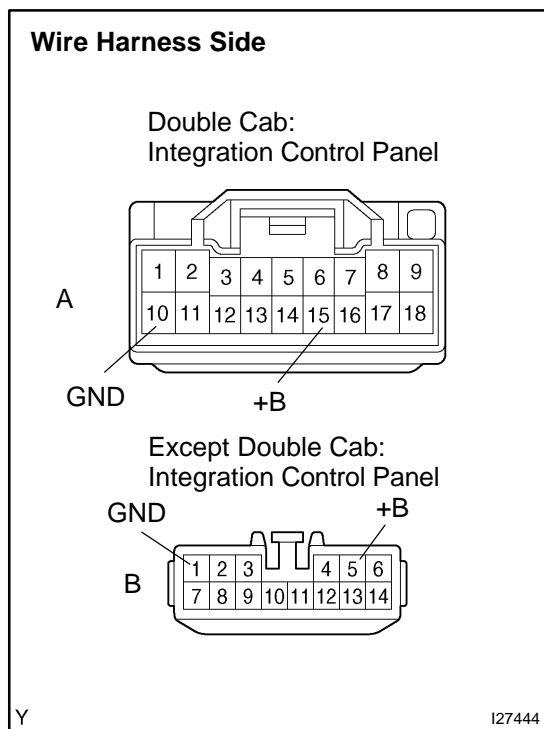

Problem	No.
Clock does not operate	1
Clock loses or gains time	2

± 1.5 seconds/day

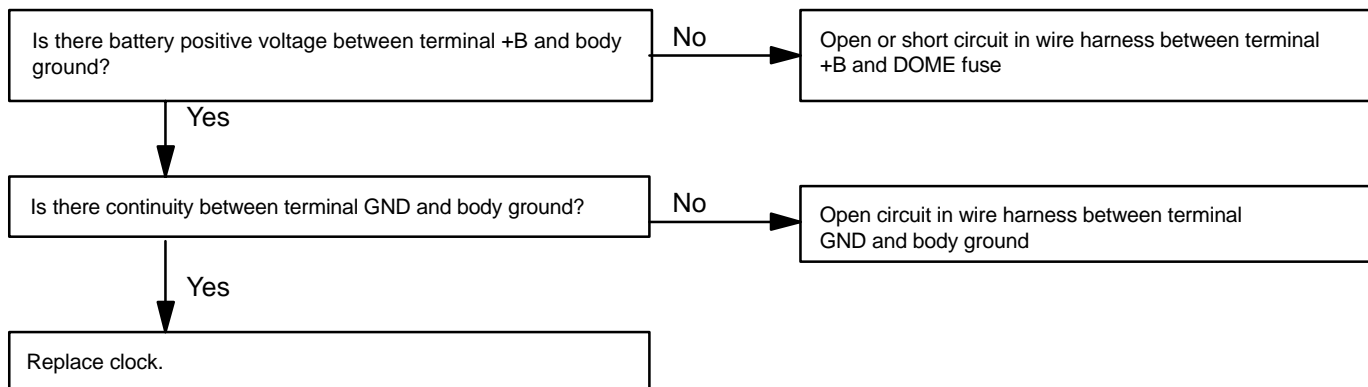

1. PROBLEM NO. 1

1	CLOCK DOES NOT OPERATE
---	-------------------------------

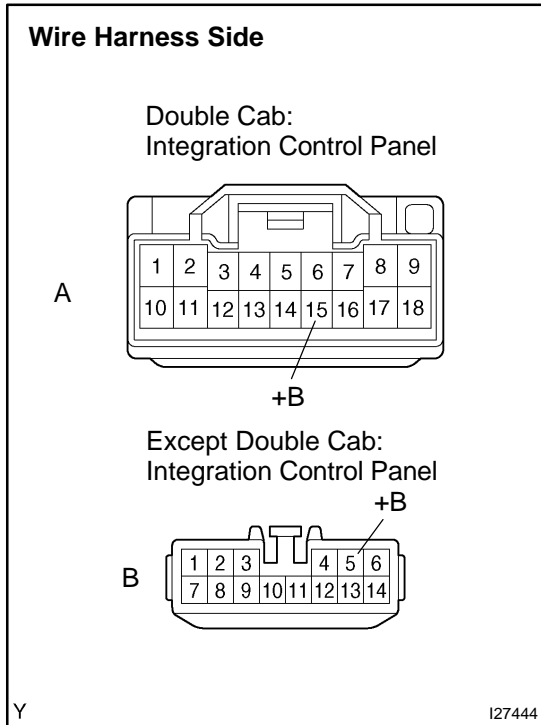

- (a) Check that the battery positive voltage is between 10 to 14 V.
If voltage is not as specified, replace the battery.
 - (b) Check that the DOME fuse is not blown.
If the fuse is blown, replace the fuse and check for short.
 - (c) Troubleshoot the clock as follows.
- HINT:**
Inspect the connector on the wire harness side.

2. PROBLEM NO. 2

2	CLOCK LOSES OR GAINS TIME
---	---------------------------

- (a) Check that the battery positive voltage is between 10 to 14 V.
If voltage is not as specified, replace the battery.
 - (b) Inspect the error of the clock.
Allowable error (per day): ± 1.5 seconds
If the error exceeds the allowable error, replace the clock.
 - (c) Check that the clock adjusting button is stuck in position and has failed to return.
If the error exceeds the allowable error, replace the clock.
 - (d) Troubleshoot the clock as follows.
- HINT:
Inspect the connector on the wire harness side.

GARAGE DOOR OPENER SYSTEM (Double Cab)

REGISTRATION PROCEDURE

BE2KG-01

REGISTER TRANSMITTER CODE

HINT:

The vehicle's garage door opener records transmitter codes for systems such as garage doors, gates, entry gates, door locks, home lighting systems, security systems or other transmitter code based systems. The garage door opener is built into the roof console box assembly. After the console box assembly is replaced, transmitter codes for any systems previously registered in the garage door opener must be re-registered.

- (a) Re-register systems in the garage door opener registration mode.

NOTICE:

- Do not perform transmitter code registration for a system if people or objects are near the system to be registered. When registering transmitter codes, injury or damage can occur as the system may open, close, unlock or otherwise operate.
- Before transmitter code registration, stop the engine and remove the key from the ignition switch.
- The garage door opener cannot be used with: 1) systems that: 1) were manufactured before April 1, 1982; or 2) systems that do not meet Federal Safety Standards (for example, garage doors without a jam protection function).

HINT:

- 3 transmitter codes can be registered with the garage door opener, one transmitter code for each of the 3 garage door opener switches.
- Disconnecting the battery will not erase the transmitter codes registered with the garage door opener.
- An attempt to overwrite a previously registered transmitter code with a new system's transmitter code may fail. In these situations, the previously registered transmitter code will not be erased.

- (1) Select a switch of the garage door opener for the transmitter code registration.
- (2) Press and hold the selected switch for 20 seconds. Then, the garage door opener enters registration mode.

HINT:

Before entering registration mode, the indicator shows the display. After entering registration mode, the indicator flashes at a cycle of 1 Hz. For a "rolling code" type system, after entering registration mode, the indicator flashes at a cycle of 8.8 Hz for 1.6 seconds, and then the indicator flashes at a cycle of 1 Hz.

- (3) After the garage door opener has entered registration mode, bring the original transmitter of the system to be registered within 1 to 3 inches of the garage door opener and press and hold one of the garage door opener switches. Then press the original transmitter switch.
- (4) If the transmitter code registration was successful, the indicator of the garage door opener flashes at a cycle of 5.6 Hz. If no malfunction occurs, release both the garage door opener switch and the original transmitter switch.

HINT:

- If transmitter code registration fails: 1) the original transmitter's battery may be low or need to be replaced, or 2) the system to be registered may not be compatible with the garage door opener.
- Some transmitter's signals stop after 1 to 2 seconds. For these types of transmitters: 1) press and hold one of the garage door opener switches, and 2) press and release (cycle) the transmitter switch every 2 seconds. Check if the transmitter code was successfully registered.
- After entering the garage door opener registration mode, transmitter code registration must be completed within 90 seconds. If 90 seconds elapses, the garage door opener will enter low power mode (See step (c)).

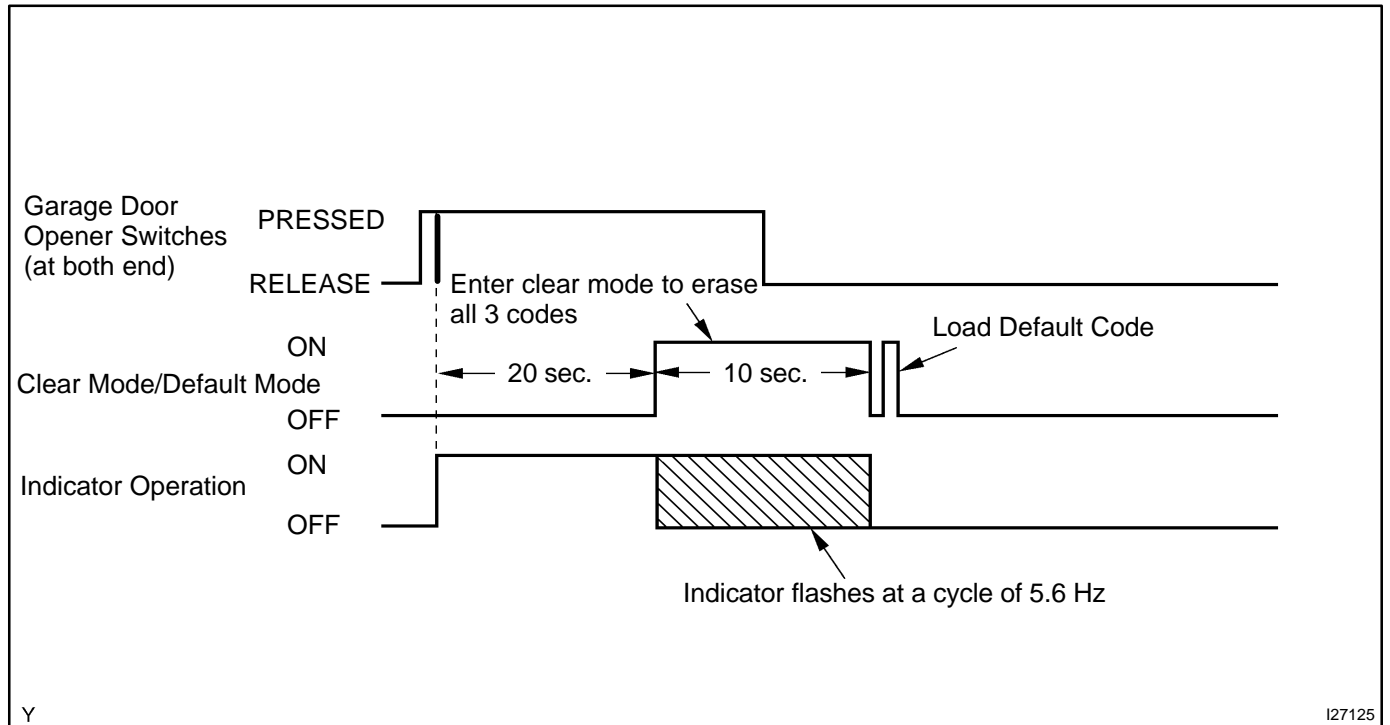

Timing chart of registration mode:

(b) Erase transmitter codes in the garage door opener clear mode.

HINT:

- All 3 registered transmitter codes must be erased at the same time.
- If the switches are released within 10 seconds after the transmitter codes have been erased, the garage door opener will enter registration mode.
- If the switches are held for 10 seconds or more after the transmitter codes have been erased, default codes will be set to the 3 switches of the garage door opener. Using these default codes, you can check operation of the garage door opener can be checked using a tester. Press and hold the left and right switch of the garage door opener for 20 seconds. The indicator will begin to flash at a cycle of 5.6 Hz. Releasing the switches will end clear mode.

Timing chart of clear mode:

(c) Low power mode:

If a garage door opener switch is held for 55 seconds or more, the garage door opener will enter low power mode to economize on power consumption. When the garage door opener has entered low power mode, the indicator turns off.

LOCATION

INSPECTION

1. INSPECT GARAGE DOOR OPENER

Press the switch and check that indicator turns on.

Even if only one switch cannot turn on an indicator, replace the door opener.

2. INSPECT GARAGE DOOR OPENER REGISTRATION AND TRANSMITTING

HINT:

Use the KENTMORE home link tester and a tester transmitter for this test. First erase the customer's transmitter code, and then register the tester transmitter code.

(a) Check if the tester transmitter code was successfully registered.

(b) Press the garage door opener switch that was registered to the tester transmitter. Check if the home link tester's green LED illuminates.

HINT:

If the green LED does not illuminate, replace the garage door opener.

(c) When the inspection is complete, re-register the customer's transmitter code(s) again.

TRAILER TOWING (Double Cab) LOCATION

BE2KC-01

I27426

INSPECTION

1. INSPECT TOWING CONVERTER CIRCUIT

Remove the towing converter with the connector still connected and inspect the wire harness side connector from the backside, as shown in the table.

Tester Connection	Condition	Specified Condition
1 - 6	Constant	10 - 14 V
2 - 6	Turn signal switch RIGHT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch RIGHT and stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF, hazard warning switch OFF and stop light switch OFF (brake pedal released)	Below 1 V
	Stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
3 - 6	Turn signal switch RIGHT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF or LEFT and hazard warning switch OFF	Below 1 V
4 - 6	Turn signal switch LEFT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch LEFT and stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF, hazard warning switch OFF and stop light switch OFF (brake pedal released)	Below 1 V
	Stop light switch ON (brake pedal depressed)	10 - 14 V
6 - 8	Stop light switch ON (brake pedal depressed)	10 - 14 V
	Stop light switch OFF (brake pedal released)	Below 1 V
6 - 9	Turn signal switch LEFT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF or RIGHT and hazard warning switch OFF	Below 1 V
6 - Body ground	Constant	Continuity

If the result is as specified, replace the towing converter.

2. INSPECT TOWING TAIL RELAY CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

3. INSPECT BATTERY CHARGE RELAY (Marking: BATT CHARGE) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

TRAILER TOWING (Except Double Cab)

LOCATION

BE2KE-01

INSPECTION

1. INSPECT TOWING CONVERTER CIRCUIT

Remove the towing converter with the connector still connected and inspect the wire harness side connector from the backside, as shown in the table.

Tester Connection	Condition	Specified Condition
1 - 6	Constant	10 - 14 V
2 - 6	Turn signal switch RIGHT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch RIGHT and stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF, hazard warning switch OFF and stop light switch OFF (brake pedal released)	Below 1 V
	Stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
3 - 6	Turn signal switch RIGHT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF or LEFT and hazard warning switch OFF	Below 1 V
4 - 6	Turn signal switch LEFT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch LEFT and stop light switch ON (brake pedal depressed)	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF, hazard warning switch OFF and stop light switch OFF (brake pedal released)	Below 1 V
	Stop light switch ON (brake pedal depressed)	10 - 14 V
6 - 8	Stop light switch ON (brake pedal depressed)	10 - 14 V
	Stop light switch OFF (brake pedal released)	Below 1 V
6 - 9	Turn signal switch LEFT or hazard warning switch ON	10 - 14 V ↔ Below 1 V
	Turn signal switch OFF or RIGHT and hazard warning switch OFF	Below 1 V
6 - Body ground	Constant	Continuity

If the result is as specified, replace the towing converter.

2. INSPECT TOWING TAIL RELAY (Marking: TOW TAIL) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

3. INSPECT SUB BATTERY RELAY (Marking: SUB BATT) CONTINUITY

Tester Connection	Specified Condition
3 - 5	No continuity
3 - 5	Continuity (When battery voltage is applied to terminals 1 and 2)

If the continuity is not as specified, replace the relay.

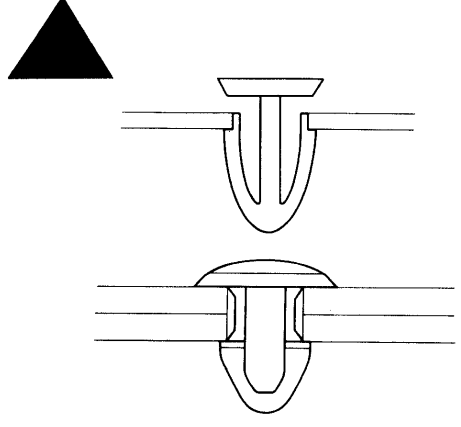

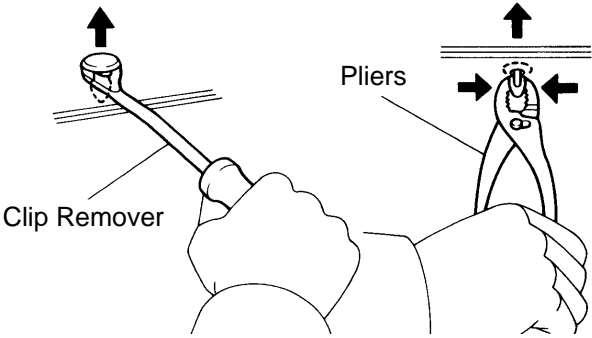

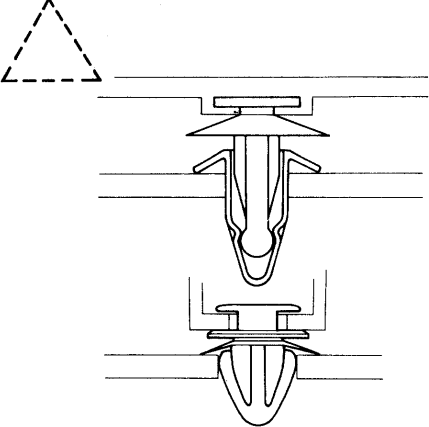

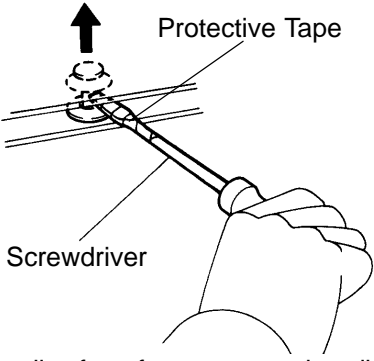

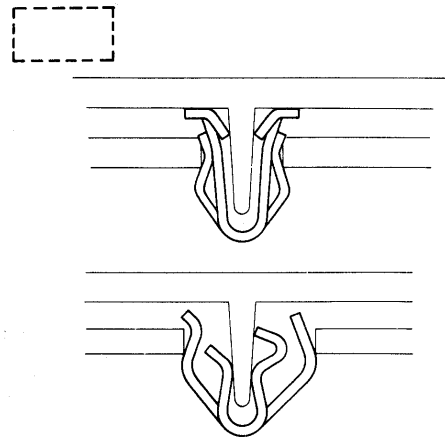

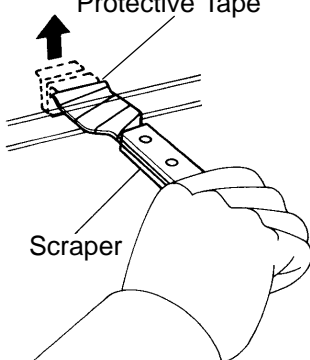

CLIP REPLACEMENT

BO0HX-04

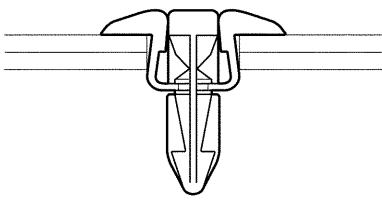

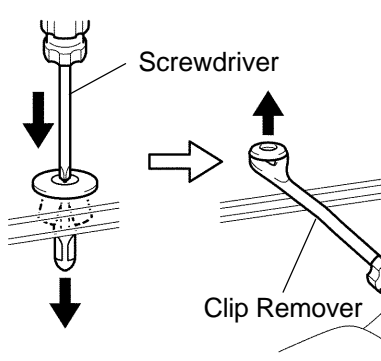

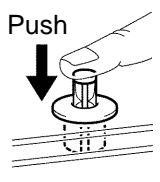

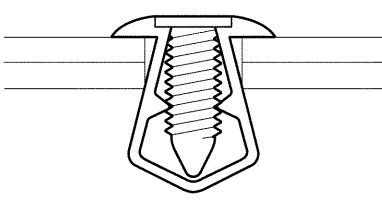

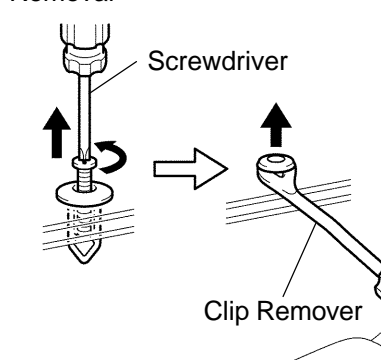

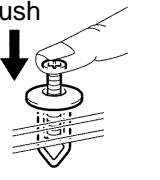

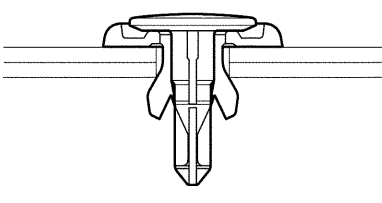

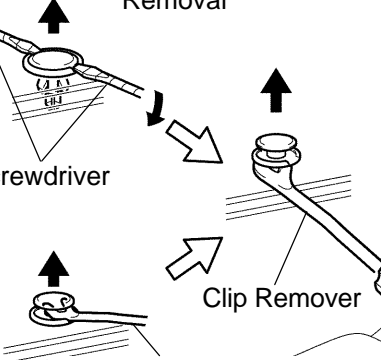

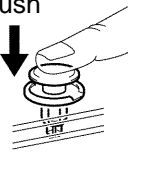

The removal and installation methods of typical clips used in body parts are shown in the table below.

HINT:

If the clip is damaged during the operation, always replace it with a new clip.

Shape (Example)	Removal / Installation
	 <p>Remove clips from front or rear using clip remover or pliers.</p>
	 <p>Remove clips from front or rear using clip remover or pliers.</p>
	 <p>Remove clips from front or rear using clip remover or pliers.</p>

SRS AIRBAG

BO0HY-06

PRECAUTION

The TOYOTA TUNDRA is equipped with an SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operation in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices in the RS section.

HOOD ADJUSTMENT

B0011-03

HINT:

Since the centering bolt is used as the hood hinge set bolt, the hood cannot be adjusted with it on. Substitute the standard bolt for the centering bolt.

1. ADJUST HOOD IN FORWARD/REARWARD

Adjust the hood by loosening the hood side hinge bolts.

Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

2. ADJUST HOOD IN VERTICAL DIRECTIONS

(a) Remove the bolts and increase or decrease the number of washers between the hinge and hood.

(b) Install the bolts again.

Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

3. ADJUST FRONT EDGE OF HOOD IN VERTICAL DIRECTION

Adjust the hood by turning the cushions.

4. ADJUST HOOD LOCK

Adjust the lock by loosening the bolts.

Torque: 7.8 N·m (80 kgf·cm, 69 in·lbf)

HOOD SUPPORT REPLACEMENT

1. REMOVE HOOD SUPPORT

- (a) Remove the bolt and hood support from the hood.

HINT:

While supporting the hood by hand, remove the hood support from the hood.

- (b) Remove the bolt and hood support.

2. IF NECESSARY, REPLACE HOOD SUPPORT

NOTICE:

Handling the hood support

- ◆ Do not disassemble the support as the cylinder is filled with pressurized gas.

- ◆ If the hood support is to be replaced, drill a 2.0 to 3.0 mm (0.079 to 0.118 in.) hole in the area shown in the illustration to completely release the high pressure gas before disposing of it.
- ◆ When drilling, chips may fly out so work carefully.
- ◆ The gas is colorless, odorless and non - toxic.
- ◆ When working, handle the hood support carefully. Never score or scratch the exposed part of the piston rod, and allow any paint or oil to get on it.
- ◆ Do not turn the piston rod and cylinder with the hood support fully extended.

3. INSTALL HOOD SUPPORT

- (a) Install the bolt and hood support to the body.
Torque: 22 N·m (224 kgf·cm, 16 ft·lbf)
- (b) Install the bolt and hood support to the hood.
Torque: 22 N·m (224 kgf·cm, 16 ft·lbf)

FRONT DOOR COMPONENTS

BO2EL-03

H23541

DISASSEMBLY

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. w/o Power window: REMOVE REGULATOR HANDLE

Pull off the snap ring with a cloth and remove the regulator handle and plate.

2. REMOVE INSIDE HANDLE BEZEL

- Remove the screw.
- Using a screwdriver, remove the inside handle bezel as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

3. w/ Power window: REMOVE POWER WINDOW SWITCH

- Using a screwdriver, remove the power window switch.

HINT:

Tape the screwdriver tip before use.

- Disconnect the connectors.

4. w/ Courtesy light: REMOVE COURTESY LIGHT

- Using a screwdriver, remove the courtesy light.

HINT:

Tape the screwdriver tip before use.

- Disconnect the connector.

5. w/o Courtesy light: REMOVE COURTESY LIGHT COVER

Using a screwdriver, remove the courtesy light cover.

HINT:

Tape the screwdriver tip before use.

6. w/ Tweeter speaker: REMOVE TWEETER SPEAKER

- Using a screwdriver, remove the tweeter speaker cover.

HINT:

Tape the screwdriver tip before use.

- Disconnect the connector.
- Remove the 3 screws and tweeter speaker.

7. REMOVE DOOR TRIM

- (a) Remove the 2 caps and 2 screws.
- (b) Insert a screwdriver between the door trim and door panel to remove the door trim.

HINT:

Tape the screwdriver tip before use.

- (c) Pull the door trim upward to remove it.

8. REMOVE DOOR ASSIST GRIP

Remove the 2 screws and door assist grip from the door trim.

9. REMOVE INNER WEATHERSTRIP**10. REMOVE LOWER WEATHERSTRIP****11. REMOVE INSIDE HANDLE**

- (a) Remove the screw.
- (b) Slide the inside handle backward to remove it.

- (c) Disconnect the 2 cables from the inside handle as shown in the illustration.

12. REMOVE SERVICE HOLE COVER

- (a) Disconnect the clamps and connector.
- (b) Remove the service hole cover.

13. REMOVE SPEAKER

- (a) Disconnect the connector.
- (b) Remove the 3 screws and speaker.

14. REMOVE OUTSIDE REAR VIEW MIRROR

- (a) w/ Remote control:
Disconnect the connector.
- (b) Remove the 3 screws and outside rear view mirror.

15. REMOVE DOOR BELT MOULDING

Using a moulding remover, remove the door belt moulding.

16. REMOVE DOOR GLASS RUN

17. REMOVE FRONT LOWER FRAME

Remove the 2 bolts, nut and front lower frame as shown in the illustration.

18. REMOVE REAR LOWER FRAME

Remove the bolt, nut and rear lower frame as shown in the illustration.

19. REMOVE DOOR GLASS

- (a) Open the door glass until the bolts appear in the service hole.
- (b) Remove the 2 bolts and door glass.

NOTICE:

Do not damage the door glass.

**20. REMOVE WINDOW REGULATOR**

- (a) w/ Power window:
Disconnect the connector.
- (b) w/ Power window:
Remove the 5 bolts, nut and window regulator.
- (c) w/o Power window:
Remove the 4 bolts, nut and window regulator.
- (d) Remove the window regulator through the service hole.

**21. REMOVE DOOR LOCK**

- (a) Disconnect the 2 links from the outside handle and door lock cylinder.
- (b) w/ Power door lock:
Disconnect the connector and remove the bolt.
- (c) Using a torx® socket wrench, remove the 3 torx® screws.

Torx® socket wrench:**T30 (Part No. 09042-00010 or locally manufactured tool)****22. REMOVE OUTSIDE HANDLE WITH DOOR LOCK CYLINDER**

- (a) Remove the 2 bolts and outside handle together with the door lock cylinder.
- (b) Remove the door lock cylinder from the outside handle.

ADJUSTMENT

1. ADJUST DOOR IN FORWARD/REARWARD AND VERTICAL DIRECTIONS

Using SST, adjust the door by loosening the body side hinge bolts.

SST 09812-00010

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

2. ADJUST DOOR IN LEFT/RIGHT AND VERTICAL DIRECTIONS

Adjust the door by loosening the door side hinge bolts.

HINT:

Substitute the standard bolt for the centering bolt (see page [BO-7](#)).

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

3. ADJUST DOOR LOCK STRIKER

- Check that the door fit and door lock linkages are adjusted correctly.
- Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a hammer.
- Tighten the striker mounting screws again.

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

REASSEMBLY

1. INSTALL OUTSIDE HANDLE WITH DOOR LOCK CYLINDER

- (a) Install the door lock cylinder to the outside handle.
- (b) Install the outside handle with door lock cylinder with the 2 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

2. INSTALL DOOR LOCK

HINT:

Apply MP grease to the sliding and rotating parts of the door lock.

- (a) Using a torx® socket wrench, install the door lock with the 3 torx® screws.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

HINT:

Apply adhesive to the 3 screws.

Adhesive: Part No. 08833-00070, THREE BOND 1324 or equivalent

- (b) w/ Power door lock:
Connect the connector and install the bolt.
Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)
- (c) Connect the 2 links to the outside handle and door lock cylinder.

3. INSTALL WINDOW REGULATOR

HINT:

Apply MP grease to the sliding and rotating parts of the window regulator.

- (a) Install the window regulator through the service hole.

- (b) w/ Power window:

Install the window regulator with the 5 bolts and nut.

Torque:

8.0 N·m (82 kgf·cm, 71 in.-lbf) for bolt

5.0 N·m (51 kgf·cm, 44 in.-lbf) for nut

HINT:

When installing the window regulator, tighten the bolts and nut in the order shown in the illustration.

- (c) w/o Power window:

Install the window regulator with the 4 bolts and nut.

Torque:

5.0 N·m (82 kgf·cm, 71 in.-lbf) for bolt

5.0 N·m (51 kgf·cm, 44 in.-lbf) for nut

HINT:

When installing the window regulator, tighten the bolts and nut in the order shown in the illustration.

- (d) w/ Power window:

Connect the connector.

4. INSTALL REAR LOWER FRAME

Install the rear lower frame with the bolt and nut.

**5. INSTALL FRONT LOWER FRAME**

Install the front lower frame with the 2 bolts and nut.

6. INSTALL DOOR GLASS RUN**7. INSTALL DOOR GLASS**

Install the door glass with the 2 bolts.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

NOTICE:

Do not damage the door glass.

8. INSTALL DOOR BELT MOULDING**9. INSTALL OUTSIDE REAR VIEW MIRROR**

(a) Install the outside rear view mirror with the 3 screws.

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

(b) w/ Remote control:

Connect the connector.

10. INSTALL SPEAKER

(a) Install the speaker with the 3 screws.

(b) Connect the connector.

**11. INSTALL SERVICE HOLE COVER**

(a) Install the service hole cover.

HINT:

- ◆ When installing the service hole cover, pull out the cables and connectors through the service hole cover.
- ◆ There should be no wrinkles or folds after attaching the service hole cover.
- ◆ After attaching the service hole cover, confirm the sealing condition.

(b) Connect the clamps and connector.

12. INSTALL INSIDE HANDLE

(a) Connect the 2 cables to the inside handle.

(b) Slide the inside handle forward to install it.

(c) Install the screw.

13. INSTALL DOOR ASSIST GRIP

Install the door assist grip to the door trim with the 2 screws..

14. INSTALL LOWER WEATHERSTRIP**15. INSTALL INNER WEATHERSTRIP**

16. INSTALL DOOR TRIM

Install the door trim with the 2 screws and 2 caps.

17. w/ Tweeter speaker:

INSTALL TWEETER SPEAKER

- (a) Install the tweeter speaker with the 3 screws, then connect the connector.
- (b) Install the tweeter speaker cover.

18. w/ Courtesy light:

INSTALL COURTESY LIGHT

- (a) Connect the connector.
- (b) Install the courtesy light.

19. w/o Courtesy light:

INSTALL COURTESY LIGHT COVER

20. w/ Power window:

INSTALL POWER WINDOW SWITCH

- (a) Connect the connectors.
- (b) Install the power window switch.

21. INSTALL INSIDE HANDLE BEZEL

Install the inside handle bezel with the screw.

**22. w/o Power window:
INSTALL REGULATOR HANDLE**

Install the regulator handle with the snap ring.

HINT:

With the door window fully closed, install the plate and the regulator handle with the snap ring as shown in the illustration.

FRONT DOOR (Double Cab) COMPONENTS

BO4PQ-01

H23267

DISASSEMBLY

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. REMOVE DOOR INSIDE BEZEL

- (a) Using a screwdriver, open the cover.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the screw.

- (c) Using a screwdriver, remove the door inside bezel, as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

2. REMOVE COURTESY LIGHT

3. REMOVE FRONT ARMREST BASE PANEL UPPER WITH POWER WINDOW SWITCH

- (a) Using a screwdriver, remove the front armrest base panel upper together with the power window switch.

HINT:

Tape the screwdriver tip before use.

- (b) Disconnect the connector.

- (c) Remove the power window switch from the front armrest base panel upper.

4. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH

Using a screwdriver, remove the front door lower frame bracket garnish.

HINT:

Tape the screwdriver tip before use.

5. REMOVE FRONT DOOR TRIM PANEL

- (a) Using a screwdriver, remove the 2 caps.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and 2 clips.

- (c) Insert a screwdriver between the front door trim panel and front door panel to remove the front door trim panel.

HINT:

Tape the screwdriver tip before use.

- (d) Pull the front door trim panel upward to remove the front door trim panel.
- (e) Remove the front door glass weatherstrip inner from the front door trim panel.
- 6. REMOVE TWEETER SPEAKER**
- 7. REMOVE OUTER REAR VIEW MIRROR**
- (a) Disconnect the connector.
- (b) Remove the 3 bolts and outer rear view mirror.
- 8. REMOVE SPEAKER**
- (a) Disconnect the connector.
- (b) Remove the 3 screws and speaker.

- 9. REMOVE FRONT DOOR INSIDE HANDLE**
- (a) Slide the front door inside handle backward to remove it.

- (b) Disconnect the 2 cables from the front door inside handle, as shown in the illustration.
- 10. REMOVE FRONT DOOR SERVICE HOLE COVER**
- (a) Using a clip remover, remove the clamps and grommets.
- (b) Remove the front door service hole cover.

NOTICE:

Do not tear the front door service hole cover.

11. REMOVE FRONT DOOR GLASS

- (a) Open the front door glass until the bolts appear in the service hole.
- (b) Remove the 2 bolts.

NOTICE:

Do not damage the door glass.

- (c) Pull the front door glass upward to remove it.

12. REMOVE FRONT DOOR GLASS RUN

13. REMOVE FRONT DOOR WINDOW FRAME MOULDING UPPER

- (a) Remove the 6 screws.
- (b) Using a screwdriver or clip remover, remove the front door window frame moulding upper.

HINT:

Tape the screwdriver tip before use.

14. REMOVE FRONT DOOR BELT MOULDING

- (a) Apply protective tape to the outer surface, as shown in the illustration, to prevent the vehicle surface from being scratched.
- (b) Using a moulding remover, remove the front door belt moulding.

15. REMOVE FRONT DOOR FRAME FRONT LOWER

- (a) Remove the 2 bolts, nut and front door frame front lower, as shown in the illustration.
- (b) Remove the front door glass run No. 2 from the front door frame front lower.

16. REMOVE FRONT DOOR FRAME REAR LOWER

Remove the bolt, nut and front door frame rear lower, as shown in the illustration.

HINT:

Remove the front door frame rear lower through the service hole.

17. REMOVE FRONT DOOR POWER WINDOW REGULATOR

- (a) Disconnect the connector.
- (b) Remove the 5 bolts.
- (c) Loosen the bolt, and remove the front door power window regulator.

HINT:

Remove the front door power window regulator through the service hole.

- (d) Remove the 3 screws and power window regulator motor from the front door power window regulator.

18. REMOVE FRONT DOOR LOCK

- (a) Disconnect the 2 control cables from the clamp.
- (b) Remove the clamp.

- (c) Remove the screw and front door lock control link protector.
- (d) Disconnect the 2 control links from the front door outside handle and front door lock cylinder.

- (e) Disconnect the connector and remove the bolt.
- (f) Using a torx® socket wrench, remove the 3 torx® screws.
Torx® socket wrench:
T30 (Part No. 09042-00010 or locally manufactured tool)
- (g) Remove the front door lock.

HINT:

Remove the front door lock through the service hole.

- (h) Remove the 2 screws and front door lock cover from the front door lock.

19. REMOVE FRONT DOOR OUTSIDE HANDLE WITH LOCK CYLINDER

- (a) Remove the service hole plug.
- (b) Remove the 2 bolts and front door outside handle together with lock cylinder.
- (c) Remove the bolt and lock cylinder from the front door outside handle.

20. REMOVE FRONT DOOR WEATHERSTRIP

Using a clip remover, remove the front door weatherstrip.

21. REMOVE FRONT DOOR WEATHERSTRIP NO. 2

ADJUSTMENT

1. ADJUST DOOR IN FORWARD/REARWARD AND VERTICAL DIRECTIONS

Using SST, adjust the door by loosening the body side hinge bolts.

SST 09812-00010

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

2. ADJUST DOOR IN LEFT/RIGHT AND VERTICAL DIRECTIONS

Adjust the door by loosening the door side hinge bolts.

HINT:

Substitute the standard bolt for the centering bolt (see page [BO-7](#)).

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

3. ADJUST DOOR LOCK STRIKER

- (a) Check that the door fit and door lock linkages are adjusted correctly.
- (b) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a hammer.
- (c) Tighten the striker mounting screws again.

Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

REASSEMBLY

1. **INSTALL FRONT DOOR WEATHERSTRIP NO. 2**
2. **INSTALL FRONT DOOR WEATHERSTRIP**
3. **INSTALL FRONT DOOR OUTSIDE HANDLE WITH LOCK CYLINDER**
 - (a) Install the lock cylinder to the front door outside handle with the bolt.
Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)
 - (b) Install the front door outside handle with lock cylinder with the 2 bolts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)
 - (c) Install the service hole plug.

4. **INSTALL FRONT DOOR LOCK**

HINT:

Apply MP grease to the sliding and rotating parts of the front door lock.

- (a) Install the front door lock cover to the front door lock with the 2 screws.

- (b) Using a torx[®] socket wrench, install the front door lock with the 3 torx[®] screws.

Torx[®] socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

Torque:

5.0 N·m (51 kgf·cm, 44 in.-lbf) for bolt

5.0 N·m (51 kgf·cm, 44 in.-lbf) for screw

HINT:

Apply adhesive to the 3 screws.

Adhesive: Part No. 08833-00070, THREE BOND 1324 or equivalent.

- (c) Connect the connector and tighten the bolt.
- (d) Connect the 2 control links to the front door outside handle and front door lock cylinder.
- (e) Install the front door lock control link protector with the screw.
- (f) Install the clamp.
- (g) Connect the 2 control cables to the clamp.

5. INSTALL FRONT DOOR POWER WINDOW REGULATOR

HINT:

Apply MP grease to the sliding and rotating parts of the front door power window regulator.

- (a) Install the power window regulator motor to the front door power window regulator with the 3 screws.

- (b) Install the front door power window regulator with the 6 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

HINT:

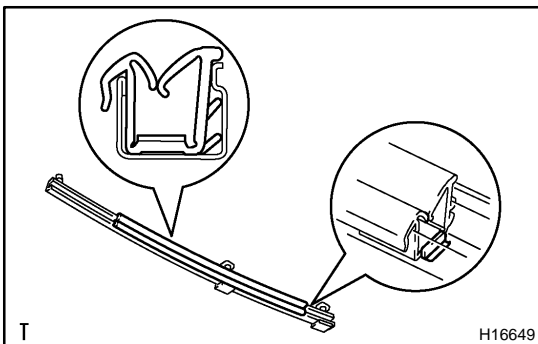

Tighten the 6 bolts in the order shown in the illustration.

- (c) Connect the connector.

6. INSTALL FRONT DOOR FRAME REAR LOWER

Install the front door frame rear lower with the bolt and nut.

7. INSTALL FRONT DOOR FRAME FRONT LOWER

- (a) Install the front door glass run No. 2 to the front door frame front lower.

- (b) Install the front door frame front lower with the 2 bolts and nut.

8. INSTALL FRONT DOOR BELT MOULDING

9. INSTALL FRONT DOOR WINDOW FRAME MOULDING UPPER

10. INSTALL FRONT DOOR GLASS RUN

11. INSTALL FRONT DOOR GLASS

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

12. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Install the front door service hole cover.

HINT:

- ◆ When installing the service hole cover, pull out the cables and connectors through the service hole cover.
- ◆ There should be no wrinkles or folds after attaching the service hole cover.
- ◆ After attaching the service hole cover, confirm the sealing condition.

(b) Connect the clamps and connector.

13. INSTALL FRONT DOOR INSIDE HANDLE

(a) Connect the 2 cables to the inside handle.

(b) Slide the inside handle forward to install it.

14. INSTALL SPEAKER

15. INSTALL OUTER REAR VIEW MIRROR

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

16. INSTALL TWEETER SPEAKER

17. INSTALL FRONT DOOR TRIM PANEL

18. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH

19. INSTALL FRONT ARMREST BASE PANEL UPPER WITH POWER WINDOW SWITCH

20. INSTALL COURTESY LIGHT

21. INSTALL DOOR INSIDE BEZEL

DISASSEMBLY

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. REMOVE DOOR INSIDE BEZEL

- (a) Using a screwdriver, open the cover.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the screw.

- (c) Using a screwdriver, remove the door inside bezel, as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

2. REMOVE COURTESY LIGHT

3. REMOVE REAR ARMREST BASE PANEL UPPER

- (a) Remove the rear ash receptacle.

- (b) Using a screwdriver, remove the rear armrest base panel upper together with the power window switch.

HINT:

Tape the screwdriver tip before use.

- (c) Disconnect the connector.

- (d) Remove the power window switch from the rear armrest base panel upper.

4. REMOVE REAR DOOR TRIM PANEL

- (a) Using a screwdriver, remove the cap.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the screw and 2 clips.

- (c) Insert a screwdriver between the rear door trim panel and door panel to remove the rear door trim panel.

HINT:

Tape the screwdriver tip before use.

- (d) Pull the rear door trim panel upward to remove the rear door trim panel.

- (e) Remove the rear door weatherstrip inner from the rear door trim panel.

5. REMOVE SPEAKER

- (a) Disconnect the connector.

- (b) Remove the 3 screws and speaker.

**6. REMOVE REAR DOOR INSIDE HANDLE**

- (a) Slide the rear door inside handle backward to remove it.

- (b) Disconnect the 2 cables from the rear door inside handle, as shown in the illustration.

7. REMOVE REAR DOOR SERVICE HOLE COVER

- (a) Using a clip remover, remove the clamp and grommets.
 (b) Remove the rear door service hole cover.

NOTICE:

Do not tear the rear door service hole cover.

8. REMOVE REAR DOOR GLASS

- (a) Open the rear door glass until the bolts appear in the service hole.
 (b) Remove the 2 bolts.

NOTICE:

Do not damage the door glass.

- (c) Pull the rear door glass upward to remove it.

9. REMOVE REAR DOOR GLASS RUN**10. REMOVE REAR DOOR WINDOW FRAME MOULDING UPPER**

- (a) Remove the 7 screws.
 (b) Using a screwdriver or clip remover, remove the rear door window frame moulding upper.

HINT:

Tape the screwdriver tip before use.

11. REMOVE REAR DOOR BELT MOULDING

- (a) Apply protective tape to the outer surface, as shown in the illustration, to prevent the vehicle surface from being scratched.
- (b) Using a moulding remover, remove the rear door belt moulding.

12. REMOVE REAR DOOR WINDOW FRAME REAR LOWER

Remove the bolt, nut and rear door window frame rear lower, as shown in the illustration.

HINT:

Remove the rear door window frame rear lower through the service hole.

13. REMOVE REAR DOOR POWER WINDOW REGULATOR

- (a) Disconnect the connector.
- (b) Remove the 5 bolts.
- (c) Loosen the bolt, and remove the rear door power window regulator.

HINT:

Remove the rear door power window regulator through the service hole.

- (d) Remove the 3 screws and power window regulator motor from the rear door power window regulator.

14. REMOVE REAR DOOR LOCK

- (a) Disconnect the 2 control cables from the clamp.
- (b) Remove the clamp.
- (c) Disconnect the connector.

- (d) Using a torx® socket wrench, remove the 3 torx® screws.
Torx® socket wrench:
T30 (Part No. 09042-00010 or locally manufactured tool)

- (e) Remove the rear door lock.

HINT:

Remove the rear door lock through the service hole.

15. REMOVE REAR DOOR OUTSIDE HANDLE

Remove the 2 bolts and rear door outside handle.

16. REMOVE REAR DOOR WEATHERSTRIP

Using a clip remover, remove the rear door weatherstrip.

17. REMOVE REAR DOOR WEATHERSTRIP NO. 2

REAR DOOR (Double Cab) COMPONENTS

BO4PU-01

H23256

ADJUSTMENT

1. ADJUST DOOR IN FORWARD/ REARWARD AND VERTICAL DIRECTIONS

- Remove the front and rear door scuff plates.
- Remove the center pillar lower garnish.
- Remove the front seat outer belt (see page [BO-133](#)).
- Loosen the body side hinge nuts to adjust.
Torque: 23 N·m (230 kgf-cm, 17 ft-lbf)
- Install the front seat outer belt and center pillar lower garnish (see page [BO-133](#)).
- Install the front and rear door scuff plates.

2. ADJUST DOOR IN LEFT/RIGHT AND VERTICAL DIRECTIONS

Loosen the door side hinge bolts to adjust.

Torque: 23 N·m (230 kgf-cm, 17 ft-lbf)

3. ADJUST DOOR LOCK STRIKER

- Check that the door fit and door lock linkages are adjusted correctly.
- Loosen the striker mounting screws to adjust.
Torque: 23 N·m (230 kgf-cm, 17 ft-lbf)
- Using a plastic hammer, tap the striker to adjust it.

REASSEMBLY

1. INSTALL REAR DOOR WEATHERSTRIP NO. 2
2. INSTALL REAR DOOR WEATHERSTRIP
3. INSTALL REAR DOOR OUTSIDE HANDLE
Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

4. INSTALL REAR DOOR LOCK

HINT:

Apply MP grease to the sliding and rotating parts of the front door lock.

- (a) Using a torx® socket wrench, install the rear door lock with the 3 torx® screws.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

Torque: 5 N·m (51 kgf·cm, 44 in.-lbf)

HINT:

Apply adhesive to the 3 screws.

Adhesive: Part No. 08833-00070, THREE BOND 1324 or equivalent.

- (b) Connect the connector.
- (c) Install the clamp.
- (d) Connect the 2 control cables to the clamp.

5. INSTALL REAR DOOR POWER WINDOW REGULATOR

HINT:

Apply MP grease to the rear door power window regulator.

- (a) Install the power window regulator motor to the rear door power window regulator with the 3 screws.

(b) Install the rear door power window regulator with the 6 bolts.

Torque: 8.0 N-m (82 kgf-cm, 71 in.-lbf)

HINT:

Tighten the 6 bolts in the order shown in the illustration.

(c) Connect the connector.

6. INSTALL REAR DOOR WINDOW FRAME REAR LOWER

7. INSTALL REAR DOOR BELT MOULDING

8. INSTALL REAR DOOR WINDOW FRAME MOULDING UPPER

9. INSTALL REAR DOOR GLASS RUN

10. INSTALL REAR DOOR GLASS

Torque: 8.0 N-m (82 kgf-cm, 71 in.-lbf)

11. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Install the service hole cover.

HINT:

- ◆ When installing the service hole cover, pull out the cables and connectors through the service hole cover.
- ◆ There should be no wrinkles or folds after attaching the service hole cover.
- ◆ After attaching the service hole cover, confirm the sealing condition.

(b) Connect the clamps and connector.

12. INSTALL REAR DOOR INSIDE HANDLE

(a) Connect the 2 cables to the inside handle.

(b) Slide the inside handle forward to install it.

(c) Install the screw.

13. INSTALL SPEAKER

14. INSTALL REAR DOOR TRIM PANEL

15. INSTALL REAR ARMREST BACE PANEL UPPER

16. INSTALL COURTESY LIGHT

17. INSTALL DOOR INSIDE BEZEL

ACCESS DOOR COMPONENTS

BO2EN-02

H09438

DISASSEMBLY

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. REMOVE DOOR INSIDE HANDLE BEZEL

- (a) Remove the screw.
- (b) Using a screwdriver, remove the door inside handle bezel.

HINT:

Tape the screwdriver tip before use.

2. REMOVE DOOR ARMREST

- (a) Remove the screw.
- (b) Using a screwdriver, remove the door armrest.

HINT:

Tape the screwdriver tip before use.

3. REMOVE ACCESS DOOR TRIM

- (a) Release the quarter window lock.

- (b) Insert a screwdriver between the door trim and door panel to remove the door trim.

HINT:

Tape the screwdriver tip before use.

4. REMOVE DOOR ARMREST BASE

Remove the 2 screws and door armrest base.

5. REMOVE SPEAKER

- (a) Disconnect the connector.
- (b) Remove the 4 screws and speaker.

6. REMOVE DOOR INSIDE HANDLE

- (a) Remove the screw and slide the inside handle forward.

- (b) Disconnect the cable as shown in the illustration.

7. REMOVE SERVICE HOLE COVER

- (a) Disconnect the connector.
- (b) Remove the service hole cover.

HINT:

Bring out the cable and connector through the service hole cover.

**8. REMOVE ACCESS DOOR CONTROLLER**

- (a) Disconnect the 2 cables and 2 links.
- (b) Disengage the 2 clamps.
- (c) Remove the 3 bolts and access door controller.

9. REMOVE LOWER DOOR LOCK

- (a) Disconnect the connector.

- (b) Using a torx® socket wrench, remove the 3 torx® screws and lower door lock.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

10. REMOVE UPPER DOOR LOCK

- (a) Disconnect the connector.

- (b) Remove the 3 bolts and upper door lock.

11. REMOVE OUTSIDE HANDLE

Remove the 2 bolts and outside handle.

**12. REMOVE CANCEL LEVER**

Using a torx® socket wrench, remove the 2 torx® screws and cancel lever.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

**13. REMOVE OUTER WEATHERSTRIP**

- (a) Remove the 2 screws and 4 clips.
- (b) Using a clip remover, remove the outer weatherstrip.

14. REMOVE INNER WEATHERSTRIP

Using a clip remover, remove the inner weatherstrip.

**15. REMOVE QUARTER WINDOW AND WEATHERSTRIP**

- (a) Remove the 2 bolts, 4 nuts and quarter window.
- (b) Remove the weatherstrip.

16. REMOVE QUARTER WINDOW LOCK AND HINGES

- (a) Remove the screws and window lock from the quarter window.
- (b) Remove the 2 screws and 2 hinges from the quarter window.

ADJUSTMENT

1. ADJUST DOOR IN FORWARD/REARWARD AND VERTICAL DIRECTIONS

Adjust the door by loosening the body side hinge bolts.

Torque: 23 N·m (235 kgf-cm, 17 ft-lbf)

2. ADJUST DOOR IN LEFT/RIGHT AND VERTICAL DIRECTIONS

Adjust the door by loosening the door side bolts.

HINT:

Substitute the standard bolt for the centering bolt (see page [BO-7](#)).

Torque: 23 N·m (235 kgf-cm, 17 ft-lbf)

3. ADJUST DOOR LOCK UPPER STRIKER

- Check that the door fit and door lock linkages are adjusted correctly.
- Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a hammer.
- Tighten the striker mounting screws again.

Torque: 23 N·m (235 kgf-cm, 17 ft-lbf)

4. ADJUST DOOR LOCK LOWER STRIKER

- Check that the door fit and door lock linkages are adjusted correctly.
- Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a hammer.
- Tighten the striker mounting screws again.

Torque: 23 N·m (235 kgf-cm, 17 ft-lbf)

REASSEMBLY

1. **INSTALL QUARTER WINDOW LOCK AND HINGES**
 - (a) Install the 2 hinges to the quarter window with the 2 screws.
 - (b) Install the window lock to the quarter window with the screw.

2. **INSTALL QUARTER WINDOW AND WEATHERSTRIP**
 - (a) Install the weatherstrip.
 - (b) Install the quarter window with the 2 bolts and 4 nuts.
3. **INSTALL INNER WEATHERSTRIP**

4. **INSTALL OUTER WEATHERSTRIP**
Install the outer weatherstrip with the 2 screws and 4 clips.

5. **INSTALL CANCEL LEVER**
Using a torx® socket wrench, install the cancel lever with the 2 torx® screws.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

6. **INSTALL OUTSIDE HANDLE**

Install the outside handle with the 2 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

7. **INSTALL UPPER DOOR LOCK**

(a) Install the upper door lock with the 3 bolts.

Torque: 12.5 N·m (128 kgf·cm, 9 ft-lbf)

(b) Connect the connector.

8. INSTALL LOWER DOOR LOCK

- (a) Using a torx® socket wrench, install the lower door lock with the 3 torx® screws.

Torx® socket wrench:

T30 (Part No. 09042-00010 or locally manufactured tool)

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (b) Connect the connector.

HINT:

Apply adhesive to the 3 torx® screws.

Adhesive: Part No. 08833-00070, THREE BOND 1342 or equivalent

9. INSTALL ACCESS DOOR CONTROLLER

HINT:

Apply MP grease to the sliding and rotating parts of the access door controller.

- (a) Install the access door controller with the 3 bolts.

Torque: 12.5 N·m (128 kgf·cm, 9 ft·lbf)

- (b) Attach the 2 clamps.

- (c) Connect the 2 cables and 2 links.

10. INSTALL SERVICE HOLE COVER

- (a) Install the service hole cover.

HINT:

- ◆ When installing the service hole cover, pull out the cable and connector through the service hole cover.
- ◆ There should be no wrinkles or folds after attaching the service hole cover.
- ◆ After attaching the service hole cover, confirm the sealing condition.

- (b) Connect the connector.

**11. INSTALL DOOR INSIDE HANDLE**

- (a) Connect the cable to the inside handle.
- (b) Install the inside handle with the screw.

12. INSTALL SPEAKER

- (a) Install the speaker with the 4 screws.
- (b) Connect the connector.

13. INSTALL DOOR ARMREST BASE

Install the door armrest base with the 2 screws.

**14. INSTALL ACCESS DOOR TRIM**

- (a) Install the door trim.
- (b) Lock the quarter window lock.

15. INSTALL DOOR ARMREST

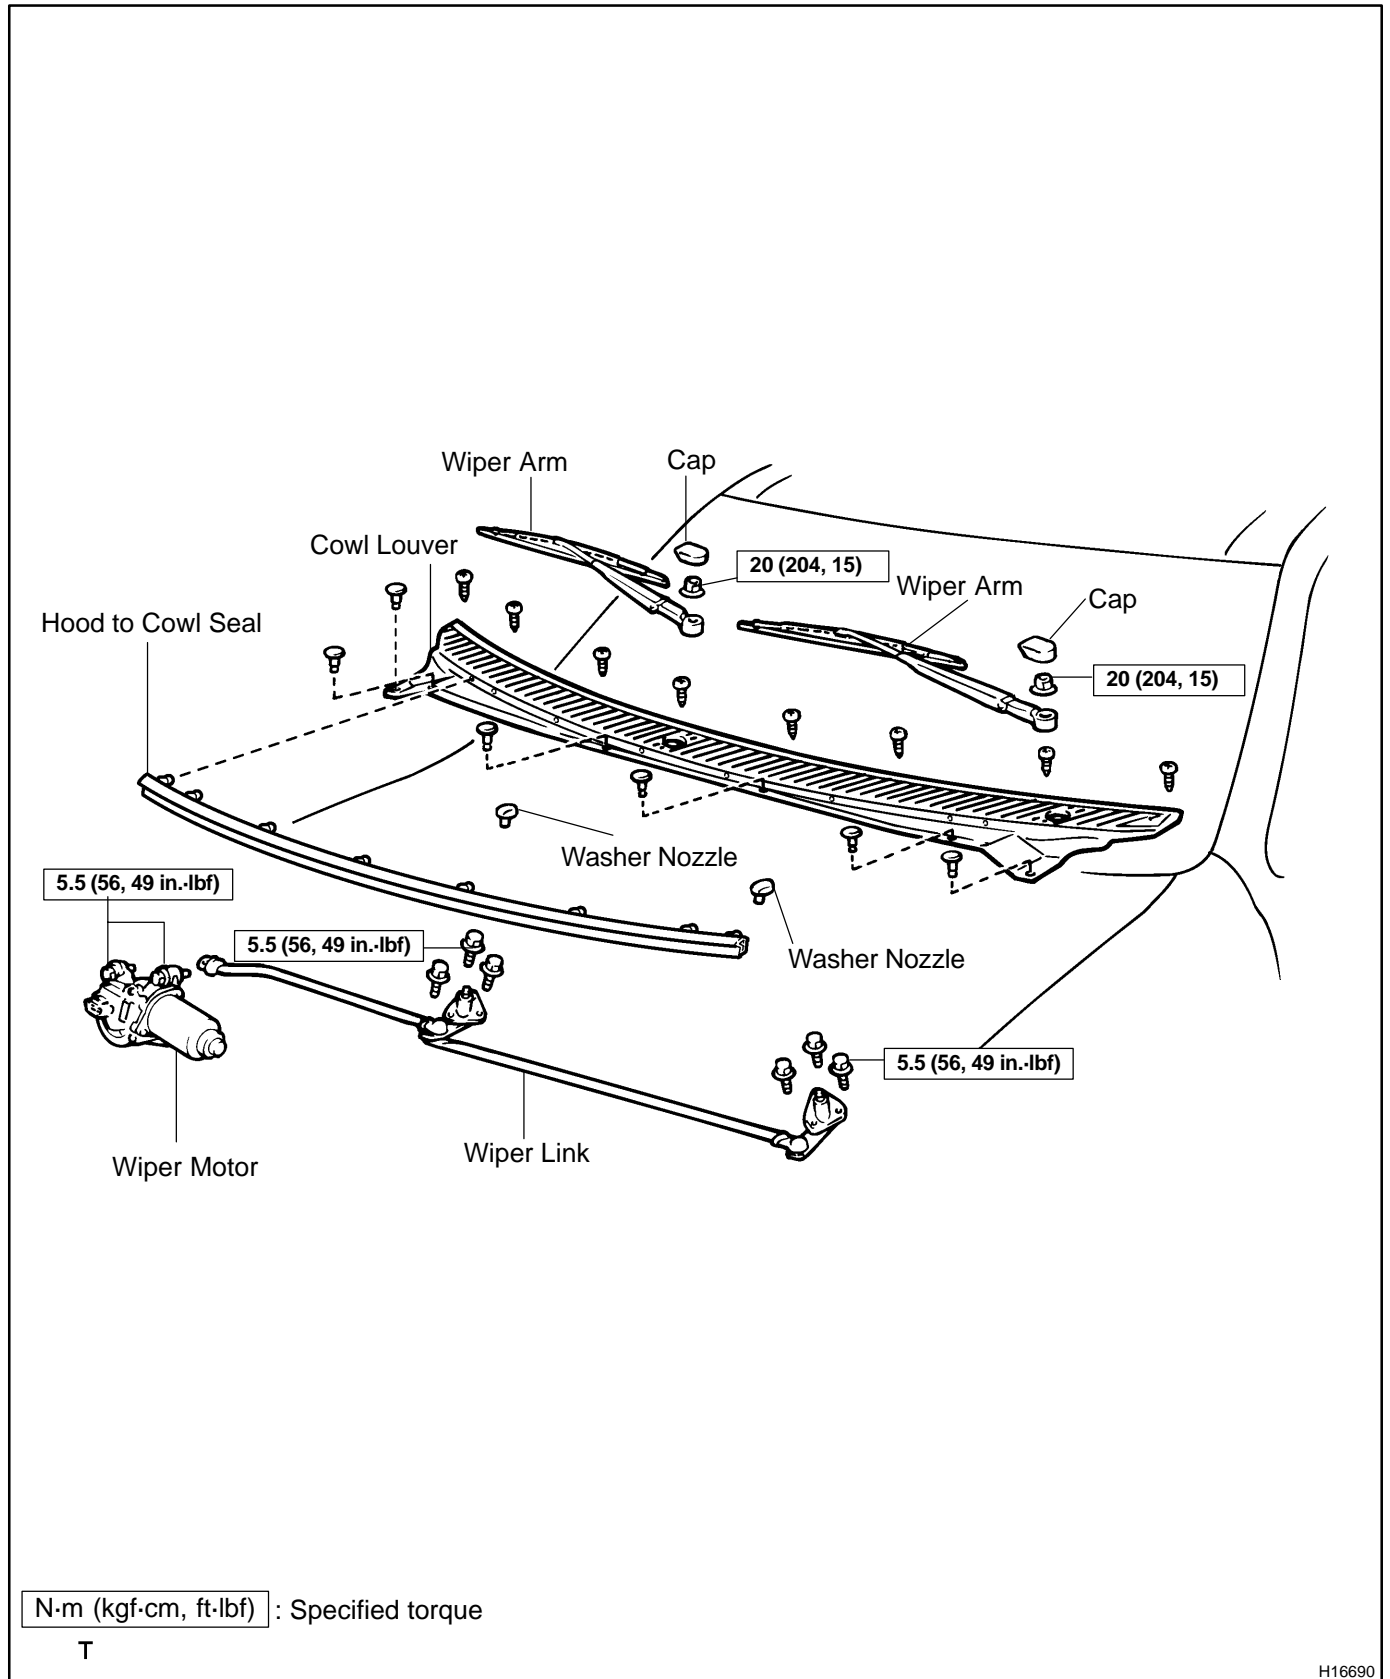

Install the door armrest with the screw.

16. INSTALL DOOR INSIDE HANDLE BEZEL

Install the door inside handle bezel with the screw.

FRONT WIPER AND WASHER COMPONENTS

B001A-04

H16690

REMOVAL

1. REMOVE WIPER ARMS

- (a) Using a screwdriver, remove the 2 caps.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 nuts and wiper arms.

2. REMOVE COWL TOP VENTILATOR LOUVER

- (a) Using a clip remover, remove the 6 clips.

- (b) Remove the 8 screws and cowl top ventilator louver.

3. REMOVE HOOD TO COWL TOP SEAL

Remove the hood to cowl top seal from the cowl top ventilator louver.

4. REMOVE WIPER MOTOR

- (a) Disconnect the connector.

- (b) Unfasten the 4 bolts.

- (c) Disconnect the wiper motor from the wiper link, then remove the wiper motor.

5. REMOVE WIPER LINK

- (a) Remove the 6 bolts.

- (b) Remove the wiper link through the service hole.

6. REMOVE WASHER NOZZLE

- (a) Disconnect the washer hose.

- (b) Using a screwdriver, remove the nozzle.

HINT:

Tape the screwdriver tip before use.

- (c) Perform the same procedure on the other side.

INSPECTION

1. INSPECT WASHER NOZZLE

- (a) While operating the washer, check whether the upper point where the washer fluid hits the windshield and the surge area are within the range indicated by the hatched line.

A	Approx. 150 mm (5.90 in.)
B	Approx. 50 mm (1.97 in.)
C	Approx. 312.3 mm (12.295 in.)
D	Approx. 299.2 mm (11.780 in.)

- (b) Check if the lower point where the washer fluid hits the windshield is within the range of the wiping pattern (the area of the glass which is wiped by the wiper blades).

2. ADJUST WASHER NOZZLE

Using a tool like the one shown in the illustration, change the direction of the nozzle hole to adjust the point where washer fluid hits the windshield.

ADJUSTMENT

ADJUST WASHER NOZZLE

Using a tool like the one shown in the illustration, change the direction of the nozzle hole to adjust the point where washer fluid hits the windshield.

INSTALLATION

1. INSTALL WASHER NOZZLES

2. INSTALL WIPER LINK

Install the wiper link through the service hole, then torque the 6 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

3. INSTALL WIPER MOTOR

(a) Install the wiper motor to the wiper link.

HINT:

When installing the wiper motor, connect the claw of wiper link to the cowl panel shown in the illustration.

(b) Torque the 4 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

(c) Connect the connector.

4. INSTALL HOOD TO COWL TOP SEAL

Install the hood to cowl top seal to the cowl top ventilator louver.

5. INSTALL COWL TOP VENTILATOR LOUVER

Install the cowl top ventilator louver with the 8 screws and 6 clips.

6. INSTALL WIPER ARMS

(a) Operate the wiper once and turn the wiper switch OFF.

(b) Install the wiper arms and tighten the nuts by hand.

(c) Adjust the installation positions of the wiper arms to the positions shown in the illustration.

A: Approx. 25.4 mm (1.000 in)

B: Approx. 40.0 mm (1.574 in)

HINT:

When installing the wiper arms, make sure that the tips of the blades are not beyond the ceramic edge as indicated "C" part in the illustration.

(d) Torque the 2 nuts.

Torque: 20 N·m (205 kgf·cm, 15 ft-lbf)

(e) Install the 2 caps.

B17041

REMOVAL

1. HEAT MOULDING

Using a heat light, heat the moulding between 20 to 30°C (68 to 86 °F).

NOTICE:

Do not heat the moulding excessively.

2. REMOVE MOULDING

- (a) Insert piano wire between the vehicle body and moulding.
- (b) Tie objects that can serve a handle (for example, wooden blocks) to all wire ends.
- (c) Cut off the double-sided tape by pulling the piano wire as shown in the illustration.

NOTICE:

Do not damage the body.

- (d) Remove the moulding.

INSTALLATION

1. CLEAN BODY MOUNTING SURFACE

- (a) Using a heat light, heat the body mounting surface between 40 to 60°C (104 to 140°F).

NOTICE:

Do not heat the body excessively.

- (b) Remove the double-sided tape from the body.
 (c) Wipe off the stains with cleaner.

2. INSTALL MOULDING

- (a) Using a heat light, heat the body and moulding.

Heating Temperature:

Item	Temperature
Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the body and moulding excessively.

- (b) Remove the moulding peeling paper from the face of the moulding.

NOTICE:

After removing the peeling paper, keep the exposed adhesive away from dirt and other contaminants.

- (c) Align the bosses with their corresponding holes on the body, and press the moulding firmly.

NOTICE:

Do not apply excessive force onto the moulding, but steady pressure with your thumbs.

WHEEL ARCH MOULDING COMPONENTS

H21129

WHEEL OPENING MOULDING COMPONENTS

BO2EV-03

REMOVAL

1. Resin bumper type:

REMOVE FRONT BUMPER EXTENSION

Remove the 4 nuts and front bumper extension.

NOTICE:

If the protector are damaged, exchange them for new protector.

2. w/ Front mudguard:

REMOVE FRONT MUDGUARD

Remove the 4 screws and front mudguard.

3. REMOVE FRONT FENDER OUTSIDE MOULDING

(a) Remove the 6 screws.

(b) Using a heat light, heat the moulding to 20 to 30°C (68 to 86°F).

NOTICE:

Do not heat the moulding excessively.

(c) Cut off the adhesive tape with a knife.

NOTICE:

Do not damage the body.

(d) Remove the moulding.

NOTICE:

If the clips are damaged, exchange them for new clips.

4. w/ Rear mudguard:

REMOVE REAR MUDGUARD

Remove the 4 screws and rear mudguard.

5. REMOVE QUARTER OUTSIDE MOULDING

(a) Remove the 6 screws.

(b) Using a heat light, heat the moulding to 20 to 30°C (68 to 86°F).

NOTICE:

Do not heat the moulding excessively.

(c) Cut off the adhesive tape with a knife.

NOTICE:

Do not damage the body.

(d) Remove the moulding.

NOTICE:

If the clips are damaged, exchange them for new clips.

INSTALLATION

1. INSTALL QUARTER OUTSIDE MOULDING

- (a) Clean the body mounting surface.
 - (1) Using a heat light, heat the body mounting surface to 40 to 60°C (104 to 140°F).
 - (2) Remove the protector from the body.
 - (3) Wipe off the stains with cleaner.

- (4) Install a new protector as shown in the illustration.
- (b) Install the quarter outside moulding.
 - (1) Using a heat light, heat the body and moulding.
Body: 40 to 60°C (104 to 140°F)
Moulding: 20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the body and moulding excessively.

- (2) Remove the moulding release sheet from the face of the moulding.

NOTICE:

When removing the moulding release sheet, be careful that dirt or dust will not adhere to the face of the moulding.

- (3) Align the bosses with their corresponding holes on the body and press the moulding firmly.

NOTICE:

Do not apply excessive force onto the moulding, but steady pressure with your thumbs.

- (4) Install the 6 screws.

2. w/ Rear mudguard:

INSTALL REAR MUDGUARD

Install the rear mudguard with the 4 screws.

3. INSTALL FRONT FENDER OUTSIDE MOULDING

- (a) Clean the body mounting surface.
 - (1) Using a heat light, heat the body mounting surface to 40 to 60°C (104 to 140°F).
 - (2) Remove the protector from the body.
 - (3) Wipe off the stains with cleaner.

- (4) Install a new protector as shown in the illustration.
- (b) Install the front fender outside moulding.
 - (1) Using a heat light, heat the body and moulding.
Body: 40 to 60°C (104 to 140°F)
Moulding: 20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the body and moulding excessively.

- (2) Remove the moulding release sheet from the face of the moulding.

NOTICE:

When removing the moulding release sheet, be careful that dirt or dust will not adhere to the face of the moulding.

- (3) Align the bosses with their corresponding holes on the body, and press the moulding firmly.

NOTICE:

Do not apply excessive force onto the moulding, but steady pressure with your thumbs.

- (4) Install the 6 screws.

4. w/ Rear mudguard:**INSTALL FRONT MUDGUARD**

Install the front mudguard with the 4 screws.

**5. Resin bumper type:****INSTALL FRONT BUMPER EXTENSION**

- (a) Install the new protector as shown in the illustration.

- (b) Install the front bumper extension with the 4 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

ROOF DRIP SIDE FINISH MOULDING COMPONENTS

BO0IL-04

Standard cab:

◆ Roof Drip Side Finish Moulding

Access cab:

◆ Roof Drip Side Finish Moulding

T ◆ Non-reusable part

H11362

REMOVAL

1. REMOVE ENDS OF MOULDING

- (a) Apply protective tape to the outer surface as shown in illustration, to keep the surface from being scratched.
- (b) Using a heat light, heat the moulding to 20 to 30 °C (68 to 86 °F).

NOTICE:

Do not heat the moulding excessively.

- (c) Using a scraper, pull off the roof drip side finish moulding from front end and rear end.

HINT:

Tape the scraper tip before use.

2. REMOVE MOULDING AND ADHESIVE

- (a) Pull off the moulding by cutting the adhesive with a knife.
- (b) Remove the moulding

NOTICE:

Do not damage the body with the knife.

INSTALLATION

1. CLEAN CONTACT SURFACE OF BODY

- (a) Using a heat light, heat the body surface 40 to 60 °C (104 to 140 °F).

NOTICE:

Do not heat the body excessively.

- (b) Using a knife, cut away any rough areas on the body.

NOTICE:

Be careful not to damage the body.

- (c) Wipe off stains with cleaner.

2. COAT CONTACT SURFACE OF BODY WITH PRIMER "M"

Using a brush, coat the body surface except the front and rear end with Primer M as shown in the illustration.

Front end: 23 mm (0.91 in.) + 8 mm (0.31 in.) or less

Rear end: 70 mm (2.76 in.) + 12 mm (0.47 in.) or less

NOTICE:

- ◆ Let the primer coating dry for 3 minutes or more.
- ◆ Do not coat to the adhesive.
- ◆ Do not keep any of the opened Primer M for later use.

3. INSTALL NEW MOULDING

- (a) Using a heat light, heat the body and moulding.

Body: 40 to 60 °C (104 to 140 °F)

Moulding: 20 to 30 °C (68 to 86 °F)

NOTICE:

Do not heat the moulding excessively.

- (b) Lift the moulding release sheet from face of the moulding.

NOTICE:

When the moulding release sheet is removed, make sure that no dirt or dust can get onto the uncoated area.

- (c) Install the moulding.

REMOVAL

1. **Access cab (Standard body type):**
REMOVE REAR BODY SIDE PANEL PROTECTOR

Using a moulding remover, remove the 2 protectors.

NOTICE:

- ◆ Each protector has 21 clips as shown in the illustration.
- ◆ Be careful not to damage the clips.

2. **Access cab (Wide body type):**
REMOVE REAR BODY SIDE PANEL PROTECTOR

Using a moulding remover, remove the 2 protectors.

NOTICE:

- ◆ Each protector has 19 clips as shown in the illustration.
- ◆ Be careful not to damage the clips.

3. **Access cab (Standard body type), Standard cab:**
REMOVE TAIL GATE PROTECTOR

- (a) Remove the 6 pins.
- (b) Using a clip remover, remove the protector and 10 clips.

4. **Access cab (Wide body type) only:**
REMOVE TAIL GATE PROTECTOR

- (a) Using a torx® socket wrench (T30), remove the 4 screws.
- (b) Using a moulding remover, remove the protector and 8 clips.

5. Double cab:

REMOVE REAR BODY SIDE PANEL PROTECTOR

Using a moulding remover, remove the 2 protectors.

- (a) Using a torx® socket wrench (T30), remove the 4 screws.
- (b) Using a moulding remover, remove the protector and 8 clips.

NOTICE:

- ◆ Each protector has 22 clips (3 types) as shown in the illustration.
- ◆ Be careful not to damage the clips.

6. Double cab:

REMOVE TAIL GATE PROTECTOR

- (a) Remove the 6 pins.

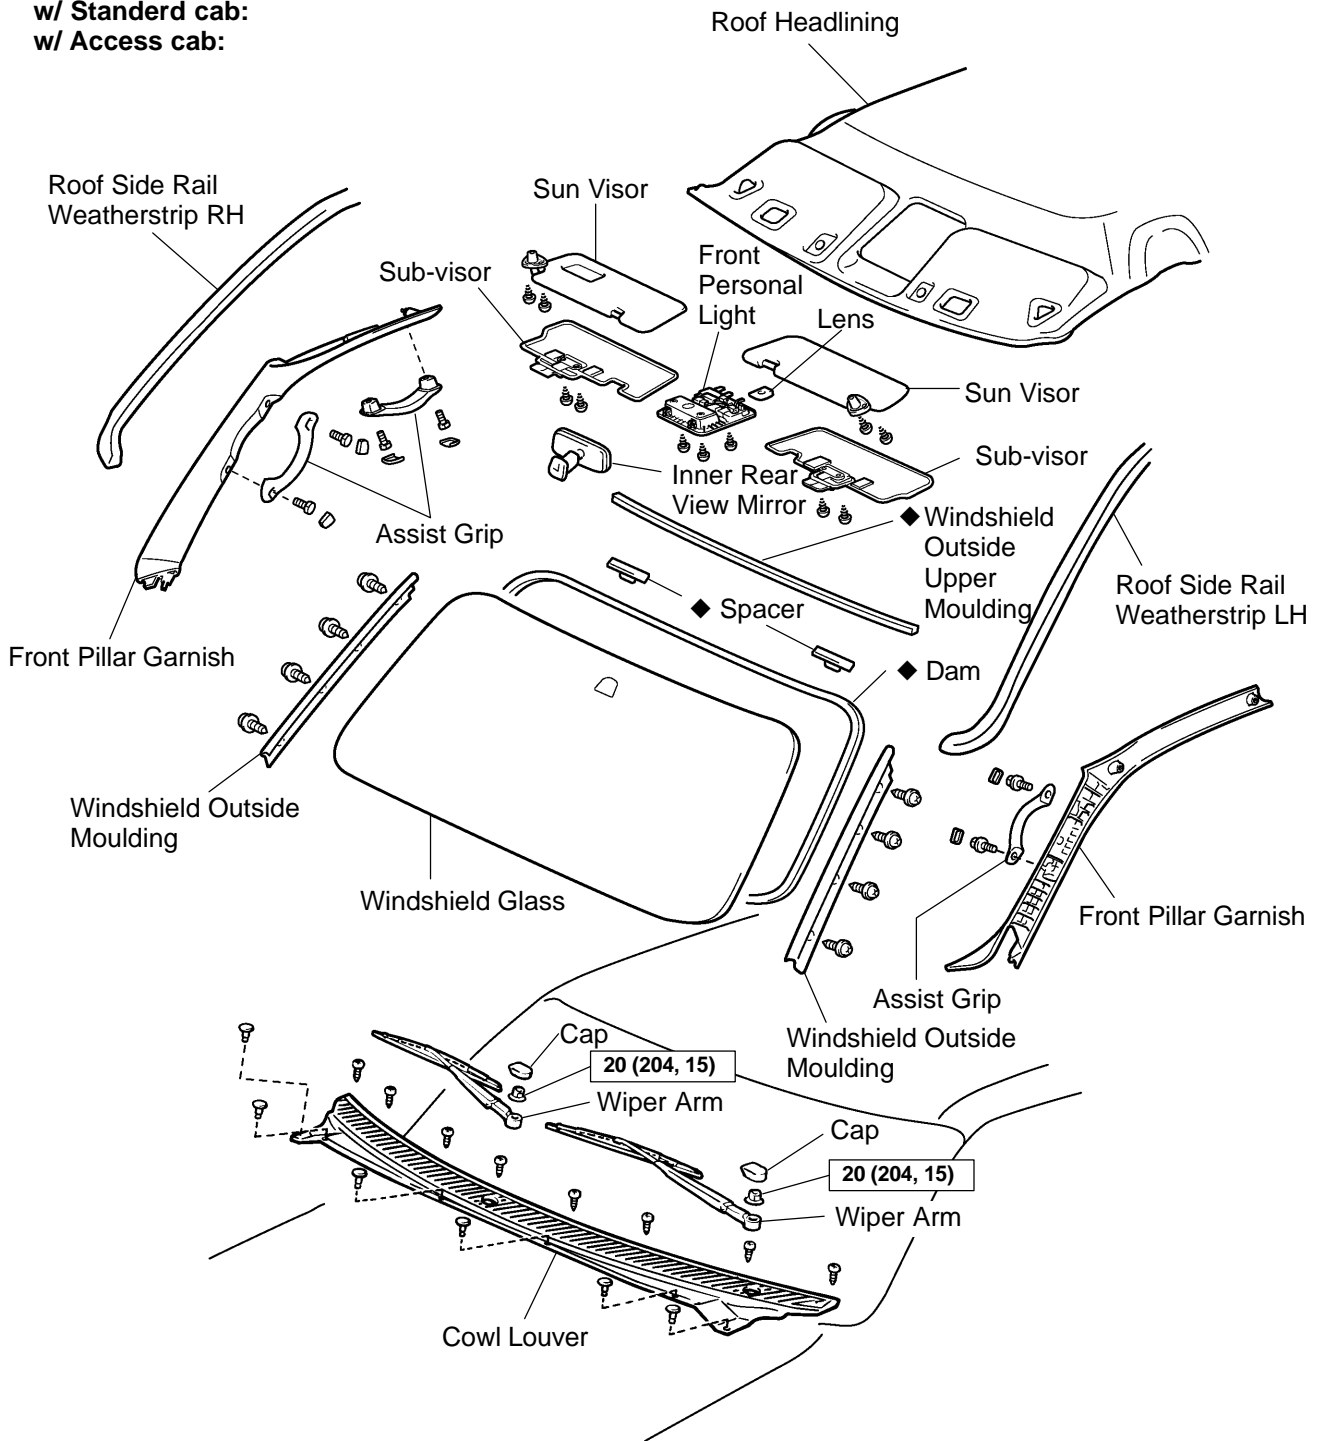

INSTALLATION

Installation is in the reverse order of removal (see page [BO-66](#)).

REMOVAL

HINT:

While supporting the hood by hand, remove the hood support from the hood.

1. REMOVE INNER REAR VIEW MIRROR

Remove the inner rear view mirror as shown in the illustration.

2. REMOVE ASSIST GRIPS

(a) Using a screwdriver, remove the caps.

HINT:

Tape the screwdriver tip before use.

(b) Driver side:

Using a torx® driver, remove the 2 torx® screws and assist grip.

Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)

(c) Standard cab, Access cab, Passenger side:

Using a torx® driver, remove the 4 torx® screws and 2 assist grips.

Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)

(d) Double cab cab, Passenger side:

Using a torx® driver, remove the 2 torx® screws and assist grips.

Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)

3. REMOVE FRONT PILLAR GARNISH

(a) Using a screwdriver, remove the front pillar garnish.

HINT:

Tape the screwdriver tip before use.

(b) Employ the same manner described above to the other side.

4. REMOVE SUN VISORS

(a) Remove the 4 screws and 2 sun visors.

(b) w/ Light:

Disconnect the connector.

5. REMOVE SUB-VISORS

Remove the 4 screws and 2 sub-visors.

**6. REMOVE FRONT PERSONAL LIGHT**

(a) Using a screwdriver, remove the left side lens.

HINT:

Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a screwdriver, rotate the clip by 90° and remove it.

HINT:

Tape the screwdriver tip before use.

(d) Remove the front personal light, then disconnect the connector.

**7. w/ Sliding roof:****REMOVE ROOF CONSOLE BOX**

(a) Remove the 2 screws.

(b) Using a screwdriver, remove the roof console box.

HINT:

Tape the screwdriver tip before use.

(c) Disconnect the connectors.

**8. w/o Sliding roof:****REMOVE ROOF CONSOLE BOX**

(a) Remove the 4 screws.

(b) Using a screwdriver, remove the roof console box.

HINT:

Tape the screwdriver tip before use.

(c) Disconnect the connectors.

9. REMOVE SUN VISOR HOLDERS

Remove the 2 screws and 2 sun visor holders.

10. REMOVE FRONT PART OF ROOF HEADLINING**11. REMOVE WIPER ARMS**

(a) Using a screwdriver, remove the 2 caps.

HINT:

Tape the screwdriver tip before use.

(b) Remove the 2 nuts and wiper arms.

12. REMOVE COWL TOP VENTILATOR LOUVER

- (a) Remove the hood to cowl top seal.
- (b) Using a clip remover, remove the 6 clips.
- (c) Remove the 8 screws and cowl top ventilator louver.

13. REMOVE FRONT PART OF ROOF SIDE RAIL WEATHERSTRIP LH AND RH

Using SST, pull off the roof side rail weatherstrip from front end.
SST 09806-30010

14. REMOVE WINDSHIELD OUTSIDE MOULDING

- (a) Remove the 4 screws and windshield outside moulding.
- (b) Perform the same procedure on the other side.

15. w/ Standed cab, Access cab:

REMOVE WINDSHIELD OUTSIDE UPPER MOULDING

- (a) Using a knife, cut off the moulding as shown in the illustration.

NOTICE:

Do not damage the body with the knife.

- (b) Remove the remaining moulding.

16. w/Double cab:

REMOVE WINDSHIELD OUTSIDE UPPER MOULDING

Using a knife, cut off the moulding as shown in the illustration.

NOTICE:

Do not damage the body with the knife.

17. REMOVE WINDSHIELD GLASS

- (a) Push piano wire through between the body and glass from the interior.
- (b) Tie both wire ends to wooden blocks or similar objects.

HINT:

Apply protective tape to the outer surface to keep the surface from being scratched.

**NOTICE:**

When separating the glass, take care not to damage the paint and exterior ornaments. To prevent scratching the safety pad when removing the windshield, place a plastic sheet between the piano wire and safety pad.

- (c) Cut the adhesive by pulling the piano wire around it.
- (d) Remove the glass.

NOTICE:

Leave as much of the adhesive on the body as possible when cutting off the glass.

INSTALLATION

1. CLEAN AND SHAPE CONTACT SURFACE OF BODY

- (a) Using a knife, cut away any rough areas on the body.
- HINT:
Leave as much of the adhesive on the body as possible.
- (b) Clean the cutting surface of the adhesive with a shop rag saturated in cleaner.
- HINT:
Even if all the adhesive has been removed, clean the body.

2. CLEAN REMOVED GLASS

- (a) Remove the damaged stoppers and dam.
- (b) Using a scraper, remove the adhesive sticking to the glass.
- (c) Clean the glass with cleaner.

NOTICE:

- ◆ Be careful not to damage the glass.
- ◆ Do not touch the glass face after cleaning it.

3. w/ No. 1 stopper:

REPLACE NO. 1 STOPPERS

- (a) Remove the damaged stoppers.
- (b) Cut off the old adhesive around the stopper installation area.

NOTICE:

Be careful not to damage the body.

- (c) Clean the installation area.
- (d) Attach new stoppers to the body so that the notches on the body will align with the stoppers as shown in the illustration.

HINT:

Make sure that the stoppers are installed facing the correct direction.

4. INSTALL NEW STOPPERS

Attach new stoppers to the glass with the ceramic notches on the glass aligned with the stoppers as shown in the illustration.

HINT:

Make sure that the stoppers are installed facing the correct direction.

5. INSTALL NEW DAM

Install a new dam with double-stick tape as shown in the illustration.

A: 7.0 mm (0.276 in.)

NOTICE:

Do not touch the glass surface after cleaning it.

6. POSITION GLASS

- Place the glass in the correct position.
- Check that all contacting parts of the glass rim are perfectly even.
- Place reference marks between the glass and body.
- Remove the glass.

7. CLEAN CONTACT SURFACE OF GLASS

Using a cleaner, clean the contact surface which is black-colored area around the entire glass rim.

NOTICE:

Do not touch the glass face after cleaning it.

8. COAT CONTACT SURFACE OF BODY WITH PRIMER "M"

Using a brush, coat Primer M to the exposed part of body on the vehicle side.

NOTICE:

- ◆ Let the primer coating dry for 3 minutes or more.
- ◆ Do not coat Primer M to the adhesive.
- ◆ Do not keep any of the opened Primer M for later use.

9. COAT CONTACT SURFACE OF GLASS WITH PRIMER "G"

- (a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.
- (b) When the primer is coated wrongly to the area other than the specified, wipe it off with a clean shop rag before the primer dries.

NOTICE:

- ◆ Let the primer coating dry for 3 minutes or more.
- ◆ Do not keep any of the opened Primer G for later use.

10. APPLY ADHESIVE

- (a) Cut off the tip of the cartridge nozzle.
Part No. 08850-00801 or equivalent

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Temperature	Tackfree time
35 °C (95 °F)	15 minutes
20 °C (68 °F)	100 minutes
5 °C (41 °F)	8 hours

- (b) Load the cartridge into the sealer gun.
- (c) Coat the glass with adhesive as shown in the illustration.
A: 12 mm (0.47 in.)
B: 8 mm (0.31 in.)

11. INSTALL WINDSHIELD GLASS AND MOULDING

- (a) Install the glass, aligning the reference marks using a suction rubber.

HINT:

Check that stoppers engage correctly viewing.

- (b) Lightly press the glass front surface for close contact.

- (c) Correct insufficient or protruded adhesive agent using a spatula.

HINT:

Apply the adhesive agent up to the windshield glass edge.

- (d) Install a new windshield outside upper moulding to the windshield glass before the adhesive agent hardens.

HINT:

Install the moulding, aligning the center of moulding with the center of body.

- (e) Using a scraper, remove any excessive adhesive agent before it hardens.

- (f) Hold the glass and moulding in place securely with a protective tape or equivalent until the adhesive hardened.

NOTICE:

Take care not to drive the vehicle during the time described in the table below.

Temperature	Minimum time prior to drive of the vehicle
35 °C (95 °F)	1.5 hours
20 °C (68 °F)	5 hours
5 °C (41 °F)	24 hours

12. INSPECT FOR LEAKAGE AND REPAIR**NOTICE:**

Conduct a leak test after the hardening time has elapsed.

**13. INSTALL ROOF SIDE RAIL WEATHERSTRIP**

Attach the upper edge of the weatherstrip to body flange. Tap on the weatherstrip by hand.

**14. INSTALL WINDSHIELD OUTSIDE MOULDING**

- (a) Install the 4 screws and windshield outside moulding.
- (b) Employ the same manner described above to the other side.

15. INSTALL FRONT PART OF ROOF SIDE RAIL WEATHERSTRIP LH AND RH

Install the front part of roof side rail weatherstrip LH and RH.

16. INSTALL COWL TOP VENTILATOR LOUVER

Install the cowl louver with the 8 screws and 6 clips.

17. INSTALL WIPER ARMS

- (a) Operate the wipers once and turn the wiper switch OFF.
- (b) Install the wiper arms and tighten the nuts by hand.

- (c) Adjust the installation positions of the wiper arms to the positions shown in the illustration.
A: Approx. 25.7 mm (1.012 in.)
B: Approx. 39.7 mm (1.563 in.)

HINT:

When installing wiper arms, make sure that the tips of the blades are not beyond the ceramic edge as indicated by "C" part in the illustration.

- (d) Torque the nuts.
Torque: 20 N·m (204 kgf-cm, 15 ft-lbf)
 (e) Install the caps.

18. INSTALL FRONT PART OF ROOF HEADLINING**19. INSTALL SUN VISOR HOLDERS**

Install the 2 sun visor holders with the 2 screws.

**20. w/o Sliding roof:
INSTALL ROOF CONSOLE BOX**

- (a) Connect the connector.
 (b) Install the console box with the 4 screws.

**21. w/ Sliding roof:
INSTALL ROOF CONSOLE BOX**

- (a) Connect the connector.
 (b) Install the console box with the 2 screws.

**22. INSTALL FRONT PERSONAL LIGHT**

- (a) Connect the connector, then install the front personal light.
 (b) Install the 2 screws and the clip.

HINT:

When installing the front personal light, attach the clip to the housing and push it to the bracket.

- (c) Install the left side lens.

23. INSTALL SUB-VISORS

Install the 2 sub-visors with the 4 screws.

24. INSTALL SUN VISORS

- (a) w/ Light:
Connect the connector.
- (b) Install the 2 sun visors with the 4 screws.

25. INSTALL FRONT PILLAR GARNISH

- (a) Install the front pillar garnish.
- (b) Perform the same procedure on the other side.

26. INSTALL ASSIST GRIPS

- (a) Driver's side:
Using a torx® socket wrench, install the assist grip with the 2 torx® screws.
Torx® driver: T30 (Part No. 09041-00030 or locally manufactured tool)
- (b) Standard cab, Access cab, Passenger side:
Using a torx® driver, install the 2 assist grips with the 4 torx® screws.
Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)
- (c) Double cab cab, Passenger side:
Using a torx® driver, install the assist grips with the 2 torx® screws.
Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)
- (d) Install the caps.

**27. INSTALL INNER REAR VIEW MIRROR**

Install the inner rear view mirror as shown in the illustration.

Remove the 2 clips and the rear part of the roof headlining.
- (b) Access cab (Standard body type):
Access cab (Wide body type):
Remove the 3 clips and the rear part of the roof headlining.

**16. Power slide type:****REMOVE BACK WINDOW REGULATOR ASSEMBLY**

- (a) Remove the 2 bolts and tether anchor brackets.
- (b) Remove the 4 clips and 2 back panel silencer pads.
- (c) Using a screwdriver, remove the back door glass channel cover.

HINT:

Tape the screwdriver tip before use.

- (d) Remove the 7 nuts and the back window regulator assembly.

**17. Power vertical type:
REMOVE SERVICE HOLE COVER**

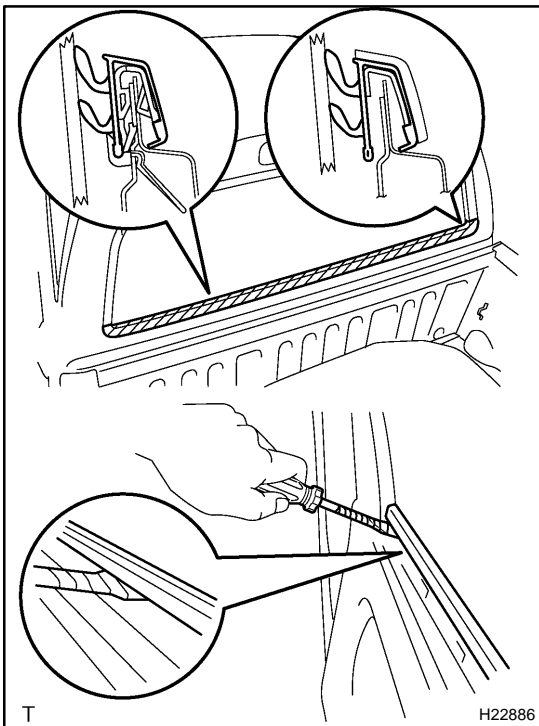

(a) Remove the 12 bolts.

(b) Using a clip remover, remove the 2 clips and cover.

NOTICE:

When the clips are removed, the cover may fall and become deformed.

**18. Power vertical type:
REMOVE WEATHERSTRIP OUTER**

(a) Put protective tape under the weatherstrip.

(b) Using a screwdriver, disengage the claws and remove the weatherstrip.

HINT:

Tape the screwdriver tip before use.

**19. Power vertical type:
REMOVE WEATHERSTRIP INNER**

Using a screwdriver, remove the weatherstrip.

**20. Power vertical type:
REMOVE BACK WINDOW GLASS**

- (a) Disconnect the defogger connector.
- (b) Remove the 4 bolts and glass.

HINT:

Insert a shop rag inside the panel to prevent the back window glass from being scratched.

NOTICE:

- ◆ Do not damage the back window glass assembly.
- ◆ When the bolts are removed, the back window glass assembly might fall and become deformed.

**21. Power vertical type:
REMOVE BACK WINDOW REGULATOR ASSEMBLY**

- (a) Disconnect the connector.
- (b) Remove the 7 bolts and regulator.

HINT:

Remove the back window regulator assembly through the service hole.

NOTICE:

When the bolts are removed, the back window regulator assembly may fall and become deformed.

**22. Power vertical type:
REMOVE BACK WINDOW MOULDING**

- (a) Remove the 8 bolts and the bracket LH and RH.

- (b) Remove the 2 clips.
- (c) Using a drill of less than $\varnothing 4$ mm (0.16 in.), drill out the 14 rivet heads and remove the moulding.

NOTICE:

- ◆ Be sure to gently place the drill perpendicular to the rivet, otherwise the rivet hole and the drill itself will be damaged.
- ◆ Be careful as the cut rivet will be very hot
- ◆ Cover the panel with a shop rag to prevent metal debris from entering inside the panel.

**23. Fix type, Slide type, Power slide type:
REMOVE BACK WINDOW GLASS**

- (a) Remove the 4 nuts.
- (b) Using a screwdriver, remove the weatherstrip from the body.

HINT:

Tape the screwdriver tip before use.

NOTICE:

Be careful not to damage the body paint.

- (c) From the interior, insert piano wire between the vehicle body and glass.
- (d) Tie objects that can serve as handle (for example, wooden blocks) to all wire ends.

HINT:

Apply protective tape to the outer surface to prevent the surface from being scratched.

NOTICE:

When separating the glass, take care not to damage the body paint and exterior.

- (e) Cut off the adhesive by pulling the piano wire around it.

HINT:

Cut off the adhesive on the areas as shown in the illustration but leave the adhesive where the stud bolts exist.

- (f) Pass piano wire through as shown in the illustration, and cut off the adhesive on the part adhered to the stud bolts.
- (g) Remove the glass.

NOTICE:

Leave as much of the adhesive on the body as possible when removing the glass.

INSTALLATION

1. Fix type, Slide type, Power slide type:

CLEAN AND SHAPE CONTACT SURFACE OF BODY

- (a) Using a knife, cut away any rough adhesive on the contact surface of the body to shape the surface.

HINT:

Leave as much of the adhesive on the body as possible.

- (b) Clean the contact surface of the body with a piece of shop rag saturated with cleaner.

2. Fix type, Slide type, Power slide type:

POSITION GLASS

- (a) Place the glass in the correct position.
 (b) Check that the whole contact surface of the glass rim is perfectly even.
 (c) Place reference marks on the glass and body.
 (d) Remove the glass.

3. Fix type, Slide type, Power slide type:

COAT CONTACT SURFACE OF BODY WITH PRIMER M

Using a brush, coat the exposed part of the body with Primer M.

NOTICE:

- ◆ Allow the primer coating to dry for 3 minutes or more.
- ◆ Do not apply too much Primer M.
- ◆ Throw away any leftover Primer M.

**4. Fixed type:
COAT CONTACT SURFACE OF GLASS WITH PRIMER
G**

Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G as shown in the illustration.

HINT:

If the area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- ◆ Allow the primer coating for 3 minutes or more.
- ◆ Throw away leftover Primer G.

**5. Slide type, Power slide type:
COAT CONTACT SURFACE OF GLASS WITH PRIMER
G**

Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G as shown in the illustration.

HINT:

If the area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- ◆ Allow the primer coating for 3 minutes or more.
- ◆ Throw away leftover Primer G.

6. Fixed type:

APPLY ADHESIVE

(a) Cut off the tip of the cartridge nozzle.

Adhesive: Part No. 08850-00801 or equivalent

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Usage timeframe:

Temperature	Usage Timeframe
35°C (95°F)	15 minutes
20°C (68°F)	100 minutes
5°C (41°F)	8 hours

(b) Load the cartridge into a sealer gun.

(c) Coat the glass with adhesive, as shown in the illustration.

Specification:

Area	Measurement
A	8.0 mm (0.314 in.)
B	12.0 mm (0.472 in.)

7. Slide type, Power slide type:

APPLY ADHESIVE

(a) Cut off the tip of the cartridge nozzle.

Part No. 08850-00801 or equivalent

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Usage timeframe:

Temperature	Usage Timeframe
35°C (95°F)	15 minutes
20°C (68°F)	100 minutes
5°C (41°F)	8 hours

(b) Load the cartridge into a sealer gun.

(c) Coat the glass with adhesive, as shown in the illustration.

Specification:

Area	Measurement
A	8.0 mm (0.314 in.)
B	12.0 mm (0.472 in.)

8. Fix type, Slide type, Power slide type:

INSTALL BACK WINDOW GLASS

(a) Position the glass so that the reference marks are aligned, and press it in gently along the rim.

(b) Using a spatula, apply adhesive on the glass rim.

(c) Use a scraper to remove any excess or protruding adhesive.

HINT:

Confirm that the moulding is attached to the body panel as shown in the illustration.

- (d) Hold the back window glass in place securely with a protective tape or equivalent until the adhesive hardens.

NOTICE:

Take care not to drive the vehicle during the time described in the table below.

Usage timeframe:

Temperature	Usage Timeframe
35 °C (95 °F)	1.5 hours
20 °C (68 °F)	5 hours
5 °C (41 °F)	24 hours

9. INSPECT FOR LEAK AND REPAIR

NOTICE:

Conduct a leak test after the adhesive has completely hardened.

Adhesive: Part No. 08833-00030 or equivalent

10. Power vertical type:

INSTALL BACK WINDOW MOULDING

- (a) Using a hand riveter or an air riveter, install the 14 drive pulley assemblies.

NOTICE:

Do not prize the riveter. The riveter will be damaged and the mandrel will bend.

- ◆ Do not tilt the riveter when fastening the rivet to the item(s) as this will cause the rivet to be loose.
- ◆ Do not have any space between the rivet head and the item(s). The rivet head must be completely flat against the item(s).

Do not have any space between the items. Firmly hold together the two items while installing the rivet.

(b) Install the 2 clips.

(c) Install the bracket LH and RH with the 8 bolts.

11. Power vertical type:

INSTALL BACK DOOR WINDOW REGULATOR ASSEMBLY

(a) Apply MP grease to the sliding and rotating parts of the window regulator assembly.

NOTICE:

Do not apply grease to the spring of the window regulator assembly.

(b) Install the window regulator assembly with the 7 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

(c) Connect the window regulator connector.

NOTICE:

Be careful not to drop and deform the window regulator assembly.

- 12. Power vertical type:
INSTALL BACK WINDOW GLASS**
- (a) Install the back window glass to the window regulator assembly with the 4 bolts..

Torque: 8.0 N·m (82 kgf·cm, 71 in.-lbf)

NOTICE:

Do not damage the back window glass sub-assy.

HINT:

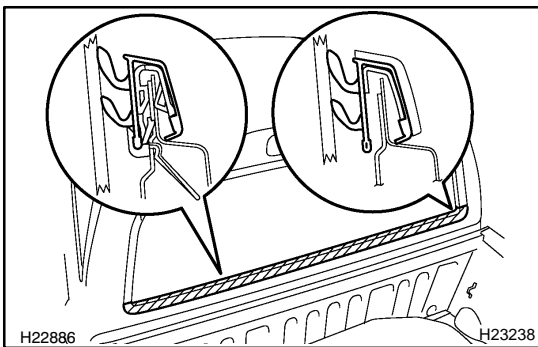

Insert a shop rag inside the door panel to prevent the back window glass from being scratched.

- (b) Connect the defogger connector.

- 13. Power vertical type:
INSTALL WEATHERSTRIP INNER**

Install the back window glass to the window regulator assembly.

- 14. Power vertical type:
INSTALL WEATHERSTRIP OUTER**

Install the weatherstrip as shown in the illustration.

- 15. Power vertical type:
INSTALL SERVICE HOLE COVER**

- (a) Install the cover with the 2 clips.

NOTICE:

Be careful not to drop and deform the cover as this may cause deformation.

- (b) Install the cover to the body.

- (c) Install the 12 bolts.
Torque: 8.0 N-m (82 kgf-cm, 71 in.-lbf)

- 16. Power slide type:**
INSTALL BACK WINDOW REGULATOR ASSEMBLY
 (a) Install the back window regulator assembly with the 7 nuts.
Torque: 5.5 N-m (54 kgf-cm, 49 in.-lbf)
 (b) Install the back door glass channel cover.

- (c) Install the 4 clips and 2 back panel silencer pads.
 (d) Install the tether anchor brackets with the 2 bolts.
Torque: 20 N-m (200 kgf-cm, 15 ft-lbf)
17. Standard cab:
Access cab (Standard body type):
Access cab (Wide body type):
INSTALL REAR PART OF ROOF HEADLINING
 (a) Standard cab:
 Install the rear part of the roof headlining with the 2 clips.
 (b) Access cab:
 Install the rear part of the roof headlining with the 3 clips.

- 18. Double cab:**
INSTALL QUARTER TRIMS UPPER
 (See page [BO-138](#))

- 19. Double cab:**
INSTALL QUARTER TRIMS LOWER
 (See page [BO-138](#))

- 20. INSTALL QUARTER TRIMS (See page [BO-130](#), [BO-138](#))**

- 21. Standard cab:**
INSTALL BACK PANEL UPPER GARNISH
 (See page [BO-130](#))

- 22. Standard cab:**
INSTALL COAT HOOK (See page [BO-130](#))

- 23. INSTALL ROOM LIGHT (See page [BO-130](#) , [BO-138](#))**

- 24. Access cab (Standard body type):**
Access cab (Wide body type):
INSTALL ROOF SIDE RAIL GARNISHES
 (See page [BO-130](#) , [BO-138](#))

25. **Standard cab:**
INSTALL FRONT PILLAR GARNISHES
(See page [BO-130](#))
26. **INSTALL ASSIST GRIPS** (See page [BO-130](#) , [BO-138](#))
27. **Double cab:**
INSTALL BACK PANEL TRIM (See page [BO-138](#))
28. **Access cab (Standard body type),**
Access cab (Wide body type):
INSTALL ACCESS DOOR SCUFF PLATES
(See page [BO-130](#))
29. **Standard cab:**
INSTALL FRONT DOOR SCUFF PLATES
(See page [BO-130](#))
30. **Access cab (Standard body type),**
Access cab (Wide body type):
INSTALL REAR SEAT (See page [BO-21 1](#))
31. **Double cab:**
UNFOLD REAR SEAT

CAUTION:

When returning the seat, make sure the seat is securely locked by pushing forward and rearward on the top of the seatback or by trying to pull up the edge of the bottom cushion. Failure to do so will cause the seat belt from operating improperly.

SLIDING ROOF ON-VEHICLE INSPECTION

B0408-01

INSPECT SLIDING ROOF GLASS ALIGNMENT

- (a) Start the engine and check the operation time of the sliding roof.

Operation time:

Approx. 6 secs.

- (b) Check for abnormal noise or binding during operation.
 (c) With the sliding roof fully closed, check for water leakage.
 (d) Check for a difference in level between the sliding roof weatherstrip and roof panel.

Front end:

0 - 2.0 mm (0 - 0.079 in.)

0 + 1.0 mm (0 + 0.039 in.)

Side end:

0 ± 1.5 mm (0 ± 0.059 in.)

Rear end:

0 - 1.0 mm (0 - 0.039 in.)

0 + 2.0 mm (0 + 0.079 in.)

COMPONENTS

REMOVAL

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. **REMOVE ROOF HEADLINING (See page [BO-133](#))**
2. **REMOVE SLIDING ROOF GLASS ASSEMBLY**
 - (a) Using a torx wrench, remove the 4 screws.
 - (b) Pull the glass upward to remove it.

3. REMOVE DRIVE GEAR

NOTICE:

Remove the drive gear with the sliding roof fully closed.

- (a) Disconnect the connector.
- (b) Remove the 2 bolts and drive gear.
- (c) Remove the 2 screws and drive gear bracket.

4. REMOVE SLIDING ROOF HOUSING

- (a) Disconnect the 4 drain hoses from the housing.
- (b) Disengage the wire harness clamps.
- (c) Remove the 8 bolts, 2 nuts and sliding roof housing.

Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)

DISASSEMBLY

1. REMOVE NO. 3 SLIDING ROOF HOUSING SIDE MOUNTING BRACKETS
2. REMOVE SLIDING ROOF HOUSING REAR MOUNTING BRACKETS

**3. REMOVE SLIDING ROOF SUNSHADE STOPPER**

- (a) Remove the screw and stopper.
- (b) Perform the same procedure on the other side.

4. REMOVE SUNSHADE TRIM**5. REMOVE REAR ROOF DRIP CHANNEL**

Remove the 2 screws and rear roof drip channel as shown in the illustration.

**6. REMOVE REAR FRAME**

Remove the 4 screws and rear frame.

**7. REMOVE DRIVE CABLE**

- (a) Remove the screw and sliding roof panel stopper.
- (b) Slide the drive cable rearward, then remove it.
- (c) Perform the same procedure on the other side.

**HINT:**

At the time of reassembly, please refer to the following items.

- ◆ Adjust the drive cable to a closed and tilted down position.
- ◆ Slide the cable forward or backward to align the 2 marks as shown in the illustration.
- ◆ Slide the cable to the forefront with your hand.

8. REMOVE ROOF WIND DEFLECTOR PANEL**9. REMOVE GUIDE BLOCK**

- (a) Remove the 2 screws and guide block.
- (b) Perform the same procedure on the other side.

**10. REMOVE SLIDING ROOF HOUSING**

Remove the 6 screws and sliding roof housing.

**11. REMOVE CABLE GUIDE CASING**

Remove the 2 screws and cable guide casing.

B03396

ADJUSTMENT

ADJUST SLIDING ROOF GLASS IN CLEARANCE

- (a) When the front or rear/left or right alignment is not correct, remove the drive gear and sliding roof glass, then adjust the drive cable.

H12171

NOTICE:

Remove the drive gear with the sliding roof fully closed.

- (b) Adjust by sliding the cable forward or rearward or rearward to align the 2 marks as shown.
- (c) Install the driving gear and sliding roof glass.

REASSEMBLY

Reassembly is in the reverse order of disassembly (see page [BO-101](#)).

INSTALLATION

Installation is in the reverse order of removal (see page [BO-100](#)).

REMOVAL

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Disconnect the cable from the negative (-) battery terminal.

NOTICE:

If the cable is disconnected from the negative battery terminal, the preset AM and FM stations stored in the memory will be erased. Be sure to make note of them before disconnecting the cable.

CAUTION:

Work must not be started until at least 90 seconds after the ignition switch is turned to the LOCK position and the cable is disconnected from the negative (-) battery terminal. (The SRS is equipped with a back-up power source. If work is started within 90 seconds of disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.)

2. REMOVE FRONT DOOR SCUFF PLATE

- (a) Standard cab:
Remove the 5 screws and front door scuff plate.
- (b) Access cab (standard and wide body type):
Remove the 4 screws and front door scuff plate.
- (c) Double cab:
Remove the 4 screws and front door scuff plate.
- (d) Use the same procedures described above on the other side.

3. Standard cab:

Access cab:

REMOVE COWL SIDE TRIM

- (a) Remove the 2 clips and cowl side trim.
- (b) Use the same procedures described above on the other side.

4. Double cab:

REMOVE COWL SIDE TRIM BOARD

- (a) Remove the nut, 2 clips and cowl side trim board.
- (b) Use the same procedures described above on the other side.

5. Double cab:

REMOVE SIDE PANEL

6. REMOVE ASSIST GRIPS

- (a) Using a screwdriver, remove the plugs.

HINT:

Tape the screwdriver tip before use.

- (b) Driver side:

Using a torx® driver, remove the 2 torx® screws and assist grip.

Torx® driver:

T30 (Part No.09041-00030 or locally manufactured tool)

- (c) Standard cab (Passenger side):

Access cab (Passenger side):

Using a torx® driver, remove the 4 torx® screws and 2 assist grips.

Torx® driver: T30 (Part No.09041-00030 or locally manufactured tool)

- (d) Double cab (Passenger side):

Using a torx® driver, remove the 2 torx® screws and assist grips.

Torx® driver:

T30 (Part No.09041-00030 or locally manufactured tool)

7. REMOVE FRONT PILLAR GARNISH

- (a) Using a screwdriver, remove the front pillar garnish.

HINT:

Tape the screwdriver tip before use.

- (b) Use the same procedures described above on the other side.

8. REMOVE STEERING WHEEL PAD

(See page [SR-18](#) , [SR-33](#))

9. REMOVE STEERING WHEEL

(See page [SR-18](#) , [SR-33](#))

10. REMOVE STEERING COLUMN COVERS

(See page [SR-18](#) , [SR-33](#))

11. REMOVE COMBINATION SWITCH

Disconnect the 4 connectors and remove the 3 screws and combination switch.

**12. REMOVE LOWER FINISH PANEL**

- (a) Remove the 2 screws and hood lock release lever.
- (b) Remove the 4 bolts and lower finish panel.
- (c) Disconnect the connectors.

**13. REMOVE SWITCH BASE**

Using a screwdriver, lift up the switch base and remove it.

HINT:

Tape the screwdriver tip before use.

14. REMOVE NO. 2 HEATER TO REGISTER DUCT**15. REMOVE STEERING COLUMN**

(See page [SR-18](#) , [SR-33](#))

**16. REMOVE CLUSTER FINISH PANEL**

Remove the 2 screws and cluster finish panel.

17. REMOVE COMBINATION METER

- (a) Remove the 4 screws.
- (b) Remove the combination meter and disconnect the 4 connectors.

**18. REMOVE INTEGRATION CONTROL PANEL**

- (a) Remove the 3 control knobs.
- (b) Remove the 5 screws.
- (c) Remove the integration control panel by pulling at the positions indicated by the arrows in the illustration.
- (d) Disconnect the connectors.

**19. REMOVE RADIO TUNER ASSEMBLY**

- (a) Disconnect the connector.
- (b) Remove the 4 bolts and the radio tuner assembly.

20. REMOVE HEATER CONTROL ASSEMBLY

(See page [AC-101](#))

21. DISCONNECT PASSENGER AIRBAG ASSEMBLY CONNECTOR

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

- (a) Using a clip remover, disengage the connector clamp.
- (b) Disconnect the connector as shown in the illustration.

22. REMOVE GLOVE COMPARTMENT DOOR

Remove the 2 screws and glove compartment door.

23. REMOVE LOWER NO. 2 FINISH PANEL

Remove the 3 screws and lower No. 2 finish panel.

24. Standard cab:

Access cab (w/o Large type console box):

Double cab (Split type seat):

REMOVE LOWER CENTER COVER

- (a) Remove the 2 clips and lower center cover.
- (b) Disconnect the connectors.

25. Access cab (w/ Large type console box):

REMOVE FRONT CONSOLE BOX ASSEMBLY

- (a) Remove the shifting hole cover.
- (b) Using a screwdriver, disengage the 3 clips and remove the console panel upper.

- (c) Remove the 4 bolts and console rear end panel No. 2.

BODY - INSTRUMENT PANEL

- (d) Remove the 2 bolts, clip and the front console box assembly.
- (e) Disconnect the connector.

**26. Double cab:
REMOVE SHIFTING HOLE COVER**

- (a) Using a screwdriver, disengage the 4 clips and remove the shifting hole cover.

HINT:

Tape the screwdriver tip before use.

**27. Double cab:
REMOVE UPPER CONSOLE PANEL**

- (a) w/ Seat heater:
Using a screwdriver, remove the seat heater switches, then disconnect the connectors.

HINT:

Tape the screwdriver tip before use.

- (b) Using a screwdriver, remove the power mirror control switch, then disconnect the connector.

HINT:

Tape the screwdriver tip before use.

- (c) Using a screwdriver, disengage the 6 clips and remove the upper console panel.

HINT:

Tape the screwdriver tip before use.

**28. Double cab:
REMOVE REAR CONSOLE BOX**

- (a) w/ VTR control garnish.
Using a screwdriver, disengage the 2 claws, and remove the VTR control garnish and connector.

- (b) Disconnect the connector.

HINT:

Tape the screwdriver tip before use.

- (c) w/o VTR control garnish.
Using a screwdriver, remove the rear console pocket.
HINT:
Tape the screwdriver tip before use.

- (d) w/ Rear seat entertainment:
(1) Remove the disc bracket.
(2) Remove the 3 bolts and disc player.
(3) Disconnect the connector.
(e) Remove the 4 bolts and rear console box.

**29. Double cab:****REMOVE CONSOLE BOX POCKET**

- (a) Using a screwdriver, disengage the 4 claws.

HINT:

Tape the screwdriver tip before use.

- (b) Disconnect the connectors and remove the console box pocket.

30. REMOVE FRONT CONSOLE BOX

Remove the 2 bolts, 2 clips and front console box.

**31. REMOVE LOWER INSTRUMENT COVER**

- (a) Remove the 4 bolts and screw.

- (b) Using a screwdriver, disengage the clips and remove the lower instrument cover.

HINT:

Tape the screwdriver tip before use.

**32. REMOVE PASSENGER AIRBAG ASSEMBLY**

- (a) Remove the 2 bolts which hold the passenger airbag assembly and instrument panel.

Torque: 5.0 N·m (51 kgf·cm, 44 in.-lbf)

- (b) Remove the bolt which hold the passenger airbag assembly and instrument panel reinforcement.

Torque: 20 N·m (204 kgf·cm, 15 ft-lbf)**CAUTION:**

- ◆ Do not place the passenger airbag assembly with the airbag deployment side facing down.

◆ **Never disassemble the passenger airbag assembly.**

33. w/ Rear console box:

REMOVE REAR CONSOLE BOX

- (a) Using a screwdriver, remove the console box pocket.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 4 bolts and rear console box.

34. REMOVE NO. 4 HEATER TO REGISTER DUCT

35. REMOVE INSTRUMENT PANEL

- (a) Remove the nut.

- (b) Disconnect the connectors and remove the instrument panel.

36. REMOVE CENTER HEATER TO REGISTER DUCT

37. REMOVE INSTRUMENT PANEL REINFORCEMENT

- (a) Disconnect the connectors.
- (b) Remove the bolt and door control receiver.
- (c) Remove the 3 bolts, nut and No. 1 brace.
- (d) Remove the bolt, nut and No. 2 brace.
- (e) Remove the 3 bolts, 4 nuts and instrument panel reinforcement.

DISASSEMBLY

1. REMOVE NO. 3 HEATER TO REGISTER DUCT

Remove the screw and duct.

2. REMOVE NO. 1 REGISTER

Remove the 2 screws and register.

3. REMOVE CENTER STAY

Remove the 3 screws and center stay.

4. REMOVE CENTER BRACKET

Remove the 3 screws and center bracket.

5. REMOVE NO. 5 HEATER TO REGISTER DUCT

Remove the screw and duct.

6. REMOVE SIDE DEFROSTER NOZZLE DUCT

Remove the screw and duct.

7. REMOVE NO. 2 REGISTER

Remove the 3 screws and register.

REASSEMBLY

Reassembly is in the reverse order of disassembly (see page [BO-1 18](#)).

INSTALLATION

Installation is in the reverse order of removal (see page [BO-1 11](#)).

CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

TAIL GATE COMPONENTS

B00J7-07

REMOVAL

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. REMOVE TAIL GATE PROTECTOR (See page [BO-66](#))

2. REMOVE SERVICE HOLE COVER

Using a torx® socket wrench (T30), remove the 8 screws and service hole cover.

3. REMOVE TAIL GATE LOCK

(a) Remove the 2 tail gate lock links from the tail gate locks and tail gate handle assembly.

(b) Using a torx® socket wrench (T40), remove the 4 screws and 2 tail gate locks.

4. REMOVE TAIL GATE HANDLE ASSEMBLY

Remove the 2 bolts and tail gate handle assembly.

5. REMOVE TAIL GATE LOCK STRIKERS

Using a torx® socket wrench (T40), remove the 4 screws and tail gate lock strikers.

6. REMOVE TAIL GATE CABLE

(a) Remove the deck side shaft and tail gate cable from the deck.

(b) Remove the gate side shaft and tail gate cable.

(c) Use the same procedures described above to the other side.

7. REMOVE TAIL GATE

(a) Remove the 2 bolts and tail gate.

NOTICE:

Be careful not to drop the tail gate.

(b) Using a torx® socket wrench (T40), remove the 6 screws and 2 tail gate hinges from the tail gate.

INSTALLATION

1. INSTALL TAIL GATE

- Using a torx® socket wrench (T40), install the tail gate hinges to the tail gate with the 4 screws.
Torque: 17 N·m (178 kgf-cm, 13 ft-lbf)
- Install the tail gate to the body with the 2 bolts.
Torque: 17 N·m (178 kgf-cm, 13 ft-lbf)

NOTICE:

Be careful not to drop the tail gate.

2. INSTALL TAIL GATE CABLE

- Install the tail gate cable and gate side shaft to the tail gate.
Torque: 27 N·m (275 kgf-cm, 20 ft-lbf)
- Install the tail gate cable and deck side shaft to the body.
Torque: 27 N·m (275 kgf-cm, 20 ft-lbf)
- Use the same procedures described above to the other side.

3. INSTALL TAIL GATE LOCK STRIKER

Using a torx® socket wrench (T40), install the 2 tail gate lock strikers with the 4 screws.

Torque: 13 N·m (133 kgf-cm, 10 ft-lbf)

4. INSTALL TAIL GATE HANDLE ASSEMBLY

Install the tail gate handle assembly with the 2 bolts.

Torque: 5.5 N·m (56 kgf-cm, 49 in.-lbf)

5. INSTALL TAIL GATE LOCK

- Using a torx® socket wrench (T40), install the 2 tail gate locks with the 4 screws.

Torque: 12.5 N·m (128 kgf-cm, 9 ft-lbf)

- Connect one end of the tail gate lock link to the tail gate lock and another end to the tail gate handle assembly.

6. INSTALL SERVICE HOLE COVER

Using a torx® socket wrench (T30), install the service hole cover with the 8 screws.

7. INSTALL TAIL GATE PROTECTOR (See page [BO-68](#))

ROOF HEADLINING COMPONENTS

BO2F8-04

REMOVAL

HINT:

- ◆ A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).
- ◆ Tape the screwdriver tip before using it to remove the parts.

1. Access cab:

REMOVE REAR SEAT (See page [BO-203](#))

2. REMOVE FRONT DOOR SCUFF PLATES

(a) Standard cab:

Remove the 10 screws and front door scuff plates.

(b) Access cab:

Remove the 8 screws and front door scuff plates.

3. Access cab:

REMOVE ACCESS DOOR SCUFF PLATES

Remove the 6 screws and access door scuff plates.

4. Access cab:

REMOVE FRONT DOOR REAR SCUFF PLATES

(a) Remove the 2 clips and 2 covers.

(b) Remove the 2 clips and 2 front door rear scuff plates.

5. REMOVE ASSIST GRIPS

(a) Using a screwdriver, remove the caps.

(b) Driver's side:

Using a torx® driver (T30), remove the 2 screws and assist grip.

(c) Passenger's side:

Using a torx® driver (T30), remove the 4 screws and 2 assist grips.

6. REMOVE FRONT PILLAR GARNISH

(a) Using a screwdriver, remove the front pillar garnish.

(b) Perform the same procedure on the other side.

7. Access cab:

REMOVE FRONT SEAT OUTER BELT ANCHORS

(a) Remove the bolt and front seat outer belt floor anchor.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

- (b) Using a screwdriver, remove the cap.
- (c) Remove the bolt and front seat outer belt shoulder anchor.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

- (d) Perform the same procedure on the other side.

8. Access cab:

REMOVE ROOF SIDE RAIL GARNISH

- (a) Using a screwdriver, remove the caps.
- (b) Using a torx® driver (T30), remove the 2 screws and assist grip.

- (c) Using a screwdriver, remove the roof side rail garnish.

9. REMOVE SUN VISORS

- (a) Remove the 4 screws and 2 sun visors.
- (b) w/ Light:
Disconnect the connector.

10. REMOVE SUB-VISORS

Remove the 4 screws and 2 sub-visors.

11. REMOVE FRONT PERSONAL LIGHT

- (a) Using a screwdriver, remove the left side lens.

- (b) Remove the 2 screws.
- (c) Using a screwdriver, rotate the clip by 90° and remove it.
- (d) Remove the front personal light, then disconnect the connector.

HINT:

At the time of installation, please refer to the following item.
When installing the front personal light, attach the clip to the housing and push it to the bracket.

**12. REMOVE ROOM LIGHT**

- (a) Using a screwdriver, remove the room light cover.
- (b) Remove the 2 screws and room light, then disconnect the connector.

**13. Standard cab:
REMOVE COAT HOOK**

- (a) Using a screwdriver, open the cap.
- (b) Remove the screw and coat hook.

**14. Standard cab:
REMOVE ROOM PARTITION GARNISHES**

- (a) Using a screwdriver, remove the back panel trim covers.

HINT:

Tape the screwdriver tip before use.

- (b) Using a screwdriver, remove the room partition garnishes.

HINT:

Tape the screwdriver tip before use.

15. REMOVE QUARTER TRIM

- (a) Standard cab:

Remove the bolt and front seat outer belt floor anchor.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

- (b) Access cab:

Remove the bolt and rear seat outer belt floor anchor.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

- (c) Using a screwdriver, remove the quarter trim belt hole cover.

- (d) Standard cab:
Using a screwdriver, remove the cap.
- (e) Standard cab:
Unfasten the bolt and remove front seat outer belt shoulder anchor.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

- (f) Access cab:
Using a screwdriver, open the cap.
- (g) Access cab:
Unfasten the bolt and remove rear seat outer belt shoulder anchor.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

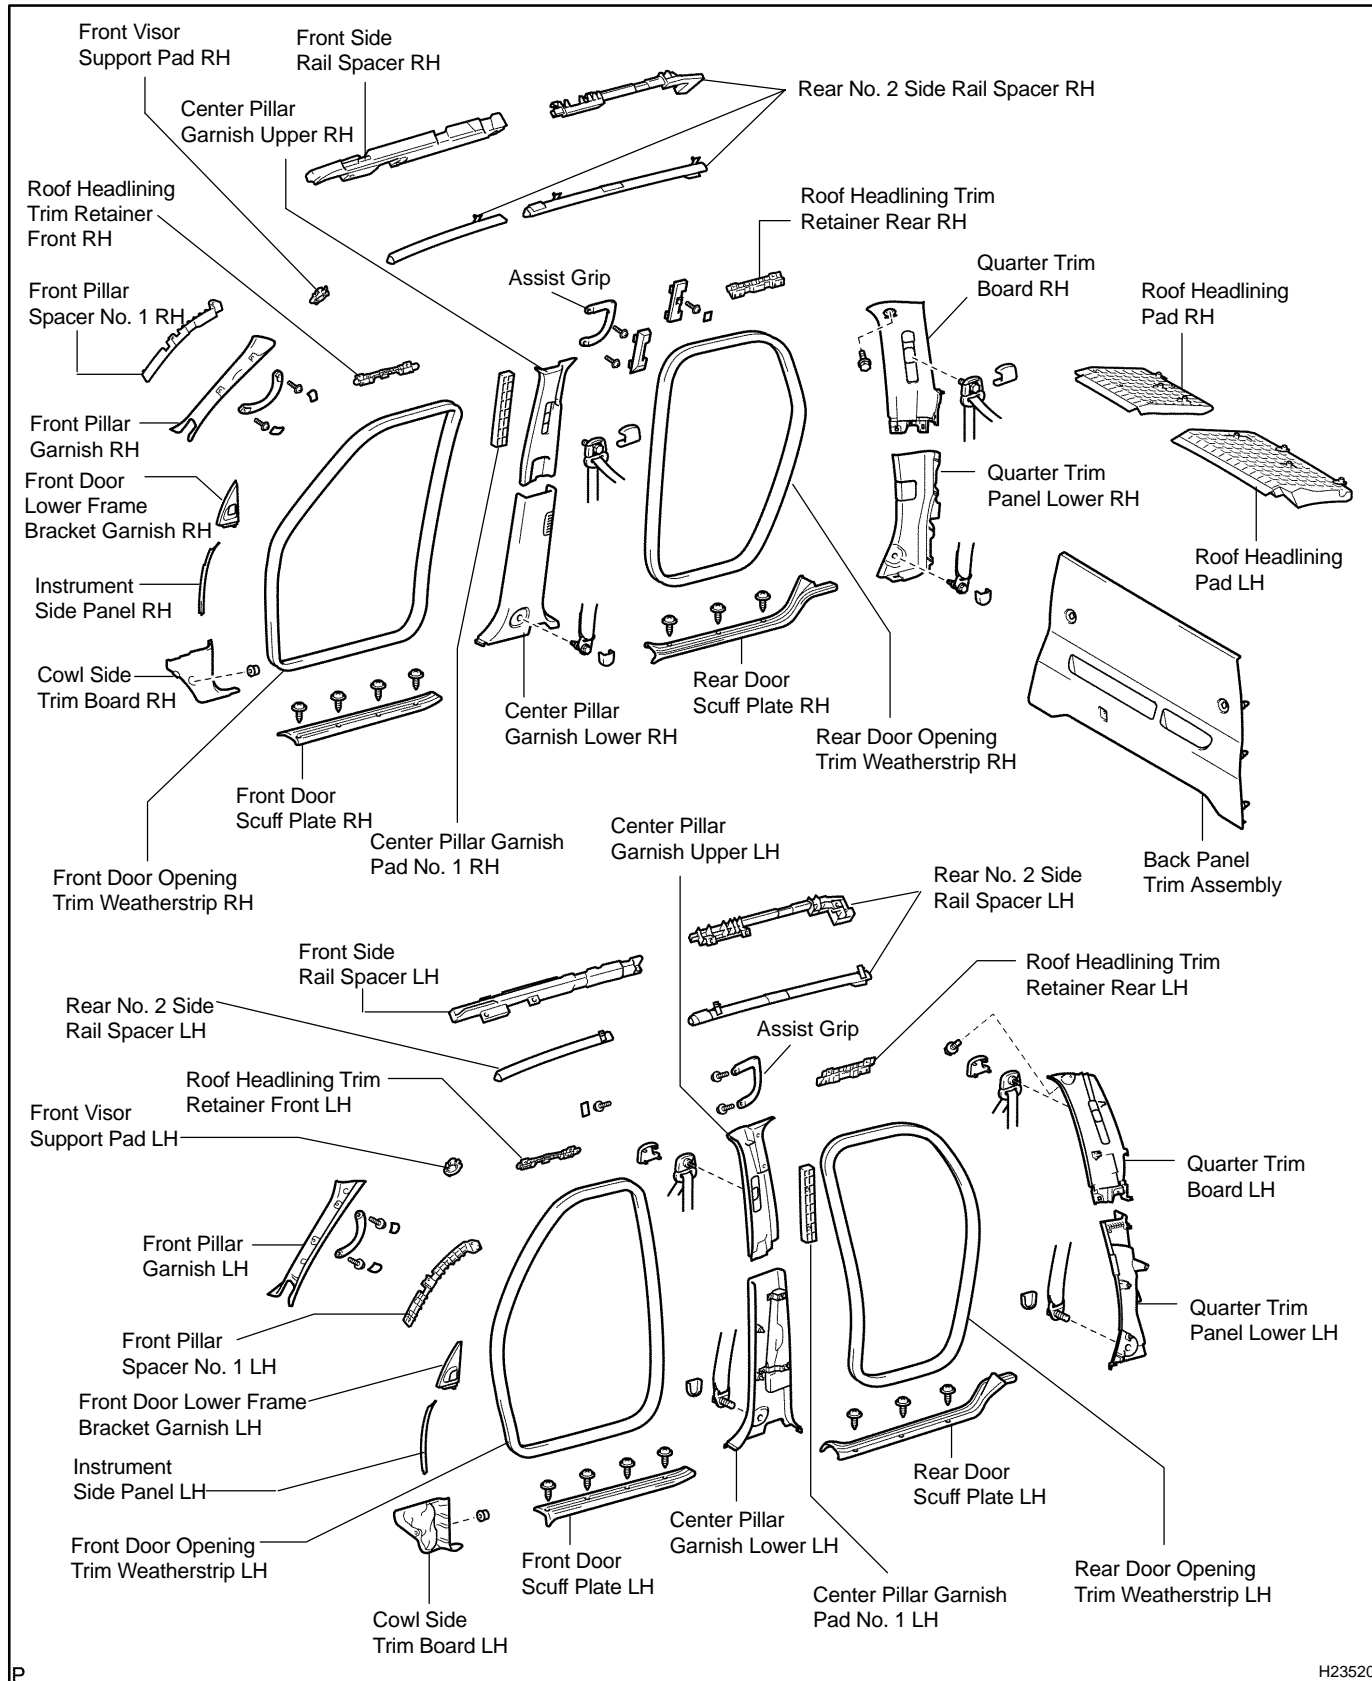

- (h) Insert a screwdriver between the quarter trim and body panel to remove the quarter trim.
 - (i) Perform the same procedure on the other side.
- 16. REMOVE ROOF HEADLINING**
- (a) Remove the 2 screws and 2 sun visor holders.
 - (b) Standard cab:
Remove the 2 clips and roof headlining.
 - (c) Access cab:
Remove the 3 clips and roof headlining.

INSTALLATION

Installation is in the reverse order of removal (see page [BO-126](#)).

ROOF HEADLINING (Double Cab) COMPONENTS

BO4QG-01

P

H23520

REMOVAL

HINT:

- ◆ A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. REMOVE FRONT DOOR SCUFF PLATE LH

- (a) Remove the 4 screws.
- (b) Using a screwdriver, disengage the claw and remove the scuff plate.

HINT:

Tape the screwdriver tip before use.

2. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

3. REMOVE COWL SIDE TRIM BOARD LH

- (a) Remove the nut, 2 clips and cowl side trim board.

4. REMOVE COWL SIDE TRIM BOARD RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

6. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

7. REMOVE FRONT PILLAR GARNISH LH

- (a) Remove the assist grip.
 - (1) Using a screwdriver, remove the 2 assist grip plugs.

HINT:

Tape the screwdriver tip before use.

- (2) Remove the 2 screws and assist grip.

- (b) Remove the front pillar garnish.

- (c) Use the same manner described above to the other side.

8. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

**9. REMOVE REAR DOOR SCUFF PLATE LH**

- (a) Remove the 3 screws.
- (b) Using a screwdriver, disengage the claw and remove the scuff plate.

HINT:

Tape the screwdriver tip before use.

10. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

11. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**12. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH****13. REMOVE LOWER CENTER PILLAR GARNISH LH**

- (a) Remove the front seat outer belt floor anchor.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)
- (b) Using a screwdriver, remove the 4 clips and pillar garnish.

HINT:

Tape the screwdriver tip before use.

14. REMOVE LOWER CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

**15. REMOVE FRONT SEAT OUTER BELT SHOULDER ANCHOR**

- (a) Using a screwdriver, remove the anchor cap.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the front seat outer belt shoulder anchor.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)**16. w/ Curtain shield airbag assembly:
REMOVE ASSIST GRIP**

- (a) Using a screwdriver, remove the cap.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the screw.

- (c) Using a screwdriver, remove the No. 2 assist grip plug.

HINT:

Tape the screwdriver tip before use.

- (d) Remove the 2 screws and assist grip.
- (e) Use the same manner described above to the other side.

**17. w/o Curtain shield airbag assembly:
REMOVE ASSIST GRIP**

- (a) Using a screwdriver, remove the No. 2 assist grip piug.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and assist grip.
- (c) Use the same manner described above to the other side.

18. REMOVE CENTER PILLAR GARNISH UPPER LH

- (a) Using a clip remover, remove the clip labeled A, clip labeled B and garnish.

19. REMOVE CENTER PILLAR GARNISH UPPER RH

HINT:

Use the same procedures described for the RH side.

20. REMOVE CENTER PILLAR GARNISH LOWER LH

Using a screwdriver, remove the 4 clips and garnish.

HINT:

Tape the screwdriver tip before use.

21. REMOVE CENTER PILLAR GARNISH LOWER RH

HINT:

Use the same procedures described for the RH side.

22. REMOVE QUARTER TRIM PANEL LOWER LH

- (a) Remove the rear floor anchor belt cover and bolt.
- (b) Using a screwdriver, remove the clip labeled A, 3 clips labeled B and pillar garnish.

HINT:

Tape the screwdriver tip before use.

23. REMOVE QUARTER TRIM PANEL LOWER RH

HINT:

Use the same procedures described for the RH side.

**24. REMOVE QUARTER TRIM BOARD LH**

- (a) Remove the shoulder anchor bolt.
- (b) Using a screwdriver, remove the 2 clips and bolt.

HINT:

Tape the screwdriver tip before use.

25. REMOVE QUARTER TRIM BOARD RH

HINT:

Use the same procedures described for the RH side.

**26. REMOVE DOME LIGHT**

- (a) Using a screwdriver, remove the lens.

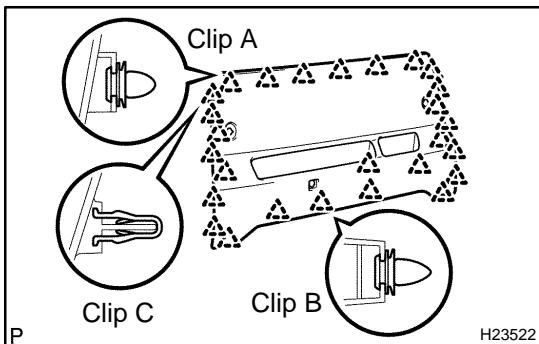

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and dome light, then disconnect the connector.

**27. BACK PANEL TRIM**

- (a) Remove the 2 clips and bolt.

- (b) Using a clip remover, remove the 6 clips labeled A and 7 clips labeled B, 14 clips labeled C and panel.

**28. REMOVE MAP LIGHT**

- (a) Using a screwdriver, remove the lens.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and map light, then disconnect the connector.

**29. REMOVE ROOF CONSOLE BOX**

- (a) Remove the 2 screws.
- (b) Using a screwdriver, remove the roof console box.

HINT:

Tape the screwdriver tip before use.

- (c) Disconnect the connector.

30. REMOVE SUN VISORS AND HOLDERS**31. REMOVE ROOF HEADLINING**

Using a clip remover, remove the 3 clips and headlining.

- 32. REMOVE ROOF SILENCER PAD**
- 33. REMOVE FRONT SIDE RAIL SPACER LH**
- 34. REMOVE FRONT SIDE RAIL SPACER RH**
- 35. REMOVE REAR NO. 2 SIDE RAIL SPACER LH**
- 36. REMOVE REAR NO. 2 SIDE RAIL SPACER RH**
- 37. REMOVE FRONT PILLAR SPACER NO. 1 LH**
- 38. REMOVE FRONT PILLAR SPACER NO. 1 RH**
- 39. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH**
- 40. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH RH**
- 41. REMOVE INSTRUMENT PANEL LH**
- 42. REMOVE INSTRUMENT PANEL RH**
- 43. REMOVE CENTER PILLAR GARNISH PAD NO. 1 LH**
- 44. REMOVE CENTER PILLAR GARNISH PAD NO. 1 RH**
- 45. REMOVE ROOF HEADLINING TRIM RETAINER FRONT LH**
- 46. REMOVE ROOF HEADLINING TRIM RETAINER FRONT RH**
- 47. REMOVE FRONT VISOR SUPPORT PAD LH**
- 48. REMOVE FRONT VISOR SUPPORT PAD RH**
- 49. REMOVE ROOF HEADLINING TRIM RETAINER REAR LH**
- 50. REMOVE ROOF HEADLINING TRIM RETAINER REAR RH**
- 51. REMOVE ROOF HEADLINING PAD LH**
- 52. REMOVE ROOF HEADLINING PAD RH**

INSTALLATION

Installation is in the reverse order of removal (see page [BO-133](#)).

SIDE STEP REPLACEMENT

BO4HS-02

REMOVE SIDE FRONT STEP

Using a screwdriver, remove the side front step.

HINT:

Tape the screwdriver tip before use.

NOTICE:

- ◆ Do not damage the body.
- ◆ If the clips are damaged, exchange them for new clips.

FRONT SEAT (Separate Type: Power Adjuster) COMPONENTS

BO4S6-03

N

H24931

REMOVAL

CAUTION:

Work must not be started until at least 90 seconds after the ignition switch is turned to the LOCK position and the negative (-) terminal cable is disconnected from the battery.

(The SRS is equipped with a back-up power source. If work is started within 90 seconds from disconnecting the negative (-) terminal cable of the battery, the SRS may deploy.)

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

2. REMOVE SEAT TRACK COVERS

Using a screwdriver, remove the seat track covers.

HINT:

Tape the screwdriver tip before use.

3. REMOVE FRONT SEAT

- (a) Remove the 4 bolts.
- (b) Disconnect the connectors.
- (c) w/ Side airbag:
Disconnect the airbag connector.
- (d) Remove the front seat.

NOTICE:

Be careful not to damage the body.

DISASSEMBLY

CAUTION:

Wear safety gloves, because the sharp edges and surfaces of the seat frame may cause injury to the hands.

HINT:

- ◆ Tape the screwdriver tip before using it to remove the parts.
- ◆ For easy removal of the lumbar support adjuster, release the lumbar support through lumbar switch operation.

1. REMOVE HEADREST

2. REMOVE SLIDE KNOB AND RECLINING KNOB

Using a screwdriver, remove the slide knob and reclining knob.

HINT:

Tape the screwdriver tip before use.

3. REMOVE SEAT CUSHION LOWER SHIELD, SEAT CUSHION OUTER SHIELD AND SEAT CUSHION INNER SHIELD

- (a) Remove the screw from the seat cushion outer shield.
- (b) Perform the same procedure on the seat cushion inner shield.

- (c) Remove the 2 screws from the seat cushion outer shield.
- (d) Remove the screw from the seat cushion inner shield.

- (e) Remove the 2 screws from the seat cushion lower shield.
- (f) Disconnect the lumbar switch connector from the seat cushion outer shield, and remove the seat cushion lower shield, outer shield and inner shield.

- (g) Remove the screw and separate the seat cushion lower shield and seat cushion outer shield.
- (h) Perform the same procedure on the other side.

4. REMOVE FRONT SEAT INNER BELT

- (a) Disconnect the wire harness clamps and connectors.
- (b) Remove the nut and front seat inner belt.

5. REMOVE LUMBAR SWITCH

Remove the 2 screws and lumbar switch from the seat cushion outer shield.

6. REMOVE POWER SEAT SWITCH

Remove the 3 screws and power seat switch.

7. REMOVE ARMREST ASSEMBLY

- (a) Using a screwdriver, remove the armrest cap.
- (b) Remove the bolt, armrest spacer, armrest lock plate and armrest assembly.
- (c) Remove the spacer from the armrest assembly.

8. REMOVE SEATBACK COVER AND PAD

- (a) Remove the hog rings from the seat frame assembly.
- (b) Open the fastener.

- (c) w/ Side airbag:
Remove the nut and disconnect the seatback cover bracket from the seat frame assembly.

- (d) Remove the hog rings from the seat frame assembly.

- (e) Remove the hog rings from the seat frame assembly.
(f) Remove the seatback cover and pad from the seat frame assembly.

9. REMOVE SEATBACK COVER

- (a) Turn up the seatback cover and remove the hog rings.
(b) Remove the 2 headrest supports.
(c) Remove the seatback cover from the seatback pad.

10. w/ Seat heater:

REMOVE SEATBACK HEATER ASSEMBLY

Cut off the tack pins which fasten the seat heater, and then remove the seatback heater assembly from the seatback cover.

11. REMOVE SEAT CUSHION COVER AND PAD

- (a) Disconnect the wire harness clamp.
(b) Remove the 2 clips.

- (c) Remove the hog rings from the seat cushion cover.
- (d) Unlatch the seat cushion cover hooks, then remove the seat cushion cover and seat cushion pad.

12. REMOVE SEAT CUSHION COVER

Remove the hog rings and seat cushion cover from the seat cushion pad.

13. w/ Seat heater:

REMOVE SEAT CUSHION HEATER ASSEMBLY

Cut off the tack pins which fasten the seat heater, and then remove the seat cushion heater assembly from the seat cushion cover.

14. REMOVE LUMBAR SUPPORT ADJUSTER

- (a) Disconnect the connector.
- (b) Disengage the seatback spring edge from the seat frame assembly.

NOTICE:

Be careful when releasing the seatback spring edge, because there is a possibility that the spring may break due to tension by the lumbar support.

- (c) Remove the 2 screws and lumbar support adjuster.
- (d) Remove the bushing from the lumbar support adjuster.

15. REMOVE RH AND LH RECLINING ADJUSTER INSIDE COVERS

- (a) Remove the screw and RH reclining adjuster inside cover.
- (b) Disconnect the wire harness clamp.
- (c) Perform the same procedure on the other side.

**16. REMOVE RH AND LH SEATBACK SHIELDS**

- (a) Remove the 2 screws and RH seatback shield.
- (b) Perform the same procedure on the other side.

17. REMOVE VERTICAL ADJUSTER BRACKET INNER AND OUTER COVERS

- (a) Remove the screw and vertical adjuster bracket inner cover.
- (b) Perform the same procedure on the other side.

18. REMOVE SEAT POSITION SENSOR

(See page [RS-1 18](#))

REASSEMBLY

CAUTION:

Wear safety gloves, because the sharp edges and surfaces of the seat frame may cause injury to the hands.

HINT:

A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. **INSTALL SEAT POSITION SENSOR
(SEE PAGE [RS-122](#))**
2. **INSTALL VERTICAL ADJUSTER BRACKET INNER AND OUTER COVERS**
 - (a) Install the vertical adjuster bracket inner cover with the screw.
 - (b) Perform the same procedure on the other side.

3. **INSTALL RH AND LH SEATBACK SHIELDS**
 - (a) Install the RH seatback shield with the 2 screws.
 - (b) Perform the same procedure on the other side.

4. **INSTALL RH AND LH RECLINING ADJUSTER INSIDE COVERS**
 - (a) Connect the wire harness clamp.
 - (b) Install the RH reclining adjuster inside cover with the screw.
 - (c) Perform the same procedure on the other side.

5. **INSTALL LUMBAR SUPPORT ADJUSTER**
 - (a) Install a new bushing to the lumbar support adjuster.
 - (b) Install the lumbar support adjuster with the 2 screws.

(c) Engage the seatback spring edge with the seat frame assembly.

6. w/ Seat heater:

INSTALL SEAT CUSHION HEATER ASSEMBLY

- (a) Set the seat cushion heater assembly with the name stamp side facing the seat cushion cover.
- (b) Install the seat cushion heater assembly with the 10 tack pins.

NOTICE:

Do not substitute other metal parts for tack pins.

a-a:

Listing Pocket, Seat Heater, Tack Pin, Seat Wire, Seat Cushion Cover

A: Install the tack pins under the wire.

b-b:

Seat Heater Strap, Tack Pin, Seat Heater, Seat Cushion Cover

Tack pins should not be beyond the seat.

Front ↑

Tack Pin, Name Stamp

T H24394

7. INSTALL SEAT CUSHION COVER

Install the seat cushion cover to the seat cushion pad with the hog rings.

HINT:

When installing the hog rings, take as much care as possible to prevent wrinkles.

8. INSTALL SEAT CUSHION COVER AND PAD

- (a) Install the seat cushion cover with seat cushion pad, and latch the seat cushion cover hooks.

(b) Install the hog rings to the seat cushion cover.

(c) Install the 2 clips.
 (d) Connect the wire harness clamp.

**9. w/ Seat heater:
 INSTALL SEATBACK HEATER ASSEMBLY**

(a) Set the seatback heater assembly with the name stamp side facing the seatback cover.
 (b) Install the seatback heater assembly with the 11 tack pins.

NOTICE:
 Do not substitute other metal parts for tack pins.

a-a:

A: Install the tack pins under the wire.

Upper

b-b:

Tack pins should not be beyond the seat.

T H24393

10. INSTALL SEATBACK COVER

(a) Install the seatback cover to the seatback pad.
 (b) Install the 2 headrest supports.

- (c) Turn up the seatback cover and install the hog rings.
11. INSTALL SEATBACK COVER AND PAD
 (a) Install the seatback cover and pad to the seat frame assembly.

- (b) Install the hog rings to the seat frame assembly.

- (c) Install the hog rings to the seat frame assembly.

- (d) w/ Side airbag:
 Connect the seatback cover bracket to the seat frame assembly with the nut.
Torque: 5.5 N·m (56 kgf·cm, 49 in.-lbf)
 (e) Close the fastener.

- (f) Install the hog rings to the seat frame assembly.

**12. INSTALL ARMREST ASSEMBLY**

- (a) Install the spacer to the armrest assembly.
- (b) Install the armrest assembly, armrest lock plate and armrest spacer with the bolt.

Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)

HINT:

Install the armrest lock plate as shown in the illustration.

- (c) Install the armrest cap.

13. INSTALL POWER SWITCH

Install the power switch with the 3 screws.

14. INSTALL LUMBAR SWITCH

Install the lumbar switch with the 2 screws to the seat cushion outer shield.

15. INSTALL FRONT SEAT INNER BELT

- (a) Install the front seat inner belt with the nut.

Torque: 42 N·m (430 kgf·cm, 32 ft·lbf)

- (b) Connect the connectors and wire harness clamps.

**16. INSTALL SEAT CUSHION LOWER SHIELD, SEAT CUSHION OUTER SHIELD AND SEAT CUSHION INNER SHIELD**

- (a) Assemble the seat cushion lower shield and seat cushion outer shield with the screw.
- (b) Perform the same procedure on the other side.
- (c) Connect the lumbar switch connector to the seat cushion outer shield, and install the seat cushion lower shield, outer shield and inner shield.

- (d) Install the 2 screws to the seat cushion lower shield.
- (e) Install the screw to the seat cushion inner shield.

- (f) Install the 2 screws to the seat cushion outer shield.

- (g) Install the screw to the seat cushion outer shield.
- (h) Perform the same procedure on the seat cushion inner shield.

17. INSTALL SLIDE KNOB AND RECLINING KNOB

18. INSTALL HEADREST

INSTALLATION

1. INSTALL FRONT SEAT

- (a) Mount the front seat to the vehicle.

NOTICE:

Be careful not to damage the vehicle body.

- (b) w/ Side airbag:
Connect the airbag connector.
- (c) Connect the connectors.
- (d) Slide the front seat to the rearmost position.
- (e) Tighten the bolts on the front side temporarily, starting from the bolt on the inner side.
- (f) Tighten them completely.
- Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)**
- (g) Slide the front seat to the foremost position.
- (h) Tighten the bolts on the rear side temporarily, starting from the bolt on the inner side.
- (i) Tighten them completely.

Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)

2. INSTALL SEAT TRACK COVERS

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

FRONT SEAT (Separate Type: Manual Adjuster)

COMPONENTS

BO4SB-03

HINT:

The procedures listed below are for the LH side.

N

H24345

REMOVAL

CAUTION:

Work must not be started until at least 90 seconds after the ignition switch is turned to the LOCK position and the negative (-) terminal cable is disconnected from the battery.

(The SRS is equipped with a back-up power source. If work is started within 90 seconds from disconnecting the negative (-) terminal cable of the battery, the SRS may deploy.)

NOTICE:

When removing/installing and overhauling the passenger seat, check the passenger occupant classification system and perform the zero point calibration (see page [DI-1849](#)).

HINT:

The procedures listed below are for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

Wait for 90 seconds after disconnecting the cable to prevent the airbag working.

2. REMOVE SEAT TRACK COVERS

Using a screwdriver, remove the seat track covers.

HINT:

Tape the screwdriver tip before use.

3. REMOVE FRONT SEAT

- (a) Remove the 4 bolts.
- (b) Disconnect the connectors.
- (c) w/ Side airbag:
Disconnect the airbag connector.
- (d) Remove the front seat.

NOTICE:

Be careful not to damage the vehicle body.

DISASSEMBLY

CAUTION:

Wear safety gloves, because the sharp edges and surfaces of the seat frame may cause injury to the hands.

HINT:

- ◆ The procedures listed below are for the LH side.
- ◆ Tape the screwdriver tip before using it to remove the parts.

1. REMOVE HEADREST

2. REMOVE SEAT CUSHION OUTER SHIELD

- (a) Remove the screw from the seat cushion outer shield.
- (b) Using a screwdriver, remove the seat cushion outer shield.

HINT:

Tape the screwdriver tip before use.

3. REMOVE RECLINING ADJUSTER RELEASE HANDLE

4. REMOVE VERTICAL ADJUSTER HANDLE

- (a) Using a screwdriver, remove the vertical adjuster handle cap.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 screws and the vertical adjuster handle.

5. REMOVE SEAT CUSHION INNER SHIELD

- (a) Remove the screw from the seat cushion inner shield.
- (b) Using a screwdriver, remove the seat cushion inner shield.

HINT:

Tape the screwdriver tip before use.

6. REMOVE FRONT SEAT INNER BELT

- (a) Disconnect the wire harness clamps and connectors.
- (b) Remove the nut and front seat inner belt.

**7. REMOVE ARMREST ASSEMBLY**

- (a) Using a screwdriver, remove the armrest cap.
- (b) Remove the bolt, armrest spacer, armrest lock plate and armrest assembly.
- (c) Remove the spacer from the armrest assembly.

**8. REMOVE SEATBACK COVER AND PAD**

- (a) Remove the hog rings from the seat frame assembly.
- (b) Open the fastener.

- (c) w/ Side airbag:
Remove the nut and disconnect the seatback cover bracket from the seat frame assembly.

- (d) Remove the hog rings shown in the illustration from the seat frame assembly.

- (e) Remove the hog rings shown in the illustration from the seat frame assembly.
- (f) Remove the seatback cover and pad from the seat frame assembly.

**9. REMOVE SEATBACK COVER**

- (a) Turn up the seatback cover and remove the hog rings.
- (b) Remove the 2 headrest supports.
- (c) Remove the seatback cover from the seatback pad.

**10. REMOVE SEAT CUSHION COVER AND PAD**

- (a) Remove the clip.
- (b) Perform the same procedure on the other side.

- (c) Remove the hog rings from the seat cushion cover.
- (d) Unlatch the seat cushion cover hooks, then remove the seat cushion cover with seat cushion pad.

**11. REMOVE SEAT CUSHION COVER**

Remove the hog rings and seat cushion cover from the seat cushion pad.

**12. REMOVE RH AND LH UPPER RECLINING ADJUSTER INSIDE COVERS**

- (a) Remove the screw and LH upper reclining adjuster inside cover.
- (b) Perform the same procedure on the other side.

13. REMOVE RH AND LH LOWER RECLINING ADJUSTER INSIDE COVERS

- (a) Remove the screw and LH lower reclining adjuster inside cover.
- (b) Perform the same procedure on the other side.

14. REMOVE RH AND LH SEAT CUSHION LOWER SHIELDS

- (a) Using a screwdriver, disengage the claw and remove the LH seat cushion lower shield.

HINT:

Tape the screwdriver tip before use.

- (b) Perform the same procedure on the other side.

**15. Driver's seat:
REMOVE SEAT POSITION SENSOR
(See page [RS-1 18](#))**

REASSEMBLY

CAUTION:

Wear safety gloves, because the sharp edges and surfaces of the seat frame may cause injury to the hands.

HINT:

- ◆ The procedures listed below are for the LH side.
- ◆ A bolt without a torque specification is shown in the standard bolt chart (see page [SS-2](#)).

1. Driver's seat:

**INSTALL SEAT POSITION SENSOR
(SEE PAGE [RS-122](#))**
